VOL. LXIX NEW YORK, THURSDAY, JULY 7, 1910 No. 3214

Survey of the World

Governor Hughes Unsuccessful

The extraordinary session of the New York Legislature, called by Governor Hughes after the failure of the regular session to enact a Direct Nomination law, adjourned on the 1st without having taken the action he desired. In his message at the beginning of this session, the Governor not only submitted the question of direct nominations, but also pointed out that the resolution providing for an investigation of corrupt practices should be broadened, and recommended that the revenue be increased by new tax legislation. The proposed Direct Nomination bill, less comprehensive than the one originally supported by the Governor, was rejected, altho it had the published approval of Mr. Roosevelt. No amendments to broaden the scope of the investigation were adopted. A graduated inheritance tax bill was passed. It is estimated that this will add $4,000,000 or $5,000,000 to the revenue. Governor Hughes met Mr. Roosevelt at the Harvard commencement exercises on the 29th ult., when the Governor received an honorary degree. In his public introduction of the Governor, Mr. Roosevelt said the latter had asked him for help and he had consented to assist him:

"I say I agreed to help him. I meant to say agreed to try to help him. That makes a difference. I haven't the slightest idea whether my efforts will do any good or not, but I have sent to the local authorities in New York as emphatic an appeal as I know how to send, asking that the Legislature hold up the hands of our Governor and pass the legislation affecting our political structure which the Governor feels, which the best people thruout the State are growing more and more to feel, to be essential to our wholesome political life."

In reply, the Governor expressed his appreciation of the "great service" thus rendered to the people of his State by Mr. Roosevelt, who was casting "the weight of his just and great influence upon the side of freedom within parties, honorable conduct of party affairs, and the expression of the intelligent will of the people." Mr. Roosevelt had sent the following telegram to Chairman Griscom, of the New York Republican County Committee:

"During the last week great numbers of Republicans and of independent voters from all over the State have written me urging the passage of direct primary legislation. I have seen Governor Hughes and learned your views from your representative. It seems to me that the Cobb bill, [for direct nominations] with the amendments proposed by you, meets the needs of the situation. I believe the people demand it. I most earnestly hope that it will be enacted into law.

"THEODORE ROOSEVELT."

This telegram was at once published. At Albany it was approved by some and disapproved by others. An adverse report upon the Cobb bill was made by the House Judiciary Committee, and the House supported this report by a vote of 80 to 62, nearly half of the Republicans opposing the Governor. In the Senate the vote was 25 for the bill and 19 against it, but this meant defeat, for 26 votes were required for passage. Seven Republicans stood with the Democrats in opposition. Final adjournment speedily followed. A joint committee of eight was appointed to conduct the investigation relating to corrupt practices in the Legislature and executive departments. This inquiry was suggested by the exposure of bribery in the Allds-Conger case. In his message the Governor had severely criticised the resolution providing for the investigation, pointing out that parts of it might serve to narrow the

inquiry and restrain the committee. But it was not amended. The committee includes no member who has been prominent in demanding a searching investigation. One or two of those appointed have been asserting that no investigation is needed.

Railway Rate Decisions

Several important decisions affecting freight rates were made last week by the Interstate Commerce Commission. On the 29th large reductions west of the Missouri River were ordered, especially with reference to rates on the Pacific Coast and in the intermountain States. The rate situation there has been studied by the Commission for several months. Many of the cases relate to cities, such as Spokane and Reno, which have been compelled to pay the thru rate to the coast, plus the charges for transportation back from the coast to these cities, altho the freight was dropped within their boundaries as it was going westward. These were examples of an excessive use of the arguments in favor of a larger charge for a short haul than for a much longer one on the same line. The reductions ordered ranged from 20 to 50 per cent., and the Commission submitted explanations in detail, showing also the results of a careful examination of earnings and growth of traffic. But the orders will not take effect until October 1, and in the meantime the transcontinental roads will keep accounts to show how they would affect revenue. The decisions in these cases caused a sharp decline in the stock market on the 29th and even a greater fall on the 30th. On this second day, however, there were decisions favorable to the railroads. Shippers had complained of a new classification east of the Mississippi, affecting 6,000 items. The Commission refused to suspend or disturb this classification, showing that the charges on only 30 items had been increased, while those on 28 had been reduced. It also permitted railroads out of Buffalo to increase rates on flour going eastward, giving as one reason the recent increase of wages. The notable decline of stocks was arrested by the support, it is said, of prominent banking interests. Mr. Taft asked Chairman Knapp, of the Commission, to call upon him at his summer home in Beverly. On the 1st, after a long conference there, a statement was published to the effect that the authority given to the Commission by the new law was not to be used arbitrarily. All new rates were not to be suspended, but such action was to be taken only in exceptional cases. The new law was not to be used as a club. It had not been passed to reduce rates. It was the desire of the President and Chairman Knapp to assure the public that the law would be administered in a conservative manner.

Labor Questions

At the beginning of last week there was danger that about 20,000 trainmen on the Southeastern railroads would go on strike. Mediators at work under the Erdman act had failed, and 90 per cent. of the men had voted to strike in support of their demands. Unexpectedly, however, on the 2d, a settlement was reached. The companies made concessions which were accepted. Other increases of wages were announced last week, as follows:

Great Northern & Northern Pacific, two cents an hour for 1,400 machinists; New York, New Haven & Hartford, an addition of 7 per cent. for 2,300 clerks; Philadelphia & Reading, increase granted to yard engineers; Erie, agreement signed granting advance of about 9 per cent. to trainmen; Third Avenue Street Railway, New York City, addition of 2 cents an hour granted by the Receiver to 2,000 men.

About 15,000 employees of the Pennsylvania road are voting on a strike to support their demand for increases in addition to the general increase of 6 per cent. ordered in April. The Delaware & Hudson's 1,200 trackmen are on strike for higher pay. In the case of the Yonkers street railway men recently on strike, Supreme Court Justice Keogh, as arbitrator, has decided that they shall have an increase of 2 cents an hour, or about 9 per cent. The road is in the hands of a receiver.——In Iowa, Judge Morris, of the Federal Court, has decided that the Federal law regulating trainmen's hours of service is constitutional.——Beginning on the 1st, a majority of the cotton mills in New England and the South shut down for nearly two weeks. The number of employees affected is

about 100,000.——The Social Service Committee of the Federal Council of Churches has published a report concerning "deplorable social and economic conditions" at the Bethlehem Steel Works and recommending that the Government, when ordering armor plate to be made there, insist upon a six-day week and a shorter day. Before the recent strike, 51 per cent. of the employees worked twelve hours a day, 28 per cent. worked seven days in a week, and the pay of 61 per cent. was less than 18 cents an hour.

Riots and Murder Follow the Fight

The prize fight at Reno, Nev., on the 4th was easily won by the negro heavyweight champion, John Arthur Johnson, in the fifteenth round. His opponent, James J. Jeffries, could make no effective defense after the sixth, and at the end he was brutally pounded even after he had shown that he could scarcely rise from the ground. Twenty thousand spectators paid $360,000 for their seats. Many were surprised and disappointed, for the betting had been in favor of Jeffries at 10 to 6, and even 2 to 1.——Following the announcement of the result there were bloody race riots in many places. At least eight negroes were killed. Dispatches from nearly thirty cities, relating to these riots, were published in the daily papers. At Uvaldia, Ga., three negroes were killed and five wounded by a mob of white men. One negro was killed in Omaha, and two in Little Rock. A negro in a street car at Houston had his throat cut by a white man. At Mounds, Ill., a negro constable was killed by negro rioters whom he was trying to restrain. The white conductor of a railway train in Tallulah, La., was mortally wounded by a negro. In a dozen cities many persons were seriously injured in riots, and hundreds were arrested. In Pittsburg whites were ejected from street cars by negroes, who took their places. The police were busily engaged in repressing riots in St. Louis, Baltimore, Wilmington, Philadelphia and Washington. Bands of white men and boys pursued and beat negroes in New York City, where many whites and blacks were sent to prisons or hospitals.

College Races at New London

Harvard crews won all the races last week on the Thames course at New London. The time of the Harvard freshman eight for two miles was 11:54½, with Yale three lengths behind, in 12:02. In the race for university fours (two miles) Yale was the leader for a mile and a half. Harvard then forged ahead by a spurt and won by about four lengths, in 13:00½, Yale following in 13:18. In the third and greatest contest, for university eights, over a course of four miles, the two boats were nearly abreast for more than two miles, with Yale slightly in advance. But at the three-mile mark Harvard was leading by a length, and this was increased to five lengths at the finish. The winning time, 20:46½, was very good, the best on the Thames course since Yale's 20:40½, in 1904. Yale crossed the line in 21:04. The river was crowded with yachts and other craft. In and near the city there were miles of automobiles, some of them bearing tags which showed that they had come from States of the Middle West.

Cases of Bribery and Fraud

At the end of the trial, in Chicago, of Lee O'Neil Browne, leader of the Democratic minority in the Illinois House, for bribing Charles White and others to vote for the election of United States Senator Lorimer, the jury disagreed, after they had been out for nearly five days. There were eight for conviction. Among the witnesses against Browne were White and two other members of the Legislature, each of whom testified that Browne had paid him $1,000 for his vote. After the jury had been discharged, the State Attorney, Mr. Wayman, said that this had been "a flagrant case of jury fixing." The jury, he added, had been "packed from the start." He sharply crticised Charles E. Spare, one of the jurors. Spare has since sued him for libel, asking for $50,000 in damages. ——When the Canadian Government recently announced the results of its inquiry concerning extensive frauds in the Printing Bureau at Ottawa, F. S. Gouldthrite, superintendent of the bureau for

twenty years, was missing. A letter left on a lake steamer last week indicated that he had committed suicide. His dead body has since been found at Detroit.

The Islands

It is asserted that the Danish Minister at Washington has been instructed to ascertain whether the United States desires to acquire the Danish West Indies, comprising the islands of St. Thomas, St. John and Santa Cruz, lying east of Porto Rico.——As the $300,000 appropriated by Congress is not sufficient to pay the entire cost of raising the wreck of the battleship "Maine," a thoro examination of the wreck and of the harbor bottom in the vicinity of it will be made by the army engineers. A report will be submitted to Congress next winter, showing what can be done and how much the entire cost will be.——In a cloak room adjoining the halls of the Cuban Congress, on the 27th ult., Congressman Lores attempted to assassinate Congressman San Miguel, editor of *La Lucha*, by shooting him with a revolver. His aim was poor, and Miguel escaped, but the bullet grazed the head of Congressman Lanuza, leader of the Conservative party. Lores was promptly seized and disarmed. He had warmly supported the project for an exchange of the Government's water front property for the terminal of the United Railways

Copyright, 1910, by Paul Thompson.

J. PIERPONT MORGAN AND DEAN BRIGGS AT HARVARD COMMENCEMENT.
Mr. Morgan was given the honorary degree of LL. D.

on the Prado. San Miguel had denounced the project as a fraudulent one and had made charges of bribery. He now asserts that the Government promoted a conspiracy to procure his assassination.——Ricarte, a leader of the revolt in the Philippines, who was sent to prison for six years, completed his term last week and was released, the courts deciding that his imprisonment could not be prolonged on account of the fine of $5,000 which had been imposed.——An official report shows that the death rate for the 8,000 Government employees in the Philippines last year was less than seven per thousand.

Countries South of Us

In Nicaragua, Estrada's forces, moving westward, have captured several towns within about one day's march of Managua, the capital. On the east coast they have taken Pearl Lagoon from Madriz, and with it more than 100 prisoners. One of these was General Matuty, formerly a supporter of Estrada. He was arrested in April last for treachery. It was charged that he was concerned in a plot against his commander and had conspired to surrender the east coast to Madriz. Having been released, he joined Madriz's army. After his recent capture at Pearl Lagoon, the dispatches say, he was tried by court martial, found guilty of treachery and shot. Estrada asked the Madriz commander at Bluefields to exchange William P. Pittman, the young adventurer from Boston who laid dynamite mines, for a colonel captured at Pearl Lagoon, but the commander refused to do this. The Central American Court of Justice has urged Estrada to accept the court's mediation. He declines, saying that all of his peace propositions have been ignored contemptuously by Madriz. The State Department at Washington has ascertained that ex-President Zelaya is using a part of his large fortune in support of Madriz, having paid for the steamship "Venus." He is also maintaining an agent in New York. His aid is insufficient, however, for Madriz is now collecting a forced loan of $750,000. Newspapers in Managua advise that all Americans in Nicaragua be seized and put to death. Leading journals in Costa Rica are attacking our Government and asking Costa Ricans to assist Madriz in preventing the establishment of a protectorate. They say that Madriz's steamship "Venus" should have fired upon the United States gunboats at Bluefields. ——Gen. Porfirio Diaz was again elected President of Mexico on the 26th, and Ramon Corral Vice-President, altho the Electoral College's formal action will not be taken until the 11th. So far as can be learned, there was no disorder. The opposition amounted to about 2 per cent. of the votes cast. Owing to the advanced age of General Diaz, it is expected that the controlling power will soon be exercised by Vice-President Corral. At the time of the election, Francisco Madero, the nominee of those who oppose Diaz, was still in prison.

English Politics

Premier Asquith has announced an autumn session of Parliament. This is hailed as a good sign by the Nationalists and extreme Radicals since it implies that supplies will be held up until the result of the peace negotiations between the party leaders are known.——Chancellor Lloyd-George's budget speech was optimistic in tone. He is confident of raising the necessary revenue and having a surplus besides. Figuring the total revenue at a little short of £200,000,000 he gets a surplus £861,000. The chancellor justified his estimate of the stated revenue with the assumption of an unprecedented increase in the volume of trade this year. In spite of a loss of over a million pounds sterling he retained the duty on spirits unchanged, contending that the decrease of consumption by ten million gallons represents a moral gain to the State which far outweighs the loss of revenue. Since all the main features of the previous budget are retained in the current one, the Unionists will oppose its passage at every step. The retention of the whisky tax is disappointing to the Redmondites, but they are not expected to be obstructive as long as the veto power of the House of Lords is undecided. Should the present conference fail of an agreement the struggle between the rival houses may be revived in autumn to an intensified degree.

Conflict of Church and State in Spain

The Canalejas government is carrying into effect a program designed to reduce the number of religious establishments erected by the various Catholic orders, and to reduce at the same time the amount of money now paid by the State to the Church. His first move has been a decree permitting Protestant and other religious bodies to display the outward evidences of public worship. This brought a note from the Vatican requesting withdrawal of the decree, to which the answer of the Government was a polite, but firm, refusal. A bill recently submitted to Parliament by the Government proposes the substitution of a simple promise for the oath customarily taken over the Scriptures in connection with civil acts, like the installation of Cabinet Ministers. This new measure, which is said to have the support of the King, is denounced by clericals as a new provocation to the Vatican. The liberal press, on the other hand, hails it as a necessary step toward the secularization of the State. The Premier also proposes to take from the Catholic orders some of the privileges which they enjoy, like exemption from military service and from taxation. The latter exemption is claimed by many unauthorized institutions industrially engaged. The decree granting privileges to non-Catholic religious societies has been taken by the clergy as a signal for organized hostility. Especially in the provinces the peasantry is being aroused to resistance, and some serious disturbances have already taken place. Canalejas understands fully the gravity of his undertaking in a country where the agricultural population blindly follows the lead of the clergy. But he claims to have behind him the support of the majority of the urban population and the full approval of the King. Nevertheless there are many indications that Spain is facing another crisis in its checkered history.

Belgium

The political campaign in Belgium has been spirited. It appears from the figures of the last elections that the Catholic Government no longer holds the majority of the plural vote. Therefore, the Brussels federation of the Labor party has declared its energetic opposition to the further maintenance of such a majority, and desires to inaugurate a movement like the one which led to a revision of the constitution in 1893. The Liberals also have declared war to the knife on the Government and the Right wing. If the Left succeeds in forcing its claims for a proportional representation it will gain a considerable number of new seats. Therefore the latter demands the dissolution of the Chamber and another general election in 1912. The Catholic party objects to this on the ground that the constitution fixes the official term of deputies elected last May at four years. The strength of the opposition is such that the Government feels much embarrassed.

China

Reports from Peking indicate considerable political uneasiness in the Yangtse Valley. A letter addressed to the foreign representatives at Peking, and purporting to come from a high military official in Central China, ascribes the national calamities of the past three hundred years to the displeasure of heaven on account of the occupation of the Chinese throne by foreign usurpers. In the Shanshi Province thousands are said to be dying from starvation. A crop failure is now impending in a large section of the eighteen provinces. It is feared that this may furnish the anti-dynastic forces with the opportunity for which they have been looking. The Chinese Government, forewarned, is taking precautions to prevent an outbreak.

Eastern Affairs

From Tokio comes the announcement that the annexation of Korea by Japan is imminent. The Korean Emperor has issued an edict delegating the police administration of the country to the Japanese Government. This is regarded as the first step in the direction of formal annexation, an event which the mass of Koreans seem to regard with indifference.——The State Department at Washington has been advised by its representative at St. Petersburg that an agreement between Russia and Japan regarding the administration of railway

and other interests in Manchuria was reached last week and that it will probably be signed without delay. If, as supposed, it contains a statement as to the maintenance of the *status quo* in Manchuria, the State Department cannot object to it on the ground that it contravenes the Root-Takahira agreement.——There is some dissatisfaction among Japanese regarding certain displays of the Anglo-Japanese Exhibition now in progress in London. In a species of village, Ainus and aborigines from Formosa are on view, besides various artisans engaged in petty manufactures. These displays are not considered altogether complimentary to Japanese civilization, and are said to have a purely mercenary object.

Various Items

We seem to have evidence of the effect of Mr. Roosevelt's address at Paris in a series of measures introduced into the French Chamber of Deputies last week, which have for their purpose to facilitate marriage and increase the birth rate. They include the imposition of additional military service upon bachelors of more than twenty-nine years of age; making obligatory the marriage of state employees who have reached the age of twenty-five years, with supplementary salaries and pension allowances for those with more than three children, and the repeal of the law requiring equal distribution of estates among the children. The dislike of Frenchmen to divide their property is a frequent cause of restricted families, according to those who have made a study of the subject. The proposed legislation follows the recent publication of vital statistics, which showed that the births in the republic during 1909 were 770,000, against 792,000 in the preceding year, and that the population has been increased by only 3,000,000 since 1851, and that largely by immigration.——On Wednesday of last week Count Zeppelin inaugurated a regular air service from Friedrichshaven to Düsseldorf, a distance of 300 miles, with six paying passengers. The trip took nine hours. The regular time on an express train is six hours from Mannheim to Düsseldorf, but the airship took just four hours. This voyage marks a new era in aerial navigation, as it is the first of a regular scheduled service to be inaugurated. The weather conditions were most favorable. Tickets for other scheduled trips have been sold at from $25 to $40 each. The next day he took a larger party of ladies and gentlemen for a shorter ride. This airship is called the "Deutschland," and is of immense size, as required for a dirigible balloon. ——Notwithstanding vigorous opposition by the Socialist and Republican members, the Italian Chamber of Deputies has voted $1,200,000 for dirigible balloons for war purposes. The opposition argued that expenditure for military purposes is a pure waste, as war is practically impossible. They called rather for disarmament.——Rumania delivered an ultimatum to Greece in regard to the attack on a Rumanian mail boat by a mob at Piræus about a week ago. On that occasion a mob boarded the Rumanian boat and looted all the valuables of the passengers, among whom were a prince and princess. Rumania insisted that Greece should make official expression of regret and make compensation to those injured during the looting of the vessel, and dismiss the prefect of the port before whom the captain of the Rumanian ship was summoned, and punish the guilty looters. After some representations by other Powers the Greek Government promised satisfaction, but Rumania still presses more speedy action. —— An American company has asked of the Turkish Government a concession to build a railway of 1,200 miles in length from a port on the Mediterranean Sea to Diarbekir, Bitlis and Van. They ask for no subsidy or guarantee, but the right to work some mines along the route. The Government has favored it and was likely to give final consent when the German Government objected, on the ground that the concession as to mines conflicted with rights already granted to the German railway projected from Bagdad. It is said that our Government at Washington is unable to discover any ground for this objection in any grants made to the Bagdad Railway.——Queen Elizabeth of Rumania, widely known as Carmen Sylva, is still seriously ill. Latest reports indicate a slight improvement of her condition.

The Fishery Arbitration at The Hague

BY W. T. STEAD

[We are glad to print this informing article during the progress of the trial at The Hague by the editor of the *Review of Reviews*. No Englishman keeps himself better informed on international arbitration than Mr. Stead. At the conclusion of this great trial we expect to print another article by an American, Dr. James Brown Scott, solicitor of the State Department and one of the American counsel.—EDITOR.]

I CAME over to The Hague to attend the Court of Arbitration before which America and Great Britain are arguing with a view to settlement of the century-old dispute as to the fishery rights off the coasts of Newfoundland and Labrador.

"Never was there such a trumpery dispute," exclaimed a well-known American citizen to me when I told him I proposed to run across to The Hague to hear the case tried. "It is simply monstrous to invoke the machinery of the International Court of Arbitration to settle a miserable little bagatelle which does not involve a sum of more than $10,000 a year.

"See the whole ocean in a tempest hurled
To waft a feather or to drown a fly."

"But," I said, "why the arbitration?" "Oh," said my informant, "that is very easily explained. No one in the whole continent cares a continental for the alleged rights of fishing in Newfoundland waters—where, by the bye, we don't fish ourselves, but buy fish from those who do, and then import them in American bottoms duty free—nobody, that is, except the fishermen of the fishing village of Gloucester, on the coast of Massachusetts. You want to know how it came to pass that this fishing village can swing the policy of the United States. *Cherchez la femme.* There is always a woman at the bottom of everything. If Senator Henry Cabot Lodge had never had a daughter this arbitration would never have taken place. But he had a daughter, and this daughter married a Mr. Gardiner. This Mr. Gardiner is a member of Congress and these Gloucester fishermen are his constituents. Father-in-law Lodge is all potent in the Committee for Foreign Affairs. Son-in-law Gardiner is pledged to the Gloucester fishermen. Father-in-law supports son-in-law—the fishery question becomes urgent. Not even for the sake of the Gloucester fishermen can war be thought of. Why not try a law suit? And so it was arranged that it should be sent to The Hague. On the maxim *de minimis non curat lex* it ought to be ruled out of court."

I repeated this pretty story to the leading American counsel. He replied: "The importance of the arbitration does not depend at all, or at least very little, upon the financial interests involved in the fisheries. No doubt the immense development of the material resources of our vast continent have long since thrown into comparative insignificance the once all-important fisheries of Massachusetts. But a question which has a strong national sentiment behind it, a question which is bound up with the history and tradition of a nation, cannot be assessed as if it were a mere matter of dollars. Such unsettled questions are a constant menace to the peace of nations. A lucifer match costs next to nothing, but it is worth any money to remove it from the midst of a powder magazine. The fishery dispute may involve very few actual dollars, but it holds within it the potentiality of involving two great nations in war. Hence the importance of settling it amicably. No doubt our Secretary of State and your Foreign Secretary could settle it in a trice if they had a free hand. But your colonists won't let you give way to meet us, and the Gloucester fishermen, as you say, have a pull on the Senate. Therefore, nothing can be done by the principals. What can be done is what we are doing now—refer the whole question to a competent authoritative impartial tribunal, and the ease and relief that will come to all concerned will be worth more to the Empire and to the Republic than all the fish that have ever been caught or that ever will be caught in the territorial waters in question."

In very much the same fashion spoke

the counsel for the British. "It is quite true," they said, "that the profit on the fish involved in the controversy is a mere bagatelle. From a pound, shillings and pence point of view there has seldom been a more insignificant question submitted to international arbitration. But that is not the right point of view from which to look at it. Questions of the greatest importance from the point of

THE HOTEL DES INDES AT THE HAGUE.
The headquarters of the American delegates at the trial of the fisheries dispute.

view of international law have been raised by the American pleadings. You think this arbitration only affects the Gloucester fishermen. I tell you that if this court were to decide in favor of the doctrine put forward by the Americans in their pleadings there is hardly a country in the whole civilized world which might not find its vital interests materially affected."

"You refer, I suppose, to the claim that a bay is not a bay if its entrance is more than six miles wide?"

"That is important, no doubt, but that also is a mere bagatelle compared with the other question to which I refer. I mean the claim to apply the doctrine of servitude as it is known in the civil law to international treaties. It is a novelty in international law. If it is accepted by this tribunal it would revolutionize the relations of almost all the States in the comity of nations. It is difficult to exaggerate the consternation which the acceptance of such a principle would create in the chanceries of Europe."

Of that, however, I shall have occasion to say more hereafter. At present I will content myself with quoting from the opening speech of the president the following passage, which indicates his estimate of the immense importance of the pending arbitration. Dr. Lammasch said:

"Matters of great importance have been adjusted in these modest, provisional rooms, some of them involving the most delicate questions of sovereignty and national pride, all implicating intricate problems of international law.

"But perhaps never till now has there been entrusted to an arbitral tribunal a question of such gravity and of so complex a nature as in the present case of almost secular standing. Many of the documents in this case are prior to the independence of the United States of America, some of them go as far back as the seventeenth century. Upward from 1818, during more than ninety years, the questions implicated in the present arbitration have been the subject of almost uninterrupted diplomatic correspondence and transaction, and more than

THE AMERICAN COUNSEL FOR THE NEWFOUNDLAND FISHERIES DISPUTE LEAVING NEW YORK FOR THE HAGUE.

Left to right: Robert Lansing, Watertown, N. Y.; Dr. James Brown Scott, Hon. Samuel J. Elder, of Boston; Senator George Turner, of Spokane, Wash.; Chandler P. Anderson, of New York; Hon. Elihu Root.

once they have brought the two great seafaring nations of Europe and America to the verge of the extremities of war.

"And now these two nations, to which the world is indebted for so much of its progress in every sphere of human thought and action, have agreed to submit their long-standing conflict to the arbitration of this Tribunal."

The court itself affords a striking contrast in its severe simplicity to the pride, pomp and circumstance of glorious war. Five gentlemen plainly habited in the ordinary costume of the white civilized man sit behind a long table and listen with more or less profound attention to the forensic eloquence of a succession of counsel. The counsel wear neither wigs nor robes. And they all speak English. For four hours a day in two shifts of two hours each the stream of legal pleading runs on without a break. Each counsel can speak as long as he thinks his case demands. All the American counsel speak under direct instructions from Washington. But the four British counsel are briefed from London, from Ottawa and from St. John's, Newfoundland. Sir John Finlay, who opened the case for Canada and Newfoundland, was British Attorney-General under the late Unionist administration. He is Scotch by birth, but his accent does not betray him. He is an old hand in international court practice. He speaks slowly, clearly in pronunciation, and lucidly as to argument. "A man of singularly pleasant utterance," said Elihu Root, after listening to his opening speech. "Really," said one of the American junior counsel, "Sir John put his case so plausibly, so cleverly, so convincingly that one almost expected to hear him conclude by an appeal to the court to declare that there was no case, and that the only thing to be done was to enter judgment for Great Britain and then dissolve the court."

All the evidence relevant to the case has been printed. No witnesses are called. Every conceivable relevant or irrelevant fact relating to the question in dispute is duly recorded in the 1,584 documents put in by the litigants.

The five judges profess to have read all these documents and begged, somewhat pathetically, to be spared hearing them again and again from the lips of counsel. Sir John Finlay promised to be merciful, but it is not an extravagant calculation that the court will hear the vital clauses of the Act of 1818, in the interpretation of which everything turns, read at least 100 times, in whole or in part, before the case is disposed of.

The president, Dr. Lammasch, is professor of the University of Vienna, Aulic counsellor and member of the Upper House of the Austrian Parliament, but for the present purpose is more distinguished as being the only member of the court who sat as delegate in both The Hague Conferences. Dr. Lammasch was a good friend of the Americans in their struggle for arbitration both in 1899 and 1907. He speaks English very well, is a brisk, alert professorial kind of a president, with stiff upstanding hair, and a quick, keen pair of eyes glancing thru his glasses. He has his wife and daughter at The Hague, and unlike the other judges he is staying at a pension in Palace street. The final decision of most of the questions in dispute will largely rest with him. But following precedents, he will compass sea and land in order to secure, if possible, a unanimous verdict.

On his right sits a smooth-shaven judicial - looking Dutchman, with the white tie that at first suggests an English clergyman. This is Jonkheer A. F. de Savornin Lohman, former Minister of the Interior, and if I remember aright a member of one of the first courts impaneled under The Hague Act. He is an international jurist of repute, a man who seems to be over sixty. Of the English and American judges I need say nothing. They neutralize each other. The presence of those who are as it were judges in their own case is only tolerable on the assumption that they are sitting as umpires to see the game played fairly than as actual judges. They can only add to the moral value of a verdict by voting against their own side. Otherwise their judgment is discounted. They are, however, useful, not to say indispensable, when questions arise as to compromise. As umpires and negotiators they are so valuable that their presence on the judgment seat does not provoke protest or create scandal. The third independent member of the court is Dr. Drago, the famous author of the famous Drago doctrine, the acceptance of

which, by the Conference of 1907, was one of the most valuable contributions made by that assembly to the cause of the world's peace. Dr. Drago is the youngest man on the bench. He sits on the extreme left of the president. He is dark in complexion, spare in body and alert in mind. The *Cologne Gazette,* in an article on the court, declared that Dr. Drago has been nominated by the United States as a compliment to the South American Republics. This may be set off against the other story that Dr. Drago is more British than the British. The fact is that Dr. Drago was notified that he had been selected as arbitrator by both Britain and the United States. He will do his duty impartially and well. No man was better liked at the Conference of 1907, and no man brings to the court a more anxious desire to ascertain the truth and to decide according to justice. Dr. Drago is staying with his daughter at the Hotel Orangia at Scheveningen. The American delegation is established at the Hotel des Indes, in the Plein at The Hague. I found Mr. Root in the same apartment where I had previously met Sir Julian Pauncefote in 1899, President Kruger in 1900, and Mr. Choate in 1907. The British delegation is at the Oude Doelen. There Newfoundlanders, Canadians and Britishers, with the aid of some of their wives and daughters, are engaged in the congenial task of cementing the foundations of Imperial Unity. The judges hold themselves more or less severely apart from the counsel. The British are using this occasion very adroitly for the purpose of conciliating their colonial allies. The Attorney-General, Sir W. Robson, who manages the British team with great skill, is giving the Canadians and Newfoundlanders all the rope they desire. They are allowed to lead, they are encouraged to state their own case in their own way, and the British King's Counsel are ever ready with their wider experience and more expert training to help them in case of need. The colonials are made to feel at every turn that they possess all the privileges of absolute independence with all the advantages of Imperial protection.

The two leaders on the opposing sides, Sir W. Robson, British Attorney-General, and Senator Elihu Root, ex-Secretary of State, will reply on the whole case. While each will contend as strenuously as their respective clients can desire for the whole case committed to their care, both men are profoundly convinced that it would be for the benefit of both were a settlement to be arrived at by mutual consent and to general satisfaction rather than that their own side should win a complete triumph which left the other side smarting under a sense of injustice. The materials for a mutually satisfactory settlement are not far to seek. Five out of seven questions are matters of local detail, raising no serious matter of principle. The other two are of great and far-reaching importance.

The American contention that a concession by one Power to another of rights of way or privilege of access sets up an international equivalent to that known as the doctrine of servitude in the civil law, is capable of such development as to be a bar in future to any such concessions. If right of access, right of way, right of fishery, etc., cannot be conceded by one Power to the subjects of another without thereby establishing an *imperium in imperio* based upon a partition of sovereignty—and that is the sum and substance of the American contention as the British understand it—a decision to that effect by the court would not only be a fatal bar to all future arrangements of the kind, but it would give a *locus standi* before The Hague Court for every Power to claim a right to share sovereignty where its subjects have been secured concessions by treaty. England, for instance, has numberless treaties with various Powers securing British subjects concessions of various kinds. A breach of these concessions would give the British Government ground for complaint. But it has never hitherto been held that the treaty-guaranteeing privilege carries with it a partition of sovereignty or establishes a state of servitude. The British believe that the Americans will disclaim any intention to put forward seriously a contention the logical consequence of which would revolutionize the existing *status quo* and place a fatal obstacle in the way of concessions which the United States as a great, a growing and an expanding Power is at least as

likely to desire as any other State in the world. If this belief be correct a way out of the present difficulty might be found by waiving the claim to a right of concurrence in the framing of regulations. By universal usage the framing and enforcing of local regulations necessary to secure to the concessionaires the privileges to which they are entitled is left to the Power exercising local sovereignty, and not until such Power is guilty of bad faith by framing or enforcing regulations inconsistent with treaty rights has the other Power a right to intervene. It is not contended that Great Britain has acted with bad faith, and the British admit in the most unqualified terms that any regulations incompatible with the equal rights conceded to American fishers could not be defended for a moment. In these circumstances, with two such men as Sir W. Robson and Mr. Elihu Root in charge of the discussion, a satisfactory settlement ought not to be difficult.

The other question, "When is a bay not a bay," is more difficult owing to the differing views held at different times by the disputing Governments. Each has defined a bay according to its own ideas of its own interests in each case as it arose. The American contention that a harbor or inlet is a part of the open sea unless it is less than six miles wide is now opposed by Newfoundland, chiefly on the ground that they have two bays or inlets of value to the herring fishery which are just a little over six miles wide at their mouth. All the water in these bays, they claim, is part and parcel of their own territorial jurisdiction. If for miles the court were to decide to substitute leagues in accordance with the general usage at the time the treaty of 1818 was negotiated Newfoundland would be satisfied. But it is probable that the court will shrink from laying down any hard and fast principle which would inevitably be quoted as decisive in the case of other bays in every other part of the world. The near future, however, will put an end to these speculations, and the award of the court will be awaited with keen interest all over the world.

THE HAGUE, HOLLAND.

John Brown's Soul

BY WILLIAM E. BARTON, D.D.

[The poem by Edna Dean Proctor, we find, appeared first in THE INDEPENDENT of January 15, 1863, and it is given at the end of Dr. Barton's article as there printed. It is a very interesting memorial of the days of the Civil War.—EDITOR.]

WHILE preparing an address to be delivered on the fiftieth anniversary of the hanging of John Brown, I remembered to have heard that the original version of the John Brown song was written by Edna Dean Proctor, and first appeared in THE INDEPENDENT. I wrote to THE INDEPENDENT to obtain the original verses, and found that the matter had been forgotten in the lapse of fifty years, and could not readily be traced. I then wrote to Miss Proctor, who replied that she remembered to have written some verses about John Brown and that they were printed in THE INDEPENDENT, but had no copy of them, and did not remember just when they were printed.

I then went to the lady in whose address I remembered to have heard the statement, and she loaned me a manuscript copy of the verses, and told me of another lady who possessed an old book containing them. I have followed the lines to this last hiding place, and the volume lies before me. It is a thick book, entitled "Our War Songs, North and South," and I think cannot have

been published much earlier or later than 1884. [G. Brainerd's Sons, Cleveland, 1887.—Editor.] Unfortunately, it has seen much service, and the title page is gone, and the preface and the notes that accompany the songs are unsigned.

There is an extended introduction, containing the history of some of the songs of America, and among the rest is a history of the John Brown song. It gives as its authority "the investigations of a newspaper writer," and says that Miss Proctor wrote the original version in 1861. Against so early a date is the recurring line, "Freedom reigns today." I should think it more likely that this song was written later in the war, after the Emancipation Proclamation. Even so, it does not lack the prophetic note.

Inasmuch as THE INDEPENDENT has forgotten this, among its many good deeds, and Miss Proctor's recollection is not very distinct, and most other people have forgotten it, it is certainly worth while to reprint the verses. Let me also give the data which I find in the old book concerning the song.

This book says that soon after the hanging of John Brown, there originated in Boston some doggerel verses which were sung by the Douglas and the Bell and Everett Marching Clubs in the campaign of 1860, and which taunted John A. Andrew, then and during the war the Governor of Massachusetts, with the failure of the John Brown raid, with which he and his fellow Republicans were supposed to have been in sympathy. These lines were sung to the old hymn-tune of Greenville, in imitation of the old ditty,

"Go tell Aunt Rhody,
Go tell Aunt Rhody,
Go tell Aunt Rhody,
Her old gray goose is dead."

And the song ran,

"Go tell John Andrew, etc.
John Brown's dead,
Salt won't save him, etc
John Brown's dead."

The memories of this song were fresh in Boston in 1861, when the islands of Boston harbor were full of soldiers on their way to the front.

It is further stated that in 1855, a Mr. William Steffe, a popular song writer in Charleston, S. C., wrote the melody for a drinking song,

"Say, bummers, will you meet us?"

This was used by a fire company in that city, and spread out to the camp meetings, where it was changed to

"Say, brother, will you meet us?"

Brander Mathews, in a very interesting article on "The Songs of the War," published among the war papers in the *Century*, in August, 1887, and unfortunately not reprinted in the war-book afterward compiled from those valuable papers, opines that this camp meeting melody had become familiar thruout the North by 1861, and thinks that the "Go Tell John Andrew" song suggested this as a sort of retort.

The old book goes on to say that Col. Fletcher Webster, a son of Daniel Webster, caught two lines out of Miss Proctor's song, and says that Mr. C. Sprague Hall, who had been credited with the authorship of the song, is authority for the statement that it originated in this fashion, and that a Mr. Greenleaf, of Charlestown, Mass., suggested the melody from Charleston, N. C., which had come by way of the fire laddies and the camp meetings, and drifted onto the islands in Boston Harbor. He says that as there sung by the soldiers, it contained but one stanza:

"John Brown's body lies a mouldering in the grave,
John Brown's body lies a mouldering in the grave,
John Brown's body lies a mouldering in the grave,
But his soul goes marching on."

Both these lines are contained in Miss Proctor's poem, and whether they originated with her, or were taken by her from the doggerel words of the song and incorporated into a more worthy poem, may be uncertain. I am inclined to think the latter is true, and that the files of THE INDEPENDENT early in 1863 might show that the song in this much improved form followed the Emancipation Proclamation.

Miss Proctor writes that she remembers writing the song, but that she attached no importance to it, and does not know that it served as the original of the John Brown song, and had not thought of it in that relation till Edmund Clarence Stedman suggested it to her. It would be unfair to her to represent her as claiming to have originated the song.

But she certainly gave it a far better form than that which is commonly sung, and one which ought to be preserved.

It is time for John Brown's soul to start on a new march. The colored man never needed or deserved a friend so much as he does today. If some one with the courage of John Brown, and more wisdom than the old hero sometimes displayed, could rise and lead this unfortunate people into the heritage which freedom ought to bring to them, it would be the best thing yet accomplished by the spirit of the old hero of Ossawatomie.

Who will write the song to which the soul of John Brown shall lead these people on their march toward this greater victory than the pike of John Brown, or the pen of Lincoln or the sword of Grant could give to them?

OAK PARK, ILL.

John Brown Song

BY EDNA DEAN PROCTOR

[From THE INDEPENDENT of January 15, 1863.]

JOHN BROWN died on a scaffold for the slave;
Dark was the hour when we dug his hallowed grave;
Now God avenges the life he gladly gave,
Freedom reigns today!
Glory, glory hallelujah,
Glory, glory hallelujah,
Glory, glory hallelujah,
Freedom reigns today!

John Brown sowed, and his harvesters are we;
Honor to him who has made the bondsman free;
Loved evermore shall our noble Ruler be;
Freedom reigns today!
Glory, etc.

John Brown's body lies mouldering in the grave;
Bright o'er the sod let the starry banner wave;
Lo, for the millions he periled all to save.
Freedom reigns today!
Glory, etc.

John Brown lives, we are gaining on our foes;
Right shall be victor, whatever may oppose—
Fresh thru the darkness the word of warning blows.
Freedom reigns today!
Glory, etc.

John Brown's soul thru the world is marching on;
Hail to the hour when oppression shall be gone;
All men will sing, in the better age's dawn,
Freedom reigns today!
Glory, etc.

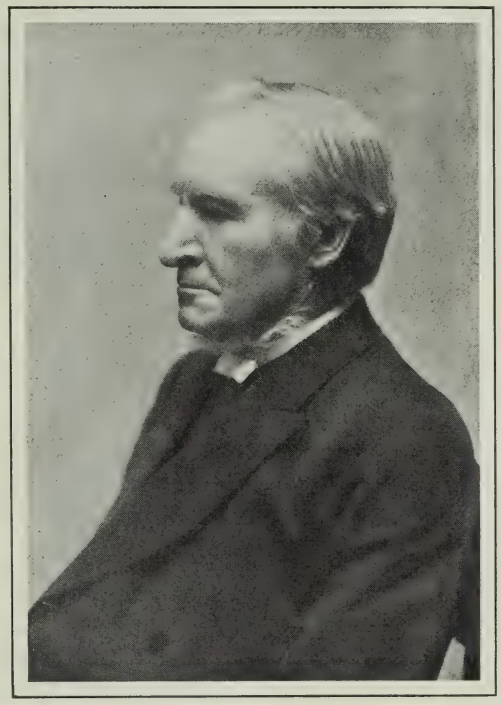
John Brown dwells where the battle strife is o'er;
Hate cannot harm him, nor sorrow stir him more;
Earth will remember the crown of thorns he wore.
Freedom reigns today!
Glory, etc.

John Brown's body lies mouldering in the grave;
John Brown lives in the triumphs of the brave;
John Brown's soul not a higher joy can crave;
Freedom reigns today!
Glory, etc.

The Great Conference in Edinburgh

BY HENRY A. STIMSON, D.D.

[The following appreciation of the Missionary Conference just concluded at Edinburgh is by the pastor of the Manhattan Congregational Church, of this city, himself one of the American delegates to the Conference.—EDITOR.]



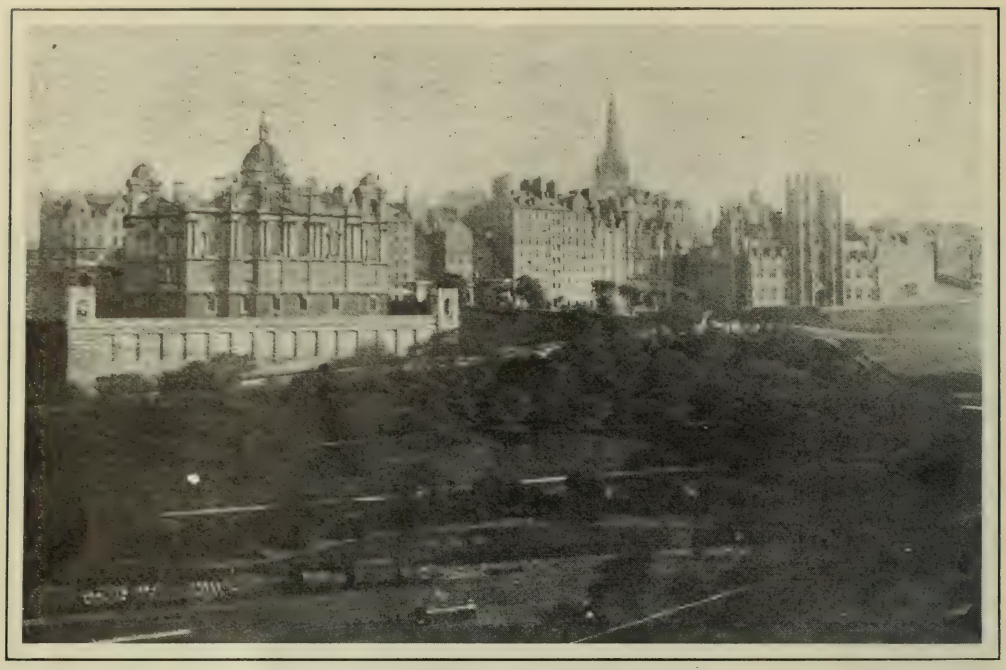
NOW! Now! Now! has, from the opening meeting on, been the dominant note of the great Missionary Conference in Edinburgh. It was sounded in the opening address of the president, and, whatever subject was under discussion, the development and independence of the native churches, the increase of higher education, the exalting of the native ministry, the pushing of evangelization, the advance upon the unreached peoples and areas, or the claims and opportunities in great fields like India, China and Africa, and in the new spirit that is distintegrating the non-Christian religion, the emphasis was invariably upon the exceeding importance of the present hour, amounting, it was claimed, in many cases to a crisis. And this was no excited talk of the enthusiast or ill-considered utterance of men without responsibility. The speaking has been almost exclusively that of men from the field, and those whose official connection with the missionary societies has given them large experience.

Never was a convention held more strictly to the business in hand, and never was that business less allowed to be interfered with either by "business" or oratorial display. Not a minute has been wasted. The eight reports of the eight great commissions, which have been at work gathering their material for a year and a half, were the material for as many days of consideration at two long sessions daily. These were on Carrying the Gospel to the Non-Christian World; The Church in the Mission Field; Education in Relation to the Christianization of National Life; The Christian Message to Non-Christian Religions; The Preparation of Missionaries; The Home Base of Missions; Missions and Governments; and Co-operation and Promotion of Christian Unity.

The method pursued was a model for all great missionary and ecclesiastical assemblies. These commissions sought from all parts of the world the widest and completest information on their separate subjects. This they condensed and reviewed in printed reports adding carefully considered conclusions. These reports were distributed in advance. Each day every delegate was furnished thru the mail an outline of the report, with *"Agenda"* indicating the line in which the business committee wished it to be reviewed and discussed. The chairman of the commission opened the day's work with a brief illuminating statement of the question and of the work of the committee. Then followed in two sessions some five hours of keen, intense and searching discussion, almost entirely confined to statement of fact, account of personal experience, or expression of judgment by men who had come from the thick of the battle in the mission fields of the world. Opinions differed sharply on many points, but it was noticeable that all the speakers were careful to say they could speak only of their own field. The situation must needs differ greatly in different lands, for example, between Central Africa and Japan or India and Korea. Speeches were strictly limited to seven minutes, consequently the attention of the great audience never flagged and not infrequently the last hour produced the most thrilling address. A man who did not come directly from the field or was not very sure of his knowledge might well hesitate to send up his name to the chairman with the request to speak and few or none of that class did so. The amount of fresh and important material made available for the conduct of missionary enterprise was enormous, and the examination and revising of both principles and methods of operation cannot fail to be wide-reaching, if not in some cases revolutionary.

The utmost unanimity prevailed upon the great questions which were uppermost. At the opening session the presi-

dent. Lord Balfour of Burleigh, the lineal descendant of the Bruce and the official representative in Scotland of the King, a fine figure of a man, in profile much like the late Dr. John Hall, in a noble and stirring address, returned again and again to the necessity of a united Christianity, and the waste and weakness resulting from our denominational differences. He pleaded for a closer and more sympathetic fellowship with men of every race, a fellowship which the missionary illustrates; and he emphasized in the new awakening of the Orient the immediate importance of Christianity as alone making possible the enlightenment and liberty upon which the hope of the nations depends. He said, "There cannot be Christianity without liberty and liberty without at least the restraint of Christian ideals is full of danger."



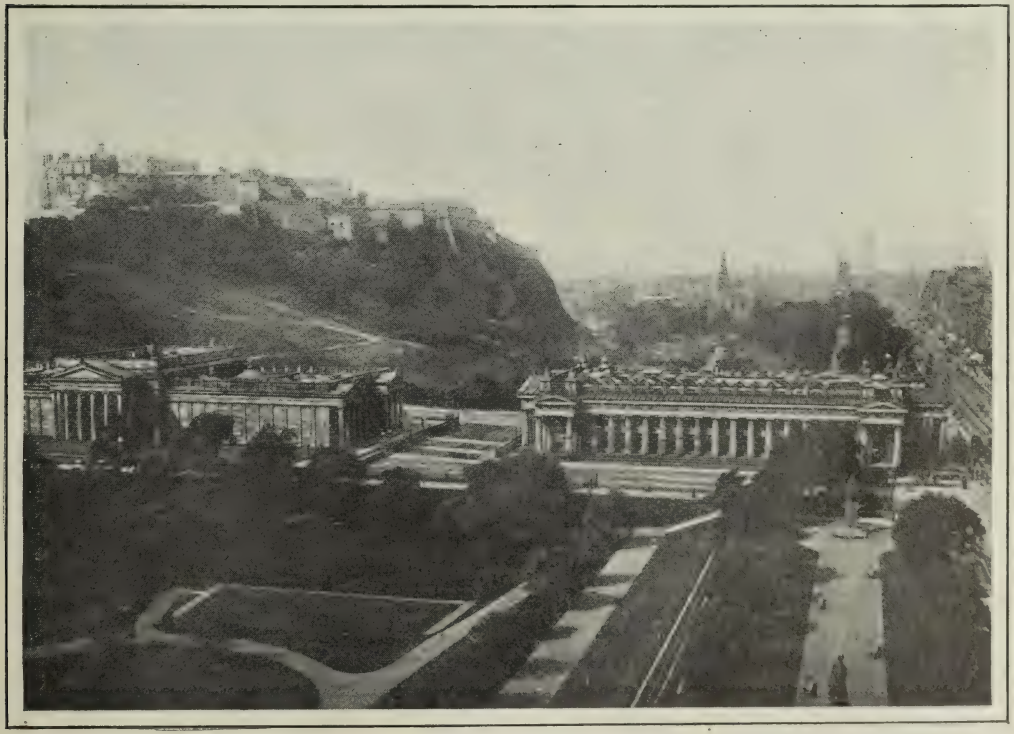
DR. ALEXANDER WHYTE.

The quaint opening prayer by the aged and famous Edinburgh preacher, Dr. Whyte, which a Scotchman by my side said no other living man could make, was along the same line. He seemed to feel himself amid "the goodly fellowship of the prophets," and he proceeded to thank the Lord for them by name, the Anglicans for teaching us to pray, the Covenanters for their faith, Jeremy Taylor, and John Bunyan, and McCheyne and Rutherford and David Livingstone and Spurgeon and Alexander MacLaren, characterizing each with a word; then he got back to John Knox; his Scotch soul caught fire and he found in him the faith that will make all believers one. The Archbishop of Canterbury, who followed, had an easy task, as, laying aside all hint of his rank, and carefully discarding any ecclesiastical tone or utterance, he exalted the missionary work as that which looms largest and matters most in the world today. Simply and eloquently he pleaded for the recognition of this and of the urgency of the present need, with the assurance that the sacrifice and effort involved have connected with them promise of the largest results.

To these thoughts, in subsequent sessions, the convention quickly added that of uniting as rapidly as possible the work on foreign fields, of ceasing to teach distinctive denominational tenets, of aiming at a local and national church where possible, of taking hands off the native church and pressing upon it full responsibility of Christian service and independence of planning in full force to advance upon the unevangelized millions that still are to be found and, at the same time, of greatly reinforcing the existing missions. Southern India, for example, calls for at least 8,000 additional missionaries. The stupendous character of the task now before the Christian world was always in evidence. Of the thousand millions of the population of the world outside the Christian nations only to two hundred millions is the Gospel in any reasonable sense accessible. Altho there are between four and five hundred versions of the Scriptures of one kind and another, there are in Africa about one thousand different languages or dialects, and of the one hundred and forty in India only for eighty are there as yet translations of the Bible.

So pressing were the claims of each

ASSEMBLY HALL, EDINBURGH.



separate topic and so eager the interest that the chairman always had in his hand a dozen or twenty more cards of speakers than the time would allow. It was "the King's business" indeed, and it required not "haste" simply, but wisdom and earnestness of the highest type. The opinion was frequently expressed that the conference would mark an epoch in the history of missions. It can hardly be otherwise: not so much because new methods were devised, as because of the clarifying of views, the reducing of waste, the wise direction of effort, the revivifying and energizing of familiar truths and the suggestion of what will be to many new points of view, with a tremendous uplift in courage and expectancy, and an altogether new sense of the fellowship of Christians and the greatness of the missionary work.

The personnel of the convention has been not the least important feature. It is said to be, if men are not counted, but weighed, the greatest assembly ever convened in the British Isles. The missionary societies of all the Protestant nations and churches are represented; many of the best known men in the Christian world and missionaries innumerable from every land are to be seen. The Archbishops of Canterbury and York with many bishops, the chief dignitaries of the Scotch churches and universities, many well-known men from America and Canada, with others from Germany, Norway, Denmark, Holland, Switzerland, Lord Balfour, Lord Cecil, Lord Kinnaird, the Master of Polwarth, Lord Reay, late Governor of Bengal, the older missionaries like Dr. Watson, who has been fifty-seven years in Egypt, and young men from the heart of Africa and the center of China, a Chinese Christian professor in his native costume, the venerable Dr. Chatterji with his long white beard from India, and an Anglican "brother" from Delhi with the ascetic features and the coarse brown robe and girdle of a Franciscan monk, were to be distinguished in the audience, or heard as speakers. As I took my seat the first day I found myself beside President Harada, of Japan. Just beyond was a Hindu; a little further along an African, in front a Chinaman and next to me a Scotchman. A few ladies were among the official delegates and many in the galleries, many with refined strong, dignified, sweet faces, but none more attrac-

tive than Miss Scrabji, from India, with her white silk shawl draped about her shoulders and her quiet and beautifully intelligent countenance conspicuous from all parts of the house.

The conference was held in the Assembly Hall of the United Free Church of Scotland. It is on the Castle Hill, looking down upon the famous Princes street and the long garden-like park that lies between. It is one of the most picturesque and beautiful urban scenes in Europe. The hall, which holds over two thousand, is admirably adapted to its uses, with ample subsidiary accommodations and with perfect acoustic qualities and excellent artificial ventilation. The hospitality of Edinburgh is boundless, the weather was perfect most of the time and the management of the convention could not have been better. To an American there were some marked novelties. An "executive chairman," Mr. John Mott, was chosen to preside, and did it simply and admirably. The large business committee carefully selected to represent all interests occupied raised seats in front of the desk, and was always in evidence. It controlled the docket, arranging it carefully in advance, and relieving the presiding officer from uncomfortable responsibility. Large parallel meetings were always in progress for which as well as for the galleries in the Assembly Hall special tickets were furnished at a small price. The delegates, 1,200 in number, also paid a "registration fee" of $2.50 in obtaining their official admission tickets, and these, with the special tickets, must have materially helped to meet the expenses of the convention, as well as to secure audiences for the various meetings, and proper accommodations for those chiefly concerned. In any case I have heard no complaints, and it is difficult to see how any great assembly could be better managed.

The evening meetings were carefully planned and occupied with two or three important addresses, often three or four meetings proceeding at the same time, with crowded houses. Among the missionary speakers our Americans, Drs. Jones and Hume, of India; Bishops Brent, of Manila; Root, of China; and Robinson, of India, and Drs. Arthur Smith, of China, and Moffatt, of Korea, were

EDINBURGH CASTLE.

particularly effective, while Dr. Henry Sloane Coffin and Mr. Robert Speer made notable addresses. For its incisive eloquence and courageous earnestness Dr. Coffin's was a splendid use of a great opportunity. His challenge to Christianity at home to live up to its professions and to present to the non-Christian world an individual and national life governed by the teachings of Christ was thrilling in its arraignment and in its appeal. The Archbishop of York subsequently spoke to the same end.

From beginning to end the conference has been characterized by the note of success in the missionary enterprise both in the present and in the future, by confidence in the Gospel of Jesus Christ both as a personal faith and as a subduing and reforming power in the world, by assurance of the reality and adequacy of the Christian life of the native convert in all the various mission fields and under all the varying conditions, by expectancy of great and rapid advance of the work thru the new evidence of the presence and power of the Spirit of God, as seen in recent progress in Korea and China, and the changes going on in India and Japan, by the surprising unanimity of the welcome given on all sides to the news of the drawing together in co-operation and even in organic union of the different societies and denominations on the foreign field, and by the strong conviction that the time has come when Christians at home will be moved in the same direction, and the home churches will throw themselves into the foreign missionary service with a strength and devotion such as they have not known.

No one wishing to understand the religious situation of the world today should fail to read the remarkable closing chapter of the report of the fourth commission, that on "The Relation to the Non-Christian Religions." It concludes thus:

"Hitherto the work has been advancing gradually, and slowly and imperfectly the resources of the Christian church have been developed to meet the need. But suddenly the whole situation abroad has been changed; and almost without warning we find ourselves in a new world of incalculable peril and opportunity. The momentous question arises whether at this moment the Church possesses the spiritual resources for the emergency which has so suddenly risen upon her. Duty has led us into extremity and extremity casts us upon God. . . . The spectacle of the advance of the Christian Church along many lines of action to the conquest of the five great religions of the modern world is one of singular interest and grandeur. *Vexilla regis prodeunt.* But at least as remarkable as that spectacle of the outward advance of the Church is the spectacle of the inward transformations that are in process in the mind of the missionary, the changes of perspective, the softening of wrong antagonisms, the centralizing and deepening of faith in the Lord Jesus Christ, the growth of the spirit of love to the brethren and to the world. Once again the Church is facing its duty and, therefore, once more the ancient guiding fires begin to burn and shine."

EDINBURGH, SCOTLAND.

The United States in Porto Rico

BY WILLIAM JENNINGS BRYAN

[We are very glad to give our readers Mr. Bryan's views of the situation in Porto Rico, which he has recently visited. He appeared before the Committee of the House on Insular Affairs immediately after his return and made an argument in favor of collective citizenship for the Porto Ricans and an elective Senate, and a referendum for franchises.—EDITOR.]

THE United States is in Porto Rico, and Porto Rico is in the United States, as a result of the Spanish War. The acquisition of the island was not contemplated—in fact, altho there had in former years been talk of the annexation of Cuba, little Porto Rico seems to have been overlooked. And yet it now turns out that Porto Rico was ripe for annexation and is the very base needed for the extension of our trade with, and our influence over, the republics of Venezuela, Brazil and Argentina. It is the key to the East Coast of South America, as the Canal Zone is the key to the West Coast.

Have you ever seen Porto Rico? If not, you have a picture in your mind, and it may be as imperfect a one as I formed before going there. I had learned that the island was, roughly speaking, 100 miles long and 50 miles wide. I could easily picture such an island. I had heard that a military road crossed the island from San Juan on the north to Ponce on the south, and that in the center of the island the road was about 3,000 feet above the sea, and I pictured an island rising gradually from all sides to that hight. But when I reached Porto Rico I found a miniature Switzerland. The beauty of the island surpasses anything I had heard or read—our people do not know what a gem they have in Porto Rico. Its mountains, its cañons, its deep gorges, its rivers, its waterfalls, its fertile plains, its rich valleys, its innumerable hills, its fields of cane and pineapples, its cocoanut groves, its coffee plantations, its orchards of oranges and grape fruit and its quaint old Spanish towns—all combine to make the island one of the most delightful places to visit. To add to its natural attractions they have built hundreds of miles of road so that one can now travel by automobile some 700 miles and see something worth looking at every mile of the way. When Porto Rico is known it is certain to become a winter resort for the people of the North Atlantic States. The hotel accommodations at San Juan are not the best at present, but arrangements have been made for a $400,000 hotel on the beach which will meet the requirements of transient guests, while the more permanent ones will prefer a cottage home surrounded by fruit trees and flowers.

It now takes five days to make the trip from New York, but it is only a question of time when larger and faster boats will bring the island within three days of the mainland. It is about 1,375 miles from New York, 1,250 from Norfolk, 1,100 from Savannah and 1,000 from Key West. A new line from Savannah and Charleston is already being discussed and it is not improbable that the railroads will one day be advertising a "To Porto Rico by land" trip by way of Florida and Cuba. A regular boat already connects Florida and Cuba and a line from the east end of Cuba to the west end of Porto Rico would reduce the water part of the journey to a minimum.

The effects of American occupation are very apparent. First, in sanitation. Great progress has been made in locating and eradicating disease. Some 300,000 cases of hookworm have been treated—all but 30,000 by the official physicians. An appropriation of $375,000 is asked for the completion of the work. There is no yellow fever there or bubonic plague. Second, the products of the island have largely increased in quantity and value. The cane crop has risen from 70,000 tons to 300,000 tons, and there has been a large increase in the production of grapefruit, oranges and pineapples. The grapefruit and oranges are equal in flavor to any in the market and the pineapples grow to enormous size—some exceeding 20 pounds in weight. But the most noticeable result of American occupation is the increase in the school attendance. It was less than 25,000 in 1898; it is now more than 100,000, and increasing. While the United States has furnished the initiative and done the directing, the Porto Ricans must be credited with hearty co-operation. The Porto Rican Assembly has responded promptly and liberally to every demand for funds for education. So much for what has been accomplished. What of the future? Governor Colton is urging the establishment of a Pan-American college on the island, with the idea of making it a training school for those who are to carry our trade to South America, and a university for those who come from the South American Republics to study American institutions. It is an excellent idea and has the hearty support of the Porto Ricans. Mr. Degetau, formerly the Porto Rican representative in Congress, made a similar recommendation some eight years ago. To work successfully among the people in South America one must know the Spanish character as well as the Spanish language, and a year's study in Porto Rico will be more valuable than several years devoted to the study of Spanish in the United States. Then, too, Porto Ricans, commercially inclined, after finishing the course in this college, can visit the United States, learn the details of some exporting business and go

to the South as commercial travelers. The college would doubtless attract young men from South America, not only because of its proximity, only two days from Venezuela and on the line from Brazil and Argentina to New York, but because one could study American institutions while studying the English language. Instead of decreasing, however, the number of students coming to the United States, it is likely to result in an increase, because a course at the Pan-American College would in many cases lead to a postgraduate course at some university in the United States. From whatever standpoint it is viewed, the Pan-American College looms up as an institution of great importance. Our nation is just beginning to understand the opportunity presented by the republics of Central and South America. It has been demonstrated that white people can live within the tropics; that the diseases formerly dreaded can be prevented, and this demonstration, together with the pressure of European population, will add greatly to the population of South America during the present century. Every student who comes from the Southern republics goes back a friend and champion of the United States. He carries our ideas and our ideals and becomes a customer for American goods. We can afford to invite him; we could even afford to furnish him board and tuition free; hence, the Pan-American College will prove a valuable asset from the day of its opening.

But we need something else in Porto Rico and we need it even more immediately and more urgently than we do the Pan-American College or university, namely: the application of the American ideal in government. Just in proportion as Porto Rico is near to South America —and especially since its people speak Spanish—it is important that we shall make it a working model of our governmental ideas. We have been inexcusably slow in offering them the privileges and guarantee of citizenship. I am writing this on the ocean and do not know just what has been done in regard to collective citizenship. The bill, as reported to the House, provided for individual naturalization, but there were indications that it would be so modified as to permit collective citizenship. This will be a much appreciated concession—in fact its denial has been one of the causes of friction between the Porto Ricans and the officials sent from the United States. The people, with few exceptions, want to become citizens, and Governor Colton's path will be made much more smooth by the conferring of citizenship upon the whole population, leaving those to reject it who desire to do so. The other point of friction is the Senate. At present the Senate is appointive—five out of the eleven being Porto Ricans. The bill, as reported, increases the number to thirteen and provides for the election of five. The Porto Ricans ask for a Senate entirely elective, and it is difficult to comprehend how an objection can be interposed from the standpoint either of principle or expediency. An appointive Senate is inconsistent with our institutions—in fact, we have to go to Europe for a precedent. And as little can be said in favor of its expediency. With an absolute veto power, which the Porto Ricans gladly concede, the Governor has all that a Senate would give him. He does not need a Senate to represent him; and the very existence of a non-elective Senate is a challenge to the representative body. One representative body is more apt to obstruct than two, because at present the one bears alone the responsibility of representing the people, while with two elective bodies the responsibility would be divided. It is of the utmost importance that there shall be harmonious co-operation between the people of the United States and the people of Porto Rico, and it ought to be easy to secure this when compliance with American principles is all that is asked by the Porto Ricans.

Just one more point. There are franchises to be granted in Porto Rico, and the franchise seeker is not always scrupulous as to his methods. We have seen him take advantage of cities and States in this country and he has even reached out after national franchises. It has required diligent effort to protect the public here; how much more care is necessary in Porto Rico. No franchises should be granted without the approval of some representative Porto Rican body

—City Council or Legislature, and wherever possible the people should be given a referendum vote on a proposed franchise. It is better to risk a little delay in granting a franchise rather than to allow a suspicion to rest upon our Government or its representatives. In other words, our Government should make Porto Rico an example and thru it speak to South and Central America. In no other way can we serve Spanish America so well, and that service, like all good service, will return to us in manifold blessings.

LINCOLN, NEB.

"The Lord My Healer"

BY MELANCHTHON WOOLSEY STRYKER

RIMMED by thy Gulf and Lakes and either Sea,
Shaped and reserved by our Almighty Hand,
Hail my America! thou people's land,
Whose awful name is Opportunity.

Wondrous thy story and thy heritage,
Thy strife that has been and that is to be,
To learn where Law locks fast with Liberty,
For final Man-right thy long war to wage.

What shapes of cunning, ill-born, malice lower
Above thy beautiful and bannered stars,
To foul and shred those white and crimson bars,
To steal thy strength and bring the baleful hour!

Upon thy vast experiment doth rest
What passioned hopes, what grim and seismic fear!
Remember whence and whereto thou art here,
And heed the human, piteous, behest.

Deny Him not who heals thee! Speak, aflame,
Full Freedom's challenge to a sobbing world.
Spare not! To every wind of Time unfurled
Set up thy guidons in thy God's great name!

Let all thy hills be joyful! Each fair vale
Bloom with Love's equity! Thy coronet
Be with Truth's everlasting rainbow set!
Follow to find the Light that shall not fail!

The University of Calcutta

BY CHARLES F. THWING, LL.D.

[This is the second article by the president of Western University and Adelbert College on the great Oriental universities. The University of Cairo was discussed in our issue of June 23. Articles on the Universities of Peking and Tokyo will follow.—EDITOR.]

IN his essay on Bacon, Macaulay says, "To give to the human mind a direction which it shall retain for ages is the rare prerogative of a few imperial spirits." This prerogative the essayist believes belongs to Bacon. Tho no such general prerogative belonged to Macaulay yet, as one reflects on the history of education in India for two generations, and as one considers the work of the first university of India, the conclusion is inevitable that to Indian education, both lower and higher, Macaulay gave impulse and lasting direction.

In the year 1834 Macaulay landed in Madras. Altho his purpose in going to India was not to form or to reform the educational policies of the Empire, yet his work in behalf of education was among the greatest works he ever performed, and was perhaps as great a work as was ever performed by one man for the education of a nation. At the time of his arrival, all educational effort had ceased by reason of divisions in the committee which administered public instruction. Five members of this committee were determined to maintain a scheme of education long in existence. This scheme largely consisted in giving stipends to students in Sanskrit, Persian and Arabic. Joined with this method, was the method of making large grants for the issuing of books in these three languages. It was a system of the endowment of Oriental learning. The other five members of the committee were determined to teach to Indian students the simple element of knowledge in their own vernacular, and the higher branches in the English tongue. The second method stood for the educational principles of the West. As a result of this apparently irreconcilable difference Macaulay wrote a minute in which he argued for the vernacular and the English method. This minute, which is as long as one of his essays, is thoroly Macaulayese in diction and in illustration. He says:

"In India, English is the language spoken by the ruling class. It is spoken by the higher class of natives at the seats of government. It is likely to become the language of commerce thruout the seas of the East. It is the language of two great European communities which are rising, the one in the south of Africa, the other in Australasia; communities which are every year becoming more important, and more closely connected with our Indian Empire. Whether we look at the intrinsic value of our literature or at the particular situation of this country, we shall see the strongest reason to think that, of all foreign tongues, the English tongue is that which would be the most useful to our native subjects.

"The question now before us is simply whether, when it is in our power to teach this language, we shall teach languages in which, by universal confession, there are no books on any subject, which deserve to be compared to our own; whether, when we can teach European science, we shall teach systems which, by universal confession, whenever they differ from those of Europe, differ for the worse; and whether, when we can patronize sound philosophy and true history, we shall countenance, at the public expense, medical doctrines, which would disgrace an English farrier—astronomy, which would move laughter in the girls at an English boarding school—history, abounding with kings thirty feet high, and reigns thirty thousand years long—and geography made up of seas of treacle and seas of butter."[1]

The minute thus made was adopted by Lord William Bentinck and his council in 1835, under the vote:

"His Lordship in Council is of opinion that the great object of the British Government ought to be the promotion of European literature and science amongst the natives of India, and that all the funds appropriated for the purposes of education would be best employed on English education alone."[2]

As a result of this vote, Macaulay was made the president of a body called to execute its provisions. The task was complex, large, difficult. If the larger share of the Hindu community were in favor of English learning, a still larger part of the strong Mohammedan community was opposed. The forces for carrying out the vote were thoroly in-

[1] A History of English Education in India, by Syed Mahmood, pages 50-51.

[2] A History of English Education in India, by Syed Mahmood, page 51.

adequate. The general staff was unorganized. No training schools for teachers had been founded. No body of proper associates were at his command. But, as a master of principles, as well as a master of routine, Macaulay at once

chancellor and senate. The governing body, or syndicate, consists of the vice-chancellor and certain members of the senate.

The early constitution of the University of Calcutta, like the constitution of

THE UNIVERSITY OF CALCUTTA.
On the left the Senate House; in the middle and on the right the Sanskrit College (affiliated). Within a half mile of this educational center are found five thousand students.

rose to the greatness of the opportunity. His work, done in four years, directed the course of education, primary and university, for the remaining decades of the nineteenth century, and its influence still abides.

The foundation of the three great universities of Calcutta, Bombay and Madras, in the year 1857, and later that of the Punjab, at Lahore and one at Allahabad, are among the results of Macaulay's service. It is notable that these first foundations were laid in the year of the Great Mutiny. The stirring of the people's mind over large affairs usually results in the laying of educational foundations. The University of Berlin was founded in the midst of the Napoleonic wars. Our own great Morrill land and university bill was passed in 1862. Calcutta was the first of the three to be incorporated. The foundation was, after due deliberation, modeled upon the University of London. It was made an examining institution, with the right of conferring degrees in art, law, medicine and civil engineering. In its constitution it is composed of a chancellor, vice-

its model the University of London, has been the subject of fundamental change. Experience has made manifest various shortcomings of a purely examining university, and the university on the banks of the Hooghly, as well as the university on the banks of the Thames, has taken steps to become a teaching, as well as an examining and degree-conferring, institution.

The amount of tuition, however, given directly by the University of Calcutta is still small. The larger share of the students who come up for either the matriculation or the degree examination have received their education in affiliated colleges. These colleges are in part missionary, and in part somewhat personal foundations. In any one examination of the university may be found students from Hindu, Mohammedan, Christian and other colleges. The examination room in the Senate House of the university on an examination day is a microcosm of the races, the religious beliefs, the castes, and the diverse culture of India.

The breadth of the service rendered to

the people of India and to the people of the world by the University of Calcutta is intimated in the number and variety of subjects, in which it examines candidates for its degrees. I doubt if any university offers a larger number. Among them are English, Bengali, Hindi, Uriya, Assamese, Burmese, Urdu, Modern Armenian, Classical Armenian, Arabic, Persian, Sanskrit, Hebrew, Greek, Latin, French, German, History, Political Economy and Political Philosophy, Mental and Moral Philosophy, Mathematics, Physics, Chemistry, Physiology, Botany, Zoölogy.

The list is appalling, but it is to be remembered that the topics cover some professional as well as undergraduate knowledge. The teaching in many of these subjects is not carried so far as it is in the better American colleges. The teaching in science in particular is limited, tho large progress is now being made. The teaching in Latin and Greek, also, is not prolonged. The place which these two classical languages occupy in Western education is taken in Indian education by Sanskrit, as in Japanese education it is taken by the Chinese classics. I have asked not a few of the most learned men of India whether India lost by studying Sanskrit and not Greek. The answer has invariably been in the negative. Sanskrit offers a literature as rich as that of Plato and Aeschylus. Its philosophy is declared to be more attractive to the metaphysical mind, as by common confession the Hindu mind is more metaphysical than the Greek. Its poetry is quite as noble. The value of the study of the Sanskrit language as an intellectual discipline is declared to be as great as the study of the Greek language. Its grammar is as regular; its forms are as finely scientific; and its whole spirit and atmosphere as philosophic. The Indian student thus finds in Sanskrit, it is by many affirmed, the same culture and training which the Western student finds in Greek language and literature. But altho the Sanskrit grammar is exact and affluent, it is also clear that these early scholars were not logicians. Grammar represents their highest attainments. In orderliness of conception, in freedom from the fantastic, the Greek is superior to the Sanskrit.

The difficulty in the administration of

AN ABANDONED ANCIENT OUTDOOR OBSERVATORY AT JAIPOR.

the University of Calcutta, and of the other universities of India, does not at all lie, therefore, in the lack of proper subjects of learning, or of examination; but difficulties do exist and they are serious.

One of them is found in the nature of the intellectual habits of the students themselves. The Indian student is not a student of the type in which the college officer and teacher rejoice. He lacks those virtues which are summed up in the good old word thoroness. He finds it hard to concentrate his mind on a single subject. His heart seems fixt upon the prizes which the higher education may offer, rather than upon the higher education itself. He sacrifices power to honor. This lack of thoroness, too, has relation to the typical Indian character. The Hindu is slight in body. His muscles are thin. He seems feeble, as well as small. He is precocious, premature. He may enter the university at fourteen, and become a bachelor of arts at eighteen. He may also be married before the age of eighteen. The support of a family does not promote thoroness or length of university careers.

Closely joined with the lack of thoroness is the too high place given to memory in scholastic concerns. The Hindu has a quick power of learning. This power is greater than the power of reasoning. The daily work of students illustrates the high place given to the memory. A teacher who prepares students for passing examinations of the University of Calcutta has said to me that they learn geometry purely as a memorizing process. This lack of reasoning helps to explain the interesting phenomenon that India has never produced more than three able mathematicians, and these three not of the first order. In the sixth, seventh and twelfth centuries appeared three algebraists who have a good place in the history of the most rational of the pure sciences.

MEDICAL COLLEGE HOSPITAL.

A third difficulty under which the University of Calcutta labors in leading the education of the youth of India arises from a lack of sense of proportion in the Indian mind. This lack is both of the head and of the emotional nature. The habit of exaggeration is both symbol and result of this evil. In his convocation address of 1905, at Calcutta, Lord Curzon said:

"It is quite a common thing to see the most

extravagant account of ordinary occurrences, or the most fanciful motives attributed to persons. Invention and imputation flourish in an unusual degree. There is a thing which we call in English a mare's nest, by which we mean a pure figment of the imagination, something so preposterous as to be unthinkable. Yet I know no country where mare's nests are more prolific than here. Some ridiculous concoction is publicly believed until it is officially denied. Very often a whole fabric of hypothesis is built out of nothing at all. Worthy people are extolled as heroes. Political opponents are branded as malefactors. Immoderate adjectives are flung about as tho they had no significance. The writer, no doubt, did not mean to lie. But the habit of exaggeration has laid such firm hold of him that he is like a man who has taken too much drink, and who sees two things where there is only one or something where there is nothing. As he writes in hyperbole, so he tends to think in hyperbole, and he ends by becoming blind to the truth."[3]

A further difficulty in which the higher education in India suffers lies in the dominance of the examination. That dominance, which has so long prevailed in England, and in so many respects disastrously, has tyrannized Indian education for more than half a century. The successful issue of an examination is the goal, far off or near, on which the student fixes his heart. That issue determines whether he shall be able to win yet another object of his ambition, a position under the Government. Such a position by a Hindu of the middle class is most coveted. For, under the narrow conditions of Indian society, the places he can accept are few. Therefore the examination system has been and is a dominating force in education of every order. Its influence has, on the whole, been and still is evil. It stimulates mere learning; it represses thinking; it narrows the scope of training; it makes instruction a type of the pump handle, as Thring of Uppingham would say, and robs education of its liberalizing character. It makes the student a collector of facts, and not a gentleman of culture and of intellectual, ethical and esthetic appreciations. But, be it added, in India, as in England, this system, so narrowing, so devitalizing, is losing somewhat its enslaving grip and influence.

FIELD DAY AT AN INDIAN UNIVERSITY.
The tug-of-war.

Thru the University of Calcutta and its companion universities the greatest progress made in education lies in the field of medicine and of pedagogy. In these two departments the work of the

[3]Convocation of the Senate, for Conferring Degrees, the 11th February, 1905.

university on the Hooghly is occidental. It links itself, however, with those institutions of the West which hold to the liberalizing value of professional education. Calcutta does not directly require the student to take his bachelor degree before entering upon his course for the medical; as do the best medical colleges of America. The whole medical course covers, however, no less than six years. The method is, on the whole, like that prevailing in the University of London. Normally the Indian student enters upon his medical practice at the age of twenty-two—some four years earlier than the customary age in America—but in this case he has usually had little or no period of residence in a hospital.

India, thru its universities, is also seeking to improve education of every order by giving a better training to its teachers. One of Macaulay's serious difficulties sixty years ago was a lack of good teachers. The difficulty is still serious. I can give no more adequate presentation of what the University of Calcutta is seeking to do in the training of teachers than in indicating some of the subjects in which it examines, upon the theory and art of teaching in relation to mental and moral science, it presents these topics:

"The physical basis of mental life; sensation, perception, attention, memory, association of ideas, assimilation of knowledge, feeling and volition; their associated physical conditions.

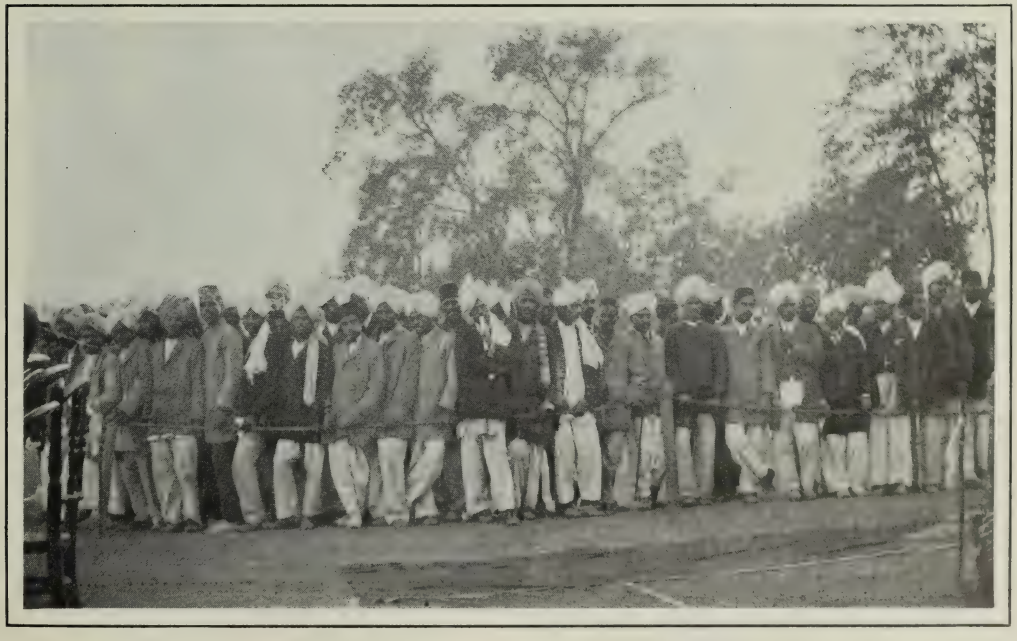
"Mental evolution in the individual—characteristics of different ages:—infancy and childhood—the school age, and the succeeding period.

"The training of the senses; coordination of sense and movement.

"The cultivation of attention and interest—the cultivation of the imagination and the emotions—the æsthetic basis of intellectual education.

"The logical basis of education—logical method—theory of the five formal steps—abstraction, generalization and conception—order of the acquisition of knowledge.

"Language, imitation and play as factors in education—growth of the linguistic faculty.



"The training and discipline of the emotions—cultivation of sympathy and the social emotions—of the moral sentiment.

"The training of the will—formation of habits—rewards and punishments—authority and discipline—the moral standard—the moral ideal and moral progress.

"Characters of individual children—marks of brightness and cleverness—marks of deficiency and abnormality—atavism, physical and moral.

"Tests of visualizing power, memory, verbal memory, command of language, sense of number, and the computing capacity, with the conditions of their growth and decline.

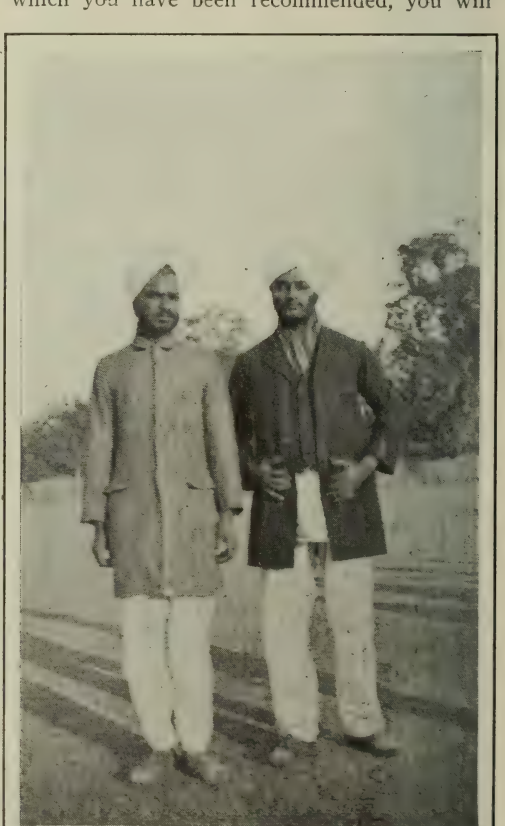
"Educational values and educational ends. Education: classical and scientific, liberal and technical, general and special. Civic education. Coordination and sequence of studies.

FIELD DAY AT AN INDIAN UNIVERSITY.
The spectators.

National systems of education; the primary, the secondary, and the University stage."[4]

The need of teaching and training in yet another profession is quite as great as in medicine and pedagogy; it is the general field of engineering. The Indian mind is rather literary than scientific, philosophic than practical. But India, as a country, needs development. The railroad system of 30,000 miles is still inadequate. The irrigation systems need vast improvement and enlargement. The agricultural system is terribly imperfect, as famines, both regular and irregular, prove. Many of the appliances and forces of civilization, electric, hydraulic, should be introduced. The great needs of India are technical. The few technical schools now established are insufficient in number, and inadequate in force. As the president of the best college in India said to me, "We are trying to oblige the Indian man to adopt these technical callings, but it is a long and hard struggle."

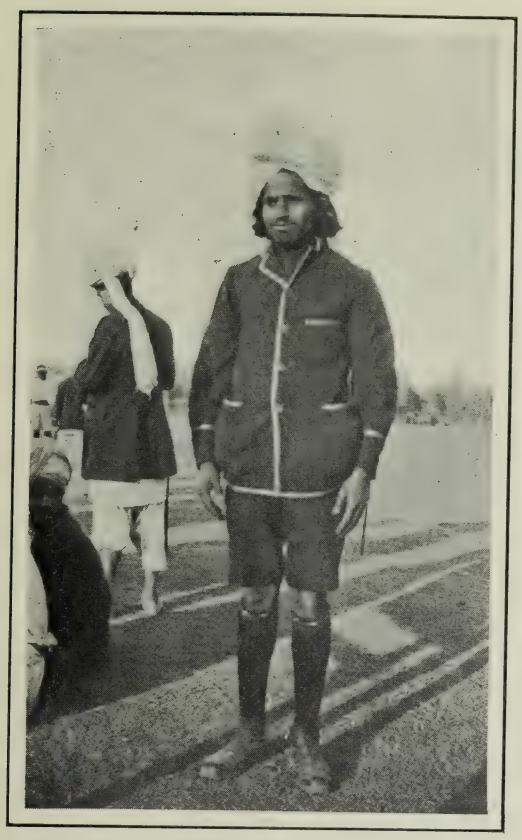
The great day for the student, for the teacher, for the examiner, for the vice-chancellor and the chancellor of the University of Calcutta, as of every university, is the day of the annual convocation. This day falls in what would be in America, the very midst of the academic year. It is a day not unlike the similar day at Oxford, or at either the old or the new Cambridge. It is an occasion which appeals alike to the eye, to the ear and to the heart of man. The assembling of candidates for degrees, the crowds of interested and wondering spectators, the band playing popular airs, the additional force of policemen, the general atmosphere of expectancy are as common in the university on the Hooghly and in the university of the Punjab as in the university on the Charles. But in one respect the difference is marked. In India the State or civil authority is manifestly made superior to the academic. The Governor-General, or Lieutenant Governor, presides, confers degrees and awards honors.



The Indian university is also more punctilious as regards academic order and ceremonial. Academic costume is prescribed on the degree-conferring occasion with far more care than in the American college. It is said that:

"Graduates shall wear a European dress with a college cap, or a chapkan and trousers with a shawl pagree and black taz."

No less than eight requirements are also laid down for the gowns and hoods of the several degrees. For instance, for the degree of master in the faculties of art, science and law, there is required a black silk or stuff gown. "The hood shall be of black silk or stuff, with lining of silk corresponding in color with the inside border of the hood for bachelors of the faculty."



But a still more important and fundamental difference is made plain in the questions which the chancellor addresses to the candidates for degrees. These questions are significant:

Chancellor.—Do you sincerely promise and declare that if admitted to the Degrees for which you are severally candidates, and for which you have been recommended, you will

SIKH STUDENTS AT LAHORE.

[4]Regulations of the Calcutta University, pages 245-6.

THE ONLY BELOOCHEE WHO HAS EVER WON A UNIVERSITY DEGREE.

in your daily life and conversation conduct yourselves as becomes Members of the University?

Candidate.—I do promise.

Chancellor.—Do you promise that to the utmost of your opportunity and ability you will support and promote the cause of morality and sound learning?

Candidate.—I do promise.

Chancellor.—Do you promise that you will, as far as in you lies, uphold and advance social order and the well-being of your fellowmen?

Candidate.—I do promise.

Chancellor.—Let the candidates be presented.

In conclusion, the chancellor confers a degree under the following form:

"By virtue of the authority vested in me as Chancellor of the University, I admit you to the Degree of ————, and in token therof, I present to you this Diploma and authorize you to wear the robes ordained as the insignia of this Degree."

Thus the candidate of the five universities of India is in essentially similar ceremonies introduced to his world of work and of service. It is a world standing in less need of his service than he likes to believe. No people can be too well educated; but the proportional numbers of those who have received an education of different types may be ill-adjusted. India still lacks educated men, and lacks them tremendously. It is an illiterate people. But it has too many men of a literary education in proportion to those of other types and also in proportion to the needs of the nation. Nine-tenths of all the inhabitants of India are supported directly or indirectly by agriculture. Few are manufacturers or traders. The professional class is small. The opportunities for men of literary tastes and abilities are slight. To the aristocracy of religion and of concentrated wealth India can hardly afford to add the aristocracy of culture or of profession. Educated men, therefore, unable to find opportunities of legitimate service, are prompted to embrace opportunities that are illegitimate. Illegitimate opportunities prompt the founding of cheap newspapers devoted to vilifying the Government and lead to public speaking which is often a cheaper haranguing. The long and lengthening list of seditionists and conspirators contains not a few college men among its leading members.

This is one side, and the darker, of the political and educational condition of India. It is not, however, the only side. For tho emphasis on literary, as contrasted with technical education may be too heavily laid; yet not a few men who do receive degrees from Calcutta, Bombay and their companion universities, do devote their increasing powers in wisdom and sobriety to the enlightenment and uplifting of their own people. They do not fail to recognize the tremendously difficult conditions under which the English Government labors; they also do not fail to appreciate the state of their own people, of many tribes and tongues, scattered about in hundreds of thousands of little villages from Lahore to Tutucorin. They are at once patriots and individualists. These men are seeking by wise methods and in calm earnestness to make their people—sane masters of themselves—worthy of republican institutions, and to inspire them thru highest thinking and just appreciations unto great living, unto greater achieving and unto even greater character.

CLEVELAND, OHIO.

The Woman Movement in England and in America

BY DORA B. MONTEFIORE

[Mrs. Dora B. Montefiore, the noted British suffragist, who is now making a tour of this country, is a typical English woman, tall, fine physique, clear complexion, musical voice and charming manner, somewhat motherly in appearance, but with a decided tendency toward fashionable dress. Altho originally from Australia, she has for a long time been connected with the popular movement in England, but gained her greatest prominence thru barricading her house to the tax collector as a protest against the injustice of taxation without representation. In this way she succeeded in keeping the bailiff out for six weeks, but, his patience becoming exhausted, he finally came in the name of the Crown with a number of men armed with pickaxes, broke open the door and auctioned off the furniture. Many women who attended the sale took advantage of the occasion to make speeches denouncing the attitude of the Government toward women. Hard as it was to see her belongings sold, Mrs. Montefiore considered the principle involved well worth the sacrifice and was willing to endure the discomfort and degradation of a term in prison for the same cause. She was one of the first of the suffragists to go to jail, and is popularly known as the "militant grandmother."—EDITOR.]

NOTHING in any modern upheaval has been more remarkable than the conscious and forceful movement of women, demanding equal economic and political opportunities with men. Whether in England's colonies beyond the seas, or in the small and oppressed Grand Duchy of Finland; whether in some of the States of America, or among the mountains and fjords of Norway, women have already conquered and gained their political enfranchisement and are encouraging their sisters in the fight for freedom.

But England, whose boast it is that her Parliament is the mother of Parliaments, and that her constitution ensures fredom to all, has not yet enfranchised her women. Neither have the majority of the United States of America followed the example of the more Western States and placed in the hands of their women the weapon of the ballot; but in both these great English-speaking communities the crisis is becoming daily nearer, when their statesmen will have to take a definite attitude on the subject, and when the just aspirations of women for political representation will have to be justified. Every Trade Union Congress in England for some years past, every Socialist and Labor Conference, and the Co-operative Women's Guild have bound themselves by resolution to work and agitate for universal suffrage for all men and women.

The Conservative element in the kingdom is spending enormous sums every year to force forward a bill giving suffrage to women on a property basis. Women of every shade of politics are showing by militant action that the time is gone by when they can any longer be deluded by the second reading of a bill, which was never meant to go further in the direction of becoming law. What then is barring the way for women at present in England? It is party expe-

diency, and nothing but party expediency. Neither Liberals nor Tories can be quite sure in what way the admission of women to political rights will affect party interests or the balance of power between the two capitalistic parties. The Tories might be induced by their lady supporters to bring in a bill to enfranchise women householders, and thus entrench still more securely the interests of property and of privilege; and suffrage societies composed of Tory and Conservative women pledge themselves in their constitution to resist any changes in the property basis of the franchise, and to oppose universal suffrage. The Liberals, smarting under the organized attacks of suffragettes, are sulkily indifferent, and their leader, Mr. Asquith, has refused to include women in his promised Reform Bill; though he has promised if a private member brings in an amendment to the bill, enfranchising women on a democratic basis, he will accept the amendment. Our hope, therefore, lies with the Radicals and Socialists; and it is men like Sir Charles Dilke, who for years has been educating the House of Commons on this subject, who will in the end help English women to their full enfranchisement. John Galsworthy, the dramatist and novelist, writes in a March number of *The New Age:*

"In an age when spirituality has ever a more desperate struggle to maintain hold at all against the inroads of materialism, any increase of bitterness in the national life, any loss of gentleness, aspiration and mutual trust between the sexes, however silent, secret and unmeasurable, is a very serious thing. Justice, neglected, works her own insidious revenge. There is an impasse. It will be easy to prolong that impasse indefinitely. It will be easy to go on saying: 'Your cause is not our cause; we can't help you!' To go on shouting: 'Behave yourselves, if you want us to do something!' But with every month every year, the germs of bitterness and of brutality have been spreading. . . . If any think that repression can put an end to this impasse they are mistaken. The idea of the full emancipation of women is so rooted that nothing can now uproot it."

It is for these reasons and appeals that I have been particularly interested in studying the woman suffrage question in the United States. Here I surely believe the women will not have the same problem to face as have their sisters in England. Here property and privilege have not the entrenched strongholds that they possess in the old country. Here men are prepared, if women can make good their case, and show that there is a real demand for their political enfranchisement, to grant them their demands. *The New York Times* took last year a straw vote of its own on the subject, and addressed an inquiry to all of the United States Senators and Representatives and to the presidents of all the universities and colleges. The replies showed that 49 per cent of the writers were in favor of woman suffrage, 28 per cent were opposed, and 23 per cent were either noncommittal, or favored the granting of a limited suffrage to women. This idea of a limited suffrage must, of course, be fought in the same way as other prejudices must be fought. The demand of the United States National Suffrage Society is for full suffrage and eligibility; and the Socialist women in their report presented in May this year to the national convention in Chicago resolved "that the Socialist Party demands equal suffrage, regardless of sex, color or race, and pledges itself to work, advocate and agitate for it." The modern argument in favor of our demands is the industrial argument. Women, like men, have been forced into industrialism, and are the creators of a great part of the wealth of the world. As the direct result of their political disqualifications, their status in industry is lower than that of men. It is to the interest, therefore, of any party representing the working class to demand the political representation of women. One result of the woman's franchise in Utah, Wyoming, Colorado and Idaho is that the wages of women in the public service approximate more nearly to those paid to men; and female teachers are paid at the same rate as male teachers, when doing equal work. Mrs. Bowman Wells, an English suffragist, who has collected statistics about the Western States where women are enfranchised, affirms:

"In the ten years ending 1900 the total value of farm property increased by 37 per cent. in Colorado, by 90.4 per cent. in Utah, by nearly 100 per cent. in Wyoming, and by 160 per cent. in Idaho. In California the increase was only 2.5 per cent. During the same period, while the total capital invested in manufacturing in California increased only 39.9 per cent., the

increase in Wyoming was 70.9 per cent., in Utah 122 per cent. and in Idaho, over 180 per cent."

The female illiteracy percentages of the great Eastern States are 25 per cent. higher than that of Colorado, 40 per cent. higher than Idaho, 60 per cent. higher than Wyoming, and nearly twice as high as Utah. With such facts and figures before them, I cannot believe that the men of a great and young country so keenly alive as they appear to be to all that makes for real and lasting progress, will long delay to grant the demand of their women for political equality. It is a well-worn axiom that "the safety of a government rests upon the consent of the governed," and women are no longer an inarticulate and consenting portion of the population. Revolt against existing disqualifications is spreading; and in these days when reason, rather than force, should decide all issues, it behoves the men who see life clearly and see it whole, to listen to the call of reason and to grant the just demands of women before there is any further appeal to force. Laurence Housman, in a recent poem dedicated to the women's cause, writes:

"'Tis England's need
Which bids her women now no more be dumb.
We cry for justice! And lo, Justice stands
Still with uplifted sword and balanced scales;
While in her courts blind Hate, with blundering hands,
Smites with brute force, and yet with brute force fails."

The women of America are to be congratulated that in their struggle toward freedom neither "blind hate" nor "brute force" will ever play a part. Let us hope we have seen the last of them in England.

An International Home Exchange for Young People

BY ERNST RICHARD

[The author of the following article is a lecturer on German history and civilization in Columbia University and president of the New York German-American Peace Society.—Editor.]

THE proposal of the organization of an International Home Exchange for Young People, is based on the idea that in all countries there are families that, altho settled comfortably enough, are unable to pay for the advantage of an extended residence of their sons or daughters in a foreign country. In case, however, that two such families in different countries agree to entertain a child of the other, the expense for board and lodging is the same as if their own child had stayed at home. An extra expense is caused only by the journey; and even this might be diminished by Government or private help. While scholarships in higher or special schools for students are a part of this scheme, positions in mercantile or industrial concerns ought to be provided for, as of the highest importance.

I have young people of seventeen to twenty-two years of age in view. Central Bureaus in both countries, supported by trustworthy persons who are to ascertain the fitness of the parties concerned, ought to conduct the negotiations.

The plan proposed is simply a combination, an expansion and systematization of institutions, existing already. For a long time the advantage of foreign residence for educational purposes has been recognized; far-seeing Governments and philanthropists have founded scholarships to send talented students to other countries. Nor is it unusual that young people, following a commercial or industrial career, are sent to foreign countries to learn their methods of business. It is furthermore not by any means a new idea that parents exchange children to let them have the advantage of learning bet-

ter a foreign language. Such has been the custom, for instance, between families in the German, French and Italian parts of Switzerland for many years, and I understand that it is not unfrequent in Hungary for purposes of modern language study. Systematized children's exchange has been instituted between France, Germany and England for some time. Of late, the promoters of international peace and solidarity have recognized the importance of these institutions for the promotion of international friendship; and with their help, the children's exchange has rapidly increased, so that during the year 1909 not less than 362 children (181 pairs) have benefitted by this institution.

It is now proposed to extend the advantages of the system to young people more advanced in years, and over countries further distant from each other, and to all fields of life. By trying to place young people in commercial and industrial enterprises—not necessarily for a financial consideration, but rather in the nature of an apprenticeship—besides boarding them in respectable families, wil offer more practical advantages than the mere exchange of students or professors, since it will not only result in a better knowledge of the foreign country and in the formation of friendship between the families belonging to the different nations, but it will in many instances lead to an increase of commercial and industrial relations of direct economical value. There is no doubt that there are great difficulties in the way of the realization of this plan, but there are so many groups of people and institutions interested in it that with their help, and an efficient centralized organization, all obstacles could be met and the proper agencies found for investigation. It is, of course, desirable that the two families, who exchange their sons or daughters, should be living under nearly equal social and economical conditions; in many instances their religious standing and other points will have to be taken into consideration. When the organization is perfect, there is no reason why not even the laboring classes might benefit by it; why, for instance, not the son of an American laborer might enjoy the hospitality of a German workingman's family, and vice versa.

Just one illustration! In this country, fortunately, the interest in forestry is greatly increasing. Suppose the exchange was organized at the present time, it would be easy to inquire whether or not some German forester would be glad to send his son for a year to America, and in turn offer to a young American student of forestry the chance to live and work for a whole year with a German forester learning the method, so successfully applied in that country, right on the spot. It will not be necessary to add other illustrations.

Circumstances of a personal nature brought it about that this plan has been submitted first to the Peruvian Government, which has received it with the greatest enthusiasm, and holds out the hope that it would pay the passage of young Peruvians who would go to America under the system. This news of the negotiations with Peru somehow found its way into German newspapers, and the Germans were strongly advised to adopt the plan without delay in order to promote their commercial interests in South America. The author has received several inquiries from Germany and Austria, assuming that the scheme was already in operation, making application for young Austrians and Germans to be taken into consideration. Most interesting was a letter sent by the Austrian Export Society in Vienna, a very important, semi-official organization, of which the leading merchants and exporters of Austria are the members.

They say in their letter:

"This excellent idea is very appropriate to bring the nations together and promote their commercial relations. Therefore, we would propose to include Austria in your project; we shall be happy to co-operate to its success."

Thus it can be seen that other nations are ready for action and are waiting for our initiative. It would be, therefore, highly desirable that the plan would be seriously taken up by some of our American organizations, peace societies, Chambers of Commerce, educational organizations and institutions and certain departments of our Government might join in the creation of a central bureau to execute the plans.

New York City.

Literature

The Indian

INDIAN INSPECTOR MCLAUGHLIN* writes a fascinating book. It is the work of one whose life has been spent among the Indians, who knows them as few, if any other, white men know them, and who tells what he knows in the language of the born story-teller. His subjects embrace a wide scope. He tells of Indian hunts and battles, of customs and manners, of superstitions and legends, and he gives an intimate picture of the aborigines' daily lives.

Copyright, 1907, by Crosset.
"TWO MOONS, NORTHERN CHEYENNE CHIEF."
From "My Friend the Indian." (Houghton Mifflin Company.)

Four of his chapters have notable his-

[1]MY FRIEND THE INDIAN. *By James McLaughlin.* New York: Houghton Mifflin Co. $2.50.

toric value. He gives the Indian story of the Custer battle, and also narrates the Modoc War, the flight of the Nez Perces and the incidents leading up to the death of Sitting Bull. No other white man is so capable of giving the Indian side of the Custer battle. He has talked with most of the prominent chieftains, and with a good many of the undistinguished warriors, who were in that conflict. Perhaps about no battle has no much foolish conjecture been written and spoken. Mr. McLaughlin's contribution deserves to rank with Captain E. S. Godfrey's account in the *Century Magazine* for January, 1892, and with Joseph Mills Hanson's relation in his volume, "The Conquest of the Missouri" (1909), as one of the three accounts which, taken together, compose a thoro and detailed description of that battle and the conditions under which it was fought.

Mr. McLaughlin describes with admiration the exploits of Chief Joseph, who with his Nez Perces in 1877 led the soldiers so exasperating a chase until they were finally rounded up by Miles in the Bear Paw Mountains. Examining Joseph's last battle-ground, he is struck anew with the "tremendous military capacity" of the chieftain who could plan defensive works like a trained officer, and who could for so long a time baffle pursuit. The author's account of the death of Sitting Bull throws considerable new light on the episode, and his narrative of the Modoc War, tho containing little that is new, is written with an understanding that will picture it to the reader with a fresh vividity.

Mr. McLaughlin describes the Indian as "a sort of half-starved ward in chancery." The Government holds about thirty-six millions of dollars in trust, besides many million dollars' worth of land, for the Indian. Instead of doling out supplies to him, a method which keeps him in a state of unthrift and indigence, the Government, Mr. McLaughlin insists, should give him his portion and turn him adrift to work out his salvation.

Mr. Leupp* treats the Indian problem in its entirety. A former Commissioner of Indian Affairs, he speaks with the knowledge of one who has dealt with every phase of the problem. He, too, insists that the Indian should be set upon his feet and that the ties which bind him to his tribe, in the communal sense, or to the Government, should be forever severed. The Indian must be recognized as an individual and so treated; he must be made an active factor in the upbuilding of his local community; his children must be taught to do needful things rather than read Latin or "extract the cube root of 123456789." To the objection that the Indian would probably be immediately swindled out of his possessions if forced to act for himself, Mr. Leupp reminds his assumed critic of the present measures for guarding the weaker and more ignorant Indians. Nevertheless, he wants the placing of personal responsibility upon the Indian to be hastened, satisfied that the harm will be but incidental and the good incalculable. No one who wishes to keep informed on the current phases of the Indian problem can afford to miss this book.

*The Indian and His Problem. *By Francis E. Leupp.* New York: Charles Scribner's Sons. $2.

Modern Japan

Not least among the memorials marking the semi-centennial of the commercial opening of Japan, under the Townsend Harris treaty, is this book* compiled by Count Okuma, who was one of the most hopeful pupils of Verbeck in Japan and an active mover in the Restoration of 1868. These men secured a coalition of the clans that took away from the Yedo Shogun the guardianship of the Kyoto palace and of the Emperor, and which in place thereof brought in the new Government. From 1868 until the present time Okuma, whether in or out of office, has been ever active in making that New Japan which resembles, both in beauty of its form and method of its growth, the peerless Fuji Yama of his native country. Resting upon a foundation of ancient rock, rises the great cone of lava that has risen up *de profundis*. That is the mountain, beautiful and strong. So the Japan of today, while borrowing from afar forces and appliances hitherto unknown and previously unseen, keeps in her own life the

*Fifty Years of New Japan. *Compiled by Count Okuma.* 2 Vols. New York: E. P. Dutton & Co. $7.50.

energies that are of herself. Despite the fears of those who do not know well the genius and history of Nippon, the new Japan is not destined to fall back.

These two volumes, well arranged and indexed, contain contributions from over fifty writers whose Japanese script has been translated into English by Captain Brinkley, who is without peer in his chosen field. The whole work, thus put into good form by Mr. Marcus B. Huish, is a reproduction and part condensation of the original Japanese publication. In the appendices are texts of the Constitution of 1889 and of treaties, a list of publications in science by Japanese, besides information as to weights, measures, wages, etc. It would have been well if some one who knew personally and accurately about the first missionary, educational and industrial pioneers had assisted the editors; for the one great defect of the book is, despite its generous acknowledgment, a special chapter on the foreigners who taught, aided and advised the Japanese in office, or who, by their enthusiasm and abilities raised up many of these contributors and other eminent men of the empire. Without such instruction, inspiration and initiatory work, it is certain there would have been no such New Japan as is here pictured and who speaks for herself.

The mass of information, relating to religion, philanthropy, culture, education, philosophy, science, fine arts, literature, politics, industry and socialism, here so well arranged and so interestingly set forth, is unified by Count Okuma's executive ability, insight and experience. Most valuable are his own contributions, in four chapters, concerning history, education and a final summary. None but he could have obtained from Prince Y. Tokugawa, the ex-Shogun, the last of his line, so significant an interview. In large measure, this personage summed up in himself the old civilization. Giving his views of the Restoration of 1868, which unified feudal Japan and made thereof a nation, the Prince would not be a Japanese if he did not argue with wholeheartedness in favor of loyalty to the Emperor. He even insists that in the teachings of his house and ancestors lay the seed bed of that loyalty, which, in its bright, consummate flowering during his own lifetime has unified the Japanese nation. Of course, no Western scholar can take seriously Count Okuma's assertions as to the very early history of Japan, for no critical scholar of any reputation believes that Dai Nihon has, or ever had, any written history which antedates the introduction of letters in the sixth century. In institutional life and artistic spirit the composite people now called the Japanese have a perspective that runs back into the days of the dolmens, before Chinese art or civilization were known or possibly even heard of. But anything more, politically or geographically, than a small court-center, with loose control over outlying regions, before the eighth century, one cannot see, in either their ancient texts or traditions; while the existence of anything that can be called a nation, or homogeneous body of people, before the twelfth century, a critic peers in vain to behold. For delightful optimism Count Okuma has no superior, while for exalted ideas of the greatness of the Japanese and the splendor of their future, the good sage reminds us less of Fuji Yama than of Niitaka (New High) which in Formosa is the still loftier mountain of the Japanese empire.

Space does not permit us to summarize the contributions of such eminent men as Ito, Soyeshima, Shimada and others in the brilliant galaxy of scholars in and out of the Imperial University and of its rival Waseda University, over which Count Okuma presides. Academic freedom is not yet permitted to the professors of the Government institution, and any critical examination of the dogmas and mythology on which the throne of Japan is supposed to rest may be visited with disgrace and degradation; but Waseda, besides beating our boys at football and being beaten, is a little more liberal. So we find Professor Kume talking freely of native religious beliefs. Yet even this chapter on Shinto is almost as colorless as the cult itself. Suffice it to say that no other book gives so full and genuine an account of the movements of mind in the country which, since 1868, is so worthy of the name of the Mikado's empire. Incidentally, this book reveals how vitally Japanese civilization is fed from its own interior springs.

Ants: Their Structure, Development and Behavior. By William Morton Wheeler, Ph. D. With Illustrations. New York: The Macmillan Co. $5 net.

This scholarly, systematic treatise, representing years of careful observation and research, has been awaited with much interest. Among social insects, always fascinating to man, the bees and wasps have heretofore been the chief objects of study, notwithstanding the fact that ants outnumber as individuals all other terrestrial animals and have the most highly developed, picturesque social life. Among foreign workers, Emery, Forel, Wasmann and Janet have made valuable contributions to this subject, as well as Miss Fielde and Dr. McCook in our own country. Professor Wheeler's book is, however, the most comprehensive study of ants in all phases yet offered in a single volume. Beginning with a general description of the ant and its place in nature, Professor Wheeler takes up the structure, development, history, classification and distribution, treating each division of the subject concisely, accurately and with full detail. The chapters on the social life of the ant treat of his relation to plants, to animals and other ants, including those interesting problems of nature, mutualism, symbiosis and parasitism. We may note in passing that in this part of the work the sociologist and the psychologist will find many suggestive observations. The chapters on sensation, instincts and behavior are of especial interest for the ant shows emotions akin to those of man, such as affection, hatred, fear, anger, elation and depression. The chapter entitled "The Instinctive Behavior of Ants" cannot fail to arouse interest and will repay a careful reading. Professor Wheeler here shows most plainly what he himself characterizes as the "critical and catholic" spirit of the scholar, for he is led away

"FEMALE, MALES, MAJOR AND MINOR WORKERS AND BROOD OF CAMPONOTUS AMERICANUS, X2."
From "Ants," by William Morton Wheeler. (The Macmillan Co.)

neither by the sentimentalism of the nature-lover nor the dry intellectualism of the laboratory scientist. This sane, broad outlook upon the subject gives the book its significance and its wide appeal. A final chapter upon methods of collecting and studying ants and a complete bibliography render it indispensable to the student. The book is profusely illustrated and the typographical work excellent. It is written in clear, forcible English, is replete with interesting facts and suggestions for correlative lines of thought. The technical language used thruout will, however, discourage the lay reader. On the whole, this volume is the most valuable contribution made in recent years by an American writer to entomological science.

WITHOUT THE SLIGHTEST HESITATION HE WHIPPED UP TWO WRITHING TENTACLES AND SEIZED HIM.
From Roberts' "Kings in Exile." (The Macmillan Co.)

Kings in Exile. By Charles G. D. Roberts. Illustrated. New York: The Macmillan Co. $1.50.

It is a far cry from "The Land of Evangeline and the Gateways Thither" written by Mr. Roberts for the Dominion Atlantic Railway Company in 1894

to *Kings in Exile*. The first is a theme that has often been handled before and by other writers, but the last opens up a new field. Various animals have been selected by Mr. Roberts and their life stories are told as they were in a wild state and how they came to be in exile. The book naturally follows the author's former studies, such as his "Kindred of the Wild" and "The Watchers of the Trails." It shows once more the close sympathy of Mr. Roberts with the animal life of which he writes so delightfully. The animals that appear in the present book take on a new charm under the kindly touch of this author, who makes them almost human. After all, why should not animals have hates, loves, memories and retrospection just as Mr. Roberts says they have? The buffalo, puma, moose, timber wolf, eagle, octopus, seal, bear, mink and fox all figure in one or more good stories in the volume. All are well worth reading.

Oberammergau. By Josephine Helena Short. New York: T. Y. Crowell & Co. Illustrated. $1.

Unless one approach the Passion Play given at Oberammergau every ten years, from the standpoint of the student, there is little literature on the subject that may escape the stigma of sentimentalism based on over-emotional observation. The actual performance as a plastic religious representation affects many people in different ways; hence the diversity of "Impressions." There is a certain amount of conventional material with which the tourist to the Bavarian village should be familiar; every decade, cheap guidebooks in all languages are issued, each one containing a bare outline of the drama, and the pictures now made familiar to all magazine readers. These pamphlets are usually flimsy in binding, and therefore many will find the durable *format* of Miss Short's small volume more convenient for handling. In fact, if one does not care to go to the expense of buying Madame Diemer's "Oberammergau and Its Passion Plays," this little book will satisfactorily outline the main facts about the drama and the people who play in it. Miss Short's approach to this most interesting of medieval survivals, is by no means original; not even in the expression of her personal feelings does she go beyond the commonplaceness of the average traveler. We are led to believe that she has been to the village and has been befriended by the villagers; despite these opportunities, her knowledge of the subject is limited, and her novelty is that of small incident which every tourist may gather for himself. The time has come for a real deep impression of Oberammergau, from the traveler who goes there. If the authorities value truth, and desire correct knowledge of themselves and of their play to be spread abroad, they should afford the student every opportunity to reach old record—without which no writer may proceed much further than Hartmann. Oberammergau is a social and economic community—a fact which no traveler has found of sufficient significance to deal with fully. The real literary person, rather than the casual observer, who leaves Oberammergau, should have a more coherent idea than Miss Short gives in a volume which her publishers have issued tastefully, to disguise how closely akin it is to the customary guidebook, of which there are so many.

Eugenics. The Science of Human Improvement by Better Breeding. By C. B. Davenport. New York: Henry Holt & Co. 50 cents.

We have never received so small a book with so much in it, that is, so much of what is both true and important. On this subject one should bear in mind what Josh Billings once wrote, in spelling even more simplified than ours, "It is better not to no so meny things than to no so meny things that are not so." Old wives' tales and sensational imaginings make up the bulk of what people think they know about human heredity. It is only in recent years that the experimental investigation of inheritance in the animal and plant worlds has been systematically undertaken and of the new knowledge thus acquired not much of it can be with surety applied to mankind. Professor Davenport, of the Carnegie Station for Experimental Evolution, packs into thirty-five small pages a plain statement of what is positively known so far as to the inheritance of personal peculiarities and he has room enough besides for a plan and plea for further research.

Literary Notes

....We would like to express our hearty approval of the series of English classics published by Longmans, Green & Co., New York. These books are issued in large type and substantial binding at the astonishingly low price of twenty-five cents each. The volume before us—*A Tale of Two Cities,* by Dickens—contains 377 pages and makes a standard library book. It is representative of the entire series.

...."The Graphic Arts and Crafts Year Book for 1910," as issued thru the Republican Publishing Company, of Hamilton, Ohio, under the editorship of Joseph Meadon in an admirable book. In its pages many problems are discussed with clearness and understanding. The amateur and professional may each cull something from its pages that is well worth while. The illustrations include some in color that are good to look upon. Progress all along the line is reported in the various arts and crafts which are given a place in this book.

....Mrs. Mary Heaton Vorse, the well-known writer of short stories, returned to this country last week from Paris. Her homecoming was a particularly sad one as she found that she had lost both her husband, Albert White Vorse, the author, and her mother, Mrs. Hiram Heaton, while she was at sea. At the time of his death Mr. Vorse, who had been a contributor to THE INDEPENDENT, and a few years ago a substitute in our editorial rooms for a few months, was engaged in writing a book on aeronautics. He had been a member of the Peary relief expedition in 1892.

....Don Carlos Seitz, the business manager of *The New York World,* is a busy man. The lure of letters is, however, strong within him, for in 1907 he found time to issue a volume entitled "Discoveries in Every-Day Europe." Mr. Seitz has followed the publication of this with *Writings by and About James Abbott McNeill Whistler: A Bibliography,* which was published last week through Otto Schulze & Co., of Edinburgh. This volume is crowded with titles and is indicative of the most industrious research. The book contains a list of Whistler illustrations and important reproductions. The magazine references to Whistler occupy considerable space. The printing was done by Turnbull & Spears in Edinburgh on English hand-made paper with deckle edges. 181 pp. Gilt top. The edition is limited to 350 copies and is imported by Ernest Dressel North.

....The Fourth of July as it has been celebrated is full of hazard. The casualties due to the unsafe and insane Fourth are great and we are consequently coming more and more toward an Independence Day that shall be safe and sane. Aside, however, from the danger to eyes, arms, legs and the body generally that is signified by a noisy and pyrotechnic Fourth there is another and more insidious hazard due to such a celebration of the day. The death rate according to physicians rises among their patients whose troubles are nervous and who chance to be on the border line with the advent of the din of the Fourth of July. The Society for the Suppression of Unnecessary Noise has recognized the fact that there is a work for it to do and this work has accordingly been done and is being done. Hollis Godfrey devotes some attention to this idea and in his volume *The Health of the City* he points out that unnecessary noise keeps the nerves of the American people on edge and thus the celebration of a Fourth with the cannon's roar, the rattle of musketry, the popping of pistols and the explosion of large and small crackers, to say nothing of mines and torpedoes appreciably shortens lives even if no mortal injury is inflicted.

Pebbles

"Is Mrs. Schnorer in?" asked the caller.

"Yes, ma'am," answered the maid-of-all-work in the boarding house. "She's in her room."

"Are you sure?"

"Yes, ma'am. I just overheard her taking a nap."—*Good Housekeeping.*

"You are wasting your time painting pictures."

"But I sell my pictures," protested the artist.

"And that convinces me that you can sell anything. Such being the case, why not take up life insurance, or steel bridges, or something with big money in it?"—*Home Herald.*

LINES FROM AN UNCLAIMED RIB.

Oh, unknown man whose rib I am,
  Why don't you come for me?
A lonely, homesick rib I am,
  That would with others be!
    I want to wed—
    There now, it's said!
      (I won't deny and fib)—
I want my man to come at once and claim
      His rib!

Some men have thought that I was theirs,
  But only for a bit;
We found out soon it wouldn't do;
  We didn't seem to fit.
    There's just one place,
    The only space
      I'll fit—(I will not fib)
I want that man to come at once and claim
      His rib!

Oh, don't you sometimes feel a lack,
  A new rib needed there?
It's I! Do come and get me soon
  Before I have gray hair!
    Come get me, dear!
    I'm homesick here;
      I want—(and I'll not fib)—
I want my man to come at once and claim
      His rib!

—*New York Times.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Bequests and Endowments

One of the most serious questions connected with the conduct of benevolent organizations is that of the accumulation of permanent funds. Considerable sums often come to a society by bequest, and often the donor's name is attached to such a bequest, making it a permanent memorial of him. Often the donor requires the gift to be maintained in perpetuity and its income only used for a definite purpose indicated by him. The question as to the propriety of such a permanent fund is raised by the enormous foundation which Mr. Rockefeller has proposed to establish, and which has alarmed some people because of its magnitude.

We may say, to begin with, that by common consent it is proper and wise to establish such permanent funds for educational purposes. Colleges and universities cannot depend on spasmodic beneficence. They must know what they can depend on, if private chartered institutions like Harvard and Yale. To be sure, there is a better way, and we have it in our State universities, and in our whole common school system, in which the present generation pays its own bills, but that is not yet the universal system. And yet, ideally, each generation should provide for itself. It is really not right that men should save wealth and scrimp comfort or pleasure to spare the next generation. Often it is no charity to those that follow. It may make them mean and selfish. We have known an endowed church to cultivate the meanness and stinginess of its members. There have been benevolent societies which, instead of seeking the confidence and generosity of the public have made their funds the excuse for spending their income on lazy officials.

Some organizations have the rule that all bequests should add to endowment, and officials may like that way. They say that this tends to a steady income as against alternate years of abundance and stringency. But there is a better way which benevolent societies are beginning to practice. It is that by which all the larger bequests are put in a general fund, of which one-fifth will be spent every year. This fairly equalizes the expenditures, and does not hold back the principal from the benevolent work. A bequest is all spent in five years. Or the larger bequests or gifts may be given to some one of the ancillary objects of the organization, so as to relieve the parent society of annual expenditures for it. Thus a missionary society may have to support a college in China or Turkey, and the transfer to it of a large bequest would make it independent of annual missionary aid.

This is a pivotal, critical period in the history of the world's civilization, much more than ever before. This has been the keynote of the Edinburgh Missionary Conference, as described by Dr. Stimson in our issue this week. A thousand dollars or a million dollars spent now for any one of a hundred good causes will do more, far more, than can the annual doling out of a 5 per cent. income. The profit, the compound interest on what is expended now and directly is vastly greater. The large social or educational or religious product of a large expenditure multiplies itself during all the years in which a similar funded gift is waiting to be appreciated.

As a usual thing a fund should be terminated within a moderate period of

years. We like the way in which the Peabody Fund for education in the South has been closed up. For a certain number of years, less than a generation, its income was distributed widely, in limited amounts, to schools. At last the trustees gave away the principal to establish a normal college in Nashville, Tenn. They have used their best wisdom, and it will do the best sort of service. We like the very elastic conditions provided in the scheme for this new Rockefeller foundation. The money can be used at the discretion of discreet trustees. But we would desire that not only should there be a rule forbidding the enlargement of the endowment from its income, but also that the trustees might be at liberty at their discretion to expend the principal also and put it at immediate work for the uplift of the world. There will be other calls for benevolence thirty years hence, and there will be other rich men, just as rich and just as willing, unless the social foundations are overturned; and in that case the public will, out of its own resources, do all that we now ask of benevolence. Whether that will be better we do not know. This we do know, that in the majority of cases a gift tied up by a dead hand to some special form of charity in the course of a century is an injury to the public. We also know that such bequests to churches have in Europe and Latin America become such a peril and menace that the State has had to seize and sequestrate them. It would have been better for Church and State if such gifts had all been distributed in their own generation.

Schooling in Democracy

It is well to turn now and then from the obtrusive and discouraging development of class power, privilege, ostentation, extravagance, wantonness, exploitation and cruelty, in a land that is consecrated to freedom and the square deal; and to renew our faith in government by and for the people, by looking at some of the democratic habits which multitudes of Americans are acquiring, in their own way, by their own experimenting, with no help from schools, or from a leisure class.

Every year sees an enlarging proportion of the wage-earning population brought within a comprehensive labor organization. By that part of the press which addresses itself primarily to employing and other business interests, the organization of labor is commonly spoken of as the work of "leaders," "bosses" and "walking delegates," as if the rank and file of the wage-earning population consisted of "dumb driven cattle," without plans, ideas or principles, and knew no better than to be made use of by self-appointed organizers. Actual employers know, by their own too frequent contact with a live wire somewhere, that the laboring population of the real world is not like the newspaper picture of it. But there is a large Philistine class in America, including some idlers, some curbstone brokers, some clerks, some professional men, which possesses exceedingly little real knowledge of life, and imagines the great army of wage-earning manual workers as not only unfit for political power, but as even too stupid to know or to look after its own interests.

A little painstaking study of the actual conduct of the affairs of organized labor would be "improving" to the Philistine mind and enlightening to most of us. It would bring us to the interesting discovery that whether or not the American people as a whole is forgetting how to be democratic, the wage-earning part of the people is learning by persistent experiment how to be more and more democratic in the day by day work of organizing and carrying forward the labor movement.

For example, within six months past, and in one instance within a few days past, employees of great railway systems have been deciding whether or not to strike. A momentous question of this kind is no longer decided by "leaders," or even by a council of authorized representatives of local organizations. The question goes to the rank and file. Plenty of time is allowed for the voting. Coercion, or pressure of any kind, from above is keenly resented. Each individual worker listens to arguments pro and con, makes up his mind, and votes as he thinks. The decision is the delib-

erate determination of men who will have to endure the disasters of any judgment that turns out to be wrong.

More slowly than wage earners in the mining, manufacturing and transportation industries, yet steadily the farmers also are learning to work together, and to promote their common interests thru effective co-operation. And it is noteworthy that, wherever co-operation among farmers has become an important factor in the economy and politics of any section, the same schooling in democracy that the wage-earners are getting is exerting its discipline and producing concrete results. Farmers' co-operative enterprises are almost invariably "run" in the last resort by the referendum vote. It is significant that it is in the sections where this schooling has for some time been going on, that experiments with the initiative and the referendum in local and State politics are most numerous, are most sincerely believed in by the people, and have thus far been most successful.

Surely such facts as these may afford us encouragement. The struggle between the People and the Privileged Interests in this country, has already become an uncompromising one, and it will be fought to a finish. The question has to be determined whether the whole people are sovereign in this country, or whether the real sovereign is a minority that has obtained power thru bribery, corruption, graft and privilege created by legislative act. The issue turns upon the competence of the people to organize and to carry on collective action for the common good on democratic lines, and by democratic means. If the masses of the people do not possess adequate political ability, they must, of course, become subject to the rule of a clever minority that can organize government and law on lines of class distinction. And democratic ability is not inborn. It is developed by practice. It comes with actual trial and experiment. That millions of the people are now getting a democratic schooling thru efforts to improve their economic condition, is the most substantial promise that we now have, that the people will continue to be masters of the situation.

The Railroad and the Farmer

TURNING the railroads from speculation to social co-operation means a great deal to the American people. Model farms, if run on up-to-date principles, owned and conducted as models by great railroads, mean a great deal more than is comprised in the usual term *farming*. The work of the railroads will substantially be that done by our agricultural colleges, only that the latter are localized so that the majority of the people do not get at them. These railroad farms should be open to the public, and bulletins should be issued, giving results of experiments. They will aim, of course, to embody the accumulated experience of experiment stations and colleges.

All this together tends to bring to the front industrial education, and this sort of education is just now called for by the people. Our farmers are getting tired of having their boys educated away from the farm, and at last our commercial industries and carrying industries are learning that their own prosperity depends upon building up the agriculture of the country, and carrying our productive capacity up to the highest limit. We note that a few of our cotemporaries express a fear that the railroads mean something very different, and will end in getting control of the land and the water powers—as they already are in control of the mines. We do not believe this to be among the possibilities, nor is it in the mind and purpose of the leaders in the new movement.

President Brown, of the Central, is a college man, and a believer in education. With J. J. Hill he sees clearly that our population is increasing faster than our productive capacity. We have got to do a great deal better farming in the United States than anything we have yet done. Taking the nine most important articles grown during the last year, including corn, wheat and oats, the American farmer averaged as a return only fourteen dollars and twenty-three cents per acre. There are many acres in the United States, cultivated intensively and wisely, that make returns of from $500 per acre to $4,000 per acre. The average revenue of Florida per acre last year

was $125 and even this does not stand for anything like a just maximum.

It will take some time to get rid of the old-fashioned, haphazard and guesswork land tillage. It will be hurried on we believe with more rapidity, by just such efforts as are being put forth by our railroads. That they can control the output to their own advantage exclusively we do not believe.

President Brown, in his address at Cornell University, asserted that the railroad had no other object in view at present than to show, by simple and inexpensive methods, under the superintendence of a live farmer, how the greatest yield could be got out of any soil; and at the same time the soil be on the road of improvement. Now it happens that this can be accomplished, and these two ends united in one, if what is known of legumes and cover crops is put in practice. The Central Road has already picked out its general superintendent of farms, and we imagine that within the next ten years this sort of education will make the farm superintendent a man of just as much importance to the road as the superintendent of the rolling stock.

Do not fail to bear in mind that this movement is sure to turn out a school for commerce and railroaders quite as important as for the farmers themselves. The traffickers will learn that to make goods is greater than to carry them. The farmer—even the heaviest water-logged old farmer can teach some very important lessons in economics, and the farmer that is up-to-date is a most splendid example of the folly of business conceit and business bigotry. Our transporters and haulers have needed just such company, and just such a lesson. There should not be a sharp separation of classes of industry. The farmer who ships his apples from Oregon to New York ought to have some knowledge of his goods after they leave his orchard. This long distance haulage is a new thing, and it has separated producer and consumer altogether too much. The keynote to prosperity lies in restoring as much as possible a close connection between producer and consumer.

We are now enduring the reign of the middleman, and a half dozen profits have to be tacked on to everything we eat and wear before it can get from the farm to the user. The railroad stands in a good position to help us solve this problem. President Brown says wisely that the true economy of our Eastern farmers is to learn what products they can most advantageously grow, and then understand the nearest and most convenient market for the disposal of these products.

In other words, it looks like the beginning of an era of good will between the shipper and the grower. This will increase the product of the producer quite as much as the profits of the hauler, and it is plainly good business policy all around. Thousands of run-down farms are run down, not from bad management so much as from ignorance concerning marketing. The proposition before these new railroad farms is to secure good management, with sufficient capital behind the work, and then to see that the crops are sold to the best advantage. Heretofore the railroad has gone off by itself; has been operated for its own sole interest; forgetting that the prosperous farmer was a necessity to permanent profit in railroading. It has been a case of disagreement between Nature's partners. In fact it is getting to be a generally apprehended fact, that, in these days of internationalism, and when nations cover whole continents, we have got to work together or fail together.

What is called a worn-out soil is not worn out; it is simply being worked under the depressing hand of ignorance. There is not any longer an excuse of this sort for deserting old farms. Land can be used to its utmost, producing annually the heaviest possible crops, and still grow fatter every year. The graduate of an agricultural college knows this; the old timer did not know it. The president of a railroad was not expected to know it until very recently; if he has found it out it is for mutual advantage. The legumes and the compost pile will keep any land rich, and make it continually richer. But when the farm is brought to its best, and its productive power to its maximum—if that can be supposed—the railroad is needed to carry the corn and wheat and hay to

market. So what can possibly be wiser than a wedding of the two industrial factors?

President Brown is not far out of the way that high class farming will feed an enormously growing population; will do it at moderate prices, and leave a splendid export balance. At the same time good business methods will so reduce the cost of tillage, that altho prices will be considerably reduced, the condition of the farmer will not be deprest. That the tariff must not meddle so generally with prices, outside of the growers' and the haulers' calculations, goes for the saying. The one thing that has not been heretofore worked on business methods is tilling the soil and feeding the people. Hereafter the farm must be conducted on the highest principles of both science and craft. The farmer will stand halfway between the agricultural college on the one hand and the great hauling forces on the other; and in close touch with both.

The Organization of Ill-Health

In our editorial on a national Bureau of Health, June 9, we called attention to all the arguments there are in favor of the organization of such a national department. The bill introduced into the recent Congress by Senator Owen, of Oklahoma, proposes the establishment of a Department of Health, with a parity to that of Agriculture and the others that have accomplished so much good. In spite of the many reasons—financial, purely physical, even moral—that there are for such a development of government, since the introduction of the Owen bill there has been a decided manifestation of opposition. The most interesting feature of this opposition has been the manifest organization of it. The literature is issued under the name of the National League for Medical Freedom. Within a few weeks three enormous advertisements have appeared in newspapers thruout the country urging people to write to their Congressman in protest against the Owen bill for a national Department of Health. Such advertisements cost much money. It is evident, then, that there must be a rather thoro organization and good financial backing for the opposition to a movement that seems so surely fraught with nothing but benefits for the people of this country.

We have called this The Organization of Ill-Health, because that is exactly what this organized opposition is endeavoring to accomplish. But is it possible that there are any interests in this country which have at heart the continued ill-health of our people, or who at least have many money reasons why various forms of disease and ill-health should not be eradicated? Those who are familiar with the recent medical history of this country know that there are not a few such interests. Commercial interests have always been inclined to run counter to measures for the general health of the people, whenever it seemed as tho their present interests might be affected by health measures. Even when they were short-sighted enough not to see that in the end health regulations would benefit them, their opposition was none the less outspoken. For instance, the merchants of the Southern States often combined in various ways and used all their influence, political, municipal and State, for the suppression of diffusion of information with regard to the existence of yellow fever. This always worked harm to them in the end, but they continued until the discovery of the mosquito and therefore of the power to suppress yellow fever to follow this short-sighted policy.

Just the same thing happened with regard to plague in San Francisco. There was constant denial by commercial interests of the existence of plague there. For the local health authorities to have ventured to proclaim its existence would have meant bitter, intolerant rancor and probably enmities that would seriously hurt any citizens of San Francisco who would attempt it. Even after the Marine Hospital Service made it very clear that plague actually was there, every effort was made to suppress or at least to minimize the significance of this fact. The consequence was that a long and costly campaign for the eradication of plague has had to be carried on, and we are not sure whether success has

crowned the efforts of the public health authorities. From the rats the plague spread to certain other rodents, notably squirrels, and plague bacilli have been found in these animals at such a distance from San Francisco itself that we are not sure whether there may not be an outbreak of the disease at some distant point quite unexpectedly. Each month almost has brought surprises in the investigations of the spread of the bacilli of plague to other forms of rodents, until those closest in touch with the Marine Hospital Service are quite dubious as to the ultimate result.

This is what happens whenever commercial interests think themselves likely to be injured even by measures that are well calculated to foster public health. Here is the African in the wood pile in the case of the organized opposition to the Owen bill. There are a number of commercial interests in this country that do not want an independent national Department of Health. In recent years we have had many exposures of the patent medicine swindle. We have learned that most of the most popular patent medicines, the so-called tonics, were nothing more than dilute alcohol with certain bitter drugs so as to make them taste mediciny. Physicians have seen alcohol habits formed as a consequence of freely imbibing these alcoholic preparations. Some of them were meant particularly for women's diseases, and the consequence has been a feminine nipping at alcoholic products that has worked serious harm to the women of the country. We have also found that the headache powders so commonly advertised were composed of drugs which, when taken as freely as was advised on the labels of many of these preparations, were seriously dangerous. We have had not a few, but many, deaths as a consequence of them. The soothing syrups for children mostly contained opium and were seriously injuring the growing child at an important period of its development, and adding to the number of nervous wrecks with tendencies to drug addictions in after life that we had in this country.

For a time after these exposures the patent medicine swindlers were very quiet. In many cases their advertisements disappeared from their usual places. Now they are gaining courage again. The American people have proverbially a very short memory for such exposures. The patent medicine people dread very much the organization of a national Department of Health, because this will sadly interfere with their now happy prospect of reviving their business and fattening their purses at the cost of the health of our people. This is one element in the opposition organized for ill-health.

There are others. There are a number of people in this country who would like to be freer to foist drugs, impure foods and questionable products of many kinds on our inhabitants, so as to make money, cost what it might in the health of those who consumed them. The consumer's purse they are interested in, but not his health. The organization of the national Bureau of Health, with its strict enforcement of the Pure Food and Drugs Act, and its sure tendency to further protect by legislation the health of our people, is a dread specter to such exploiters of the public, and, of course, they want to lay it if possible.

The League for Medical Freedom has a rallying cry. It is that the doctors are trying to create a medical monopoly—a doctors' trust. They insist that the Owen bill is due to the American Medical Association. As a matter of fact the bill emanates from the Senator from Oklahoma himself, and the movement for a national Department of Health has been organized, not by the American Medical Association, but by the Committee of One Hundred of the American Asscciation for the Advancement of Science. This organization, as is well known, consists not of physicians, but of the united scientists of the country, and only a very small proportion of physicians are in the membership. The Committee of One Hundred contains the names of many of the representative thinking citizens of this country. They come from all over the country. It is absolutely absurd to talk about such men as organizing a medical trust. Practitioners of all the different cults in medicine are agreed that a national Depart-

ment of Health would be a good thing, and cannot possibly interfere with present State laws as to medical practice. This organization of opposition should of itself be a strong argument for the Owen bill. We have the Organization of Ill-Health for commercial reasons. Let us recognize and appreciate at their true value exactly the elements that are engaged in it.

Modern Savagery

Primitive instincts die hard. Like error mixed with a little truth, as Spencer pointed out in "First Principles," they are extremely tenacious of life. In the disgusting exhibition of brutality to which the country has been treated in the Jeffries-Johnson fight we have an analogous instance. Ruskin somewhere calls war the supreme game, because life is the stake. The observer is sure that every resource of mind and body will be exerted where a mistake is irretrievable. In a measure this may account for the admiration with which a large and as a rule not very cultured class in the community follows the brutal details of a prizefight. They are reviving within themselves the instincts of a far-off savage ancestry, whose admiration for purely physical prowess entered helpfully into their struggle for survival and dominance. But we are living in times that can derive no benefit from exhibitions like this, for they exalt in man the brute of the stone age. Mountaineering, exploration and sane athletic games afford scope to develop in the modern man those qualities of strength, courage and endurance which deserve admiration because they are the expression of intelligence and not of brutality. There is another deplorable aspect of the recent fight, which places a heavy responsibility upon its promoters. It might have been foreseen that the matching of a white man and a negro would rouse the passions of race hatred thruout the country. This has taken place. From every quarter come reports of race riots with a long list of dead and wounded. Like the *Hexenlehrling* these apostles of savagery have unchained demons of disorder whom they are powerless to lay.

The Spoliation of Country Roadsides

There is an admirable society in Boston called the "Society for the Protection of Native Plants." A recent leaflet of this society, written by Walter Deane, makes a strong appeal to spare our roadside scenery. Mr. Deane pleads against the present-day tendency to "clear up" the roadsides by cutting down the very plants that beautify them, and which our modern landscape gardeners are striving to reproduce in private grounds and public parks. He says:

"The amount of information that the country roadside can impart to him who seeks it is unlimited. One day I took a short walk along a country road in New Hampshire, where the roadside tangle was left untouched. It did not harm the road, and it did not encroach upon the field beyond. Out of curiosity I began to note the plants along the way. In ten minutes, of trees, shrubs and smaller plants I had written down sixty-five species. It is this feast for the eye and the mind that makes country roads so attractive."

It will be well for road commissioners and the owners of roadside property to think on these things and conserve our greatest rural beauty.

Airships and Aeroplanes

The future is not with dirigible balloons. That seems settled. A huge balloon, like that of the Zeppelin airship smashed in a forest the other day, is the plaything of the winds. It cannot force itself against them. It presents to the wind an immense surface, giving the wind every advantage. Then its material, oiled silk or something like it, makes it easily torn. The balloon is a plaything and a dangerous one when it attempts to fight a storm. It is true that there have been scores of accidents also in flying aeroplanes; but in their case there is more hope of ultimate success. We doubt if it will ever be prudent to use even an aeroplane in a hurricane. Even birds, who have a million years' experience in flying, seek shelter in a storm. Possibly the albatross can fly with the storm, but more probably it settles on the water. The material of an aeroplane does not give surface for the crash of a sudden wind. Its level planes are aligned with the winds, and yet the gusts are dangerous. We have

much to learn in aviation, but all is hopeful; and a thousand inventors are busy with the problem which will give us ultimate control of the air, so that we may hope that, as the unsociable sea has become the connecting roads of nations, so the one common air and sky will give us a new earth as well as a new heaven.

Formation of an American Type

A paragraph in the annual report of the British Consul General for New York, entitled "The Formation of an American Type," is receiving much comment from the British press. It is based upon the preliminary report made to Congress by the Immigration Commission on the development of a distinct American type in the descendants of European immigrants. The investigation was undertaken in the first instance to obtain data on the question of the effect of American conditions upon the descendants of foreigners. For this purpose a sub-committee under the direction of a professor of Columbia University began work in the public schools of New York, by taking careful scientific measurements of the children of Sicilians and Hebrews. The results obtained so far indicate that the descendants of European immigrants change their type so completely in the first generation that they differ essentially from their foreign-born parents. Even the form of the head, which has always been considered a more or less permanent hereditary feature, undergoes considerable change. It was found, for instance, that the American-born children of the long-headed Sicilians and those of the round-headed East European Hebrews exhibit nearly the same intermediate head form. The Commission feels that it is too early to pronounce finally upon the changes indicated by the results obtained. But broadly speaking they tend to justify the suspicion with which anthropologists have lately come to regard head forms as criteria for racial classification. Much more observation is necessary before safe conclusions can be drawn on this point. Those who feared the effect upon the State of unassimilable immigrants will draw assurance from this report. Whatever the effect of education may be, the complex conditions of American life seem determined to mold the children of immigrants into physical conformity to an American type.

A Contrast

Here are two contrasted events to which we call the attention of those interested in comparative morality. The East High School, of Cleveland, Ohio, graduated this year 94 young men and women in the scientific course and 62 in the classical course. It sends annually a large number to the universities and the technological schools. The school receives children from homes in one of the best sections of the city. The valedictorian this year, standing at the head of his class, was a mulatto boy, Daniel D. Fowler. By his ability, courtesy and modesty this colored boy has won the respect of his classmates, and when in his address the principal of the school referred to him, the large class punctuated his words with loud applause. That is one story. The other comes from high schools in East Orange and Newark, N. J. In one case there was a colored girl and in the other case a colored boy among the graduates. It has been a custom for the graduating class to conclude its festivities with a dance. But the pupils were not willing to allow the colored boy or girl to be present, and refused them tickets. It was a cruel insult to those who had as much right as any to the privileges of the occasion. It was a brave girl who had presumably endured many slights in her determination to secure an education, and she ought to have been met with encouragement and good will. Probably the parents were more to blame than the white children, whose conduct in this affair shows them less worthy of honor than those to whom they denied the Christian fellowship of equal opportunity and the decency of equal courtesy.

Jane and Maud

Jane has just received an honorary degree from Yale. Maud has just given "Twelfth Night" at the University of California. Jane is writing the story of her life. Maud depicts the story of another's life. Jane is historic. Maud is histrionic. Jane improves the work house.

Maud elevates the play house. Maud appeals to the imagination, Jane to the heart. Maud fascinates, Jane sympathizes. These are two of the best beloved women in the United States.

The Supreme Court

In the death of Chief Justice Fuller last week the Supreme Court loses possibly its strongest member. Simple in his habits, a plain and agreeable gentleman, a great jurist, he upheld for over twenty years the very best traditions of the great bench over which he presided. If Justice Moody retires next autumn, as is now expected, President Taft will be called upon to fill four vacancies in the Supreme Court since he came into office. He has already appointed Judge Lurton and Governor Hughes. These men, together with the successors of Justices Fuller and Moody, may, by their decisions, change the whole economic and financial history of the country. Certainly no public duty that devolves upon the President under the Constitution is of more far reaching importance and requires more wisdom and delicacy than the selection of a judge of the United States Supreme Court. Fortunately Mr. Taft, with his own experience on the bench, can be depended upon to keep the personnel of the court up to its high standard as the greatest judicial tribunal of the world. And the report that Governor Hughes will succeed to the office of Chief Justice is a proof of this.

Help Wanted

Farmers are again crying for help, and the help problem is going to crowd on us this summer as it never did before. Wages are very high, higher than the farmer can pay under ordinary conditions, but they are freely offered and promptly paid. Employment agencies are swamped with orders for good men, ranging from two dollars and a half to three dollars per day. There is a largely increased area of wheat and other grains, and the harvest is going to call every man into the field, good, bad and indifferent. Gardening has immensely enlarged its areas in the irrigated sections of the West, and wherever intensive farming has made itself felt. Orchards of from one thousand to fifty thousand trees are being planted, and to gather their crops will tax the owners. Unfortunately in this case skilled help is needed, to prevent the crop from being ruined in handling. In some way this help problem must be managed differently from what it has been. The distribution of population is all wrong. We do not wonder that a mass meeting should have been held at Cooper Union the other night to consider congestion; or that they passed a resolution calling for the immediate appointment of an expert and unpaid commission to "devise measures and legislation to relieve the present and prevent future congestion of population." Machinery, with electrical power, is going to do a great deal more than it has done in some departments of farm labor, but the call for hands will be enough to give every man, woman and child in the United States employment, if we could only place them where they belong.

Flies

United States Entomologist Howard tells us that he proposes to inaugurate a campaign for the absolute elimination of the house fly, that ideal of filth and instrument for spreading malarious or other diseases. It is astonishing with what ease the number of these pests can be reduced so that they shall become insignificant. They breed in horse manure for the most part, and for that reason uncleanly stables are specially to be put an end to. A single pest hole of this sort neglected for a few weeks by its owner will breed flies enough to make a very large neighborhood miserable. A strong wind will carry them in clouds for half a mile, and by noting the wind one may trace the pests back to their origin. We believe that Dr. Howard will have a big job on his hands, but not at all an impossible undertaking. Already in the post offices are to be found State bulletins explaining the problem to uninformed people. The State Board of Health in Florida has printed its bulletin on cloth, and given it a very thoro distribution. It tells the people that flies breed in excrement of all sorts, in decaying vegetables, garbage and dead animals; that they are Nature's scavengers, but as such should

never be allowed to enter human dwellings or touch our food; that stables should be thoroly cleaned every day, and the accumulations covered with lime and sand. It urges that the sick with contagious diseases be treated under a net, both for safety to others and comfort for themselves. Food should always be screened, and especially fruits, salads and whatever else does not require to be cooked. The bulletin warns the people that flies will carry typhoid fever, if given an opportunity, to food in the kitchen and dining room. The secret of getting rid of flies is, first, cleanliness, and, secondly, screening all entrances into the house, especially the kitchen and dining room. The bulletin closes with this taking acrostic:

Flies are disease carriers;
Live and breed in all kinds of filth;
Infect food and drink by germ-laden feet.
Each female fly can lay 150 eggs.
Should be kept out of dwellings.

There is a bill before the Albany Legislature, such as comes before the legislatures of other States, which, while generally wise, has one provision applied to cities whose purpose is to make vice safe and protect men from contamination in resorts which ought to be absolutely suppress. A medical supervision of bad women, to fit them for their bad business, is no more needed than such a supervision of the men who visit them. It is a confession of cowardly incompetence to say that men will be bad, and therefore safe resorts must be provided for them. Not one such resort should be allowed, and if discovered, the same treatment should be meted out to both sexes. The disease of vice, the black plague, disables and kills more men and women—yes, innocent women—than the white plague of tuberculosis, and its extirpation should call for the most drastic measures. But it is futile to send one sex to the hospital and let the other run free.

Those who are advocating the opening of a canal system from the Lakes to the Gulf, and then from the Lakes to the Atlantic, and then an inshore canal system down to Florida, and a canal across Northern Florida into the Gulf of Mexico, are confronted all the time by the fact that Canada has very nearly completed a canal system from Georgian Bay across to Montreal, cutting out Lake Erie from Western shipments, and, of course, New York State as well. Meanwhile, the $101,000,000 barge canal seems likely to become a back number, for while ships will go direct from the Great Lakes to the ocean by way of the Georgian Bay Ship Canal, all ships reaching Buffalo will have to be unloaded and their contents carried in barges to New York City. The Grange and the farmers were emphatically opposed to this canal, and it begins to look as if their opposition was based on common sense.

Everybody praises the Swedes. There are no better people in the world. No more desirable class of immigrants comes to this country. We have a new evidence of their superior character in the result of a plebiscite on the question of the entire suppression of the liquor traffic thruout the country. Out of an entire population of 5,400,000 there are 3,200,000 over eighteen, of both sexes, entitled to vote. Of these 1,700,000 voted for prohibition and only 12,500 against it. So the Swedish saloon system will come to an end.

We judge the end of Finland has not come yet, even altho the Russian Duma has passed the bill putting all the acts of the Finnish Diet under its authority. This piece of tyranny and bad faith, which is parallel to what would be done if Congress should withdraw all State rights from New York, may for the present drive many Finns to emigrate, but times are moving fast, and the time will come before long when the Duma will represent the people and not the ruling class.

Four women "coeds" have just received "High Honors" at the Wesleyan Commencement. No men "coeds" could get higher than plain "Honors." Wesleyan is the university, it will be remembered, where the men don't believe in coeducation.

FINANCIAL

THE NEW BUILDING OF THE BOSTON SAFE DEPOSIT AND TRUST COMPANY.
100 Franklin street.

THE Boston Safe Deposit and Trust Company, which was organized in 1875, has just removed to its new building at 100 Franklin street from its former location on Milk street in Boston. This company with its perpetual charter is authorized to act as executor and trustee under wills, assignee, administrator of estates, trustee under individual debentures, and also as guardian of property, in all of which capacities it can offer many substantial advantages over individuals. The field of operations in which a trust company may be found useful is constantly growing, and to the original departments many have recently been added. The Boston Safe Deposit and Trust Company receives in the ordinary course for care and management real and personal property from those who may desire to be relieved from personal attention to these matters. It is especially convenient for one going abroad or traveling in this country who desires to escape the duty of clipping coupons from bonds, crediting dividend checks and collecting rents. The Trust Company is always found at its place of office. Its doors are open on every busi-

INSURANCE

The Automobile Menace

Look out of your office window, no matter what city you are in, and you will see an automobile. Try to cross the street and one of them is more than likely to come along with sounding horn warning the pedestrian to get out of the way. If a man is deaf or a little slow in his footsteps he is too frequently run down and the chauffeur sets up as a defense that the accident was quite unavoidable. Every one knows that more than half the "unavoidable" accidents could be avoided if the cars were run slower and more attention was paid to the rights of others in their use of the public streets. The automobile almost monopolizes the country roads and has become a positive menace. It looms large in the annals of accidents as reported by accident insurance companies. The Secretary of State of Indiana has recently found that the automobile is also a menace in a financial way. According to his report covering the months of April and May he issued 3,564 licenses for automobiles for the two months. Assuming an average of $1,000 for each car, it would of course appear that $3,564,000 had been spent for automobiles in Indiana within a period of sixty days. The statement has been made that in Indianapolis alone more than 1,900 homes have been mortgaged during the past year in order that householders may buy cars. The menace of the automobile now threatens the stability of the home, and the danger is by no means confined to Indiana. Even farmers are buying them. Perhaps you can hear or see one of these "devil wagons" while you read this paragraph about them. It would be worth while to think of them seriously, with the view of reducing the hazard they undoubtedly signify. The bankers of Kansas City and of the Southwest who are dependent on the Kansas City banks have agreed to lend no money to any one who intends to use it with which to buy a motor car. The bankers of Kansas are alive to the menace of the automobile, as well they may be when it is understood that $32,000,000 were invested in motor cars in that State during the last twelve months.

NOT long ago a fire insurance agent in New Bedford, Mass, strolled into the Acushnet Saw Mill Company's office and began talking with the mill superintendent about fire insurance. The superintendent did not seem to be very much interested, but while he was talking with the insurance agent a fire broke out in his mill and did $50,000 worth of damage. The fire was caused by friction in a wooden pulley. If insurance on the plant had been in force when the fire took place the insuring company would have paid the loss. As it was, the Acushnet company had to pay it.

A SIGNIFICANT difference between the celebration of July Fourth this year and last is seen in a marked reduction of the reported accidents and deaths. Last year the total number of deaths was 44. This year the death roll contained but 24 names. There was also a big decrease in casualties thruout the United States as the result of a safe and sane observance of the day as advocated by us. The work required to be done by the police and fire departments was reduced to a minimum. Let the good work go on!

(*Continued from page* 53.)

ness day of the year for the transaction of any business in relation to its trusts. The company as a company never takes a vacation. The new building now occupied by this Boston company is the largest in New England. It is equipped with every known modern facility for doing business and has every safeguard. There are over seventy coupon rooms of the most modern construction on the same floor with the vault, affording every convenience as well as absolute secrecy for the examination of papers or other business. Visitors are always welcome and any desired information regarding trusts and banking is cheerfully given to interested parties. The capital and surplus of the Boston Safe Deposit and Trust Company is $3,000,000, and its total resources are $13,738,420. The officers are: Charles E. Rogerson, president; George E. Goodspeed, treasurer, and Henry A. Fenn, secretary and manager of the safe deposit department.

The Independent

VOL. LXIX. NEW YORK, THURSDAY, JULY 14, 1910 No. 3215

Survey of the World

Great Areas of Public Lands Withdrawn

Using the power granted to him by the recent act of Congress, President Taft has withdrawn from settlement, sale or entry, and reserved for examination and classification, more than 43,000,000 acres of public land, including water-power sites or containing phosphate, petroleum or coal. Similar withdrawals had been made before the enactment of the new law on June 25, but the right of the Executive to take such action was questioned. Therefore Mr. Taft asked for the law which was passed at the end of the recent session. His first order of withdrawal covered 8,495,731 acres, situated and classified as follows:

Water power sites: Arizona, 107,550 acres; California, 47,819; Colorado, 201,549; Idaho, 230,971; Montana, 122,315; Nevada 14,501; New Mexico, 14,536; Oregon, 176,721; Utah, 379,912; Washington, 55,439; Wyoming 103,396; in all 1,454,499 acres.

Phosphate: Florida, 27,400 acres; Idaho, 1,102,317; Utah, 107,545; Wyoming, 1,381,851; in all 2,594,113.

Petroleum: Arizona, 230,400 acres; California, 2,482,750; Colorado, 87,474; Louisiana, 314,720; New Mexico, 419,901; Oregon, 74,849; Utah, 581,564; Wyoming, 255,461; in all, 4,447,119 acres.

At the same time he withdrew all the public lands in the Alaska national forest which contain workable coal, thus confirming an order made in 1906. On the 7th inst. he withdrew 35,073,164 acres of coal land, situated as follows:

Coal lands: North Dakota, 17,828,182 acres; Colorado, 6,191,161; Utah, 5,814,287; South Dakota, 2,870,287; Washington, 2,207,967; Arizona, 161,280.

Of this large area, 14,374,695 acres had been withdrawn when Mr. Roosevelt was President. Mr. Taft adds 20,698,469 acres in the two Dakotas. He has appointed five engineer officers of the army to pass upon reclamation projects, which are to be completed by the aid of the authorized issue of $20,000,000 in bonds. This board, at the head of which is Lieut.-Col. John Riddle, will report to Secretary Ballinger, and the Secretary will report to the President, whose decision will be final. The new legislation on this subject reduces the power of Frederick H. Newell, Director of the Reclamation Service, who, owing to the Pinchot-Ballinger controversy, is not on the best of terms with the Secretary. It was reported some time ago that the Secretary would ask for the removal of this officer. The Secretary was in conference with the President at Beverly, last week, when questions relating to the public lands were considered. He denied that he intended to resign. —— At Lander, Wyo., in the civil cases affecting 10,000 acres of coal land, valued at $1,500,000, the Land Office has rejected the claims of fifty-seven of the sixty-three entrymen. Criminal proceedings are pending against eight residents of New York who, the Government alleges, wrongfully obtained possession of this coal land some years ago by means of fraudulent entries.

Our Policy in the Philippines

Speaking at the convention of the National Education Association, in Cambridge, last week, President Taft discussed the relation of education to democratic government, with special reference to American rule in the Philippines. He said:

"When the war of 1898 was ended there seemed to be but one course for the United States Government to follow, and that was

to take over the Philippines, establish law and order, and then teach the people enough in learning and in the practice of popular government to enable them to take over a Government and maintain it permanently. Meantime we had to suppress an insurrection in order to initiate such a policy. Those who were responsible for the policy have been subjected to the severest criticism, in that they are said to have violated the proposition of the Declaration of Independence that to secure the rights of life, liberty, and the pursuit of happiness governments were instituted among men, deriving their just powers from the consent of the governed. I affirm that there is nothing in the Philippines policy of this Government which is at variance with the language from the Declaration of Independence which I have quoted when that language is properly understood by the same sort of construction as Lincoln gave to the language 'All men are created equal.'

"When the time shall arrive in which the Filipinos can be safely trusted to organize and maintain permanently their own Government, and this Government shall withdraw from the islands or offer to do so, the proposition of the Declaration of Independence will then have been fulfilled and the Government will be a just one, for it will rest on the consent of the governed.

"Meantime, however, in the absence of the full effects of education, and until the Filipinos as citizens are able to walk alone, there will continue to be a seeming inconsistency between the policy of the Americans in the Philippines and the language of the Declaration of Independence. But I maintain, in the presence of this great audience, whose profession is that of teaching and whose object is that of educating and fitting men to meet the responsibilities of government and to become intelligent patriots, that the methods taken and the procedure that is being followed are in entire accordance with the spirit of that great Declaration, properly interpreted, and are only another instance with that of Cuba of a purely altruistic policy that does credit to the American Republic and is in entire accord with those high principles which are embodied in the Declaration of Independence and carried into practice in its Federal Constitution."

——Official reports for the fiscal year show that exports from the Philippines to this country under the favorable provisions of the new tariff have been far below the limits imposed. The States received a little more than half the number of cigars which could have been entered free of duty, about one-third of the quantity of sugar, and less than 2 per cent. of the specified number of pounds of tobacco.——In an address at Honolulu last week, Mr. Dickinson, Secretary of War, said our Government had ambitious plans for extending the defenses there, would increase the force at the military post, and would maintain a permanent garrison.——The Cuban House has passed a bill for the establishment of a mortgage bank, designed to aid agriculturists by means of loans.

Wage Increases and Strikes

The upward movement in wages has not been checked. Following arbitration under the Erdman act, a considerable increase of pay has been given to employees of the Southeastern railroads. Part of the advance is made effective now, and part will be granted in April next. The entire addition ranges from 12 to 30 per cent. It is reported that 25,000 locomotive engineers, employed on forty railroads west of Chicago, will soon ask for an increase. Additions were reported last week as follows:

New York, New Haven & Hartford Railroad, voluntary increase of 6 per cent. to 6,000 unorganized employees, about $500,000 a year; Delaware, Lackawanna & Western, 11 per cent. to engineers; Grand Trunk, award of from 25 to 35 per cent. by Board of Conciliation, with shorter hours and provision for promotion on account of merit or length of service; Chicago, Indianapolis & Louisville, a gradual increase, beginning with 10 per cent.; Seaboard Air Line, 3½ cents an hour for all workmen in the Federation of Trades; Rochester street laborers, strike settled by increase of 1 cent an hour.

The demands of the Missouri Pacific telegraphers have been submitted to arbitration under the Erdman act. All the bar iron mills are idle, owing to the failure of employers to reach an agreement with about 10,000 men, who ask for an increase. The old scale expired on July 1. At Cedar Rapids, Ia., the labor leaders and the Employers' Association have agreed to submit all disputes hereafter to a board of arbitration. The Delaware & Hudson Railroad Company, whose trackmen are on strike, has suspended all of its night freight trains, believing that several recent derailments were caused by strikers.——At New York, the largest strike ever known there in a single trade was begun on the 7th, when about 70,000 cloak makers, 18,000 of whom are women, quit work. Twelve hundred employers are affected. The strikers demand a forty-eight hour week, recognition of the union, and an average wage increase of 35 per cent. They also in-

sist that the sub-contract system shall be abolished.

Trust Cases

Arguments were made in Pittsburg, last week, on a demurrer to the indictment in the case of the Government against the Imperial Window Glass Company. This corporation was indicted for violation of the Sherman Anti-Trust law. It is alleged by the Government that the company is a combination of sixty-six concerns, which control 98 per cent. of the hand-blown glass industry.——Complaint is made to the State Supreme Court in New York that the manufacturers of automobile tires have combined unlawfully and are oppressing certain dealers. An examination has been ordered.——In Philadelphia, last week, three companies engaged in the manufacture of umbrella frames were fined $1,000 each in the Federal District Court for violation of the Anti-trust law. ——In Oklahoma, the Waters-Pierce Oil Company has paid a fine of $75,000 and is forbidden to enter any combination in restraint of trade.

Lynch Law in Ohio

In Newark, Ohio, on the night of the 8th, a mob of 500 citizens broke into the county jail, took Carl Etherington from a cell and hanged him in the Court House square. Etherington was one of a party of ten detectives employed by the Anti-Saloon League who had made a raid upon a beer saloon kept by William O. Howard, formerly Newark's chief of police. While they were in the saloon Howard was shot by Etherington, who asserted that he acted in self defense. The sale of liquor in Newark is forbidden by law, and the League had asserted that the law was violated there. After the death of Howard a mob pursued Etherington, who was rescued by the police and locked up in the jail. In the evening the mob attacked the jail and sought for two hours to force an entrance. At last they battered down the strong doors and got possession of Etherington. The League asserts that the lynchers were successful because of the cowardice of the Mayor and the weakness of the police. The Adjutant-General of the State blames the sheriff, William Linke, saying that, while the lynchers were at work at the doors, he had time to procure the aid of the militia.

The Flyers

There are already six entries for the aeroplane race between New York and Chicago. One of the contestants will be Charles K. Hamilton, who recently made an air journey from New York to Philadelphia. For this New York-Chicago race a prize of $25,000 is offered by the New York *Times* and the Chicago *Evening Post*.——Walter Wellman and Melvin Vaninam will attempt to cross the Atlantic on an airship in the latter part of August or early in September. They intend to use the motor balloon "America," which was built for Mr. Wellman's projected expedition to the North Pole. It has been tested in the Arctic region, and is exceeded in size only by Count Zeppelin's airship, being 228 feet long. This venture is promoted, or will be assisted, by the Chicago *Record-Herald*, New York *Times* and London *Telegraph*. These papers undertake to buy the news reports of the air voyage. The airship will have wireless telegraph apparatus, and Mr. Wellman will carry with him a Marconi operator.——Walter Brookins, at Atlantic City, on the 9th, broke his own and the world record for altitude, rising with aeroplane to the hight of 6,175 feet. Soon after he started to descend his gasoline was exhausted and his engine ceased to work. He descended a little more than one mile by means of a series of circular glides.

The Lorimer Case

John A. Malloy has been indicted in Chicago for attempting to bribe Oscar T. Morford, one of the jurors at the recent trial of Lee O'Neil Browne. Three Representatives in the Illinois Legislature testified that Browne paid them $1,000 each to vote for the election of United States Senator Lorimer, but the jury disagreed. Morford voted for conviction and did not know of the attempt to bribe him. Malloy sought to reach him by means of his wife and his father, and upon their testimony the indictment was ordered.——Speaking of the disclosures concerning corruption in

the Illinois Legislature, Senator Cullom said last week:

"I want to see an honest Legislature picked out. I want to see an end to the jackpots and the cheap thievery that have brought disgrace to the State of Illinois. I don't care whether they are Republicans or Democrats, I am unswerving in the opinion that the guilty should be run down and sent to the penitentiary. Now is the time for Illinois to speak out. The opportunity, it seems to me, is at hand for the election of a Legislature which will be composed of honest men and which will not cause the name of Illinois to be a byword in the mouths of public men from all parts of the United States. It is a burning shame that the 'jackpot' system and wholesale stealing have been permitted to be ingrafted at Springfield. The nation is looking to the decent and honest part of the community of the State to clean out the dishonest men who are responsible for the crookedness at the State capitol. I cannot state the case too strongly from my own point of view. I welcome the campaign for decency which seems to have been successfully started. I would gladly aid to the best of my ability."

——The committee appointed by the New York Legislature to inquire concerning corrupt practices has made M. Linn Bruce its counsel. He was Lieutenant-Governor from 1904 to 1906, and afterward was for one or two years a Justice of the State's Supreme Court.

Pictures of the Prize Fight

A large sum was paid for the exclusive right to exhibit "moving pictures" of the prize fight between Johnson and Jeffries, and immediately after the fight steps were taken for the presentation of these pictures in thousands of theaters. At the same time, owing partly to the bloody race riots on the night of the 4th and on the 5th, public opinion began to demand a suppression of the pictures. The first action was taken by Major Sylvester, chief of police at Washington and president of the International Association of Police Chiefs, who forbade any exhibition of the pictures at the capital. The Society of Christian Endeavor and the Epworth League promptly exerted their influence thruout the country to prevent exhibitions. From city after city came the news that the pictures had been excluded. Several Governors of States actively took part in the movement. At the end of last week there were few cities in the United States in which the exhibitions had not been forbidden. Even Mayor McCarthy, in San Francisco, who denounced Governor Gillett for preventing the fight in California, said he would not allow the pictures to be shown in his city. Exhibitions were prohibited in Havana, Montreal and Toronto. All over the world there was a protest against them. In Australia and New Zealand the clergy earnestly appealed to their respective governments, urging that no exhibition of the pictures be permitted.

Countries South of Us

The Mexican Government has published the letter sent by President Diaz to President Taft some weeks ago, and the reply. Owing to the complaints of President Madriz, of Nicaragua, because our Government had forbidden the warship "Venus" to bombard Bluefields, President Diaz "recommended most earnestly" that Mr. Taft should "reconsider those instructions of which Nicaragua complains, to the end of permitting the Government of Madriz within a brief period to accomplish that complete pacification which is offered." President Taft replied that the statement sent to Mexico by Madriz had "evidently been transmitted under erroneous information with respect to the actual facts and the principles of international law applicable to the case." With his reply he forwarded a copy of Secretary Knox's response to the complaints of Madriz.——At last reports, General Mena, with a revolutionist army of 2,000, was near the capital of Nicaragua. On the 8th, Madriz attempted to recapture Pearl Lagoon. Fire from concealed guns swept the deck of his gunboat, the "San Jacinto," killing her captain and twenty of his men, and disabling the gunboat. The revolutionists suffered no loss. Prinzaculpo, captured some days ago by Madriz, was defended by seven revolutionists under the command of General Clifford W. Sands, of Seattle, who is only twenty-two years old. Sands was tried by drumhead court martial and sentenced to be shot. Then General Irias, commander of the Madriz forces, was taken ill. Dr. Bergheim, a Texas physician, who was asked to attend him, declined to do so unless Sands should be released. In this way he saved the life of Sands, who was paroled and sent to New Orleans. It is

reported that ex-President Zelaya, who bought the "Venus" for Madriz, has offered to withdraw her from the service if the United States will protect his large property interests in Nicaragua and pay him $50,000. At Granada, Madriz has adopted the reconcentration policy of Weyler, having ordered 5,000 persons living in the vicinity to concentrate in that city, on penalty of being treated as revolutionists.——The approaching session of the Guatemalan Congress will consider a plan for refunding the foreign debt and reorganizing the monetary system. It is said that a refunding loan of $40,000,000 has been offered by New York bankers. Guatemala's national paper currency is worth 5½ cents on the dollar, in gold.——Colombia's President in a recent message to Congress, said that a foreign loan of $2,500,000 was needed to meet interest obligations. The money, he said, could not be obtained in Colombia, and the lack of it might cause foreign Powers to assume control of Colombia's custom houses.——At the meeting of the Electoral College in Mexico, on the 10th, President Diaz, now in his eightieth year, was re-elected President for a term of six years. Ramon Corral, elected Vice-President, had been selected for this office by General Diaz.

Great Britain

Bishop Charles H. Brent, of the Episcopalian Church in the Philippines, is endeavoring to secure the consent of the British Government to the Opium Conference at The Hague. Accompanied by Ambassador Reid, Bishop Brent talked with Premier Asquith, Sir Edward Grey and Lord Morley, the Secretary for India. While not unwilling to go into another conference, the Indian Government, for economic reasons, is not prepared to go as far as the reformers desire in the matter of repressing the production of opium. It seems that a considerable part of the revenue of the Indian Government is derived from the export of opium to China and the Straits Settlements.——A bill for amending the King's Declaration was introduced by Premier Asquith in the House of Commons. It provides for the omission of passages offensive to Roman Catholics. As now proposed it will read:

"I [then follows the name of the Sovereign] do solemnly and sincerely, in the presence of God, profess, testify, and declare, that I am a faithful member of the Protestant Reformed Church as by law established in England, and I will, according to the true intent of the enactments which secure the Protestant Succession to the Throne of my realm, uphold and maintain the said enactments to the best of my powers according to law."

The motion for the first reading was carried by an overwhelming vote.——In a speech made in the course of debate the Chancellor of the Exchequer stated that about 900,000 persons were now receiving old age pensions, and that by the first of January this number would increase to 1,100,000. This information has not increased the good feeling between the Nationalists and the Government, for it now appears that the cost of these pensions will amount to £14,000,000 or over. ——At the eighth annual meeting of the National Service League, Lord Curzon discussed the matter of national defence. He pointed out that Australia and New Zealand had rendered military service obligatory, and that the new Parliament of the United South Africa was likely to do the same. He commended the action of these colonies over seas as worthy of imitation at home.——Before dispersing, the World's Missionary Conference at Edinburgh decided to establish a continuation committee. This arrangement is designed to secure the permanence of the conference and to avoid the inconvenience of creating an entirely new machinery when it is desired to hold a fresh gathering.——The National University of Ireland has made a knowledge of Irish compulsory for matriculation. The last census returns showed that one-seventh of the Irish population speaks Irish as well as English. The decision of the senate is generally condemned. The motive that led to it is regarded as not educational, but political. The Roman Catholic hierarchy in part approved. But the wisest leaders of that communion clearly recognize the dangers of this concession to political sentimentalism. They see that it will not only drive many of their co-religionists from the National University into Trinity College, Dublin, but that it will justify them in this defection.——The annual statement on the condition of India shows that the population is about 300,000,000, and that the death rate is about 38 per thousand. This is higher

than during the previous year, tho the number of deaths from plague has decreased.——Lord Cromer was the chief speaker at the annual council meeting of the Women's National Anti-Suffrage League. He made the point that the British Empire should not be made the dumping ground for a crude experiment that had never been tried by any other great nation. Another meeting was held at the same time by the National Union of Women's Suffrage Societies. Lady Frances Balfour presided and Mrs. Henry Fawcett was the chief speaker. She intimated that the suffragists will again adopt militant tactics if the Shackleton bill is lost.——An inquiry addressed to the British Postmaster-General as to the percentage of letters that recently arrived at Fishguard on the Cunard liner "Mauretania" brought out interesting facts. The ship carried 1,304 bags of mail, of which 697 were for the Continent or points beyond the British domain; 607 for Great Britain, and 84 for Ireland. It was stated further that every administration which adheres to the Postal Union is, under the terms of the Universal Convention, bound to forward mails belonging to other administrations by the most rapid routes at its disposal. Mr. Samuel, the Postmaster-General, pointed out that £20,000,000 would be required to defray the Post Office expenses, a sum that had doubled during the last fifteen years. The receipts, however, had doubled likewise. Over fifteen thousand messenger boys are being employed. It becomes necessary to dismiss about six thousand every year, and this, it was stated, created a difficult economic situation. A remedy is being considered.

French Affairs

The execution of Liabeuf, who on January 8 killed in Paris a policeman and wounded three others, took place recently. Revolutionary agitators made it the occasion of a demonstration against the police and the Government. A riot resulted in which several persons were killed and wounded. The authorities, especially the Prefect of Police, maintain that Paris is becoming a refuge for too many bandits and roughs, called Apaches, and that it is imperative to take drastic measures against them.——M. Clemenceau, the French ex-Prime Minister, has sailed from Genoa for Buenos Aires. He has undertaken to deliver a series of lectures in the Argentine Republic, Uruguay, and Brazil on the general subject of "Democracy."——The aviation meeting at Rheims has been marred by two fatal accidents. A week ago aviator Wachter's machine collapsed and he was killed instantly before the eyes of his wife. Now comes the news of the fatal fall of Baroness Delaroche, the first French woman aeroplanist. Frightened by the approach of another machine, she became confused and cut the ignition.——The French Council of Ministers took note of telegrams from General Monier, in Morocco, reporting the military operations called for by the presence of Mal Ainin in South Shawia. Instructions sent to General Monier ordering him to withdraw his troops to their former positions in the interior were approved.——In the engagement fought with the native tribesmen there were many casualties on the side of the French, and the natives are reported to have been repulsed with great loss. Radical journals are severely criticising the Government's conduct of Moroccan affairs.

German Politics

The political situation of the Fatherland appears somewhat confused even to German journals. It is assumed that Herr von Bethmann Hollweg intends to remain in office. Domestic considerations are overshadowing the changes at the Foreign Office. Emperor William has addressed a letter to Prince Radolin thanking him for his distinguished services during an official career of nearly fifty years. The latter has been Ambassador at Constantinople, St. Petersburg and Paris.——By the Anglo-German Agreement of 1890 Heligoland was handed over to Germany. Among the return concessions was the recognition of Great Britain's protectorate over the Sultan of Zanzibar. Among the stipulations relating to the inhabitants of Heligoland was a twenty years' exemption from customs and military duty. That time has now expired, and henceforward Heligoland

will pay customs and furnish recruits for the defence of the Empire.

Various Items

Switzerland is becoming uneasy over the large number of foreigners who reside within the country. In cities like Geneva, Lucerne and Zurich the foreign residents constitute from 20 to 40 per cent. of the population. It is proposed by the National Council to facilitate naturalization, and to make it obligatory in the case of foreigners born on Swiss soil.——At Vienna the Austrian Lieutenant, Hofrichter, was condemned to twenty years' penal servitude for having caused the death of Captain Mader and endangered the lives of eleven other officers by sending them capsules of cyanide of potassium. The Austrian public and press consider the trial an illustration of the intolerably antiquated military penal procedure.——During the past week there have been many disturbances in Persia. Robbers mistook a postal wagon for a bank wagon conveying specie. This resulted in five killed and several wounded. Kurds under Daoud Khan defeated the Government troops at Kermanshah, and Asterabad is said to be surrounded by Turcomans. In Sultanabad bands of marauders are terrorizing the province. The Central Government is so short of funds and in such a chaotic condition that grave fears are entertained for the future.——Wardani, the murderer of Boutros Pasha, the Egyptian Premier, was hanged in prison on the 28th ult., and was buried in the Moslem Cemetery.——Long continued rains have again caused serious damage in many parts of Switzerland.——A second death from cholera has been reported from Ruhleben, near Berlin. Both victims were Russian immigrants recently arrived. Careful precautions are being taken. Official reports now admit the outbreak of cholera in St. Petersburg ——The steamship "Mainz," with a party of experts on board, has been sent to Spitzbergen to study Arctic conditions in connection with the proposed Zeppelin airship Polar expedition.—— The King and Queen of Bulgaria have spent some time in Paris and been the recipients of many honors.——A deplorable scene took place in the Italian Chamber on the 1st of July. Members of the Extreme Left made a determined effort to prevent Signor Valenziano, the newly elected Deputy for Albano, from speaking. Insults were hurled at him and the President was obliged to suspend the sitting twice. The discussion of the Educational Bill still continues.——An infernal machine which was discovered by a child in a Barcelona house was being taken to the Artillery Park in a bomb carriage when it exploded. A civilian was killed and several officers and soldiers were injured.——Political scandals in Portugal have made it difficult for King Manuel to form a new Cabinet. The task has been undertaken by Texeira de Sousa.——American bidders failed to obtain an order for locomotives for Chinese railways. The failure is said to be due to the fact that American manufacturers did not have technically trained representatives on the ground who were able to give full specifications and explanations.——The *Temps* reports that Emperor William II preached aboard the "Hohenzollern," taking as his text the passage in Luke which records a fall of darkness at the time of Christ's death. Some see in the royal sermon a criticism of the recent widespread discussion in Protestant academic circles provoked by a work denying the historicity of Christ. ——An uprising of a revolutionary character is reported from Yuen-kiang, in China. The rebels, wearing distinctive costume, like the Boxers, attacked the magistrates' yamen. They encountered Government troops and were routed with heavy loss.——A man by the name of Rudolph Francke has brought suit against Commander Peary to recover $10,000. Francke has been ordered by the court to produce Dr. Frederick A. Cook as a witness. Francke demanded restitution of furs and narwhal teeth which, he alleges, Peary required him to surrender in consideration for taking him back home from Etah.—— Since his departure for South America on a lecture tour, Socialists accuse M. Clemenceau, the former French Premier, of having caused the arrest of M. Kochette, a banker, on false charges, thereby allowing Government officials to make great profits by speculations.—— Dr. Frederick J. Furnivall, the noted Chaucer and Shakespeare student, died recently in London.

An Army with Banners

BY EDWIN E. SLOSSON

TEN thousand women marching three miles are mathematically equivalent to one woman marching thirty thousand miles. But sociology is not governed by the rules of mathe-

VOTES FOR WOMEN

matics, consequently the suffrage procession marching from Trafalgar Square to Albert Hall today produces a greater impression than any previous demonstration of the kind from the realization of the numbers who took part in it and who promoted it. More important than its numbers is its scope. It is a polychromatic procession. The strident yellow is mingled with purple, white, green and many other symbolic colors in banners and bouquets, for all the suffrage groups unite in this demonstration, except the old original society, which adheres strictly to the staid methods which it has so patiently and unsuccessfully pursued for forty years.

It is a peaceable procession, passing by the Houses of Parliament without at-

TAXATION WITHOUT REPRESENTATION IS TYRANNY

tempting to force an entrance, with the London police protecting their late assailants. The militant sisterhood have laid aside their weapons "for the pres-

EXASPERATED BUS DRIVER (TO POLICEMAN): "O GIVF 'EM THE VOTE."
From a London cartoon.

ent." A compromise suffrage bill has been duly introduced into the House of Commons, and the Prime Minister has consented to receive delegations of the women. The political truce that now prevails in England commands the respect even of the outlawed sex. What may happen if the representatives of the people again violate their personal pledges and smother the bill cannot be foretold, but probably this marks the end of the period of violence, and the movement, if it must continue, will

GOD AND MY RIGHT

change as the temperance movement has changed, from the Women's Crusade of its early days, with its bottle-smashing and saloon prayer meetings, to an orderly and reputable cause.

This is a triumphal procession. The women, tho they have not yet gained their end, have won a respectful hearing. There are no jeers and chaffing from the three miles of densely packed humanity as the women march thru. No one challenges their right to the banners they bear. The motto, "Taxation without representation is tyranny," which lost

FIRST IN THE FIGHT

America, has become an axiom on both sides of the sea. To the motto of England, *Dieu et mon droit,* they have also a moral if not a legal claim. The big banner of the Tax Resistance League bears very properly the portrait of John Hampton, with the ship and coin. The arms and legends of ancient cities, borne by the provincial delegations, receive a new significance from their use here. The Irish girls in green bearing the banner of the harp and Gaelic mottoes are received with cheers by their London

PRESTON LASSES MUN HEY TH' VOAT

compatriots; so are the Welsh and Scotch lasses in their racial costumes. There are also delegations of women voters from Norway, Finland, Australia,

A GUDE CAUSE MAKES A STRONG ARM

WOMAN'S CAUSE IS MAN'S

New Zealand and the United States, looking nevertheless quite as womanly as any of their unfranchised sex on street or sidewalk.

"Now look for the freaks and frumps and the frights," I heard a feminine voice behind me say as the procession approached, manifestly the voice of an anti. But the voice was soon silenced. Not but what these classes of womanhood are represented in the procession; all the others are also. The days have passed when unconventionality of opinion is necessarily associated with unconventionality of attire. Short skirts and long march side by side, lace and lawn. Occasionally high heels catch in trains or slip on the unspeakably filthy London streets. Old women go by leaning upon the arm of a grandson or granddaughter; crippled women propelling themselves by hand in wheel chairs. There are women in widows' weeds and women with babes in arms or followed by three or four children. Some of the women are worn out with the early rising and long standing; others cannot keep their feet from dancing as the parade is halted to let the cross traffic thru. There are forty bands, playing for the most part "Votes for Women," a new march written for the occasion, or the "Marseillaise," which has not yet to be abandoned, for it enfranchised only half of humanity. The organization and discipline are admirable. "Step back, please," says a lady marshal

THE HAND THAT ROCKS THE CRADLE.

WHAT CONCERNS ALL SHOULD HAVE THE CONSENT OF ALL

IMPRISONED FOR FREEDOM'S SAKE

PLAY UP AND PLAY THE GAME

walking on the right flank of the column. "Hit's beginnin' halready, hayn't hit?" remarks the man at my elbow, as he steps back.

A new emblem heads the procession, the "broad arrow," once the shameful badge of the convict, now converted into a conquering sign. Each of these 617 women robed in white has gone to

STRIVE AND HOLD CHEAP THE STRAIN

prison as a proof of her devotion to the cause, and bears a wand tipped with a silvered broad arrow. A woman in convict garb is seated in a car, surrounded and followed by a troop of young girls —buds their totem—a silent threat to the opposition that a question is never settled till it is settled right. The band of young athletes, in creamy sweaters,

GO FORTH AND CONQUER

marching under the banner of Diana suggests that man may not always keep the only kind of superiority to which he now has an undisputed claim. Certainly these stout-limbed and free-bodied damsels would be more than a match for the pale-faced, stoop-shouldered and sullen-capped voters who watch them from the sidewalk, and perhaps even for

DARE TO BE FREE

the supercilious and top-hatted gentlemen who look down upon them from the balconies of a Pall Mall clubhouse, blacked without by coal smoke and within by tobacco smoke.

The sweated women workers need no motto. They are their own appeal. The teachers and other Government employees have but to state their case to have its justice acknowledged by every fair-

FAIR PLAY AND FAIR PAY FOR THOSE WHO SERVE THE STATE

CAMBRIDGE TRIPOS
RIGHTFUL DEGREES DENIED

minded person. So, too, with these Cambridge and Oxford graduates who have beaten male students on their own ground, but are refused their reward.

One group of professional women have won public approval, those who march under the banner of Hygeia. The doctors and nurses are received with applause all along the line, yet most of us

JUSTICE DELAYED IS JUSTICE DENIED

can remember when masculine prejudice denied them an opportunity for training. The writers, artists and actresses hold aloft pennants inscribed with the illustrious names of the women of their gild and the early champions of women's rights.

This is very unlike other political parades that have passed thru these

GREAT IS TRUTH AND IT SHALL PREVAIL

ancient streets. It has in it more of poetry, of art, of idealism. It is a pageant of the future, not of historical scenes galvanized into momentary life. It is herald of a day to come when the power of the human race shall be doubled; when women shall be neither playthings nor slaves; when civilization in all its phases shall feel the feminine influence.

OH, LIBERTY, HOW GLORIOUS THOU ART!

We see the glow of inspiration upon many of these faces, and we feel that we are in the presence of a mighty spiritual force eager for direction in social helpfulness. The hope in the clear young eyes is a strangely moving thing to see, and we stand before it with reverence. This army of women with banners means more than a pretty spectacle; it touches the heart and stirs the imagina-

FREE TO SERVE

tion. There is a great reservoir of unused force in that young exaltation, a storage battery of unknown potentiality, ready to be of use to the people.

These seven hundred banners are not of the ordinary party kind. Many of them are artistically embroidered, patiently and piously wrought as any altar

FEAR GOD AND TAKE YOUR OWN PART

cloth. And the march under these new banners thru London in the same spirit as they marched thru Rome following a picture of the Holy Mother, as they marched thru Athens carrying the peplos to the Parthenon.

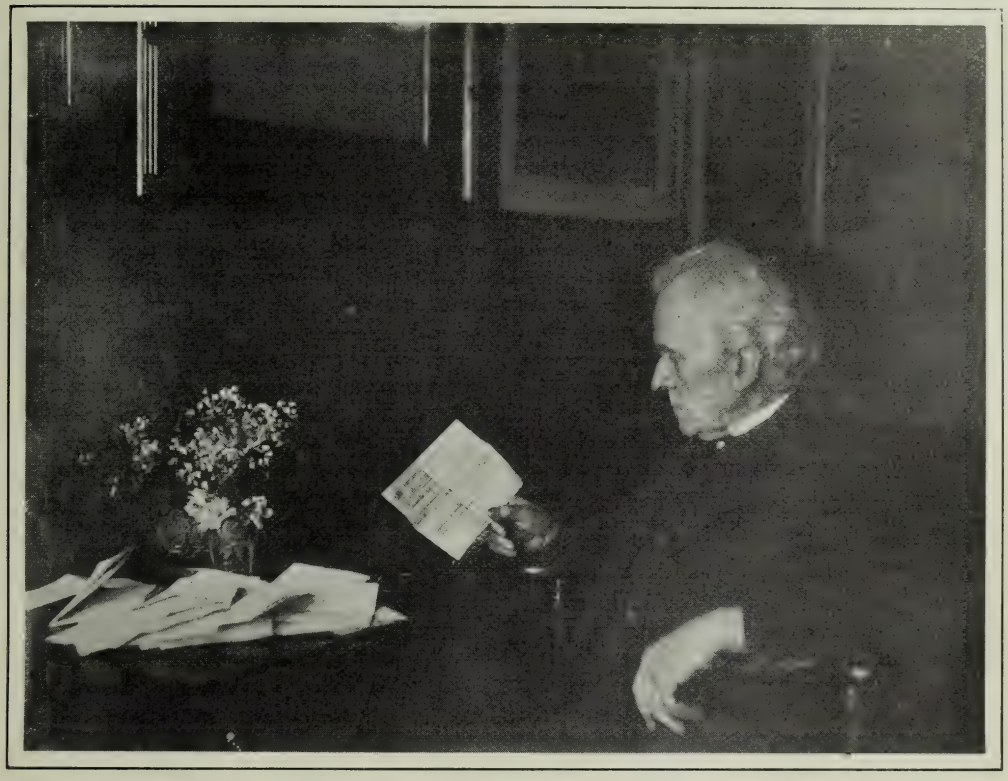
"Unfeminine" is the most inappropriate adjective to be applied to this suffraget movement. We men may not like it. We may call it undignified. We may think it unwise. But we cannot deny that in both its pleasing and unpleasing features it has been essentially womanly. Martyrdom and nagging have been the most effective weapons of women thruout the ages. They were

WHERE THERE'S A WILL THERE'S A WAY

forced to use them, for they were all they had. Now the women ask for other ways of having their way, quieter, more impersonal, more effective. If their demands are acceded to they will doubtless abandon their primitive weapons, at least in public warfare, a consummation devoutly to be wished.

London, June 18, 1910.

GO ON PESTERING



Lords and Commons Again in Westminster

BY JUSTIN McCARTHY

ON Wednesday, the 8th of June, the Houses of Parliament reassembled in London after a short interval of adjournment. The sittings in both Houses were but brief, and no business of any real importance was approached. The air, however, is already heavy with the projects of great constitutional reform, to be accomplished or at least to be approached during the present session. The one great question awaiting settlement is as to the manner of dealing with the constitutional, or rather the unconstitutional, claim of the House of Lords to legislative authority.

My readers will remember that the peers quite lately asserted their right to overrule the Commons on financial questions and that they actually did refuse to pass into law the financial scheme—the Budget, in fact—which had been carried thru all its readings by a substantial majority in the representative chamber. The Liberal Ministry, of which Mr. Asquith is the leader, must, of course, introduce and carry thru measures in the House of Commons to restore and secure to that House the full and exclusive control of the country's finance which has hitherto been always recognized as their rightful power during all modern generations. Mr. Asquith has proclaimed again and again that he and his colleagues have fully determined to maintain for the elected assembly the right of control over the country's finances. Therefore they resolved to introduce legislation which shall definitively arrange for the coming time what the Lords may do and what they may

not attempt to do. Of course, in order to carry out to full and final success this great change, the members of the Liberal Cabinet are anxious to have an overwhelming majority in the elective chamber, and it has lately been made known by ministerial statement in the House of Commons that a conference between the Government and the leaders of the Opposition is in course of preparation. We are told that on the Opposition side of the House there are many members who are quite ready to admit in their hearts and their intelligence to support some of the claims of the Peers as the most advanced Liberals who support the Ministry of Mr. Asquith. It is therefore believed that a conference such as that now known to be in preparation might be of real help to the Ministry and indeed to the whole House, and much more than that—to the whole country. But up to the time at which I am now writing we have had no definite and authoritative statement with regard to the purposes of the Ministry.

HERMANN VEZIN.

that the power of the House of Lords to deal with questions of imperial taxation must be limited and the whole constitutional position of the Peers must be put to a final reconstruction. Of course, every one who knows anything about the general composition of the existing Opposition in the Commons must know that there are many men, tho sitting on the Tory benches and holding views generally in consonance with the principles of Conservatism, are as little inclined

As to the ultimate result of the present crisis, I do not myself believe there can be any serious doubt whatever. That the hereditary peerage represented in legislation by the House of Lords must be deprived, and soon, of the utterly unconstitutional claim to overrule the representative chamber on questions of finance and taxation is certain. Many members of the upper chamber itself are as well convinced of this as are the most Radical followers of Mr. Asquith in the

House of Commons. The reign of the new sovereign, King George V, is not therefore likely, so far as I can judge, to be long disturbed by this most important constitutional struggle. There are many conflicting conjectures as to the actual course which the policy of the Government is to take in dealing with this great historical question. The general hope is, I fully believe, that there may be no compromise, and if possible, no postponement, but that the final definition of the legislative powers assigned to the hereditary chamber may be settled within the present session.

A bright star has disappeared from the sphere of English literature and political thought by the death of my dear old friend, Goldwin Smith. That death, indeed, was not premature; Goldwin Smith had lived a long life and had made the best use of it to its very end, and after the severe accident which befell him near his Canadian home some months ago we all felt sure that that end was soon to come. My appreciation of Goldwin Smith's position and influence in literature and politics began with my early life in London as a worker on the editorial staff of the *Morning Star,* the daily journal which then represented the political doctrines of Richard Cobden and John Bright. The great American Civil War was then going on, and the *Morning Star* was one of the few important English daily journals which adopted and resolutely maintained the cause of the North and the utter condemnation of slavery. Goldwin Smith was one of the few eminent English political thinkers and teachers who, like John Stuart Mill, adopted that cause and held to it with faith and fidelity. Thus I naturally came to be one of his devoted admirers and friends, and I hope I may say that I obtained his friendship. I kept up with him an occasional correspondence and an interchange of ideas during the years of his settlement in Canada, and I always looked out with the deepest interest to our regular interchange of Christmas and New Year greetings. I was always cherishing expectations of being able to pay a visit to the great patriot, philanthropist, thinker and scholar at his Canadian home, but the breakdown of health which came upon me some thirteen years ago soon clouded my anticipations of another visit to the American Continent and to Goldwin Smith. But I shall always regard it as one of the brightest events of my life that I understood and appreciated the intellect, the love of humanity, and the noble principles generally which inspired the career of Goldwin Smith, and that I had the honor of being admitted to his friendship. The name of Prof. Goldwin Smith will live forever among the most honored names belonging to the reign of Queen Victoria.

A career which is destined to have an abiding place in England's history has come to its earthly close within the last few days by the death of General Sir William Butler. The name of Butler will ever be associated with that memorable and to England for a long time most disastrous war in South Africa which ended in the establishment of that great self-governing colony known as the United States of South Africa, a colony of Great Britain, with Lord Gladstone—Herbert Gladstone as we knew him before—for its first Governor. General Butler had done all that man could do to prevent English statesmanship from being hurried into that struggle and to prevail upon her to listen to counsels of foresight and moderation, and not to yield to the clamorous promptings of that set of politicians who are now and will long be known only too well as the Jingoes. Butler's counsels prevailed in the end, but not until after a vast waste of life and treasure had been incurred. Among my cherished memories is that of the last time that I had the honor and the pleasure of meeting General Butler. It was at a dinner party given in London by my dear old friend, the late Sir John R. Robinson, then manager of the *Daily News,* and among the guests was the late Sir Henry Campbell-Bannerman, afterward Prime Minister of a Liberal Government, and who, like General Butler, has since then passed from this living world.

An old acquaintance, or, indeed, I think I might say friend of mine, has just come to the end of his most active and most interesting career in the person of the late Sir George Newnes, whose

name is well known thruout the United States as the founder of many successful novel and brilliant experiments in journalism. He was the inventor, if we may thus put it, and the founder and conductor of *Tit-Bits*. The *Tit-Bits* was a new form of comic journalism; a form which might perhaps be described as that of journalism always comic, but at the same time always comic with a purpose. The venture proved a complete success in every sense in all countries where the English language was understood, and even found imitators in lands where the imitation had to be accomplished or at least attempted in languages foreign to the Briton. Sir George Newnes was much devoted to philanthropic work of many kinds, and he may be justly described, like the hero of Leigh Hunt's poem, as "one who loved his fellow men."

The political atmosphere might be described just at present as somewhat overclouded and indeed sluggish. This, however, is only because everybody knows that a great storm is certain to come on soon, but no one knows as yet how soon it is to come or in what form it is to break out, and those who are concerned in the movements of the political world do not care to waste any time in conjectures as to the form of a great convulsion which may at any moment proclaim itself in its actual shape. We all know, of course, that the question at issue is the decisive struggle between the House of Commons as it has been constituted during so many generations and the House of Lords, which has quite recently asserted practically and for the first time its right to overrule and set aside a financial measure passed by a large majority in the representative chamber. The general desire of all advanced Liberals is that the Government shall first of all insist on the passing of the recent Budget thru the House of Lords, and if needs be, that the Crown shall exercise its ever recognized constitutional right to create a number of new peers large enough to enable the Ministry to force the acceptance of the Budget on the hereditary chamber, and then to pass on and carry to completion the new measures designed to regulate for the future the powers of the Peers. Now, I may say that I have never observed any evidences whatever in these islands of the existence of any political party which seriously desires to abolish altogether the second chamber of Parliament, and put the government of this kingdom into the hands of the sovereign and the House of Commons. So far as I have ever been able to observe, even among the most extreme of Radicals and the representatives of labor, there is no desire whatever to abolish the second chamber. Nor do I know that even the most extreme of Radicals would insist on the actual abolition of what we now describe as the upper chamber—that is, constituted exclusively of members belonging to the peerage. But the desire is that if the second chamber is still to be filled with men belonging to the peerage, it shall be constituted under entirely different conditions and qualifications from those which now belong to the House of Lords, and which have been exercised so often during our history with so despotic an authority as to bring the country again and again to the verge of a revolution. The sovereign has, of course, still the constitutional right to bring to an end the struggle between Lords and Commons by asserting his authority given to him by the constitution and creating a number of new peers whose principles will allow them to outvote the obstinate and anti-progressive Tory noblemen making up the majority in the upper chamber. This sovereign right may indeed have to be resorted to in the present instance, but it is not the sort of machinery which could seem to be regarded as in keeping with the principles and practices of a modern enlightened and progressive system of parliamentary administration.

A genuine sensation has been created thruout Great Britain and Ireland by the death of Hermann Vezin, who was for many years one of the most popular and successful actors known to our theaters. His death has indeed created, no doubt, a like sensation thruout the United States. Hermann Vezin was actually born in Philadelphia, but he came of French parentage, and some of his ancestors had been forced to become emigrants from their native land because of political troubles. Hermann Vezin

had himself settled in London at an early period of his dramatic career, and soon won for himself a distinct success among metropolitan audiences. He became known principally by his interpretation of the great Shakespearean parts. He presented himself to London audiences soon after Macready had retired from the stage, and he was for a time the dramatic comrade of Charles Kean. He played on, however, in these countries, and also in the United States down to a much later date, and he appeared quite lately in "The School for Scandal" after he had passed his eightieth year. Soon after his health completely broke down, and we saw no more of him. I had the honor and the pleasure of knowing Vezin well during many years, and found him a delightful companion, a man of many topics, and with an originality of observation and varied illustration which made you feel that you were getting some new ideas from him whenever you had an opportunity of enjoying his society. He devoted much of whatever leisured intervals he had to the giving of lessons in elocution to young actors, and indeed also to any of the outer public who had or believed they had occasion to make speeches and were anxious to learn from such a teacher a manner in which to give the best effect to their spoken words. His name, I hope and believe, will always have an honorable place in the history of the British stage.

LONDON, ENGLAND.

After a Thousand Years

BY JULIA TAFT BAYNE

A THOUSAND years ago
From all the nations rose one bitter cry,—
"The world is old, so old, 'tis time to die":
Men with few words and slow
Saw the great comet blazing in the sky,
While priest and friar preached the judgment nigh.

There was no serf so low
But he had right and privilege to fly
To Mother Church in penitential woe;
There was no prince bore haughty crest so high
But with his "mea Culpa," he must lie
Prostrate beneath the altar-scourge's blow
A thousand years ago.

Another thousand years
God given to the nations, almost sped;
And still we say the world is old and dead;
Held by the olden fears,
Still whispering of signs and omens dread,
Famine and war, and blazing death o'erhead,
Shall we do penance, fast and weep wild tears,
Another thousand years?

No, as this thousand years
(Which in God's sight is but as yesterday)
Is ebbing from time's silent shore away,
Thank God for hope and joy that lifts and cheers,
For all the light that fills the world today.
Look up, take courage, for the goal appears,
After a thousand years!

HOLDREGE, NEB.

HAULING IN A FIVE-HUNDRED-POUND MAN EATER.

Sharking for Shagreen

BY MAYN CLEW GARNETT

OF all living denizens of any size that inhabit the ocean, the shark is the most ubiquitous. He is nearly everywhere in salt water that is of sufficient depth to float him.

But he abounds mostly in tropical and semi-tropical seas, where he grows to large size and develops an unusual appetite.

Shagreen as it is used in the arts is his hide, and it presents many features for certain purposes that cannot be found in any other substances. Therefore the "sharker" can always count upon a certain market for the skin.

Unlike any other fish, the shark has a hide of the greatest toughness. He has no scales, like the giant mackerel, horse mackerel or tuna; no blubber like the warmer-blooded porpoise or blackfish. His hide is tough as tanned leather while it is still upon his body, and seems to be made expressly to withstand the attack of sharp teeth or tearing tusk, for it will neither tear nor cut except under great stress, and it possesses a certain amount of elasticity. Upon its surface are the small papillæ which give it the appearance of coarse sand paper, and it is a good knife indeed that will go into a full-grown shark's skin without turning its edge. Just beneath the skin is a flesh so tough, so gristly and stringy, that it is fit for nothing save to fertilize waste ground. There is no fat whatever upon even the stoutest shark. He is all muscle and tendon, a perfect machine for annihilating all things to be found afloat,

HAMMERHEAD SHARK.
Fifteen feet in lenght. Weight nearly one ton.

for with his six rows of cutters in jaws set in a circular form, he can chop up anything that is not either of wood or iron without great trouble. His large throat enables him to swallow like a snake objects that can just go thru his jaws, so that even a small shark can bolt fifty to a hundred pounds of flesh with ease at one swallow.

Sometimes sharks are savage, more often they are not, developing fierceness only under stress of great hunger or He leaves no scraps, no after signs of his feast. He bolts all in sight and swims lazily away, devouring almost half his weight before quitting.

The tales of savagery which are told of sharks are so varied, so wonderful and so absurd that there is no place for them in this article. A shark is the wolf of the ocean, but, like the wolf of the land, is as timid. He will come up to a boat and gaze upon her from a depth of a couple of fathoms with great impunity,

THE FINISH OF A SHARK.

among other deep-sea denizens with whom they have had much intercourse and know not to fear. Among fish a shark is absolutely fearless, and with bull-dog tenacity will attack and destroy all that comes within his scope. But he is lazy and will seldom follow or chase swift fish, preferring to scavenge or wait until an unlucky chance befalls certain inhabitants about him. Then he will suddenly develop interest, and the denizen, no matter what, will be quickly and completely absorbed within the shark.

but he knows perfectly well he is out of harm's way. He will only take a baited hook after many minutes of careful scrutiny and then usually with a nibble and taste gentle and mild until he is satisfied that there is nothing to fear. After that he bolts the bait and makes away without delay. When the barb strikes home, there is no fish more desperate or more frightened, and for a short time he will fight boldly to escape. His movements are furious only for a time. When he knows he is caught he will give up

and come in to be killed with a docility so amazing that one is fairly astonished. Such tremendous power, such immense vitality, such huge fins and tails with which to make a desperate fight, and, more than all, such immense and powerful jaws that make a lion's seem tame in comparison. But he generally comes in after he is satisfied he is caught and cannot effect an escape. Many other fish die fighting furiously, struggling, straining to the last to take any possible chance or to make their end as hard for their victorious adversary as possible. But Mr. Shark seldom shows "gameness." He is caught and knows it and he comes up for the fatal shot that settles his career with a degree of resignation that is almost disgusting. The "sharker" having located his camp near some pass or channel in the reef makes his plans to catch his fish, take their hides and get away as soon as possible. Hooks varying in size from a heavy six-inch nine-sixteenths to a two-inch drum hook are used. Line from the size of hambroline to the ordinary cod line is the kind preferred. A harpoon or two and a couple of spears complete the fishing outfit and for a "killer" a shotgun with buckshot cartridges or a heavy rifle using a large soft lead bullet of not less than forty-five caliber. The shooting is all close up and the game huge in size. The shocking power is wanted and penetration is not. Often a fish is beaten to death with a bar to save ammunition if the fish can be brought close aboard to receive the blows.

"Sharkers" generally fish as partners, two or three in a boat, each getting an equal share and one share going to the boat, so that two men in one boat get each one-third. The boat furnishes gasoline and oil, lines, etc. Grub is staked equally. Often the boat's expenses are first deducted and the remainder divided equally. This latter is the best way and the one used upon the East Coast along the Florida Reef.

After selecting a spot near the cut infested with sharks, the fishermen get their bait ready. This consists of any kind of fish large enough to tempt the appetite of the scavenger. The start seaward is made upon the last of the ebb and the boat placed in some particular spot in reference to the runways of the fish coming in on the flood. Hooks are baited and the lines played out until the bait is far astern in the clear water of the reef. Some wandering scavenger soon scents the fish, the more so if it is a bit stale, and he soon pushes the mass of stinking carrion about with his snout. A shark does not turn upon his side when striking unless he sees fit to do so; he will as often bite "fin out" as any other, that is, with his dorsal fin clear of the sea and upright. But he will generally turn upon his side and look up at the boat and its occupants as he goes past. Owing to the peculiar position of his eyes—they being placed far apart at the edge of his skull—he can see better when trying to observe things above him by raising his head at that side. The same peculiarity obtains in human beings, who generally raise their heads when trying to observe anything almost directly above them. This most commonplace and ordinary mechanical necessity has given rise to the absurd yarns about sharks turning upon their backs before striking. The mouth being wide enough to open into an immense circular cavity, the fish has only to get his prey aligned with the opening to strike forward and snap the rows of cutting teeth upon the victim. The edge of each tooth is serrated and as sharp as a razor.

After fooling around the bait, nosing it and sometimes taking hold of it gingerly, the shark will generally make a sudden resolve and bolt it. The fisherman does not jerk the line right away. He lets the hook get well down into the creature's mouth, for the skin inside is nearly as tough as the skin outside. As the fish sheers away, giving the man a chance to strike the hook sideways into the softer parts, the line is suddenly set solidly against the running fish. Nine times out of ten the barb will then enter and the fisherman braces himself and sinks the hook in with all his strength. Feeling himself caught the shark will generally make a sudden wild run for freedom. His full power is now upon the line, and he exerts it with such vigor that the small boat or launch is dragged bodily about and the line eased time and again in the most furious of his rushes. A turn is taken upon a cleat, for no man

can hold a full-grown shark, and after a few minutes the fish comes to the reasonable conclusion that he cannot make a getaway. His rushes become more and more easy to handle, and he leads gradually alongside. The other man now awaits his chance with the rifle.

In very clear water a shark often refuses for some time to come close to a boat, where he can see perfectly what is going on. He will allow the hook to lead him a few fathoms distant, but fight frantically to evade coming into close range. This is not considered necessary by the fisherman, who is satisfied to have him tow easily and almost placidly a few fathoms out. By giving a sudden pull upon the line the shark will sheer off and come close to the surface, often breaking water in the effort to keep his distance. The rifle cracks and a heavy bullet gives a shock that abates the victim's zeal and weakens his interest in the struggle, which is nearly over. Another shot and the sea is darkened with the blood, and then the scavenger is let go to drift slowly off to the length of the line. After the bullet has had a chance to do its work the shark is hauled close aboard and a bowline slipped over the small of the tail, the hook is hauled until the head and jaws come high enough alongside to enable a hatchet to chop the barb out, the bait is replaced and the next lurking denizen is awaited. Slinking slowly along the bottom another soon repeats the investigation of the new bait, and the scene is repeated until three or four monsters are fast alongside. Then the boat starts for the beach, where the skinning is done.

THE BEST CATCH OF THE SEASON.

These seven sharks were all caught last winter by one man on one tide near the Ragged Keys on the east coast of Florida.

To remove a shark's skin may seem easy, but it is not. A heavy knife is used, and as fast as its edge turns upon

the hide it is replaced by another. The fish is split along the belly and disemboweled. Then a circular cut is made just back of the slits or gills. One man hauls the leather and the other cuts under with the point of the knife until the skin comes off down to the "small" or that part near the tail. It is then cut loose and spread out to dry upon a frame. No meat is allowed to remain upon it, and it is the difficulty of removing the lean meat next to it that makes the operation difficult. The under side of the hide is as white as snow, and it is in a full-grown shark about as thick as horsehide. The gray outside, with its flinty surface, is turned down and the green side exposed and rubbed with salt. It will dry in a few days to a substance almost as hard as wood. Sometimes the jaws are cut out or the backbone removed for trophies, but with the shagreen hunter the entire fish is generally thrown away. Some of the negro fishermen try out the liver, which produces a very good oil, the only fat apparently about the creature, the rest being all bone and sinew and fibrous lean meat.

Sometimes a runway for the fish is established in some quiet lagoon which is unfrequented and the bottom offers opportunities. Often there appear pockets in the coral banks which hold deep pools of crystal water. At high tide there is enough water for the largest shark to swim into the pockets, where the offal is placed. When the tide falls the shoal between the deep water and the pocket becomes so shallow that no fish of any size can cross without showing part of his body clear. One man stations himself with rifle and spear and the other drives out the fish from their feasting. If there has been no disturbance to excite the sharks they will be found in the deep pockets and they will start wildly for the open sea, thrashing and struggling across the shoal. By getting within a few dozen paces the hunter can stop them with the rifle before they get across and by the aid of his spear drag them close together, so that a line can be passed and carried to the small boat to await the rising flood.

Night fishing is sometimes the best when the fish have been frightened or the season late, but in the warmer weather daylight under a strong sun and cloudless sky are best. The less wind the better, for a shark takes to the deep sea whenever it comes on to blow with any force, and calm days he comes closer to the surface and nearer the shore.

Skins bring various prices, according to their size and condition, but it is evident that the market for shark hides will be much better when they are better known. Like the alligator skin of recent history, it will sooner or later have a vogue, and with the unlimited source of supply will last much longer than the skin of the much-sought saurian. Alligator hides now bring as high as fifteen dollars apiece for the largest size, but the demand has been dying out owing to the inability to supply them. There is no reason why shark skins should not be equally valuable, as they are much tougher, and while lacking the strange markings due to scales, they have many qualities found in no other skin. For trunks and bags they are superior to anything in the way of leather.

A fisherman does not make much money out of any kind of fishing, and the sharker is no exception to the rule. His life upon the keys or desolate islands is primitive, but healthy, and he generally is glad enough to get in with enough to buy bacon and meal to last the warm weather out.

JACKSONVILLE, FLORIDA.

A Butler's Life Story

[M. R—— speaks English like a native of France, and his characteristics of phraseology have been preserved in the transcription that follows. The reader, however, is unfortunate in that he must miss the tones, inflections, gestures, emotions with which the narrative was delivered to THE INDEPENDENT'S representative.—EDITOR.]

I WAS born in France at the foot of the Mountain Balon d'Alsace, near the city of Belfort and the German frontier, forty-seven years ago.

Some say my name is not French but Spanish. I do not know. My grandfather was a charcoal burner up in the mountains, but my father had a mill—a saw mill—at the foot of the mountains where he sawed the lumber for houses and furniture, mostly pine, but sometimes hardwood like maple.

Our family, at the time I was born, was pretty well off, but my parents were not educated, and somehow they fall into the hands of an intriguer, a villain, cheat, scoundrel. My father had borrowed some money, and when the paper came to be looked at, it said he was to make the payment every month. He thought it was to be once a year only.

Then commenced the great struggle of my father to make these payments. My parents were too much for Catholicism. They gave to the church. They prayed, they paid for masses all the time. Too much bigotry! God never helped them.

My father he worked and worked and prayed and prayed, but it was all no good. Down, down, down, deeper and deeper in that bad man's debt, and he had no mercy, that terrible man.

At last we were ruined. We lost our home, our mill, all, all, everything. And there were those glad to see us fall down, and glad to shake hands with that bad man. And my father they call donkey, and say it serve him right for not to look out sharp.

What would you have? It is the way of the world. My parents succumb because they believe too much in good and truth and the help of God, and there we were left, at last, outside in the road, with nothing but our old cow "Ramaie" and the few things in the car.

This was in Louis Philippe's time, and the government was paying people to go to Algeria, and so we went, like Gypsies, in the car, with the cow pulling us.

There were six of us children with father and mother—five boys and one girl—the eldest my brother of twelve years. I was only six years. My grandparents had long been dead, and we only left behind an uncle. He would not come. At every city we came to the government gave us money, and it was not so bad, that Gypsying in the car. It was a covered car like that of the Gypsies. Mother cooked our meals by the roadside, and we all slept in the car at night.

It might have been a good time for us children, going thru the country that way, but mother was so severe with us, and beat us so hard for so little. Mother was a large woman, as tall as father, and she hurt very much when she beat us to drive the sin out. Father never beat us at all. Perhaps he was not so much religious.

The cow "Ramaie" suffered most. He not get the proper thing to eat, and grow thinner and thinner till my father he sell him in Arbois for 5 francs.

Then it was my father and the oldest brother to pull the car from city to city, Besancon, Chalons, Lyons. May be fifty, sixty miles. They took two weeks.

My father he was sick from the pulling, and when Lyons come he go to the hospital, and the sisters like him, he so religious. Then mother she go to visit hospital and bring the things to my father, and pretty soon he grow worse, and then one day he say to her:

"You need not to bring it more, the things for me. Just now the sisters say I may smoke as much as I like because the Doctor he tell that pretty quick I be so and so."

Then in three days my father was dead.

My mother afterwards she do wash and clean—work out by the day, and all us children we have to work, too, in factory where we make 10 and 15 cents a day. I was six year old and I became a *tirer les couleurs* in a silk printing factory. I had to handle a big color brush

and help print the silk. In the winter time it was very hard when I and the other boys go in the yard and wash the brushes. The cold and the wet split our hands until they bleed, and we were very small and miserable. In the winter time it was twelve hours that we worked, and in the summer time often it was sixteen hours a day.

All the time mother beat us for our sins, and all the time she gave money to the priest for masses for the repose of my father's soul—one franc a time. The only one of us who went to school was my younger brother who could not work. There was something the matter with him at his birth. His feet bent under him and his hands did not do what he wanted. Mother could not have been well when he was born. He was three years younger than me and by the time he was old enough to go to work a certain advocate, who had observed how religious mother was and how much money she gave to the church, made the Christian Brothers take him in their school. He learned to read and write and say his catechism, but it was all no good. After his first communion, when he was only twelve years of age, the advocate made the Christian Brothers apprentice my brother to a shoemaker who was paid one hundred francs to teach him. He had no strength and soon died of misery.

We others of the family kept growing all the time in spite of the hard work. I was at the silk printing factory for three years. At first I only got five cents a day, afterwards ten cents.

Then mother found another place for me where I got fifteen cents a day in a button factory. The boss was horrible, immoral, a beast. He told bad stories before the little boys. Such things! He beat us, too! Ugh!

I was there till I became fourteen years of age, still getting only fifteen cents a day, then, one summer, there was no work for me. Mother was very angry that I had no work, and she beat and kicked me till I thought:

"Maybe it is not so bad every place as here."

Then I ran away to the country to a farm where one of my brothers had been. The farmer gave me work and for the first time I knew what it was to be happy. I was to keep the cows in, to rake the hay, and thresh the wheat—all such things. The good country was all about me and there was plenty of food and wine, for the farmer was fair.

I grow strong and I think. I see the other people that could read and write. I want to go to school, so I make back to Lyons and get place in restaurant, first time to wash the glasses, then to wait, and by and by there were customers who would have no other to wait. They could see I had it in me to make great waiter.

I stay there till I save 300 francs—tho, like my brothers, I was sending my mother ten francs a month. I say to myself "Now here is the winter. I must learn." I went and saw a professor where my brother used to go at night, and I bargained that for 30 francs a month he would let me sit all day in his schoolroom and listen to the children.

After three or four months the professor say that if I make the competition I could take first prize from all the children, but I could not wait. My money was gone, and the restaurant sent to say if I want my place I must come back.

So back again to the restaurant, and there I work another two years and save more money, and then I think again:

The foreman of the waiters everywhere he have to talk English. So I say, "I go, learn to talk English. Then maybe I get it, foreman of waiters."

Then I go to London and get a place there. The boss do something with the Atlantic cable. I was butler and everything else, and as I not know the language, the mistress she teach. She was good woman and they like me. I was there twenty-three months, and when I go away she give me fine character.

I would not stay in the second place. They wanted that I should brush the shoes of the maid. Pah!

I soon got a place in the family of an American engineer, a large house with nine children and twelve servants. I was the butler, and was soon on good terms with every one, especially the Missus. She was very intelligent woman. She like me.

Butler is soul of domestic establish-

ment. He stand in middle responsible for all order. He is between servants and masters, and it depend on him that things are to go well. A good, faithful butler will tell all that the servants are saying so that the mistress may know how it goes. Perhaps the coachman will come back from driving the master, and will say:

"Blank his eyes, he went in to dinner in that place and left me sitting outside in the cold for three hours."

The mistress she always want to know what the servants say about them, and that is right, too. And if you do not tell, why you do not stay long. The butler he watches the servants to see that they do not waste—the cook especially. He is like foreman over servants and like one of family. Of course the Missus she would not ask the butler what servants say. No, that would be to put herself down. For she would not ask where the master he go when he go out, but there are some things that people like to know without asking, and the wise man he know those things.

After I leave that family it was to Regent's Park I go. A very grand-looking woman, Mrs. W., engaged me, and she be very particular about my character. There were ten other servants, and they tell me soon how it was in that place. It is a fine large house, and the Mr. W. he was great whisky man, very celebrated in all the papers, but he only come there sometimes. Other times there was another man, a Major ——. When Mr. W. he drive up to the house, Major —— he go out the back door. All the servants know and they tell me. I not like that place. I disgusted. It was too low.

So I only stay little time. Then I go to grand big house in South Kensington. There was good order in this house, and tho plenty of work I like the place well. The lady had big heart. She not hear the small servants' tales. A good lady make cheerful to all in the house.

I went next to a family that had two houses. I got to them thru advertisement in the *Times*. The Missus look so fierce when she talk to me that I never thought I would stay, and I was very independent. I ask for 50 pounds a year. She say, "Too high." I say, "I bring another man, fine, tall, for 30 pounds." She say, "Can you recommend him?" I say, "I best bring him to you so you can see." So we came the next day, but he not speak English, and she will not engage, and she write to me to be here in the morning, so that the gentleman will see me. I come alone next morning. He look at me right in the eye, and they talk, and then she say, "When can you come?" I say, "Any time." "Come then and serve the dinner," she say. I served the dinner that afternoon and they were pleased. She say, "Go and fetch your box." The servants tell me she keeps nobody, she very bad temper, so I ready to skip, and pretty soon we have scrap. She did not like the plate I put on the table. I say, "I did not know," and she say, "Well, you ought to know." I say, "Do not get so high. If you do not like it, pay me. I'm off." She won't answer and left me. I began to pack. Then she had scrap with cook, and the cook left them. I did not see her since and she not bring my money. The butcher came, and I say, "Come back at half past five o'clock." He came and I have no orders. Then I say to myself:

"The boss, he good fellow, I won't let him starve." So I cook dinner myself. I make soup with consommé tapioca, fish broiled, and I roast nice chicken and force it with thyme and herbs, a way that the cook did not know. At half past six o'clock there was still no word from missus, and at seven the boss come and I serve dinner. The boss and missus they have some talk in their rooms, and the boss come to me and I say:

"The cook has left and I thought I would serve the dinner. You are not the cause of all these misfortunes."

So he sat down and have that dinner, and then he sent me to the cellar for two bottles of Chateau Margeaux, one for him and one for me, and the next day, instead of giving me the sack, the boss told me it was all right, to keep on the same way. But the lady she not speak to me for two weeks, and after that she would not bother with the housekeeping. She let me manage and give all the orders, and she was most pleasant all the time.

Then it went on smoothly. We go to Eastbourne, their country place, and they keep changing their cooks, for the boss

like my cooking. When it came hot summer I was left alone in the house for four months, except that now and then the boss's brother-in-law would come and stay a day and a night and I took care of him. I had charge of everything. The lady like it that she could come in pantry or kitchen any time and find always cleaner than drawing-room. She used to say, "He's funny, that Frenchman."

I was five years with those people and they trust me always.

By and by I say to myself, "I like to go back to France," so I take my money that I have saved and make back to Paris, and there I buy a restaurant and café on the Rue Nazarath near La Porte St. Denis. I have again the misfortune of my family, for I fall into the hands of grand cheat. He bring me to the place and show it to me. Great business, every table full, people eating and drinking. It look fine. I say I take it and I pay down 5,000 francs. But behold! These people that I see eating and drinking they were all hired to make that effect for me so that I buy that place. It was place of bad name where the gambling was done, and two days after I buy the police come and lock it up, and I was ruined. Then I go after the agent, but they say they have nothing to do, the other fellow he have the money, and the other fellow he have gone away, for I pay cash.

I have only few francs left and I have for a time the great despair as I stand there in Paris ruined—like my family, always.

Then something within me say, "Why you not to America, the land of the millionaires and bad cooking." By this time I was great cook.

So here I come and the first place I get is for a man that write in the paper. He just come from Europe where he left his wife and he very gay. Every day with high boots he ride horseback in the park and he catch the eye of a multimillionairess and pretty soon they good friends, for she have arrange with her husband that whenever she in America he must be in Europe, and whenever she in Europe he must be in America.

Then the man he hire new house and put me in it and he and the lady meet there three times a week and have great feasts that I cook.

She give me orders that never at any time must I serve cabbage, but I only smile. I cut the cabbage up in long strips and bleach it by boiling for ten minutes and serve it with partridge, and pretty soon she came down to me in the kitchen and say, "Jean, that was heavenly. I never again will say against cabbage. Never before do I eat so much."

She come to that place in daylight with her carriage and fine horses and three dogs that cost $30,000. She was very brave lady and give me many presents.

After that I went to a villa near Plymouth. The boss was a Jewish banker, and we were five servants with a coachman.

Then to the establishment of a railroad president who is very well known in this country. I found there a housekeeper that would not do. I was chef. The housekeeper she had young man that came to see her that she want to make more than the boss himself. I must cook for this young man better than the boss. One day there remained but filet of beef. She went to ice box, help herself and made me cook it, and a partridge, too. Pretty soon railroad man he turn up hungry and want lunch, and she say there was nothing. Then come row, and I was supposed not to be good cook because there was nothing in the house.

I could see that they were angry, and I say to myself I not want to work there any more, and pretty soon the housekeeper she come to me and want poulard en chaudfroid for supper. It was then half past one o'clock. There was no chicken in the house and I say we not have time. This takes time to do. But she say it must be done by six o'clock. That chicken not come to the house until half past two o'clock, and how can I do the thing? It must be braised in a brazier first, then put on ice, then cut in eight pieces and the juice poured over upon it, and then put in the cooler. I knew it could not be done well. She say also she must have boudins à la Richelieu (the supreme of chicken) and eclair of chocolate. It was all a mishap. Dreadful. That woman she ruin my reputation as chef. The poulard that come on the table—what they call in

English mess, ugh! Railroad boss very mad. Me too. I wrote letter thru the post to missus (she was in house but I fear housekeeper get my letter if I send thru maid) and told her all. That the housekeeper she sent for the chicken at half past two o'clock and that housekeeper she is not capable of bossing me, for I am honorable man and I will not have it. Then I am dismissed, but four days after the housekeeper, too, she went. The missus, she sent me first for she want to keep the rank and discipline of the servants, and so she sent me away tho she know that I am the right.

My next place was on a yacht of the New York Yacht Club three months of the summer time. Here I was under an English steward who was great drinker like all other English. He all the time creep to the boss, but great tyrant with the servants. I was chef with two cooks under me. The company was the smart set. Our boss was single; our parties sixteen, ten, twelve at a time. In New Haven one time the captain watched the steward come on board, and saw there was blood on his shirt and on his face. The captain came near and saw that he had been drinking and fighting, so he was discharged, and then another steward came and brought his own cooks with him, and I was to leave.

I go next to another yacht, a big yacht where I have three cooks under me, and they give big parties. The boss was a Philadelphia millionaire, and I get $90 a month. He was a good man to work for and I stayed until the end of the season.

Then to Hotel N. for the winter time. I was night chef and I did not like it. It was more common and the help mostly Italian. Not so clean. They do not wash their hands before they touch the meat. Next spring I get chef on the yacht "W——," owned by a big banker. I had two assistants under me. This man he have marry old spinster of Newport whom they call Empress Josephine, for she dress like the Empress. She talk to me very polite and ask me to make some cakes, and she very much pleased. I stay there this season getting $100 a month.

Next I get place in Thirtieth street. Two bachelors alone. One was theatrical writer. He had made plays which were of French things, and I tell him the French, so I have to do with those plays. They have sometimes party there. In the winter time they were both sick and I give them the medicines and their meals. When cured they both go away, but I stay in the apartment, tho I have no orders. Two days after a fire break thru next door at two o'clock in the morning and flames were blowing in. I was very much afraid. Then I said, "I am glad to be here." I get out the most expensives to take away, but then the fire went off. Well, the next day at the same hour the fire come back again. I say that I thought it impossible. I took all that was in bureau and chest. The flames were getting bigger and bigger. I pack up all the best clothes and the papers and began to run with the packages. The eight firemen come, and Croker, who say there was no danger, it all out. The boss sent me a word of congratulation to say: "You behave yourself well."

Then one of the gentlemen got very sick. He go to Hot Springs try to cure, but got worse. They sent him back to New York and he died. Then I had to leave, as the other one could not afford to pay full price.

Now I am great chef. All the millionaires know my cooking and some say, "There is none like him—no, not in all America." I go to the market. I buy some common things, then I come back to the kitchen and in an hour behold! I have make something so fine, so delicate, that the real gourmand he rise from the grave to devour it.

But I do not like chef in this country. The rich people here they do not know that chef has a soul, that he is an artist, as a poet or a painter. They look upon chef as only animal, cattle. I am awfully sensible and the despise I cannot bear it. I have never been drunkard, debauchée, roué, money gambler. I have no pleasure in wrongdoing.

My pleasure it is in the books, the medicine, the philosophy and the history. So I will be butler again, for the butler he lead the intellectual life.

I do not go to church because I am not hypocritical. I am on the side of Darwin. What do we know? The world whirls around 24,000 miles a minute, and

we do not know where we are going or where we come from. They tell us that Jupiter created the world, but it is best to say we do not know.

I thought one time that I would get married. The butler who not marry he have often to endure the persecution of the maid, who know not why he should be bachelor, and think to lay a snare. In England, where he dress in the grand uniform, it is not so much to blame the women, for he look very fine, and even here, where he not wear the crimson or the yellow, he still grand figure, and the ladies smile on him. So I think to get married, but girl's mother she not like it that I am philosopher and I am still single.

I am citizen of this country now and will not go back to France, tho it make me pain at first to see the new aristocrats here how they live like pig in a palace not knowing what to do, so that the servants are laughing and saying "Ma boule!"—"he is crazy!" or "he is a farmer from Cincinnati."

I have seen guests at a millionaire's table trying to eat the crust of salambo and others drinking the mint from the finger bowl, while the waiters turn their backs so that it may not be seen that they laugh.

But still it is the good country, and as to the new aristocrats they will learn. My philosophy tell me that suffering is the great teacher, and the new aristocrats suffer from their servants. I never saw such robbers, especially the English.

There is a great mansion on Fifth avenue near Sixtieth street where the servants are eight men and twenty-five girls. The boss is very rich and very celebrate and they give grand parties, and after the guests leave the supper table the waiters plunder it—peaches that cost $3 each, cigars that cost $1, the finest wines and grapes, whole fowls—all such things—the waiters juggle them away in their napkins. They take them to the cellar or pantry and hide, for themselves and their girls—for every waiter have his girl.

One girl, who has been in that house twenty years, and tells on all the others, is herself the big thief. She once stole a ten pound tenderloin of beef to give her hairdresser. She is stealing all the time, yet because the mistress listens to her she got one of the greatest chefs in the country sacked because he told her to keep her place.

It is good to be butler in this country where you have the nice family, tho the best place is with the real gentleman in England. Still here the money is twice as much.

The English have good butlers, and some think that they are the only good butlers, but that is not true. French make better where they have the training, because the English can never have the French grace and artistic. The very essence of butler's duty is, do the thing gently, without asking. You must know what they want all the time without interrupting their conversation. You must tell the other servants by the eye, by the lifting of a finger, so that all runs smooth as if there were no servants and yet wants are all supplied. Our steps are all counted. We never hurry, yet never are slow. We watch everything yet seem not to be there at all, for we are never in the way, and if the boss makes us a compliment we do not laugh like a fool but receive it with the sobriety of respect

In the time of Louis XIV France had great butlers because there were great establishments that could train and employ them, but now in France the great fortunes have scattered themselves by the right of equality, and so we find that the English butler he have the fame.

New York City.

"The Worm Striving to Be Man"

BY JOHN BURROUGHS

WITH what different feelings we look upon the physical creation in the light of the theory of evolution from the feelings with which our fathers looked upon it! Evolution makes the universe alive. In its light we see that mysterious potency of matter itself, that something in the clod under foot that justifies Emerson's audacious line of the "worm striving to be man." We are no longer the adopted children of the earth, but her own real offspring.

In imagination stand off in vacant space and see the earth rolling by you, a huge bubble with all its continents and seas and changing seasons and countless forms of life upon it, and remember that you are looking upon a great cosmic organism, pulsing with the vital currents of the universe, and that what it holds of living forms were not arbitrarily imposed upon it from without, but vitally evolved from within, and that man himself is one of its products as literally as are the trees that stand rooted to the soil. Revert to the time when life was not, when the globe was a half incandescent ball, or when it was a seething, weltering waste of heated water, before the land had yet emerged from the waves, and yet you and I were there in the latent potencies of the chemically and dynamically warring elements. We were there, the same as the heat and flame are in the coal and wood and the explosive force of the powder is in the grains. The cosmic chemistry in due time brought us forth, started us on the long road that led from the amœbæ up to man. There have been no days of creation. Creation has been a continuous process, and the creator has been this principle of evolution inherent in all matter.

Man himself was born of this principle. His genealogy finally runs back to the clod under his feet. One has no trouble in accepting the old Biblical account of his origin from the dust of the earth when one views that dust in the light of modern science.

Man is undoubtedly of animal origin. He is embraced in the same zoological scheme as are all other creatures, and did not start as man any more than you and I started with our present stature, or than the earth sprang from chaos as we now behold it.

His complete physical evolution must have been achieved thousands of centuries ago, but his full mental and spiritual evolution is not yet.

I think of his physical evolution as completed when he assumed the upright attitude or passed from a quadruped to a biped, which must of itself have been a long, slow process. Probably our whole historic period would form but a fraction of this cycle of unrecorded time. Man's complete emergence from the lower orders, so that he stood off in sharp contrast to them in his physical form probably occurred in later Tertiary times, and what the meaning of this stretch of time is in human years we can only conjecture. During this cycle of numberless centuries till the dawn of history, man's development was mainly mental. He left the brute creature be-

hind because his mind continued to develop after his physical form was complete, while the brute stood still. Whence the impulse that sent man forward? Why was one animal form endowed with the capacity for endless growth and development, and all the others denied it? Ah! that is the question of questions. Compared with the development of his bodily powers, man's mental and spiritual growth has been very rapid. He seems to have been millions of years in getting his body, while he has been only millenniums in getting his reason and intelligence. What progress since the dawn of history! Compare the Germans of the time of Tacitus, or the Gauls of the time of Cæsar, or the Britons of the time of Hadrian with the people of those countries today.

We are apt to speak of man's emergence from the lower orders as if it was a simple thing, almost like the going from one country into another. But try to think what it means; try to think of the slow transformation, of the long, toilsome road even from the half-way house of our simian ancestors. If we do not give him the benefit of the sudden mutation theory of the origin of species, then think of the slow process, hair by hair, as it were, by which a tailed, apelike arboreal animal was transformed into a hairless, tailless, erect, tool-using, fire-using, speech-forming animal. We see in our own day in the case of the African negro, that centuries of our northern climate have hardly any appreciable effect toward making a white man of him; nor, on the other hand, has exposure to the tropical sun had much more effect in making a negro of the white man. Probably it would take ten thousand years or more of these conditions to bleach the pigments out of the one skin and put them in the other.

The most marvelous thing about man's evolution is the inborn upward impulse in some one low organism that rested not till it reached its goal in him. The mollusk remains, but some impulse went out from the mollusk that begat the fish. The fish remains, but some impulse went out from the fish that begat the amphibian. The amphibian remains, but some impulse went out from the amphibian that begat the reptile. The reptile remains, but some impulse went out from the reptile that begat the mammoth; and so on up to man. Man must have had a specific line of descent. One golden thread must connect him with the lowest forms of life. And the wonder is that this golden thread was never snapped or lost thru all the terrible vicissitudes of the geologic ages. But I suppose it is just as great a wonder that the line of descent of the horse, or the sheep, or the dog, or the bird, was not snapped or lost. Some impulse or tendency was latent or potential in the first unicellular life that rested not till it eventuated in each of these higher forms. Did any terrestrial or celestial calamity endanger the line of descent of any of the higher creatures? Was any form cut off in the world-wide crustal disturbances of the earth at the end of paleozoic and mesozoic time, when so many forms of animal life appear to have been wiped out, that might in time have given birth to a kind unlike or superior to any now upon the earth? Species after species have become extinct, whole orders and families have gone out, often rather suddenly. Why we know not. Why the line of man's descent was not cut off, who knows? It is a vain speculation. There can be little doubt that in early Tertiary times our ancestor was a small, feeble mammal, maybe of the lemur, maybe of the marsupial kind, powerless before the great carnivorous mammals of that time, and probably escaping them by his greater agility, maybe by his arboreal habits. The ancestor of the horse was also a small creature at that time, not larger than a fox. It was not cut off; the line of descent seems complete to the horse of our day. Small beginnings seem to be the rule in all provinces of life. Little doubt that the great mammals of our day—the elephant, the whale, the lion, etc.—all had their start in small forms. Many of these small forms have been found. But a complete series of any of the animal forms that eventuated in any of the dominant species is yet wanting. It is quite certain that the huge, the gigantic, the monstrous in animal, as in vegetable life, lies far behind us. Is it not quite certain that evolution in the life of the globe has run its course, and that it will not again bring forth reptiles

or mammals of the terrible proportions of those of past geologic ages? Nor ferns, nor mosses, nor as gigantic trees as those of carboniferous times. Probably the redwoods of the Far West, the gigantic sequoias, are the last race of gigantic trees. The tide of life of the globe is undoubtedly at the full. The flood has no doubt been checked many times. The glacial periods, of which there seem to have been several in different parts of the earth, and in different geological periods, no doubt checked it when it occurred. But the tide as a whole must have steadily risen, because the progression from lower to higher forms has gone steadily forward. The lower forms have come along; Nature has left nothing behind. The radiates, the articulates, the mollusca, etc., are still with us, but in the midst of these the higher and higher forms have been constantly appearing. The great biological tree has got its growth. Many branches and twigs have died and dropped off, and many more will do so, are doing so before our eyes, but I cannot help doubting that any new branches of importance are yet to appear—no new families or orders of birds, or fishes, or reptiles, or mammals. The horse, the stag, the sheep, the dog, the cat, etc., as we know them, are doubtless the end of the series. One arrives at this conclusion upon general principles. Life as a whole must run its course or reach its high-water mark, the same as life in its particular phases. Man has arrived and has universal dominion; all things are put under his feet. The destiny of life upon the globe is henceforth largely in his hands. Not even he can avert the final cosmic catastrophe which physicists foresee, and which, according to Professor Lowell, the beings upon Mars are now struggling to ward off.

Man has taken his chances in the clash of forces of the physical universe. No favor has been shown him, or is shown him today, and yet he has come to his estate. He has never been coddled; fire, water, frost, gravity, hunger, death, have made and still make no exceptions in his favor. He is on a level with all other animals in this respect. He has his life and well-being on the same terms as do the fowls of the air and the beasts of the fields.

The physical evolution of man, as I have said, is no doubt complete. He will never have wings, or more legs, or longer arms, or a bigger brain. The wings and the extra legs and the keener sense he has left behind him. His development henceforth must be in the mental and spiritual. He is bound to have more and more dominion over Nature, and see more and more clearly his own relation to her. He will in time completely subdue and possess the earth. Yes, and probably exhaust her? But he will see in time that he is squandering his inheritance and will mend his ways. He will conserve in the future as he has wasted in the past. He will learn to conserve his own health. He will banish disease; he will stamp out all the plagues and scourges, thru his scientific knowledge; he will double or treble the length of life. Man has undoubtedly passed thru and finished certain phases of his emotional and mental development. He will never again be the religious enthusiast and fanatic he has been in the past; he has not worshipped his last, but he has worshipped his best. He will build no more cathedrals; he will burn no more martyrs at the stake. His religion as such is on the wane. But his humanitarianism is a rising tide. He is becoming less and less a savage, revolts more and more at the sight of blood and suffering. The highly religious ages were ages of blood and persecution. Man's tenderness for man has vastly increased. The sense of the sacredness of human life has increased as his faith in his gods has declined. He has grown more human as he has grown less superstitious. Science has atrophied his faith, but it has softened his heart. His fear of Nature has given place to love. Man never loved as he does now. He has withdrawn his gaze from heaven and fixed it upon the earth. As his interest in other worlds has diminished his interest in this has increased. As the angels have departed, the children have come in.

When the nations, too, cease to be savage and selfish, and become altruistic,

then the new birth of humanity will actually have occurred. As an artist and a creator of beautiful forms, man has also had his day; he loved the beautiful, the artistic or the ornamental long before he loved the true and the just. He was proud before he was kind; he was chivalrous before he was decent; he was tattooed before he was washed; he was painted before he was clothed; he built temples before he built a home; he sacrificed to his gods before he helped his neighbor; he was heroic before he was self-denying; he was devout before he was charitable. We are losing the savage virtues and vanities and growing in the grace of all the humanities, and this process will doubtless go on, with many interruptions and setbacks, of course, till the kingdom of love is at last fairly established upon the earth.

West Park, N. Y.

The Fairy Realm

BY WILLIAM R. BENÉT

Oh we smiled our silent pity when they mocked our faith as fond!
Well we knew the stately city past the bounding of Beyond—
All its streets with sunshine glowing,
All its towers with banners flowing—
We were going, we were going to its jasper gates beyond!

There the mages flout at sages—and the knights-at-arms are there;
And the little Princess Wildrose, letting down her golden hair
In the night of dreams and roses,
When her casement latch uncloses
To the Prince the tale supposes climbs its shimmering like a stair.

There are flagons, there are dragons, there rings Merlin's mystic tune!
There are wizards, weirdsome lizards, and the gardens of the Moon—
Fairy kings in strange disguises—
And *such* combats and surprises!
Harps and flowers and haunted bowers—magic cap and magic shoon!

There the centuried sleepers waken; spells encoil or set one free,
And the gold-leaved trees are shaken with a rune of mystery—
And forever and forever
Float fair sirens on the river,
Sing bright maidens by the river, spinning silks o' glamourie!

Oh the blue, blue sea that shimmers from a golden, golden shore!
And the jeweled state that glimmers thru each pillared palace door!
Forest depths of glinting beryl
Whispering quests of daunting peril—
And, at night, the musicked dancing, whirling o'er each glassy floor!

How we smile to hear them saying there is no such land at all!
For the fairy steeds are neighing in each marble fairy stall—
Yes, the fairy steeds are prancing,
With their studded bridles glancing—
And tonight we'll be a-dancing at a fairy, fairy ball!

Benicia, Cal.

Literature

Karl Marx*

For a man whose name is so widely known as is that of Karl Marx it is somewhat singular that so long a time should pass without an adequate biography of him being published. Now, in the same year, and in almost the same month, two biographies appear. One is in Russian, by P. A. Berlin. The other is in English, by John Spargo. Mr. Spargo has been for years gathering material for such a work. He does not assume to have written a "final, authorized biography" of his hero. There is still material to gather, and he expects some German writer, such as Mehring or Bernstein, to whom further sources of information are more accessible, to prepare the definitive work. His own attempt has been to furnish the general reader with "a sympathetic and interpretative account" of the life of Marx, written in a popular manner.

There is no doubt that the book will be popular. It will explain Marx to thousands to whom he is but a name. Mr. Spargo has had the advantage of the acquaintance of a number of men who knew Marx well, and the further advantage of the cordial assistance of Madame Laura Lafargue, the only surviving child of Marx. He has gleaned his data from many sources. Certain slips and lapses are unavoidable in a pioneer work, and Mr. Spargo has given several instances of these, upon which the critical Socialist press has pounced with avidity. One of these slips is the use (p. 277) of an evidently inaccurate translation of a letter of Marx, taken from the London *Social Democrat,* wherein the founder of Socialism is made to express himself in favor of the co-operation of the working class with the middle class in political action. Despite these errors, the evidences of carefulness are plentiful; and tho many of the author's interpretations will doubtless be roughly criticized by the more "revolutionary" wing of the Socialists, the statements of fact are likely to stand a severe scrutiny.

The character of Marx shines thru these pages as that of a hero. No one, not even Mazzini, among the world's reformers, ever bore his part so unflinchingly and so nobly amid such privation and suffering. For years he and his family were in the direst poverty. At one time they were dispossessed from their miserable London home, and all their belongings, including even the children's toys, were seized and sold. Yet nothing could tempt him from his life-work; or if a momentary impulse to give it over in favor of more lucrative tasks sometimes possessed him, the notion was soon abandoned. Throughout it all, he was incorruptible; and he rejected offers which would have made him secure from want, but which his sense of integrity and faithfulness to the movement forbade him to accept. He has sometimes been pictured as a stern and unlovable personality, as arrogant, conceited and quarrelsome. The description of him at the age of thirty in Carl Schurz's reminiscences is familiar to many. But Schurz's picture is unfriendly and overdrawn. Another picture of him, describing the same time and probably the same occasion, by Albert Brisbane, is remarkable for its contrast to the Schurz delineation. No doubt Marx was stern; he was tempestuous, too, and the record of his quarrels is a long one. But no petty motives entered into these quarrels. Inflexible in his fidelity to principles, his personal differences were based solely upon public grounds. The tender and romantic side of Marx has not before, except in Liebknecht's little book, been dwelt upon. The story of his devotion to his wife is one for romance rather than biography, so exceptional is it; and he had a passionate love of children, his own and everybody's. There was a rich vein of poetry in his nature; he was a student of Dante; and he often dwelt upon the literary associations of his Hampstead

*Karl Marx: His Life and Work. *By John Spargo.* New York: B. W. Huebsch. $2.50.

home—the onetime haunt of Shelley, Keats and Hunt—with veneration for the "poets dead and gone." His own verses, written in his early manhood, are about as bad as those of Lecky or of Gladstone; but he could appreciate poetry, even if he could not write it.

The tactical attitude of Marx comes in for frequent treatment. The question, "What would Marx have done?" is constantly upon the lips of Socialists of the more doctrinaire variety in the face of current problems, and the biographer of the great leader must needs deal with it. Mr. Spargo effectually dispels the absurd view of Marx as an uncompromising "revolutionist." With all Marx's insistence upon correct theory, he yet regarded the proletarian movement as of prime importance. Union upon the basis of the class struggle first, the theoretical pronouncement afterward, was his principle. Mr. Spargo has no doubt that Marx would have sided with the Milwaukee movement as against the more doctrinaire attitude often taken in America.

It is as the formulator of the economic interpretation of history and the founder of an international movement more than as a political economist that Marx, in Mr. Spargo's opinion, wins title to greatness. Repeatedly he compares Marx's work in sociology to Darwin's in biology. Others had preceded Marx in indicating the influence of the economic environment in thought and action; it was left for Marx to gather "existing ideas into a synthesis of inestimable value, working them consciously and systematically into a comprehensive formula." His treatment of surplus value is regarded as of less importance from an economic than from a sociological standpoint. In other words, it is not so much his analysis of surplus value as his explanation of the rôle which surplus value plays in social evolution that constitutes one of his main legacies to the world. "Great economist that he was, Marx was first and foremost a sociologist." Slowly but irresistibly his name becomes better known and his influence expands. For an understanding of his life and work this book is indispensable.

The Study of Religion in Italy

Mr. Jordan has placed English readers under great obligation by the preparation of this volume on *The Study of Religion in the Italian Universities.*[1] The undertaking was inspired by the researches of Professor Labanca, a translation of whose work on the "Early and Later Hindrances Confronting the Study of Religion in Italy" appears as the central portion of this book and thus accounts for the two names on the title page. In the translation of Professor Labanca's brochure one gets from the pen of a competent scholar a careful survey of the historical antecedents and an analysis of the conflicting forces now struggling for supremacy in the religious thought of Italy. The present unsatisfactory condition of university instruction in religion has resulted from a laudable attempt to place such instruction on a par with other university work. The revolution of the sixties won for the Italian people complete liberty in historical and scientific investigation, and progress along these lines was soon vigorous and rapid. At the same time a few sagacious leaders saw the need of a more vital religious life based on free historical and critical study, and took up the task of awakening an interest in such intellectual research among Italian scholars and students. The work has been difficult and often discouraging. Professor Labanca finds the greatest obstacles in the inherited apathy of the Italian people in regard to religious things, and in the present ecclesiastical regime with the attendant political entanglements.

In 1873 the old Theological Faculties connected with the universities were abolished by law, and by the same enactment it was proposed to transfer the "instruction proper to these faculties—in as far as they possess a general educational value, whether historical, philological, or philosophical" to the Faculties of Literature and Philosophy. This solution of the question would have brought fruitful results, but, unfortunately, partly be-

[1] The Study of Religion in the Italian Universities. *By Louis Henry Jordan,* in Collaboration with *Baldassare Labanca,* Professor of The History of Christianity in the University of Rome. Oxford University Press. $2. Henry Frowde.

cause of indifference, and partly because of political considerations, the Government has inaugurated the contemplated study of Comparative Religion and the History of Christianity in only two of the eleven universities where Theological Faculties formerly existed. This neglect and the consequent curtailment of proper university instruction are viewed with greater anxiety by such men as Professors Labanca and Mariano because the universities are the only institutions in Italy where modern critical and comparative methods in the study of religion can be freely followed. There are, however, signs of the dawn of a better day, and not least of these is the ferment of the Modernist movement, a discussion of which is given by Mr. Jordan in the later chapters of this volume. Special praise should be given to Mr. Jordan's careful notes and the good English translation of Professor Labanca's work. The intelligent reader may gather from this book a large amount of accurate information in regard to the religious situation in Italy to-day, the causes which have produced it, and the leaders who are looking toward better things. Incidentally he may come to recognize the absolute necessity of the employment of scientific and historical study for the proper understanding and wise direction of the religious instincts, and the perpetuation of vital religious faith.

The Works of Sir John Suckling in Prose and Verse. Edited, with Introduction and Notes, by A. Hamilton Thompson, M. A. New York: E. P. Dutton & Co. $1.75.

Sir John Suckling was an amateur poet—the fact is betrayed most glaringly in his ambitious plays and other writings where he tried to be professional—but he was a man of spirit and he could not help putting some of his dash and brilliance into those free and easy lyrics which came from him, probably, with the least effort. The best of his poems are interesting not only for their own merits but also as noteworthy examples of the kind of poetry that was most relished in the rollicking cavalier times of the first Charles. A man of fashion, who had no settled business in life, he lived hard and died young—and wretchedly; yet that he was something more than a mere trifler and profligate his letters show, and that he must have had powers of keen enjoyment of life the lyrics unmistakably prove. Such of those lyrics as "Why so pale and wan, fond lover?" "No, no, fair heretic," "'Tis now since I sat down before," "Out upon it, I have loved," and two or three more that captivate by their charming petulance, their amusing distortion of the Elizabethan manner; and the incomparable "Ballad Upon a Wedding," unique in its genuine rusticity, its easy naturalness, its artless simplicity that actually turns doggerel into poetry—these are in the anthologies, and are about all of Suckling that the world at large will ever care for. But to the student of English poetry Mr. Thompson's edition of Suckling's works is a welcome book. The editor's work follows good models—the excellent series of Cambridge classics—and has been done conscientiously and well. The notes are no more than are needed, and the introduction, while containing little that is new, is adequate. After outlining the checkered career of the engaging warrior-poet, and giving a critical estimate of his verse, Mr. Thompson concludes:

"... It is impossible to doubt that beneath a gay and careless exterior he possessed sound practical sense, and that his ambition to excel as an amateur wit only too often concealed a high, if somewhat fragile, poetic gift, which on happy occasions rose superior to an atmosphere not a little hostile to its full development."

The Complete Works of Friedrich Nietzsche. Edited by Dr. Oscar Levy. Vols. I, II, Thoughts Out of Season. Vol. III, The Birth of Tragedy. Vol. VII, Human, All-Too-Human. Vol. IX, The Will To Power. New York: The Macmillan Co. $1.75 each.

In striking contrast to Germany and France where the Nietzsche fever has been raging violently for many years, America has taken almost no interest in him. It can hardly be claimed that this indifference is due to the fact that the American people are too sane and stable-minded to be carried away by a new philosophy, or that they have a superior intelligence which makes powerless his sophistical arguments, or even that their moral and religious sentiments were shocked by his blasphemous attacks. It

merely indicates the common indifference, even of educated Americans, to the movements of philosophic thought. While our religious leaders have been quarreling over whether or not they should recognize a mythical element in Genesis or whether or not the Virgin Birth is one of the essentials of Christianity, they have ignored the fact that one who had appeared on earth who called himself the Anti-Christ, boldly challenged the fundamental principles of Christian morality which the free-thinkers of previous generations had professed to admire. The translation of Nietzsche into English was first attempted about ten years ago but the few volumes issued fell flat. Nietzsche was an unknown name in the United States. Some of these earlier volumes, too, were inadequately, even absurdly, translated. So now it is high time that a complete and competent English edition like this should be published. In fact, it could hardly have been done earlier for it is only since Nietzsche's death that his unpublished fragments have been given to the world thru the reverent care of his sister, Frau Föster-Nietzsche. *The Will To Power* is such a collection of fragments, the notes of what he intended to be the exposition of his own system of morality, "An attempted transvaluation of all values," as he called it. The other volumes above mentioned are his earlier works, written when he was more a philologian and musician than an "immoralist." Consequently none of these volumes, important as they are for the student of Nietzsche, is the most suitable for the reader who wants to make his acquaintance. Nietzsche at his best—or his worst, if you please—is to be found in "Thus Spake Zarathustra," "The Genealogy of Morals" or "Beyond Good and Evil," which are also published in this edition.

Latter Day Sinners and Saints. By Edward Alsworth Ross. New York: B. W. Huebsch. 50 cents.

Economics wedded to humanity brings forth Sociology, a daughter with few of her dismal father's harsh features and much of her mother's softness and charm. When this damsel, still in her teens, is introduced to us in the dainty literary dress which Professor Ross so cleverly designs, her most winsome features are brought out, her family likeness to morals and religion made clear. For Dr. Ross, like Ruskin and Carlyle, persists in presenting the science of society under ethical aspects. In the same spirit and with the same grace that earlier essays of his displayed, Dr. Ross defines afresh in this little book the twentieth century forms of sin and of saintliness. New varieties of misconduct have been introduced as industrial and commercial development have opened new forms of temptation. "Not keeping your own cow exposes you to the seller of watered or doctored milk." "Gas and water supply introduces the trickery of dishonest meters on the one hand and of tampering with meters on the other." The development of big industries and the need for stock and bond issues produce fictitious capitalization and market rigging—robbery often more flagrant and cruel than the burglar's and the highwayman's and yet practiced safely by "the pillars of society." A lawyer who deceives or sells out his client, or a priest who divulges the secrets of the confessional is unanimouly condemned for abuse of the professional relation; but the supple preacher who suppresses his real opinions out of fear for the heavy subscriber in the front pew, the professor who cancels his course on "Trusts and Monopolies" lest a prospective gift to the university be cancelled, the traffic agent who withholds cars from shippers until he receives a "block of stock" are all abusing the professional relation as injuriously as shyster lawyer or blabbing priest. Happily a new tribe of saints matches the new brigade of sinners, saints without halo, uncanonized, even unknown. "The medieval worthy was sainted by acclamation, for everybody loved him." But the latter-day Smiter of Iniquity has too many enemies to be sainted. "Mud-spattered and war-dinted, he cannot vie in radiance with the nurser of lepers and the consoler of the poor." "Indeed, if he is the real thing he will have too many bruises on his head to take any comfort in wearing a halo." The most fruitful self-sacrifice today is battling with the Midianites. A philanthropist who starts

out simply to feed the hungry, or clothe the naked, is presently grappling with vice caterers, exploiters of child labor and public school politicians, or hammering away at bogus medical schools, patent medicine frauds and food adulterators. He visits the fatherless and the widow and soon finds himself with sword drawn girding at bad accident laws and inhuman factory conditions. Thus the up-to-date saint is often unpopular in the best circles; for "it profits little to set up a high ideal if notoriously bad men occupy conspicuous places in the community. It is not so much the crooks in the alley that menace society as the crooks in the church, in office, in places of trust —the one who leads the parade, proposes the toast, hands out the sheepskins, or delivers the Fourth of July oration." This is sound doctrine. It would be well if every divinity student, before "wagging his head in a pulpit," digested this little work.

London Life of Yesterday. By Arthur Compton-Rickett, M. A., LL. D. New York: E. P. Dutton & Co. $2.50.

The character of Mr. Compton-Rickett's book would have been more clearly indicated had he entitled it "London: A Biography," instead of *London Life of Yesterday;* for it is the personality and the changing phases of character and of mood with which he is concerned rather than life in London at any epoch in her history. London is more to Mr. Compton-Rickett than a mere aggregation of buildings or a maze of streets. It is more than the scene of great events of history, the stage on which the comedies and tragedies of English life were worked out. London to him is an entity, an individual, whose present character is explained by her heredity and early life; and to the varying phases of her life he devotes the thirteen chapters of his book. As is suitable in a biography, Mr. Compton-Rickett begins with the antecedents of London—with paleolithic man who knew naught of cities—and then tells of the supposed founding of the city by the fabulous King Lud. Each of the twelve chapters that follow treats of a phase in the life of the growing city—London of King Alfred and of King Stephen, London of Chaucer, of the Renaissance and of Shakespeare, and of the other great epochs up to the time of Francis Place and Dickens. Mr. Compton-Rickett strikes the note of the growing democracy of England in the selection he makes of men to typify nineteenth century London. The Radical tailor who was the moving spirit of the first reform of Parliament, and the novelist of the slums and alleys, of the common people —of the Marchioness and Mrs. Gamp, of Quilp, Fagin and Rogue Riderhood— after these two men Mr. Rickett-Compton names his last chapter on the phases of London life.

Women and the Trades. By Elizabeth Beardsley Butler. Russell Sage Foundation. New York: Charities Publication Committee. $1.50.

During the four years since its establishment the Russell Sage Foundation has put students of social and economic conditions under repeated obligation by the excellence of the volumes which it has published. Dr. Robert Coit Chapin's study of the standard of living among workingmen's families in New York has become the universal authority upon the subject of which it treats, and its conclusions have made their way not only into schools and colleges but into the deliberations of governmental commissions. There have also been other volumes of comparable value on medical inspection of schools, playgrounds, and the salary loan business. The present volume is an elaboration of one division of the Pittsburg Survey, the work of the Foundation that has been most widely read and quoted. Like Dr. Chapin in his volume on the "Standard of Living," Miss Butler has contented herself with a simple, unbiased and exceedingly readable presentation of the facts revealed by her searching and clearly intelligent investigation of the conditions under which women work in Pittsburg. She deals with such subjects as the work of women in the canning industries, the confectionery factories, the metal trades, and concludes her volume with a fascinating study of the social life of working women inside and outside of the shops. For the layman as well as the student the volume is highly worth reading. In its

quiet, unpretentious way it gives one a stirring insight into the dramatic migration of women from the home to the factory. And what is best, it puts facts where before we had only signs to guide our conjecture. For example, "the girl who boards away from home is not a figment of the imagination. She numbers in the garment trade 38 per cent. of the total force; in the printing trade 33⅓ per cent. Sixty per cent. of the working women earn no more than 50 cents to $1 a day."

Literary Notes

....The lectures of the late Prof. Charles Carroll Everett, of the Harvard Divinity School, on doctrinal theology and the principal teachings of the Christian faith, have been recovered from students' notes, edited by Rev. Edward Hale, and published under the title *Theism and the Christian Faith* (Macmillan, $2.50 net).

....The latest volume of "The Historical Bible," edited by Prof. Charles Foster Kent, is entitled *The Kings and Prophets of Israel and Judah,* and covers the period from the division of the kingdom to the Babylonian exile (Scribner). A selection is made of the principal passages from both the historical books and the writings of the prophets. These are arranged chronologically and in sections, with appropriate headings and notes. The volume is highly useful for the student of the period of monarchy and the earlier prophets, and the difficulty felt by the ordinary Bible reader in relating the prophetical discourses to the appropriate historical narrative is largely overcome.

....A picture hanging in a Rhode Island homestead first aroused the interest of Georgia Fraser in *The Stone House at Gowanus,* whose history she tells in a handsomely printed and well illustrated volume. Built by Nicholas Vechte in 1699, the Dutch farmhouse entered American history during the battle of Long Island, whose center it was, the names of Cornwallis, Stirling and Washington being thereafter associated with its solid brick walls until its disappearance before the spread of the city of Brooklyn. Miss Fraser has traced the history of the house from the day when its foundation was laid; she has connected its story with the history of that section of Long Island in Colonial days, has reconstituted, as far as that was possible, the revolutionary battlefield, and found the exact spot where the house stood, which, she points out, is not the one celebrated by a commemorative tablet in the immediate neighborhood. This, we are told, is the first history of the building to be written. The author gives reproductions of all the pictures of it which are in existence today. (Witter & Kintner, $2.50.)

Pebbles

It has been found by oculists that when a person has only one eye, it is almost invariably the *left* one.—*The American Oculist.*

A tramp rang a doctor's door bell out on Euclid avenue one day last week, and asked the pretty woman who opened the door if she would be so kind as to ask the doctor if he had a pair of old pants he would kindly give away. "I am the doctor," said the smiling young woman, and the tramp didn't wait for the pants.—*Ladies' Home Journal.*

"When I arose to speak," related a martyred statesman, "some one hurled a base, cowardly egg at me, and it struck me in the chest."

"And what kind of an egg might that be?" asked a fresh young man.

"A base, cowardly egg," explained the statesman, "is one that hits you and then runs."—*Everybody's Magazine.*

When the jury had filed in for at least the fourth time, with no sign of coming to an agreement in the bribery case, the disgusted judge rose up and said, "I discharge this jury!"

At this one sensitive talesman, stung to the quick by this abrupt and ill-sounding decision, obstinately faced the judge.

"You can't discharge me, judge!" he retorted.

"Why not?" asked the astonished judge.

"Because," announced the talesman, pointing to the defendant's lawyer, "I'm being paid by that man there!"—*Lippincott's.*

"The glass-armed toy soldiers of this town were fed to the pigs yesterday by the cadaverous Indian grave-robbers from Omaha. The flabby, one-lunged Reubens who represent the Gem City in the reckless rush for the baseball pennant had their shins toasted by the basilisk-eyed cattle drivers from the West. They stood around with gaping eyeballs, like a hen on a hot nail, and suffered the grizzly yawps of Omaha to run the bases until their necks were long with thirst. Hickey had more errors than Coin's Financial School, and led the rheumatic procession to the morgue. The Quincys were full of straw and scrap-iron. They couldn't hit a brick wagon with a pick-ax, and ran bases like pallbearers at a funeral. If three-base hits were growing on the back of every man's neck they couldn't reach 'em with a feather duster. It looked as if the Amalgamated Union of South American Hoodoos were in session for work in the thirty-third degree. The geezers stood about and whistled for help, and were so weak they couldn't lift a glass of beer if it had been all foam. Everything was yellow, rocky and whangblasted, like a stigtossel full of dogglegammon. The game was whiskered and frost-bitten. The Omahogs were bad enough, but the Quincy Brown Sox had their fins sewed up until they couldn't hold a crazy quilt unless it was tied around their necks."—*Quincy Herald.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

THE semi-annual index of THE INDEPENDENT is now ready and will be sent free to any subscriber who will notify us he wants a copy. Those who return us their twenty-six issues for binding, of course, will have the index included.

The Problems Before the Peace Commission

WE discussed two weeks ago the action of Congress in authorizing the President to appoint a "Peace Commission." This week we propose to consider some of the problems that will come before it.

There is ample reason to believe that Mr. Roosevelt will be chairman of the commission. It is understood that President Taft will offer the position to him, and the last sentence of Mr. Roosevelt's Nobel Address at Christiania indicates that he will accept the honor. What nobler and more valuable service can he render at this time than to place his energy, prestige and ability at the service of the greatest of all international causes, the cause of universal peace?

Whether Mr. Roosevelt consents to serve or not, the four proposals contained in his Christiania address must become the basis of the commission's program of discussion. These are in brief as follows:

First. Mutual guarantees to respect national territory and sovereignty and to arbitrate all other questions.

Second. The development of the Hague Court and Conferences.

Third. The Limitation of National Armaments by international agreement.

Fourth. A League of Peace, of Enlightened Powers, "not only to keep the peace themselves, but to prevent by force, if necessary, its being broken by others."

The fourth proposal is in a sense superfluous because the first three, if effectuated by the nations, would, in fact, constitute a League of Peace. But a League of Peace organized with power to prevent *"by force"* its being broken by others as Mr. Roosevelt suggests might easily become a League of Oppression. A league with power to exert its will without constitutional limitations on its own members, to say nothing of those without its jurisdiction, would have the right to be judge and sheriff in its own cause and that is a violation of the first principles of justice. Constitutional safeguards, therefore, would seem to be essential to any League of Peace that is expected to be of great and enduring service to humanity.

In the progress of the peace movement, which is, after all, nothing but the development of international law, we must revert again and again to the history of private law for light on the problems at issue. Similarly in the development of any League of Peace, we must turn to the organization and constitutional history of the United States, which is nothing but a League of Peace of forty-six sovereign States. Prior to the formation of a "more perfect union," the original thirteen States were united in a League of Confederacy somewhat like that now proposed on an international scale.

The States were obligated, by the articles of this Confederacy, to respect each others' territory and sovereignty, to arbitrate all questions among themselves, to assist each other against any foreign foe, not to engage in war unless called upon by the Confederation to do so, or actually invaded by a foreign foe, and

not to maintain armed forces in excess of the strength fixt for each State by all the States in Congress assembled.

It is notable that security against aggression from states inside or outside the American Union accompanied the agreement to limit armaments. Thus risk of war and armaments was decreased contemporaneously. Both our State and National Governments are bound to strict constitutional limitations, to prevent abuse of the power invested in them, and these limitations have often protected the people against the Government itself. How then can any international government which may come into being be trusted not to abuse its power?

Mr. Roosevelt's concluding statement seems to recognize these difficulties, for he says, "The combination (League of Peace) might at first be only to secure peace within certain definite limits and certain definite conditions." He does not, however, outline these "limits" and "conditions."

It is interesting in this connection to compare President Roosevelt's basis of a World Federation with that proposed by Congressman Bartholdt at the Thirteenth Interparliamentary Conference at Brussels in 1905. Mr. Bartholdt suggested that a World Federation with a World Congress be founded upon five fundamental guarantees, the full text of which may be found in our issue of May 11, 1905. These were in brief:

First. The territory and sovereignty of each nation represented to be respected by all.

Second. Each nation to have the right to arm itself according to its own judgment.

Third. Each nation to have the right to withdraw at any time.

Fourth. War to remain a lawful mode of action among the members in settling disputes, except as they severally agree to refer questions to arbitration.

Fifth. The armed forces of all the nations to be at the service of the Congress for the enforcement of any decrees rendered by the Hague Court according to treaties of arbitration.

The points of similiarity and divergence between these proposals and Mr. Roosevelt's are striking. Both aim at peace thru justice. Both propose guarantees of national territory and sovereignty and the voluntary agreement to arbitrate all else. Both contemplate the development of the Hague Court and Conferences along the lines of the American federal system of justice. Both contemplate the possible use of force to compel obedience to the League. The Bartholdt proposition, however, limits this use of force to members of the League in cases where they have previously agreed to arbitrate. Mr. Roosevelt, on the other hand, would seem to contemplate the use of the military forces of the League against nations without the League who may not have consented to arbitrate questions at issue. Mr. Bartholdt's proposition seems to us the better of the two, since it provides against the danger of arbitrary force exerted in the name of Peace and Justice.

There is one other striking difference between the two proposals. One contemplates a continuance of the present policy of national armaments, the other a decrease of armaments by international agreement. But according to the Bartholdt proposal a nation must enter and remain in the Union, and agree to arbitrate its difficulties before it can secure guarantees of its territory and sovereignty. This provision was considered a sufficient inducement to make the nations give the whole proposition a provisional trial, especially as any nation could arm itself according to its own judgment and could recover its power of independent action at any time by due notice of withdrawal.

We will await with interest the authoritative statement of the "definite limits and conditions" within which Mr. Roosevelt would compel peace "by force if necessary." Meanwhile the foregoing proposals of Mr. Bartholdt, which are still on the docket of the Interparliamentary Union, we commend to the attention of the Peace Commission. We make this important suggestion, however. There are manifest advantages in making proposals which will require no constitutional amendments for their adoption by this country. Both the Bartholdt and Roosevelt proposals contemplate the use of the armed forces of the United States in a League of Peace. The power to declare war under our constitution is vested in Congress alone, and even in time of war Congress is forbidden to make military appropriations for more than two years ahead. It is by no means

certain therefore that either the Bartholdt or Roosevelt proposal to put the army and navy of the United States at the service of a League of Peace is constitutional. Nevertheless the organization of an international government, Tennyson's dream of "The Federation of the World" is essential to the further progress of the peace movement. All obstacles will have to give way, even constitutional ones. The monster of war must be destroyed. The majesty of law, coextensive with human intercourse, can alone achieve this beneficent and inevitable result.

Dante and Pius X

THE conflict between Church and State in Spain, reported in our last issue, suggests a comparison between the greatest poet and the foremost leader of Latin Christianity. The period of 600 years which lies between them scarcely outreaches the difference of mental type which the two represent within the pale of Roman Catholicism. Dante, by the might of his immortal genius, gathered to a focus the best that his age held of philosophy, piety, and poetry, and gave to the religion of his time a lasting impulse in the direction of tolerance and progress. Pius X, the chosen head of the most influential hierarchy on earth, has addressed to the Spanish Government a request for the withdrawal of a decree of religious tolerance, and seeks to impede the country's progress by retaining control of the schools. The former opposed the union of spiritual and temporal power in one person, and after the lapse of 500 years his convictions found embodiment in the constitution of Italy, whose sons acknowledge no stronger bond of union than a common regard for the impassioned verse of the *Divina Commedia*. The latter still adhering to the pretensions of popes whom Dante lodged in the Inferno, is championing the cause of tyranny and darkness against freedom and light. We, of course, do not mean to convey the impression that Dante was not a devout Roman Catholic. Had he, unchanged, lived in Reformation days he undoubtedly would have had Luther down in Malebolge with Mahomet, the very place to which Pius X, judging by his latest encyclical, consigns him with a numerous company. Dante was a protestant before the Reformation, but a Roman Catholic protestant. He strove, from within, to reform the practice, and in a measure the doctrine, of the body to which he belonged. Moreover, he had certain very definite convictions, which leave little doubt that he would find in the Vatican material for an "Inferno" if he were writing one today. Against the papal claims of temporal overlordship he launched his most impassioned invectives as something unscriptural in theory and disastrous in practice. Notwithstanding some quaint ideas his treatise *De Monarchia* is strangely modern in the view it takes of the relation that should exist between Church and State. Nor was he less modern in believing that religious faith must be intelligent and on friendly terms with the best scientific progress of the time. The fact is Dante was a modernist, tho he lived in the Middle Ages. It was his determination to deal with things rather than with words that constitutes him the first great thinker of the modern era. Roman Catholic progressives feel that he is their friend and prophet and know how to quote him effectively. Between Rome and the Alps there is scarcely a man, woman or child, on whom an appeal in the music of Dante's verse would be lost. One is not surprised that the Order of Jesuits, with few exceptions, has hated him cordially for 300 years. His ideals, embodied in his poem, are not theirs. The popes in the Simonists' circle of the Inferno are his undying answer to the doctrines of papal infallibility and temporal overlordship, whose maintenance has always been the peculiar care of the Jesuits. The *De Monarchia* was promptly put on the Index, and it is at first sight surprising that the *Divina Commedia* escaped this distinction. But a poem that had sung itself into the hearts and lives of a people for three centuries, was past the power even of the Jesuits to condemn or dislodge. Only in Spain, in 1612, did the Inquisition dare to proscribe the most obnoxious passages. One now looks with curious interest upon old copies of Dante in which the offending lines were deleted with red ink. Poor,

deluded Spain! Its more liberal spirits are now seeking to restore, if necessary with blood, liberties and convictions which the Inquisition banished with red ink. It is to be hoped that the Canalejas Government will succeed in freeing itself from the stranglehold which Rome has on its schools. *The Tablet* gives the address of Pius X, relating to the Spanish crisis, recently delivered to a company of Spanish pilgrims from Majorca. From it we quote the following because of the quixotic view of Spanish history which it presents:

"Thus, if Spain has been second to no nation in its attachment and love for the Roman See and its head, so, too, has it been second to none in sharing in those blessings which flow from these sentiments: it triumphed over the Arian heresy seeking to establish itself in Spain, it conquered the ferocity of the Moors who invaded it, and ever victorious amid continuous vicissitudes, it is indebted entirely to religion for its prosperity and greatness."

This mode of interpreting history forcibly reminds one of the literary society which seriously debated the question as to whether the "r" in "dog" should be sounded. Spain is awakening to a more discriminating conception of what it owes to Romanism. As Dante said of Boniface VIII, Nicholas III, and Clement V, its function has not infrequently been that of "trampling on the good and raising up the wicked" (*calcando i buoni e sollevando i pravi*). But there surely is a Dantean left wing within the Roman Church which is capable of self-criticism. Such is the movement of so-called modernism, to which many must be counted as belonging who never were formally allied with it. Of recent Popes one recalls with special pleasure the noble figure of Leo XIII, who found in Dante a kindred spirit and established in 1886 a permanent course of Dante lectures at the Istituto Leoniano.

Embezzlers of Power

Mr. William Jennings Bryan, of Lincoln, Neb., has been trying for many years to serve mankind. His intentions, we would fain believe, have always been good. His judgment has often been bad, and his performance not infrequently disappointing. We take pleasure in recording the fact that he has now made a substantial contribution to the enduring possessions of the race. He has again coined a new phrase, and it is far better than his famous "cross of gold." He calls a certain type of man an "embezzler of power."

We wanted this phrase. For a long time we have needed it in our business. We take it forthwith, without apology, without even the refinements of method which soften high-handed robbery into mere embezzlement. Mr. Bryan may recover, if he can. We offer him, however, the satisfaction of assurance that we like the goods.

How beautifully this phrase illumines the whole course of American history to date! Who have been the *de facto* rulers of this great republic; its politicians, its slave owners, its beneficiaries of privilege, its organizers of combinations in restraint of trade, its creators of monopolies, its high-handed appropriators of the public domain? One and all—embezzlers of power. They have made the laws. They have shaped our actual, as distinguished from our nominal or theoretical institutions. They have determined the destinies of the many. They have taken the "rake-off" and poured it into their coffers.

The people of the United States are sovereign. They are the real, as they are the theoretical, source and supply of power, but they have permitted their power in large measure to be taken from them and turned against them. They have blindly and weakly tolerated the embezzlers of power and encouraged them to multiply and wax strong. They are confronted now with the practical problem of recovering their own, and of finding ways and means to put an end to wholesale embezzlement from this time forth.

The first thing to do is to look frankly at the facts and confess the cause of the mischief already done. That cause, stated with necessary brutality, is the undisguised desire of the average American citizen to be himself an embezzler of power. The people have lost power because, taking them by and large, they have as individuals played the game of trying to obtain more power than their rightful respective shares, and a majority of them have lost. The possessors

and wielders of power are the minority that have succeeded in illegitimate practices that others have failed to profit by.

We will be specific and concrete. Here is an actual case: A certain gentleman is a State Senator in a New England State. As the law of his State required, he kept strict account of his campaign expenses, which were large. The principal disbursements were made to campaign "workers." On their books the sums which they received are accounted for chiefly in terms of payments for "time." Practically all of these payments for time were made to the farming population which cast the vote. The time paid for was the time expended in going to the polls on election day. These "time" payments were large and for a definite and easily understood reason. The price for a day's "time" spent in going from the farm to vote, formerly $5, had advanced, with the rise of prices generally, to $10!

Every reader of THE INDEPENDENT who knows the actual political conditions prevailing in his own region, or who will take the trouble to learn what they are, can easily satisfy himself whether this case is on the whole exceptional, or on the whole typical for the United States. We have reason to believe that it is, unhappily, not altogether exceptional. And we suspect that the argument which the rural voters at $10 apiece unblushingly used in justification of their conduct would be regarded by a large proportion of the voting population of the United States as legitimate. They said: "Sam Jones is going to get ready money for going down to the Legislature. Bill Smith is pulling off a good job as Deputy Sheriff. Jim Martin goes on the Board as County Commissioner. Why should we leave our farm work to vote for all these fellers, and get nothin'?"

This philosophy has at least the merit of simplicity and it is comprehensible by the man whose intelligence and civic conscience are rudimentary. So long as we have in the American population a redundancy of citizens answering to this description the embezzlement of power will be a favorite pursuit. It is plain, we think, that the task of restoring the full reality of popular sovereignty in this American republic will have to begin at the bottom.

The Tariff in the Campaign

MR. ROOSEVELT says the report is false that he recently promised to exert his influence in behalf of the candidacy of Representative Poindexter for the Senate in the State of Washington. Mr. Poindexter, emphatically an insurgent, is known as an implacable foe of Secretary Ballinger. Public support of his candidacy would probably disclose Mr. Roosevelt's attitude with respect to the Pinchot-Ballinger controversy. Mr. Roosevelt admits, however, that he has consented to make a public address in support of the candidacy of Senator Beveridge. The Senator has been classed with the insurgents. He voted against the Payne-Aldrich tariff. But he did not become separated from President Taft, and in the latter part of the recent session he promoted the enactment of several bills in which the President was deeply interested.

Public support of Mr. Beveridge will not necessarily place Mr. Roosevelt on the side of the insurgents, but it will require him to express his views concerning the new tariff. The Senator's opinions on that subject were quite satisfactory to a large majority of the Republicans of Indiana. This is shown by the platform adopted by their convention. The tariff will be very prominent in the Indiana campaign, and any one who makes speeches for the Senator cannot easily avoid it. If Mr. Roosevelt shall commend the tariff views of the Senator and the tariff declarations of the Indiana platform, he will not be in accord with Mr. Taft.

It is asserted that the Republican leaders who made the new tariff have decided that the approaching campaign shall be one of "education" with respect to what they call the great merits of the law. Probably they will not rely exclusively upon the official figures which show that the Payne-Aldrich average ad valorem rate on dutiable imports is 41.1 per cent., against Dingley tariff averages of 42.5 in 1909, 42.4 in 1908, and 42.0 in 1907. Proof of so slight a change might lead insurgent Republicans to say there had been only a sham revision.

What the Republicans of the insurgent States want, and what many Republicans elsewhere want, is not "education" de-

signed to convince them that the new tariff law is "the best one ever enacted," but an admission that errors were made, and a promise that steps for a correction of them will be taken. If the leaders responsible for the new law are wise they will confine their campaign of education mainly to a definition of the powers and purposes of the new Tariff Board or Commission, for whose work Congress recently appropriated $250,000, at the same time authorizing the use of this money in an inquiry concerning the costs of production here and abroad.

The President sees both the economic and the political value of this Board and its work. Under his direction the Board is now taking up the tariff law by schedules and is preparing to examine thoroly every item, with the aid of competent and unbiased experts. His only instructions have been that the Board shall "get the truth," avoiding all political or personal pressure. The purpose of the President and of the Board is to ascertain how the cost here of the production of protected goods differs from the cost of the competing products abroad, in order that the doctrine of the national platform—that the duty should not exceed the difference, plus a reasonable profit—may be justly applied in legislation. Unquestionably the work of the Board points to further revision, and revision upon a scientific basis. It points to a correction of errors which have excited insurgent hostility and really were the cause of the menacing insurgent movement. The President should urge those party leaders who are preparing a plan of campaign to make all possible use of the existence and activity of this Tariff Board, which has set out to find a solid basis for an honest and just enforcement of the national platform.

The Flood at Oberammergau

THE Passion Play was originally the fulfillment of a vow. In this spirit it was first given by the villagers at Oberammergau, and the plague which had seized them was suddenly and miraculously stayed. Thus became manifest the divine acceptance of their expiation.

Generations have inherited this play, and have, in the face of changing conditions, devoutly maintained its essential purpose. The families clustered in the Ammer Valley have preserved the unending stream of tradition, which increased with every decade from 1634; they have been reared and have died within the shadow of inviolable hills: they have been unique in their aloofness, and only in their isolation could they keep their medievalism from being wholly self-conscious. The personal phase of the Passion Play began to fade when the outside world discovered it about 1840. From 1634 to 1830 it was obscure and intense. Thereafter, various popular concessions had to be made. The play was promised beneath what the villagers interpreted as the wrath of God; their belief and their offering were typically medieval. Thereafter, all phenomena affecting Oberammergau were subject to spiritual interpretation of this character. When the cross, planted high above the village on the top of the Kofl, highest of all hills encircling the valley, was rent in twain by lightning, these simple folk bethought them of God's former wrath. And tho crowds have popularized the place, have forced innovations for their immediate comfort, have helped to commercialize the play, still the individual players remain true to the simple inbred fervor, despite the passing of their ancient aloofness.

How shall they interpret the flood, which, on June 13, 1910, burst over the Bavarian Highlands? Thru the Oberammergau streets motor cars were seen floating in the stream—motor cars which for the first time were allowed by the town council within the precincts of the village. What will they say to the medieval part of themselves when they recollect that the crowds and the new theater, both inimical to the ancient quaintness and the direct appeal of the play, were threatened by the storm? For there is now a flood of modernness in Oberammergau of more significance than the waters that have risen above and beyond the banks of the river Ammer. Surely, it were well to believe that God was displeased another time, in order to save, to preserve, in its original fervor, what His wrath had long ago prompted.

The Ammer flood is a warning; it symbolizes the stream of sightseers who neither gave pause nor clad themselves

in the proper spirit for the Passion Play. These tourists will leave the village wealthier maybe, but weaker in its hold on a tradition nigh four centuries old. Is the Passion Play being secularized? The curiosity of the tourist is vulgar, and there is much maudlin sentimentalizing over a quaintness that will not long survive the flattery of the tourist. The villagers are not at fault, but the spectators largely are. They fail to apprehend the real meaning of the play. Few travelers return from Oberammergau with any consciousness of having been witness of a communal life, maintaining in peace and comfort its civic existence by means of the proceeds derived from the drama. The civic idea is one that must have a strong atmosphere of faith in which to flourish. In the Ammer Valley there are both faith and communal devotion. It is significant that a citizen, a worker, a potter and a stove maker—all in one—should be chosen for the Christus. This is the thought that should strike the tide of humanity that every ten years flows toward the village.

Wages and Freight Rates

Wages are still rising, altho the upward movement in general production has been checked, and the output in the textile industries has been largely reduced. It is noticeable that settlement of railroad wage controversies by resort to the Erdman act, a course which involves the participation and the decisions of Federal officers, has invariably been characterized this year by a grant of increased pay. Indeed, an early settlement reached in this manner has been accepted as a basis for other agreements affecting a great number of employees. If increases of pay which add many millions to the expenditures of railways are approved by Federal officers and in some measure are due to their action, it is a reasonable guess that the Federal officers who compose the Interstate Commerce Commission will listen without hostility to the argument of the railroad companies that the higher wages fairly warrant an increase of freight rates. It does not follow that the entire increase which the roads desire to make will be approved, but a study of the wage movement from week to week, and of the Erdman act cases, leads one to think that approval of a considerable part of it is within the bounds of probability. The Commission's general course was not indicated by the reductions recently ordered in the Pacific and mountain States. Those reductions were required by exceptional conditions.

Disturbers of the Peace

Moving picture concerns that paid enormous sums for the privilege of photographing the recent disgraceful prize fight are preparing to invade all the great cities of the country with their disgusting show. Decency and good order require that the public exhibition of these pictures should be prohibited. It is bad enough to pervert the morals and ideals of a community with such shows. But it would be much worse to allow them to incite race riots thruout the country. Several cities have already taken action to protect themselves, and reports from England and India indicate that the British authorities are taking steps to exclude the shows. The moving picture concerns are in large measure responsible for the continuance of the Jeffries-Johnson type of pugilism. The enormous sums of money which they pay for photographic privileges are a strong temptation to pugilists and promoters. The entire suppression of prize fight pictures thruout the country will strike at the root of the evil, and make the recurrence of such brutal encounters less likely. Public-spirited citizens everywhere should see to it that municipal authorities outlaw the pictures.

Educational Data of Who's Who

The sixth edition of *Who's Who in America,* improved and enlarged, has just appeared. As in former editions its "educational statistics" are interesting and valuable. It appears that nearly 55 per cent. of the 15,580 persons who furnished educational data are graduates of colleges and universities. If graduates of United States naval and military academies be added to their number the percentage rises to 57.89. It must be conceded that this marked preponderance of college and university graduates among persons who have attained distinction in their careers is a

very strong argument in favor of higher education. Of 8,500 persons, classified by professions, 3,081 are lawyers, 2,035 clergymen, and 1,345 physicians. The large list of lawyers is explained partly by the inclusion of persons who occupy prominent governmental and political offices irrespective of professional prominence. It is gratifying to note that the largest percentage of college graduates is found among the clergy, running as high as 81.22 of the total number of clergymen. Of lawyers 52.28 per cent. are college graduates, and of physicians 49.36. The distribution by birth and residence gives the largest number to New York, with Massachusetts, Pennsylvania and Illinois following in the given order. Many were born in Ohio, but only half as many reside there now. Comparison of birthplaces and residences shows that the trend of activity at present is decidedly westward.

The Middleman

The middleman is getting a buffet from every quarter. B. F. Yoakum, at a recent farmers' convention, laid the entire burden of the farmer on this go-between, who handles the most of the products that come from the farm. He tells us that the Florida farmer receives for his early beans $2.25 a bushel, that the railroad charges 50 cents for a 1,000-mile haul to New York, but that the consumer has to pay $6.40 for this same bushel of beans. This is not a fair division of profits, and it is plain that the middleman is responsible. These goods should be turned over to the consumer for about $3.50 per bushel. The farmers of the West receive 15 cents a dozen for their eggs; freight adds about 2 cents a dozen, making the cost at New York 17 cents; but the dealer gets over 30 cents per dozen. In the same way rice, for which the farmer of Texas gets 2½ cents a pound, costs the New York consumer 10 cents a pound, freight being ½ cent a pound. The New Yorker should get 20 pounds of rice for a dollar, instead of 10, as now. But if you converse with farmers who grow perishable material the story is far worse, the returns for goods being frequently nothing, and occasionally charges for freight. Fruit is tumbled about in a reckless way by the middlemen—that is, their employees—so that the loss is at least one-eighth of all that is shipped. The *Financial World* adds that there is an understanding established among commission men, regulating prices to their advantage; in some cases boosting vegetables at the rate of 300 per cent. Honest commission dealers are crushed out of such a market. The farmers' conventions everywhere are now crying out that their chief trouble is not with exorbitant railroad charges, but with those intermediate dealers who are slippery and greedy. The remedy seems to be to establish a closer relation between the producer and the consumer. There is no reason why most of our farmers cannot establish relations with private customers, especially if they live within hauling distance of city markets. New York State has a law forbidding any city hindering the direct connection of growers and consumers, by ordinances.

Playground or Landscape

There are two ways of looking at a city park. The old-fashioned and largely prevalent way is to view the park as a *landscape,* where elderly ladies with footmen and pugdogs can drive in victorias every afternoon at 4 p. m., to get the air and see the keep-off-the-grass signs. The other way is to view the park primarily as a *playground,* where pent up tenement children can play all the day long, where tired mothers can rest and rest, and where the sweltering city's population can picnic in the daytime and camp out under the stars at night. And if thus the tramp of the multitude wears out the grass, and if the merry-go-rounds and basket ball fields leave no room for a speedway, why, all the better! Just now these two views are being debated in this city. It is proposed to make Central Park more popular. We do not know the merits or demerits of the particular innovations proposed, but of this we are certain: Until every city in the land provides enough playgrounds to keep all its children off the streets, the parks should serve as substitutes. Does this shock you? Then see that sufficient special playgrounds are provided in your city, so that the parks can be left as land-

scapes, to rest the eye and refresh the senses.

Insecticides

The economic value of birds must be called to the attention of every one who loves the summer. You have only to watch the flights of the nighthawks and whippoorwills as well as the swallows and swifts, that fill the air just after sunset, to imagine how many moths and other insects are destroyed every night. The flycatchers are just as busy by day and the warblers and humming-birds and vireos hunt incessantly. At the same time if you will note, you will find running up and down every tree in the country woodpeckers and nuthatches, examining every possible hiding place of bug or borer. Nature has given these fellows such rapid digestion that they can keep at the work incessantly. It is getting to be a crime, with all the knowledge of bird work that we now have, to kill one of these allies of horticulture and civilization. The seed eaters are almost as invaluable as the insect destroyers, for with the exception of the English sparrow they scarcely touch our grain fields, while they do destroy immense quantities of seeds of harmful plants. The creatures upon whom we are dependent for progressive civilization should share with us in protective legislation; in fact we cannot do too much to express our recognition of their service. The Audubon Society proposes that we enlarge the scope of Arbor Day and make it also Bird Day. The purpose would be, by song and recitation and addresses, to spread the knowledge of the real relation of the birds to our civilization. Professor Shaler once said that the establishment of a truly civilized state of mankind, would extend to all those creatures that co-operate with use, equal privileges for "life, liberty and pursuit of happiness"; which is a fine way of saying that we should give them the shelter of our own Declaration of Independence.

Lands of the Friar Estates

The withdrawal of public lands by President Roosevelt, and now, under the new law, by President Taft, to prevent the growth of private monopolies of natural resources, suggests an inquiry about the sale of Friar estate lands in the Philippines to persons connected with Sugar Trust capitalists. The sale of large tracts there was at variance with the spirit of the law governing the disposition of other public lands in the islands. Attorney General Wickersham decided that this law did not cover the lands of the Friar estates. Whereupon the sale was made. After the transaction had excited much hostile criticism, however, the Washington Government virtually asked Congress, by suggestion to the appropriate committee, so to amend the law that it should cover the Friar estate lands. Was not this an admission that the disposition of the Friar estates ought to be subjected to the restrictions imposed with respect to all other lands? And if this was the opinion of President Taft and Attorney General Wickersham, why had not the Friar lands been withdrawn and withheld from sale by executive order, pending the desired amendment of the law? We suppose that this could easily have been done. Such action with respect to lands in the States was taken under both President Roosevelt and President Taft before authority had explicitly been given by the new law, which is now only three weeks old. It seems to us that it might have been taken with respect to those lands in the Philippines if the Government had desired to prevent the sale of them in great tracts to persons connected with Sugar Trust capitalists.

Family Problem in France

The vital statistics of France, recently published, indicate a serious condition of affairs. The nation is not reproducing itself. When infant mortality is taken into account, the actual increase by birth probably is more than wiped out by the death rate. A bill recently introduced in the French Chamber shows that the French Government is becoming alarmed over the situation. Among its provisions are the following: That no employee of a state department or municipality shall be retained if not married at the age of twenty-five; that every civil servant who is the father of three living children shall benefit in promotion and by a

bounty of $40 a year for each child under fifteen after the third. But the provision which is likely to have most effect is the one proposing the cancellation of laws governing the division of estates at death, so that parents may have freedom to bequeath as they wish. It has long been recognized that the desire of French families to hand down the family fortune undivided from generation to generation has been largely responsible for the production of families with only one son.

Competition with Asia

Mr. Melville E. Stone tells us that our real danger does not arise from war, but from industrialism. He finds that India is ready to debate with us in the cotton market; that millions of dollars are being invested in flour mills along the Yangtse River; that China is underselling us with pig iron, in spite of the tariff, and that Asia is creeping steadily along toward governments that will have the common sense to invade us in the world's market. This is a different sort of invasion than that threatened by Hobson, and it calls for a very different sort of preparation. It certainly is worth our while to consider whether we shall put up our three hundred millions annually in preparations for visionary wars, or put the same amount into strengthening our industrial position. We may as well understand at the outset that any permanent isolation of the Chinese and Japanese is out of the question. We have got to meet them fairly and squarely as workers and producers. If they can create such goods as the world demands better in quality than our own and at a cheaper price, no amount of white man's bluster will prevent the result. Industrially we should go under. Let us understand that the East has adopted our machinery, and she has cheaper labor. She has already beaten Spain and Portugal, and it is plain that no amount of naval power can handle this question. We do not believe that our case is hopeless, nor do we believe that the white man has done his work; but we do believe that the mission of the white man has got to be accomplished on the basis of industrial peace. We have got to produce the man, and the race of men, that can fairly compete in an open market for the custom of the world. Neither can we hide ourselves for long behind the paper wall of the tariff.

Col. George Harvey is still engaged in his pleasing avocation of nominating Woodrow Wilson for President of the United States on the Democratic ticket. President Wilson, however, will be sorely needed for quite a while yet at his commendable job of democratizing Princeton. In the meantime, why should not Colonel Harvey himself wear the mantle of Parker and Bryan in 1912. And now that Colonel Roosevelt has left the Presidency for the editorial desk, it is only fair to try to restore the balance of power bestween statesmanship and letters. A Democratic editor should lead the Democratic hosts at the next campaign. Colonel Harvey is certainly more dependable than Colonel Watterson and has a keener sense of humor than Mr. Hearst. He is the logical candidate.

One of our editors who is in Europe has contributed to this number a description of the great suffragist procession which took place in London recently. The *Times* called it the most impressive demonstration ever seen in London. One might add that the movement is impressive not only by numbers, but by brains. Giving the right of vote to English women will mean the addition of about a million and a half votes to the electorate. The martyr's spirit of devotion to a just cause which now animates the ranks of English suffragists is almost certain to achieve results.

President Diaz was the friend of Zelaya, who is assisting his successor, Madriz, with a part of the great fortune which he accumulated in Nicaragua. Diaz now commends himself to Madriz by publishing the letter in which he urged President Taft to permit the bombardment of Bluefields by the ship which Zelaya bought and for which Madriz's men fraudulently procured clearance at New Orleans. He also publishes Mr. Taft's reply. The President of Mexico erred both in making the request and in publishing the correspondence.

Insurance

Our Fire Waste

THE wide publicity that has recently been given to the very alarming fire waste in this country, as compared with foreign countries, is beginning to bear fruit. A spirit of conservatism is making itself felt and while a large number of preventable fires still take place there is now a strong tendency to think twice before taking risks that used to be taken as a matter of course. It is still practically impossible to prevent a smoker from carelessly throwing his lighted match away or from disposing of his lighted cigar or cigarette so that it shall lack hazard. But we are progressing. The *Journal of Commerce and Commercial Bulletin*, in touching on the subject of the fire loss in this country, has compiled instructive tables that show something of our progress in this direction. From the tables printed by the journal in question it appears that the fire loss of the United States and Canada for the month of June was $13,183,600. A comparison of the losses during the month of June with those of the same month in 1908 and 1909, together with the losses by months for the first half of these three years, shows a gratifying decrease as regards totals. The figures are as follows:

	1908.	1909.	1910.
January ..	$29,582,000	$22,735,000	$15,175,400
February .	18,489,700	16,131,000	15,489,350
March	16,723,300	13,795,400	18,465,550
April	26,009,000	19,345,300	18,091,800
May	15,181,150	17,360,400	18,823,200
June	19,512,000	14,435,900	13,183,600
Totals ..	$125,497,150	$103,803,000	$99,228,900

The first half of 1910 has been profitable to the fire underwriters, the rates, generally speaking, having been fully adequate. Harassing legislation has been the thing against which there has been the greatest contention. The companies have been burdened in this way with no compensating benefit to the assured.

THE prevention of industrial accidents is well worth striving after. With this end in view the accident and liability department of the Aetna Life Insurance Company has issued a book entitled *Safeguards*. The book is concerned with methods of guarding machinery against accidents. It is a valuable publication, for which there is considerable demand, since it is a fact that half a million workmen were injured in the United States during 1909 by means of accidents that might have been prevented. Hundreds of suggestions are made both to employers and to workmen in regard to conditions and surroundings. Illustrations are introduced whereby the dangers mentioned in the text are rendered more graphic. The volume is edited by David Van Schaack and contains 174 pages (50 cents).

THE other day a man named Thompson armed himself with a big revolver and visited a neighbor with the intention of harming him in the way of vengeance. The armed man's wicked scheme came to naught, but in the melee that he inspired he was himself killed. His widow thereupon sued the Kansas City Life Insurance Company of Kansas City, Mo., for the face of a $2,500 policy carried by Mr. Thompson, the company having declined to pay it. The jury returned a verdict in favor of the company.

THE article entitled "What Is an Adequate Life Insurance?" as printed in this department on June 16, has excited so much interest that we should like very much to have any of our readers who are interested express their views upon the subject. What proportion of your income do you spend for insurance? What proportion ought you to spend? Do you prefer "straight" life, endowment or annuity? We should be glad to have your personal practice and views on these and related matters. But if the letters are long they are likely to be cut down, if printed.

Financial

The Crop Report

On the 8th, in the afternoon, was issued the Government's July crop report, showing heavy losses of spring wheat on account of drought. In the Dakotas, Minnesota and Washington, the four States which contain 88 per cent. of the spring wheat acreage, the average condition was reported to be only 62.5, against 92.3 a year ago, and a ten years average of 87.8. In North Dakota it was only 45, and for the entire spring wheat area only 61.6. These figures indicated a reduction of nearly 90,000,000 bushels from the estimate of one month ago, which was 278,362,000. On the other hand, improvement of winter wheat's condition added about 10,000,000 bushels. The prospect now is that the wheat crop will be about 625,000,000 bushels, against last year's 737,189,000. The price of wheat advanced sharply on account of the report, and the stock market was affected. On Saturday, however, security prices showed little change for the week, the beginning of imports of gold having caused some advance.

While the wheat report was depressing, the figures relating to corn were quite favorable. The corn area, 114,083,000 acres, shows an increase of 5,312,000 acres, or 4.9 per cent., and the condition, 85.4, slightly exceeds the ten years average. A crop of 3,114,400,000 bushels is now promised. We have never had so much as 3,000,000,000. Last year's crop was 2,772,376,000. Oats have suffered some reduction of condition, but a crop of nearly 1,000,000,000 bushels may be expected. Losses of barley and flax are foreshadowed. The average condition of all crops in the country on July 1 was 5.5 lower than one year ago, and 3.4 below the ten years average for that date.

Iron Output

The output of pig iron continues to decline. In June, 2,265,478 tons were made. This quantity—the smallest since August—may be compared with 2,390,180 in May, 2,483,763 in April, and 2,617,949 in March. Reduction at the furnaces since the highest point in the year has been about 15 per cent., but this appears to be insufficient, for the tendency in the market is toward lower prices.

A great record has been made in the first half of 1910, for the furnaces have turned out 14,975,000 tons. If the output of the second half of 1909 be added, we have 29,750,000 for twelve months, a quantity which exceeds the output of the most productive calendar year (1909) by about 4,000,000 tons.

....The number of immigrant aliens admitted at our ports in the year which ended with June was 1,035,545. This was an increase of 283,759 over last year's number.

....During the first half of 1910 new securities having a par value of $1,048,431,950 were issued in the United States against $860,544,480 in the first half of 1909.

....It is expected that in the establishment of postal savings banks a beginning will be made at the end of the year, and that about twenty of the large post offices will be ready on January 1 to receive deposits.

....The Pennsylvania Railroad Company has added nearly 2,000 all-steel passenger cars to its equipment in the last three years. When all that have been ordered are delivered, the company will have in use about 600 sleeping cars of such construction.

....The gross earnings of the Canadian Pacific Railway for the eleven months ending with June, $94,585,000, were the greatest in the history of the road, the increase over last year's having been about 24 per cent. Net profits were $33,700,000, a gain of $10,000,000.

....The Canadian Steel Corporation, a new combination capitalized at $25,000,000, will include the Hamilton Steel and Iron Company, the Canada Screw Company, the Montreal Rolling Mills Company and the Canada Bolt and Nut Company.

The Independent

VOL. LXIX NEW YORK, THURSDAY, JULY 21, 1910 No. 3216

Survey of the World

Political Topics

Much gossip about politicians and men prominent in public life who have recently talked with the President or with Mr. Roosevelt has been published, but it has little substance. It is asserted that both the President and the ex-President are urging Collector Loeb to become a candidate for Governor in New York, and that he prefers to remain in his present office. The Democratic nominee may be Thomas M. Osborne, of Auburn. There are indications that the Democrats of New Jersey will nominate for Governor of their State Woodrow Wilson, president of Princeton University. In a published statement he says that he is in no sense a candidate, being satisfied with his present work, but that he would deem it his duty to accept a nomination if a decided majority of the thoughtful Democrats of the State should ask him to do so. In Ohio, ex-Secretary Garfield in a public address has warmly praised the insurgents and advocated the adoption of the recall. In that State the Republicans have not yet agreed upon a candidate for Governor. The Cincinnati newspaper owned by President Taft's brother says that Mr. Garfield "is the one Republican in Ohio for whom Colonel Roosevelt could take the stump every morning and every night during the campaign without giving him the slightest chance of victory."——At a club dinner in Kansas City, on the 15th, Speaker Cannon asserted that J. W. Powell, formerly director of the Geological Survey, was the father of conservation. Gifford Pinchot contended that this honor belonged to Mr. Roosevelt. He also remarked that he himself was a Republican of the Cummins, Dolliver and La Follette type. On the following day, speaking on the Chautauqua platform at Winfield, Kan., the Speaker was for a time overcome by the heat. He had vigorously defended the new tariff. He had been abused by papers and magazines, he said, because he had not sought to make print paper free of duty. "When we tried to reduce the duty to $2 a ton," he continued, "that archangel of reform from Wisconsin, who talks six hours at a time at Chautauquas denouncing the tariff, solemnly arose and said the old duty was not high enough for the Wisconsin paper mills. And so we had to compromise on $3.75."——Schedules for the two trips which Mr. Roosevelt will make have been completed. Leaving New York on August 25, he will speak at Cheyenne, Denver, Osawatomie, (Kan.), Omaha, Sioux Falls, Fargo, St. Paul (the Conservation Congress), Milwaukee, Freeport (Ill.), Chicago and Pittsburg, returning to New York on September 11. Starting again on October 6, he will make addresses in Atlanta, Hot Springs (Ark.), Peoria, and at some place in Indiana, where he will support the candidacy of Senator Beveridge. He recently said to the press that he had taken no stand with insurgents or with regulars, but was "seeing both sides." It is generally understood that he seeks to harmonize the factions.——On the 14th, President Taft ordered additional withdrawals of coal lands, making a total of 71,518,588 acres, distributed as follows: Arizona, 161,280 acres; Colorado, 6,191,161; Montana, 20,208,865; New Mexico, 2,944,279; North Dakota, 17,828,182; Oregon, 192,562; South Dakota, 2,870,287; Utah, 5,814,287; Washington, 2,207,967; Wyo-

ming, 13,099,718. All this land is open to agricultural entry, but with limited surface patent. The entire appraised value of the coal lands is $449,876,208. The area of known coal lands in Alaska affected by the President's orders is about 770,000 acres. Examination and classification by the Geological Survey has recently caused a restoration of 1,306,655 acres in the West, which had been withdrawn as coal lands, but which contain no coal; also a restoration of 1,036,800 acres in Louisiana, withdrawn as oil lands.——Attorney General Wickersham and Secretary Nagel start this week for Alaska, where they will inquire concerning the Territory's natural resources and as to local political questions which were the subject of some discussion during the recent session of Congress.

Pursuing Lynchers in Ohio

Governor Harmon went, on the 10th, to Newark, Ohio, where, two days earlier, a mob had taken from jail and hanged Carl Etherington, a detective employed by the Anti-Saloon League. In a raid upon a saloon Etherington had shot and killed the proprietor, one Howard, formerly Chief of Police. The Governor inspected the jail. He also questioned the Sheriff, William Linke, and the Mayor, Herbert Atherton. On the following day he suspended the Mayor. Residents of the city promptly filed charges against Sheriff Linke. The new Mayor, John M. Ankele (who had been President of the City Council) removed the Chief of Police and the captain of police for failure to enforce the liquor laws. Then the Sheriff resigned. Two days later Mayor Atherton resigned, thus avoiding trial for neglect of duty. Just before Etherington was lynched the Mayor had addressed the mob, urging them to do no wrong. He then went to bed, believing, he says, that they intended to do nothing unlawful. Adjutant-General Weybrecht asserts that the Sheriff not only avoided his duty, but also in a measure encouraged the lynchers. Fifteen men who took part in the lynching have been arrested. Judge Seward, who has called a special grand jury, says: "The city for years has been in the hands of lawbreakers. The high officials of the county have openly connived at violations of the law and defied the courts." It is predicted that more than one hundred citizens will be arrested and indicted. Warrants will be served upon thirty-five saloon keepers for violating the law.——In Rayville, La., on the 10th, J. D. Freeman, a white man, was taken from the jail by a mob and hanged on the spot where he had killed the town marshal, C. C. Chenault, when the latter was trying to arrest him for violation of a city ordinance. Freeman had been convicted and sentenced to death, but his attorneys had taken an appeal to the Supreme Court. The mob pinned to his clothing a sheet of paper bearing the words: "This is the outcome of the appeal. We will not stand for the law's delay."

Corrupt Public Officers

The Mayor of Lawrence, Mass., William T. White, was found guilty, last week, of conspiring to procure the removal of Fire Chief Hamilton by bribery. With him were convicted ex-Alderman Matthew Burns, George B. Smart, Samuel Kress and Ernest Dube. White's sentence was three years in the House of Correction and a fine of $1,000. Kress got three and one-half years, Burns, two years, and Smart, eighteen months. Dube was released, having given evidence for the prosecution. Fire Chief Hamilton is under indictment for giving bribes to procure confirmation of his appointment. This is the first time in the history of the State that a Mayor has been sentenced to be imprisoned. White insists that he is still Mayor, and in jail he is performing some of the duties of the office.——Lawrence Gresser, President of the Borough of Queens, in the City of New York, was indicted last week for auditing fraudulent claims. With him were indicted several subordinate officers of the Borough for larceny. These and other indictments (heretofore reported) follow an investigation made by the city's Commissioner of Accounts. Among those so accused a few weeks ago were Sheriff Goldner and Municipal Judge Cragen. The members of the Grand Jury have asked Governor

Hughes to remove Gresser from office. In their petition they say:

"From the evidence presented to us we are convinced that the borough government today is, as it has been for years past, a stench in the nostrils of honest men. For more than a decade Queens has been the prey of politicians, who have sacked and pillaged without conscience. One ring has succeeded another. Our development as a borough has been retarded; our improvements have been held up; our business interests have been sacrificed. The chaotic conditions existing today are partly an inheritance from past administrations, and partly the result of incompetency and dishonesty in the present administration. We believe, however, that there is hope even for Queens, and that the time is now ripe for a change. We do not believe, however, that any change can be brought about under the present borough head. Entirely apart from any indictment brought against him, we are convinced that the present incumbent is conspicuously unfit for public office. Almost every department in his government seems to be undermined with corruption, and, in the two years of his administration, his appointees, with few exceptions, have been notoriously incompetent."

——In Pittsburg, ex-Councilman Simon, found guilty of selling his vote twice for $406, has been sentenced to be imprisoned eight months and to pay a fine of $200.——Sentences were pronounced in Schenectady, N. Y., last week, as follows:

Ex-Supervisor Aaron P. Huffmire, convicted of grand larceny, a fine of $1,000; Ex-Supervisor Myron Jacobson, who pleaded guilty, $500; George A. Pepper, formerly county superintendent of roads, convicted of petit larceny, $500; George Foster Sauter, convicted ot grand larceny, $1,000.

The bail of three indicted county officers who are fugitives from justice was forfeited.——In New Jersey, a Senate Committee inquiring as to the conduct of school boards, has obtained much evidence of corruption. In two towns school principals have testified that they were asked to pay $200 or $300 for renewals of their appointments. In West New York, the greater part of an issue of $105,000 in bonds has been lost, and in connection with this matter the president and the secretary of the board are under indictment.——It is alleged that in the City of New York the holders of about 4,000 newsstands have been required to pay to Aldermen considerable sums, in some instances as much as $1,000, for renewals of their licenses. The evidence has been laid before Mayor Gaynor. In a letter to the newsdealers he promises protection and invites them to make affidavit at his office as to any demand upon them for money in excess of the small lawful fee.

Fourth Pan-American Conference

The fourth Pan-American Conference was opened in Buenos Ayres on the 12th. In addition to the delegates there were present the foreign diplomats, the Argentine Senators and Deputies, the leading Government officers and many prominent representatives of Argentine professional and commercial life. The delegates from the United States were warmly welcomed and reports of a movement hostile to this country were the subject of ridicule. Following are the names of the United States delegates:

Henry White, formerly ambassador to France; Prof. Paul Reinsch, of the University of Wisconsin; Prof. David Kinley, of the University of Illinois; Prof. John Bassett Moore, of Columbia University, New York; Prof. Bernard Moses, University of California; E. B. Moore, United States commissioner of patents, Washington; J. B. Quintero, lawyer and journalist, of New Orleans; Col. Enoch Crowder, assistant judge-advocate-general of the army, Washington; Lewis Nixon, ship builder, New York; Prof. J. B. Shepherd, Columbia University; Cabot Ward, ex-secretary of state of Porto Rico; and William T. S. Doyle, assistant chief of the division of Latin-American Affairs, State Department.

The address of welcome was delivered by Dr. de la Plaza, the Argentine Minister of Foreign Affairs, and Henry White, chairman of the United States delegation, responded in behalf of all the delegations. They had invited him to do this. Antonio Bermejo, of Argentina, was elected president. Mexico nominated him, and Mr. White was nominated by Argentina. At the suggestion of Peru, Mr. Knox, our Secretary of State, and Dr. de la Plaza were made honorary presidents. By order of the conference, Mr. White's address was translated into Spanish. Members of our delegation were urged to accept the chairmanships of several important committees, but all were declined except the chairmanship of the committee on steamship service. This was assigned to Mr. Nixon. Secretary Knox in his instructions had directed the delegation to avoid the prominence which

would be due to offices and committee chairmanships. In his dispatches to the Secretary, Mr. White reports that the conference is remarkable for its harmonious tone and that its general disposition is friendly to the United States.

Nicaragua and Germany

When Dr. Madriz became President of Nicaragua, he addressed to foreign Powers a letter announcing the fact. The customary diplomatic replies were duly forwarded. There was recently published in Managua the reply of the German Kaiser, who addressed Dr. Madriz as "Great and Good Friend," congratulated him and exprest the usual diplomatic good wishes. All this was quite formal. An attempt was made last week to show that the Kaiser had taken sides with Madriz against the United States. The old formal letter was used and with it a dispatch sent to the London *Standard* by its Berlin correspondent, saying that the following was an authoritative exposition of the official German view of the letter:

"Germany refuses to recognize any right on the part of the United States to supervise her diplomatic relations with the countries of Central and South America in general, and those with Nicaragua in particular. Germany's recognition of President Madriz is a matter that concerns herself and Nicaragua, and not a third person or Power."

It was also asserted that Nicaragua had offered to Germany an island, to be used as a coaling station. These reports sharply affected the stock market in New York on the 11th. They promptly drew from the German Foreign Office a disavowal. The story sent to the *Standard* was declared to be wholly false, and the following authorized statement was given to the public:

"Madriz gave notice of his election, upon undertaking the Presidency, to the Emperor in the usual written form. The customary formal reply was prepared by the Foreign Office. It was not an autograph letter, but was simply signed by the Emperor. The address 'Great and Good Friend' was in accordance with official courtesy. Any intervention by Germany in Nicaraguan affairs neither followed nor is intended. Germany neither sought nor designs to seek a coaling station. Rumors of Germany's intentions toward the Galapagos Islands are equally without foundation, as are all suggestions that the German Government has in any wise modified the cultivation of friendly relations towards the United States."

It was also denied that a coaling station had been offered to Germany.——Altho the Madriz commander at Bluefields had promised that any removal of Pittman, the young engineer, from Bluefields Bluff, should be reported to the United States Consul there, Pittman was taken away secretly on the 4th, and was found on the 14th in Managua by our consul stationed in that city. His captors had sought to starve him during the journey. He was in a cell six feet long and five feet wide, and since his arrival in the Nicaraguan capital he had received no food from the authorities. Supplies from the charitable had kept him alive. Owing to our consul's protest he has since been treated with more consideration. It is reported that yellow fever has attacked many of the Madriz soldiers on the east coast.——Norway recognizes the Madriz blockade of Bluefields, and in this matter is in conflict with the United States. As many vessels plying between New Orleans and Bluefields fly the Norwegian flag, the revolutionists may be seriously affected by this action. It is said that there will soon be a revolution in Honduras against President Davila and in the interest of ex-President Bonilla, whom Zelaya removed from office three years ago.

The Islands

By order of Cuba's Secretary of the Interior, Col. Jorge Valera, a mulatto, and six men associated with him were arrested last week while they were on their way to a village in the province of Matanzas, to which they had sent a trunk containing dynamite and arms. They are held for conspiring to cause a revolutionary uprising. The trunk was traced to the janitor of the Medical School of Havana University, and a large quantity of dynamite was found in his possession. Three of the arrested men were formerly members of the secret police. One of them said in a confession that they sought merely to affect the stock market and were to receive $20,000 for what they intended to do. The Government says it learned some time ago that these and other men were

conspiring to destroy railroad bridges and other property. It is asserted that their purpose was to cause a demand for intervention by the United States.—— The bill providing for an exchange of the Cuban Government's arsenal property on the Havana water front for the railway terminal in the heart of the city, passed some time ago in the Senate, has now been passed in the House, altho all the Conservatives and ten Liberals were absent when the vote was taken. This is the measure which our Government opposed and as to which there have been charges of bribery. Even President Gomez has been accused. It was opposed by all the Havana papers except the Government's organ.——In the Philippines, the Moro pirates who recently killed several Dutch traders have been overtaken and killed by the constabulary.

Great Britain

Ambassador and Mrs. Whitelaw Reid held a reception on Independence Day at Dorchester House in London. In the evening the annual banquet took place at the Hotel Cecil. Mr. Reid, in his address, stated that the United States now is a nation of forty-eight sovereign commonwealths with an aggregate population of 90,000,000.——The closing performances of the Army Pageant, given in the Palace grounds of the Bishop of London, drew large crowds. It is estimated that the pageant was visited by more than 100,000 persons. A large number of historic English battles, from the earliest times to the present, were realistically portrayed with the garb and arms of the various centuries in which they occurred.——A deplorable accident occurred at the Bournemouth aviation meeting. Captain C. S. Rolls, who recently flew across the English Channel and back again, fell with a Wright biplane and was instantly killed. According to aviators he put too great a strain upon the machine in trying to alight swiftly at a sharp angle. In consequence the tailpiece gave way, and he fell near the grandstand among the wreckage of his machine. Rolls was Baron Llangattock's third son, and the most prominent aviator in England.—— The Woman's Suffrage Bill, after much debate, seems to be shelved for this session. The House of Commons was crowded on Tuesday when Mr. Shackleton moved the second reading of the bill. He urged that the bill be referred to a grand committee after passing the second reading; that it would be strangled if referred to the Committee of the Whole. Mr. Haldane, Secretary of War, Sir John Rolleston, Arthur Lyttleton and Lord Hugh Cecil spoke in favor of the measure; also Mr. Redmond, the Irish leader, Mr. Keir Hardie and Mr. Balfour, the leader of the Opposition. Strong speeches were made against the bill by Premier Asquith, Winston Churchill, Lloyd George, Austen Chamberlain and others on both sides of the House. It was nevertheless carried by a majority of 109. The Government leaders then passed a motion referring the bill to the Committee of the Whole House. It is generally believed that this will kill it for the present session. There have been threats on the part of the disappointed suffragets that they will resume militant tactics. Those Cabinet Ministers who opposed the measure are guarded by detectives.——Lord Charles Beresford made a speech before the Cecil Club in which he strongly reiterated his opinion that the British Navy is not prepared for war.——A bill making compulsory the equipment of all passenger vessels with a wireless system has passed the first reading in the House of Commons.

Germany

The Foreign Office has given out an authorized statement to the press that a letter sent by Emperor William to President Madriz, of Nicaragua, was not intended to be an endorsement of the Madriz party. It was merely an official courtesy, and not prompted by any desire to interfere in Nicaraguan affairs.——By an explosion on the dirigible balloon Erbsloeh, the inventor, whose name it bore, and four companions, were dashed to death. They are believed to have fallen a thousand feet. The balloon had recently been refitted for passenger service. Experts declare that the explosion of a benzine tank tore the rubber envelope above it and allowed the gas to escape from the forward compartment. It will be remembered that Oscar Erbsloeh won the International Aeronautical Cup for long distance in 1907 by piloting the German balloon

"Pommern" from St. Louis to Asbury Park, a distance of 880 miles. The death of Erbsloeh and his crew, following closely on the loss of Count Zeppelin's "Deutschland," has caused gloom in airship circles.——A sharp earthquake shock was felt in Munich, Bavaria, on the 13th of July. Buildings were severely shaken and seismographic instruments thrown out of order. The people were greatly frightened, but no fatalities are reported. In the Austrian Tyrol, however, one person was killed and many injured.——The German army maneuvers are to be held this autumn in the neighborhood of Danzig. Izzet Pasha, Chief of the Turkish General Staff, and other Turkish officers, are expected to be in attendance.

Italy

The Italian Education Bill was passed by an overwhelming majority. Only the Clerical group voted against it.——The municipal elections in Rome have resulted in an easy victory for the candidates of the coalition known as the *Blocco Popolare*, which has held the administration of Rome since November, 1907. It consists of an anti-clerical coalition composed of Socialists, Radicals and Republicans. Among those re-elected is Signor Nathan, the Mayor of Rome.——The subject of Italian immigration has received much attention in this country. But Italy also has been interested in the subject. It is found that in spite of an enormous annual emigration of Italians to America the population of Italy has been steadily growing. In 1872 Italy had an approximate population of 27,000,000; now it has at least 33,000,000. In 1906 the excess of births over deaths was 374,000. Investigation has shown also that about 40 out of every 100 emigrants ultimately return to Italy. Hence, as regards Italian emigration, it is necessary to distinguish between two kinds, a temporary and a permanent emigration.——The Italian Government having refused to agree to the extradition of Italian criminals who escape from the scene of their evil deeds in the United States, the State Department has denied the Italian Government's application for the extradition of Charlton, who murdered his wife in Italy. In consequence of this disagreement the murderer seems likely to go free.

Church and State in Spain

On July 5 Premier Canalejas, in a long and admirable speech which prolonged the session of the Senate, explained the Government's policy regarding the religious question. He held that in order to maintain peace in the country it was necessary to steer a middle course between revolutionaries and Ultramontane agitators. It is hoped that the speech will allay the excitement of Clericals somewhat.——In the Chamber of Deputies the Republican Salillas referred to the Ferrer case. He characterized as disastrous the policy of the Conservatives who had brought about the execution of Ferrer in spite of the indignant protests of Europe. The Minister of Instruction answered the speech, describing it as violent and inopportune.——On July 8 the Premier introduced into the Senate a bill prohibiting the establishment of new religious associations in Spain until the negotiations between Madrid and the Vatican for the reform of the Concordat are concluded. Against this bill the Vatican has entered a new protest.——Anti-clerical demonstrations in which an enormous number of persons took part are reported from the larger cities of Spain. The religious orders also organized demonstrations, and occasionally there was clashing and bloodshed between partisans of the two sides. Spanish troops are reported to be kept in readiness to repel an expected invasion of refugees from France.

The Russo-Japanese Agreement

The recently concluded agreement between Russia and Japan has in many quarters been regarded as an attempt to checkmate Secretary Knox's recent proposition to neutralize the Manchurian railways. But Marquis Katsura, Premier and Minister of Finance, has issued a denial from Tokio, saying that there is no ground for the assertion that the Russo-Japanese convention is the outcome of the neutralization proposition. He avers that the only object of the treaty is to insure peace between Japan and Russia in the Far East, and to improve traffic connec-

tions between the railroads. He gives it as Japan's determined policy to adhere closely to all agreements and treaties with China and other nations. The London *Times,* however, considers that Mr. Knox's proposal to take the Manchurian railways out of politics, and to construct the Chinchau-Aigun line by international co-operation, did convince Japan and China that the good of their common interests in the Far East demanded an agreement as to their policy. The Paris *Temps* also regards this agreement as an answer to Mr. Knox's proposal. It should be noted that while the present agreement guarantees the *status quo* in Manchuria as defined by previous agreements, it also widens its scope by including agreements made by either of the contracting parties with China. The full significance of the treaty, therefore, will be known only when it is ascertained what these are. The *Temps* thinks that France and England

"can only congratulate themselves upon the growing intimacy which is thus being established between two countries which are their respective allies. For us the part which certain Asiatic conflicts have sometimes played in the politics of Europe has always been disagreeable and has sometimes been disastrous. Everything that is calculated to obviate a recurrence of these conflicts by a policy of balance and of the *status quo* is therefore welcome to France. This pre-eminently applies to the new Russo-Japanese Agreement."

German criticism of the agreement is adverse. The recognized mouthpieces of the Foreign Office have not exprest an opinion. But the *Kreutz Zeitung* goes so far as to suggest the desirability of an Austro-German-American alliance as a corrective to the four-Power *entente,* which it regards as a disturbance of political equilibrium. The German press considers that the agreement is essentially anti-American. China's answer to the notification of the contracting parties consists simply in an expression of satisfaction over the avowed purpose of Russia and Japan to adhere to the terms of the Portsmouth treaty, and to maintain the *status quo* in Manchuria. We translate the following summary of the agreement given out at St. Petersburg:

"Adhering sincerely to the principles of the Convention of July 17, 1907, and desirous of developing its effects in view of the consolidation of peace in the Extreme Orient, the high contracting parties are come together to complete the said arrangement by the following agreement:

"In order to facilitate communication and to develop commerce between the two nations they mutually agree to a friendly cooperation for the improvement of their respective railway lines in Manchuria, to perfect the service of railway connections, and to abstain from all harmful competition.

"They agree to maintain and respect the *status quo* conformably to all treaties concluded up to date, be it between Russia and Japan, or between these two powers and China.

"In the event that anything should occur to endanger the *status quo* the two contracting parties will concert measures for its maintenance."

——There may be some significance in the fact that Japan has just sent notices to Great Britain and European powers announcing the termination of commercial treaties at the end of a year.

France

Continued rainfall has caused renewed floods in different parts of France. The valleys of the Aube and of the Marne are affected most. Precautionary measures have been taken in Paris to guard against a recurrence of last winter's disaster. Some Deputies of the Department of the Seine called on the Prime Minister to ascertain what was being done to protect Paris. M. Briand explained that a number of new public works were being projected in accordance with recommendations made by the Flood Commission. Among these are the raising of the Quai de Passy, the dredging of the river between Suresnes and Bougival, and the broadening of the arm of the Seine between Notre Dame and the Place Saint Michel.——Following the charge of M. Jaures, the Socialist leader in the Chamber of Deputies, that ex-Premier Clemenceau had caused the arrest of banker Rochette in order to enable speculators to clean up $800,000, Premier Briand made a speech in which he explained the part the Government had taken in the affair. M. Briand admitted that speculators had caused the arrest of M. Rochette, whose companies were found to be on a sound financial basis. But he also insisted that the Government had acted only upon the receipt of complaints from investors living in the provinces. The Chamber adopted a vote of confidence of 395 to 85. It was nevertheless decided to appoint a commission of inquiry into the affair.

JOHN BROWN. Your Friend John Brown

LEADER OF THE HARPER'S FERRY INSURRECTION.

From a Contemporary Lithograph.

God's Angry Men

BY CHARLES M. SHELDON

Author of "In His Steps," Etc.

God has his use to make of angry men,
  Like him, who in the cruel Pharaoh's land,
Slew the Egyptian, in a rage, and then
  Buried his body in the desert sand.

Seeing his brothers scourged, enslaved and bound,
  Beaten and broken for a tyrant's fame,
Rearing vast pyramids, in ceaseless round
  Of endless toil, his anger flamed white flame.

That flame had rent the altar with its heat,
  Had not God bid it smoulder forty years,
Until the burning bush, at Moses's feet,
  Showed him God's passion for the people's tears.

Then he who slew in the white heat of youth,
  Went forth to do the mighty deeds of God:
His righteous anger burned no less, in truth,
  For now he smote with the Almighty's rod.

And out of anger for a brother's wrong,
  Grew a great nation and a mighty throne;
And out of weakness, championed by the strong,
  Israel from bondage came into its own.

Then, in the travail of the pregnant years,
  Another of God's angry men was born;
He felt the bitter burning of the tears
  Of slaves whose groaning midnight had no morn.

The prairie's stretch was freedom's road to him,
  It's soil was where injustice could not grow,
Its wind blew voices from the stars to him,
  Calling upon his soul to strike his blow.

He struck his blow—all impotent it seemed,
  And those for whom he struck toiled on in tears;
He did not live to see the thing he dreamed,
  Men said his blow retarded freedom's years.

John Brown! Thy soul is marching boldly yet
  Across the path of cold indifferent men.
The world cannot and will not soon forget
  That soul that counted not the cost again.

God give us angry men in every age,
  Men with indignant souls at sight of wrong,
Men whose whole being glows with righteous rage,
  Men who are strong for those who need the strong.

And pity those soft youth this nation rears!
  Who never strike a blow for human need!
Those puny souls that live behind their fears,
  And grow more puny, fed on lust and greed.

Topeka, Kan.

The John Brown Song

BY SAMANTHA WHIPPLE SHOUP

[The publication in our 4th of July issue of "John Brown's Soul," by Dr. William E. Barton, together with the republication of Edna Dean Proctor's "John Brown Song" from THE INDEPENDENT of 1863, seems to have excited much interest among our readers. We are glad to add this week the following brief comment from Samantha Whipple Shoup and the editorial news article from the front page of THE INDEPENDENT of August 29, 1861, to which she refers. Also the inspiring poem, "God's Angry Men," by Rev. Charles M. Sheldon, and "Another John Brown Song," by G. A. Marshall, A. M.—EDITOR.]

"TO the law and to the testimony." If the files of THE INDEPENDENT are searched with sufficient care, an article will be found, on an inside page, telling, as a news item, how a Massachusetts regiment, starting to march to the war, broke out singing it—some one in the ranks improvising it as they marched. The stanza

"His pet lambs will meet him on the way."

was italicized by the editor, as containing a prophecy, either of the slaves marching to freedom or of their marching to the fight.

I know this item was published very early in the war. I think it must have been either in the spring or early summer of 1861, not only because the incident occurred when the first levy was starting for Washington, but also because it was the first war song of which our neighborhood in Illinois had the "sheet music," excepting

"The First Gun is Fired, may God Protect the Right."

which followed hard on the fall of Sumter.

In a collection of patriotic poems published last year by Houghton & Mifflin, I saw for the first time the statement that Edna Dean Proctor's poem was "the original form." I wrote to the editor of the book, telling him of my distinct recollection of THE INDEPENDENT article, and saying I was sure Miss Proctor's poem appeared much later. I see the latter statement is confirmed by your article.

As for the music, camp meetings were scarcely obsolete in the West at that time. I have never seen one, but I know it was generally said by those familiar with them that the music was an old camp meeting melody. I suspect it is more likely that the

"Say, Bummers, will you meet us,"

was borrowed from the camp meeting song than *vice versa,* but this is merely a conjecture.

But I do arise to protest on one point. It seems to be a fixed law that when anything is said in print on "John Brown" it shall be alluded to as "doggerel." This is true enough of most of it. If an untrained improvisator gives us an inspired beginning, it is as much as can be expected, and I have always thought it probable that some of the lines, especially the sour apple tree one, were contributed by a comrade of the original singer.

But there is nothing finer in the range of lyric poetry than the first stanza. The sublime and thrilling thought is perfectly expressed in the simplest language. Just listen:

John Brown's body lies a-moldering in the grave,
But his soul is marching on!
Glory, glory, hallelujah!
His soul is marching on!

It is the inspiration not only of Miss Proctor's poem, but of Julia Ward Howe's magnificent "Battle Hymn of the Republic." The literature of the war is full of expressions reminiscent of it. Forsythe Wilson's "Rhyme of the Master's Mate," for instance:

"But there was a hand at the wheel
That nobody saw,
A *something* in every rod and screw
That made them answer their turn,
. . . . . .
Old John Brown at every gun!"

But none of them quite equal that first inspired stanza of the old song—the cry of the nation's heart, half prophecy, half demand, that the defence of the nation should also mean the freedom of the slave.

INDIANAPOLIS, IND.

John Brown, Dead, but Speaketh

[Reprinted from THE INDEPENDENT of August 29, 1861.]

WHO would have dreamed, a year and a half since, that a thousand men in the streets of New York would be heard singing reverently and enthusiastically in praise of John Brown! Such a scene was witnessed on Saturday evening last. One of the new regiments from Massachusetts on its way thru this city to the seat of war sang:

John Brown's body lies a-moldering in the grave,
John Brown's body lies a-moldering in the grave,
John Brown's body lies a-moldering in the grave,
His soul's marching on!
Glory Hallelujah! Glory Hallelujah! Glory Hallelujah!

The stanzas which follow are in the same wild strain:

He's gone to be a soldier in the army of the Lord, etc.,
His soul's marching on!
John Brown's knapsack is strapped upon his back, etc.,
His soul's marching on!
His pet lambs will meet him on the way, etc.,
They go marching on!

Seldom, if ever, has New York witnessed such a sight, or heard such a strain. No military hero of the present war has been thus honored. No statesman has thus loosed the tongues of a thousand men to chant his patriotism. Little did Captain Brown think of the national struggles that were to follow his eventful death. But his calmness and firmness gave evidence of his faith that the cause of freedom demanded the sacrifice of his life, and he nobly dies.

It was a notable fact that while the regiment united as with one voice singing this song, thousands of private citizens, young and old, on the sidewalks in crowded doorways and windows, joined in the chorus. The music was in itself impressive, and many an eye was wet with tears. Few who witnessed the triumphal tread of that noble band of men arrayed for the war of freedom will ever forget the thrilling tones of that song.

Another John Brown Song

BY G. A. MARSHALL, A.M.

I WAS much interested in the John Brown Song of Miss Proctor and Dr. Barton's historical sketch of it in THE INDEPENDENT for July 7. It reminds me of a manuscript copy of another John Brown song, given me in July, 1862, by my cousin, Miss Fanny Marshall, of Elizabeth, Ill., and herewith reproduced. I have never seen this in print, and do not know who was the author. If it had been published, no doubt Dr. Barton would have known of it and mentioned it.

"The Battle Hymn of the Republic" (first published in the *Atlantic Monthly* for February, 1862), Miss Proctor's song, and this, are variations of a common theme, the doggerel of two lines mentioned by Dr. Barton furnishing the motif. The theme was in the air, so to speak, and it would have been strange if it had not been developed contemporaneously by several persons without copying from one another. This version follows most closely the theme, as John Brown's soul goes marching on in every stanza; Mrs. Howe gives the apotheosis of the theme, recognizing that it is in truth God who is marching with freedom's army; while Miss Proctor's song anticipates the triumphant result of the war in the emancipation proclamation. I hope you will think this version of sufficient interest to be worthy of preservation in your columns.

I was a student in the University of Vermont in 1859, when John Brown's body was brought to Burlington and ta-

ken across Lake Champlain to its last resting place. The incident made quite a stir; and while some looked askance on the sympathy shown for the (so called) traitor, there were more who considered slavery to be as great a crime as treason.

DARLINGTON, WIS.

John Brown

[As transcribed by Fanny Marshall in 1862.]

OLD John Brown's body lies moldering in the grave,
While weep the sons of bondage whom he ventured all to save;
But tho he lost his life while struggling for the slave,
His soul is marching on.
Glory, glory hallelujah!

John Brown was a hero, undaunted, true and brave,
And Kansas knows his valor when he fought her rights to save;
Now, tho the grass grows green above his grave,
His soul is marching on.
Glory, hallelujah!

He captured Harper's Ferry, with his nineteen men so few,
And frightened "Old Virginny" till she trembled thru and thru;
They hung him for a traitor, themselves a traitor crew,
But his soul is marching on.
Glory, hallelujah!

John Brown was John the Baptist of the Christ we are to see,
Christ who of the bondmen shall the Liberator be,
And soon thruout the Sunny South the slaves shall all be free,
For his soul is marching on.
Glory, hallelujah!

The conflict that he heralded he looks from heaven to view,
On the army of the Union with its flag red, white and blue,
And heaven shall ring with anthems o'er the deed they mean to do,
For his soul is marching on.
Glory, hallelujah!

Ye soldiers of Freedom, then strike, while strike ye may,
The death blow of oppression in a better time and way,
For the dawn of old John Brown has brightened into day,
And his soul is marching on.
Glory, hallelujah!

A Feathered Humorist

BY HERBERT K. JOB

[Mr. Job is the author of "Wild Wings," "The Sport of Bird Study," etc., and has himself taken all the photographs herewith reproduced.—EDITOR.]

ANCHORED under lee of Breton Island, La., far out in the Gulf of Mexico, one breezy Sunday afternoon in June, we enjoyed watching the fishing operations of the brown pelicans. This was in the great Federal Reservation for the protection of bird life, and I was on a tour of inspection with the warden in the Audubon Society patrol boat. That bird protection was successful required but a glance to ascertain. As far as the eye could reach—and away beyond the limits of vision, for that matter—extended the squadron of the busy fishers. Here comes a pelican close by the vessel, so that we can easily see just what takes place. With steady flappings the great fellow glides along easily thru the air. Just as he comes opposite us he checks himself by throwing his wings forward. For an instant he hovers, perhaps thirty feet above the place in the water where his keen eyes have detected the fish just below the surface. Then his body turns, as tho on a pivot, till it points directly downward, and like a meteor he descends headlong upon the prey. He strikes the water with a mighty splash, disappears for a moment, and emerges with the fish in the pouch under his great bill. After shaking the water out of his eyes, he sits quiet for a

"SO COARSE, AS COMPARED WITH THEIR OWN DAINTY, SPOTLESS PLUMAGE."

"TO SEE THE AIR FULL OF THESE GRACEFUL BIRDS."

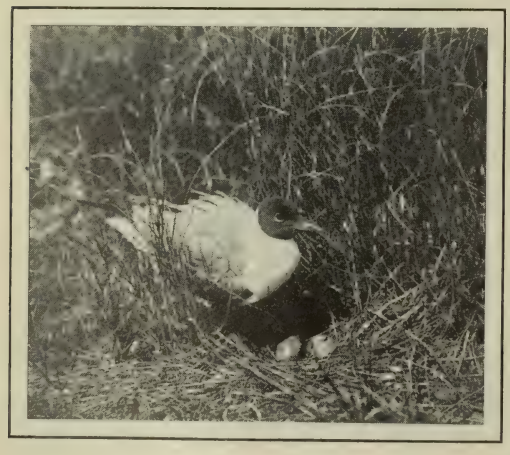
moment, and then opens his bill, contracting the pouch at the same time to drain off the water, which must be done before he can swallow the fish.

But he is not alone. Following him at a short distance all the time has been a smaller bird, mostly white, with a gray back, and black head and wing-tips, of the species known as the laughing gull. When the pelican emerges after his dive, the gull, which is somewhat larger than a pigeon, boldly alights upon his head, and stands there expectant, looking down at the big bird. Curiously enough the latter does not seem to mind the intrusion, or make any attempt to shake off the saucy little gull. Now comes the crafty gull's opportunity. No sooner does the pelican open his mouth to let out the water, than the watcher—I can imagine, with a smile—reaches in, deftly seizes the fish, and is off. The old pelican sits as tho stupefied, overcome with anger and chagrin, but presently flaps off after another fish, and very likely is served the same old trick with the very next catch.

Certainly the laughing gull is a merry fellow, well named from his laugh-like cacklings, which ring out over the bays. It makes no difference whether we visit him at his great breeding-ground at Muskeeget, an island off the southern coast of Massachusetts, or along the coast of Virginia, at Cobb's Island, on the great salt marshes, or on these great shallows and islands of the Gulf of Mexico. He is everywhere the same sprightly, genial bird, rollicking in disposition, fond of a good time, garrulous and noisy, and that not in a complaining or embittered way, unless his cheery-sounding outpourings greatly belie his real sentiments. For the life of us we cannot make anything very depressing out of his "ha-ha-ha," "ha-ha-ha," uttered upon all sorts of occasions. Even in the night, when we are at anchor near his chosen breeding island, we find that he is absolutely unable to contain himself, for he is more or less vociferous. Perhaps he is having a pleasant dream, and laughs out in his sleep. Or else, when he wakens, the man in the moon smiles at him, and he laughs back. It is well that he is found so widely distributed over

our coasts, for his merry laughter adds to the gaiety of the nation, and we could ill spare him.

At one time the millinery trade preferred his feathers to his good cheer, and did their best to silence his laugh and convert him into dollars. If this were the spirit of the "golden age," heralded in poesy and prophecy, we should want none of it. We have too much of it already. Such a spirit is dead to beauty in nature, and is incapable of real appreciation of such things. What sort of men, pray tell, must they have been to offer fishermen money for every laughing gull they could kill, and send them to the breeding colonies to decimate them and leave the helpless young to starve! There was no humor in the situation when the National Association of Audubon Societies took it in hand only a few years ago. The laughing notes were seldom heard on our coasts, for the pretty, cheery birds were almost exterminated. And there is no humor, but only pathos, in the sight of a tender-hearted woman ignorantly wearing in her hat the plumage of *any* wild bird. Ignorantly, because, if she understood, she could not and would not do it. If every woman in America followed her example, our gardens, fields, and forests would be songless, our coasts deserted—no more cheery bird-laughter for the many who love it. We had better stop first than last when it is too late to retrieve the terrible blunder. Fortunately, it is not yet too late, as the great increase of our genial friend of this sketch, and others of his confreres, is beginning to prove.



Really, I had hardly supposed that there were in all the world so many laughing gulls as I saw there last summer on the coast of Louisiana. Scores of marshy islands which I visited were swarming with them. On some islands there were, literally, thousands. What a racket they made as we anchored to leeward of such a place, and how much

"GREET HIM WITH PEALS OF THEIR LAUGHTER."

more when we landed! The cries were still laughter-like in form. It was not now the "ha-ha" of merriment, but the "ha!" of tragedy. Whether or not they took us for plume-vandals I cannot say. They ought to have known the friendly warden who protected them, tho, if their memories were as long as ours, they might have recalled that once upon a time *he, too,* had been a plume hunter and had shot their mates upon that very spot. Perhaps now they realized that no one would hurt them, but the gull is always an excitable, as well as a greedy, bird, and I could hardly imagine a rookery of them so tame and stolid that they would not rise from their nests at the approach of a man, and greet him with peals of their laughter. Maybe they think he is a comical creature, erect on his long legs, worthy of derision because he cannot fly or because his clothes are crude and unbecoming, so coarse and soiled as compared with their own dainty, spotless plumage. For that matter, tho, they are always talking or laughing among themselves, Gallic in their vivacity, ever animated in their disposition and ways.

In those great colonies I detected another trait of humor in our quaint friend. The laughing-gull—or any gull, for that matter—always has an eye out for the main chance. Other birds, such as terns, or the curious black skimmers, were nesting on the ground, often in close proximity to them. Sometimes, when these would fly from their nests at our approach, I would see a laughing-gull alight by the nest of the other bird, calmly look around, then punch his bill into one of the eggs and fly off with it, or else suck it on the spot. Whenever I saw a gull about to do this I would, if in time, chase him away, and off he would go, to hover over me close by and cackle forth his hilarious contempt, as much as to tell me that he would do it, all the same, at the very first opportunity.

LAUGHING GULL BY THE NEST.

It is a wonderfully beautiful sight to see the air full of these graceful birds, which have arisen from the grass, where each pair has a rude nest of weeds, and two or three dark, boldly-marked eggs. On the dry parts of the islands the nests are very frail, but out on the tidal marsh, where the sea each day overflows the roots of the grass, quite a pile of weeds is used to raise the precious eggs out of danger. Usually the gulls hover well up in the air, but on these islands, where they are protected, they become very bold, and hover close over or alight upon their nests, right before one. As I stood and watched, at the top of the beach, I trained my Reflex camera upon them, and took a great variety of flight pictures. Their bills were usually ajar, and the camera caught everything save the laugh.

It was great excitement to study them at close range from my little hide-tent at their nests. Ordinarily there must be some one else to leave the vicinity and dupe the birds, so deficient in mathematics, to think that no one is there. But these are so tame that without this preliminary I crawl in out of sight, and in a very few minutes the gulls come back, at first cautiously peering and tip-toeing, standing upon the near-by log, and craning their necks at the queer nondescript tent. It moves not, so they hop down and trot to their nests, sometimes brushing their wings or tail against my shelter. What pandemonium it would raise if I should seize one by the tail! It is pretty to see them enter their rests, and then sit upon the eggs, generally panting, for the sun is roasting hot. Presently the mate returns, administers a caress, and stands by the side of his beloved. Pretty creatures they are, indeed!

How wonderful it seems that so simple a deception as this umbrella tent should work so admirably, and that the fortunate and not criminal impostors should be able to watch them as long as he may wish, upon their nests, and in the discharge of their various domestic duties, perfectly natural because unaware that anyone is spying upon them. Even when I put my face boldly to the little window, and they appear to look at me, they are not afraid, for evidently they consider the face as part of the tent, and do not connect it with the idea of the stilted *man* whom they recently saw standing in the open. Bright and vivacious as is our jovial friend, he is, after all, only a bird, and like them all is largely a creature of habit, a stickler for custom, a conservative of conservatives. Custom is his morality; he cannot comprehend what is new. So tho he can size up a man, specimens of which race he knows by—often sad—experience, a tent with a man in it is beyond him, so he just gives up this riddle of the universe, and is content to be agnostic, to that degree. But for all that he is ever sounding forth the high praises of his innate joyousness. The female cackles her gull-laughter from time to time as she incubates, and her mate, coming to her side, responds in kind.

Perhaps the laughing-gulls were in a better humor than was the peeper in the tent. The heat of that little enclosed area under the rays of the tropical sun was almost unbearable. A swarm of green-head flies, to say nothing of mosquitoes and other insects, did their very worst. The tide rose over the marsh and came into the tent ankle-deep. Soaked with perspiration and with brine, plastered with mud, almost devoured by hungry mosquitoes, how could one take it otherwise than with equanimity, in such intimate association with these famous humorists, who were laughing in his very face? Happiness is always contagious.

"STANDING UPON THE NEARBY LOG."

WEST HAVEN, CONN.

God's Angel

BY MARGARET CABLE BREWSTER

I saw thee first, when thou hadst gone from me,
  Stealing across my darkened, empty days
  Like moonlight silvering with its softened rays
The lonely spaces of the open sea.
But in my heart, with every thought of thee,
  I know that tho thy days in Heaven are spent,
  No idle hour can bring thee sweet content;
Nor any moment without purpose be.
The gentle ministrations of thy hands,
  That day by day wrought here unceasingly;
Thy willing feet so swift to Love's demands,
  These are my constant memories of thee.
Remembering these, I see thee as thou art,
God's Angel with a human mother heart.

ENGLEWOOD, N. J.

Effective Church Services

BY JOHN P. PETERS, D.D.

[In our issue of March 31 we printed a very suggestive article from the pen of Dr. Henry A. Stimson, entitled "Effective Evening Services," in which was recounted the experiences of the Manhattan Congregational Church, of this city, in opening up its Sunday evening services to discussion of current problems by competent lay authorities. This article has called forth some replies. We can only print, however, the following article by Dr. Peters, rector of St. Michael's Episcopal Church, of this city, and one by the Rev. Percy S. Grant, of this city. The third, by Rev. Harry P. Dewey, of Minneapolis, will appear in a subsequent issue.—EDITOR.]

DR. STIMSON'S account of the special Sunday evening meetings in the Manhattan Congregational Church and the work growing thereout filled me with envy for two reasons—first, because he has the freedom to call into his pulpit when he will men who have a message for righteousness in civics and *socialics,* if I may invent that word to match the other; secondly, because apparently he finds an interest in his congregation in those topics sufficient to increase the size of the audience and sufficient to furnish committees actively to follow up the work.

As an Episcopalian I lack, under the recent amendment of Canon XIX, the pulpit liberty which Dr. Stimson possesses. I can call into my pulpit a prophet of righteousness not trained in my own little school of prophets only with the consent of the Bishop specifically given, and only on condition that the service is to be a "special service."

My own interest lies very largely in the direction of social and civic righteousness, the application of the Gospel of Jesus Christ to corporate as well as individual conditions. I think my people are in sympathy with me; certainly a number of them are workers with me in various organizations for that purpose; but, so far as the pulpit is concerned, they appear to prefer almost anything else than sermons or addresses on civic and social righteousness. I have a situation very different evidently from that which confronts Dr. Stimson, and perhaps many other brethren who are seeking for means of making an evening service attractive and securing a congregation. We have the congregation already. The comfortable part of my congregation, including in general the wardens and vestrymen, do not, it is true, attend two services on Sunday. Their regular service is the eleven o'clock service in the morning. There is, however, almost as large, if not quite as large, a congregation of different individuals at eight o'clock in the evening as at eleven in the morning, and these individuals, like those who attend the eleven o'clock services, apparently prefer very much what is sometimes called plain, old-fashioned Gospel preaching from ordained clergy to the other sort of talks and discussions. Even in our Lenten services I have found that plain preaching attracts larger audiences than sociological or civic addresses by the best trained and best known specialists. I have made the experiment two or three times in the Wednesday night services in Lent. These are regularly well attended services. The best attendance which we have ever had thruout was when, a couple of years ago, I celebrated the passage of the amendment to Canon XIX, (which, however much in practice it limits the freedom of our pulpit, in theory recognizes the prophetic mission of nonapostolic-successional ministers) by inviting, with the permission of Bishop Potter, the pastors of the neighboring churches, Congregational, Presbyterian, Methodist and Dutch Reformed, to preach in St. Michael's.

This year we had the best known specialists in this country, presenting problems of vital interest to the community, as speakers on Wednesday nights: Dr. Devine of the Charity Organization, Dr. Murtland of the Big Brothers movement, Mr. Lovejoy, secretary of the National Child Labor Committee; Dr. Allen of the Bureau of Municipal Re-

search, Hon. Frank Moss of the Society for the Prevention of Crime, and Rev. Charles Stelzle, superintendent of the Department of Labor of the Board of Home Missions of the Presbyterian Church. We had a brief service, in one case illustrated by lantern, in the church, with addresses by these men, after which we adjourned to the Parish House for a conference, at the close of which light refreshments were served for the purpose of establishing an atmosphere of informality and sociability. The attendance was by no means equal to that upon the regular sermons, and my comfortable eleven o'clock congregation was in general conspicuous by its absence. The people attending were, however, regular attendants of the church, very few outsiders being attracted.

I am interested to know whether others have had the same experience which I have had as to the sort of preaching which appeals to their parish and neighborhood. It is our simple, ordinary services which regularly attract people. We have a large Parish House, in which very many activities, social, civic and otherwise, are centered. This contains a fine auditorium, well adapted to lectures, public meetings and the like. But while we have to organize audiences for addresses, lectures or meetings held in this auditorium, if we put the same things in the church we only have to open the doors to secure a fair, if not a large, audience, at almost any season or any hour of the day or night.

At certain times we have in the church picture services, with the sermons addressed primarily to the eye, or musical services, the rendition of some famous Passion music or the like. Such things in the church are treated as religious services. For these the church is packed. The same things given as free lectures, oratorios or the like in the Parish House would not draw one-third the audience they do as religious services in the church.

I may add, to give a more complete view of the situation, that besides the eleven o'clock and eight o'clock services on Sunday we have a children's service at four o'clock in the afternoon, very largely attended, and two early Communion services at seven and at nine, held in a chapel formed by one of the transepts of the church. At the first of these services the attendance is not large, except on great feast days, varying from 8 to 40. At the second the attendance varies from 20 to 100, according to the day and season, a large proportion being young people, principally of the "working class." We lay in our public teaching much stress on worship and especially we lay stress on the sacramental life, believing that the Holy Communion preaches beyond all other things Jesus Christ and Him crucified,—the life of love and service and the possibility of intimate communion of man with God.

A good deal of a ritualist and distinctly a sacramentarian, I have, however, always held, following the practice of my predecessors, that services are made not for the minister, but for the people. I have sought to provide, without regard to my own desires or inclinations, that which seemed best to serve the needs of my people; hence, with all my own interest in sociological and civic questions, I have found myself compelled by conditions to give them an inferior place, so far as church services are concerned. (To be fair, I should add that, much as I believe in ritual as a means of instruction and education, I have no regard for it in itself considered and take all pains to make it understood that it is a mere vehicle of expression of those spiritual things which are the ultimate reality.) I scarce know whether I am a radical or a conservative in myself or in the administration of my parish. Probably for the purpose of your discussion I shall be reckoned an ultra conservative, but if so I think it is due to the environment with which I have to deal.

New York City.

Our Evening Services

BY THE REV. PERCY STICKNEY GRANT

[Since this article was written a few days ago, the Vestry of the Church of the Ascension has refused to renew the engagement of the Rev. Alexander Irvine. This has caused much comment and feeling in both church and socialistic circles. Dr. Grant informs us, however, that the meetings, both in the church and in the parish house, are to be continued next year under his direction, assisted by a committee broadly representative of the working classes.—EDITOR.]

THE Church of the Ascension (Fifth Avenue and Tenth Street), in addition to the morning and afternoon services, has, since December, 1893, held Sunday evening services, which for the last three years have been addressed more particularly to workingmen. As the Sunday evening service is a "third service," the rector may arrange it as he pleases; this the law of the Protestant Episcopal Church permits. The morning service at eleven o'clock is attended by a conservative congregation, upon which the support of the church depends. At four o'clock there is a choral service for those particularly to whom art and music have spiritual messages. The evening service has found a still different audience—working people. The preacher, Mr. Alexander Irvine, as a representative of the Y. M. C. A., had for a year or two previously been holding shop meetings, where workingmen had been willing to give him fifteen or twenty minutes of their precious noon hour, and had listened with interest and respect to his preaching.

I could see no reason why the Church of the Ascension, at its evening service, should not be a People's Church, where these men who were so respectful to the appeal of religion as to give a part of their noon rest, could come in fresh clothes and sit at their ease, in a beautiful church, thus offering more time to those influences which they apparently enjoyed and were benefited by.

Workingmen today, however, are suspicious of churches and too often hold them to be conventional religious agencies of the capitalistic class. To appeal to workingmen religion must show its ability to benefit the body and to improve social conditions, as well as to effect spiritual transformations. The anomaly of finding religious persons, who on the industrial side of their lives are unjust and cruel taskmasters, alienates the workingman from the Church and presents contradictions that destroy his respect for religion. In short, the workingman wants the Church to talk about things that interest him. His kingdom of heaven is not purely a sweet mood, or a future state; it is a better organization of the present world; it is this life with more justice and bigger opportunity.

Is there any reason why Christians who profess to be admirers of the Old Testament prophets (those most outspoken voices in behalf of the poor) should not give opportunity today to friendly lips to plead for the abject or the unprivileged, and to utter their dumb miseries? At the same time, workingmen can be led out of the pure materialism into which they are inclined to fall, into spiritual places which to some extent are able to correct the misfortunes of their lot, or in times of good fortune can give finer significance to their richer opportunities. So the evening services at the Church of the Ascension are a people's service, in which the note is not primarily evangelistic, but social, sympathetic, human, historical, prophetic.

These services attracted persons of such divers religious attitudes that it seemed to me discourteous to have forms of church service which should unnecessarily grate upon their racial or religious peculiarities. For instance, a great many who come are Jews—some are Catholics, some call themselves Atheists.

Believing that the religious instinct is universal and that our church differences are built upon artificial and unnecessary distinctions, we welcomed the opportunity to attempt a form of service that would appeal to a common religious instinct and that would omit such things as on account of denominational views had only a limited appeal.

Each month of this experiment a new form of evening service has been arranged. The hymns are not always from the Church Hymnal, but are poems by Kipling, T. W. Higginson, Ebenezer Elliot, Charles Kingsley, Henry van Dyke, Felix Adler and others of lyrical vision, set to music selected by Mr. Richard Henry Warren or a music committee.

The "salutation," which in January was from Charles Rann Kennedy's "The Servant in the House," in February was from Cardinal Newman; in March from the Epistle of James, and in April from Bryant's "Thanatopsis."

At the conclusion of the service there is an after-meeting in the neighboring Parish House, where a straightaway address on some sociological topic is delivered by experts, followed by questions and an open discussion. This continues from nine until eleven. The after-meeting can be considered a part of the evening service—the part that gives the congregation a voice. It was, however, an after-thought and grew up rather naturally from a little reception after the service in the church, where Mr. Irvine and the rector of the church could meet and become acquainted with the Sunday evening congregation.

The impression has got abroad that these Sunday night meetings are an avowed alliance of the Church of the Ascension and Socialism. Nothing could be further from the fact. Many of those who attend are Socialists, perhaps, because among working people they are the most inquiring minds, the most industrious readers and most combative disputants. But all kinds of social interests are represented in these meetings, as a list of speakers and topics from our last Year Book will prove:

Dr. Thomas Darlington, "Caring for the Health of the City."
Mr. James Eads How, "The Seriousness of the Unemployed Question."
Mrs. Catherine Kennedy, "Socialism and the Modern Spirit."
Mr. Wilbur Phillips, "New York's Milk Supply and the Infant Death Rate."
Prof. Perrin, "The Fallacy of Socialism."
Mr. Charles Ferguson, "Democracy."
Mrs. Rheta Childe Door, "Child Labor."
Mrs. Charlotte Perkins Gilman, "The Social Conscience."
Mr. Arthur Bullard, "Russia."
Mr. Ben Greet, "The Drama."
Dr. E. R. L. Gould, "Model Tenements."
Mr. Charles R. Lamb, "The City Beautiful."
Mr. Charles James, "Prison Reform."
Mr. Henry Moskovitz, "The Psychology of the Jew."
Mr. R. Fulton Cutting, "Popular Opinion and the Wage Question."
Mr. Bolton Hall, "The Tramp as a Social Factor."
Dr. Thomas C. Hall, "The Education for Tomorrow."
Commissioner Hebberd, "The Vagrancy Bill."
Prof. Dickinson S. Miller, "The Emmanuel Movement."
Mr. John Mathews, "The Conservation of Water Power."

In a democracy no one, I imagine, can suppose that capital is to be protected in an arbitrary use of power, or that the relation of employed to employer is one merely of numerical demand and supply. This, I should say, was in general terms a description of the liberalism common to the leaders of our Sunday night meetings. But an outlook toward a larger brotherhood—even an economic brotherhood—naturally creates religious fervor and religious consecration, and these qualities are continually appearing at our open discussions, in the speech of working people. Moreover, the effect of the Church, its services and sermons, upon the congregation, while lacking the evangelical note, has had, in many cases, an evangelical result in changed attitudes of mind, in generating gentleness, helpfulness—in fact, in producing a new spirit.

The pulpit cannot be engaged in social criticism to the exclusion of its main duty—the effort to put souls into high possession of themselves; but when the silence of the pulpit towards social injustice withholds its spiritual help from thousands of the poor, and gives false spiritual security to the rich, then social criticism becomes a normal exercise of the ministry. The outspokenness of the Church clears away impediments for the spiritual approach of the poor, and points the rich to a deeper Christian experience. Our Sunday night services stand for the spiritual healthfulness of social criticism voiced by the pulpit.

The Sunday night meetings are not merely a forum, tho an open forum has advantages. The man who expresses himself gains something with the saying of his thoughts. He is happier because he has eased his mind and in the process he has gained perhaps a new idea. Religion and sociology are united in these meetings; they are not secular discussions, because we believe that the social can only have its highest impulse and method in religion—that brotherhood is a law of the universe, a divine command. The services are a meeting-ground for the rich and the poor and interpret classes to each other, an understanding fundamental to the peaceful settlement of class questions and to the brotherly blending of classes in the future, in some higher unity.

New York City.

The Ideal City

BY REV. HERBERT A. JUMP

[The Men's Civic Class of the South Church, New Britain, Conn., recently completed a course of studies into the life of their own city. Public officials from the Mayor down appeared before the class, set forth the ideals and methods of their respective departments and submitted to kindly heckling from the audience. The superintendent of schools, Stanley H. Holmes, was the organizer and program-maker of the class, and now he is trying to bring about through the educational system of the city some of the reforms indicated in the following program, which was drafted by the minister of the church, Rev. Herbert A. Jump, amended by the Civic Class and then adopted.—Editor.]

The ideal city is:

1. *A City of Healthy Bodies*—where strong physiques are the foundation of industrial efficiency and high morality; where wise building laws are on the statute books and are enforced; where housing is sane, factories are wholesome, school children receive medical inspection, streets are kept clean, tuberculosis and other plagues are combated; where such preventative and redemptive agencies as parks, public baths, playgrounds, free tho supervised dance halls (and skating rinks), visiting nurses, day nurseries, school gymnasiums, recreation centers, and social settlements are provided.

2. *A City of Intelligent Minds*—where the school teacher is honored and the school visited; where progressive educational methods such as industrial training and kindergartens are demanded, and money is readily forthcoming for them; where the public library by its bulletins, story-hours and study-lists commends good reading to the community; where the theater and lecture platform and popular forum with public discussions are made to instruct as well as entertain; where the newspapers and stereopticon and the moving-picture lantern are enlisted in behalf of universal culture.

3. *A City of Family Life*—where the head of the family gives time to his household and sets an example of domestic affection; where mothers prepare themselves for their high mission and by the aid of mothers' associations train themselves for better motherhood; where divorce is discredited but the legitimate reasons for it are frowned upon even more than the act itself; where household servants are given such cordial and dignified recognition as they may merit; and where children grow up under the influence of truth and love and cheerfulness into noble men and women.

4. *A City of Humane Industry*—where the relation between the employer and the employee is never that of suspicion but always one of mutual confidence and generous co-operation toward ends advantageous to both; where the evils of the sweat-shop, child labor, and overworked women in industry are opposed sanely and persistently, where the laborer is given a fair wage for a fair working day, and if possible by some system of profit-sharing and co-opera-

tive ownership is made to feel a personal responsibility in the success of the business enterprise; where the employer provides safety appliances for his machinery, and aids in bearing the burden of industrial accidents; where reckoning is made with the consequences of industry upon the human lives involved as well as with the dividends and profits, wage-earner and wage-payer alike considering the common weal.

5. *A City of Virtue, Public and Private*—where citizens go conscientiously to the caucus and polls, where municipal efficiency is counted of more importance than party victory, where the giver of a bribe or of a dishonest special favor is condemned even more than the receiver of it, and the grafter is visited with a stern social ostracism; where the ignorant citizen is trained, not exploited, where men of culture and wealth are willing to go into politics, and men are willing to court risks of unpopularity and business loss if need be in order to have laws enforced and justice done; where members of the social order who have gone wrong are lovingly corrected, where court procedure is prompt, where justice is always tempered with mercy, where the modern corrective instruments of the juvenile court, the probation system and the indeterminate sentence are employed; where such forces for vice as the saloon, the gambling den, and the brothel are relentlessly hounded out of the community, while such forces for virtue as the Christian Sabbath and the Christian church are liberally supported.

6. *A City of Brotherhood*—where men of all nationalities become friends with one another, where leagues for mutual acquaintance bring together the foreign-born and native-born American, where international enterprise cements the fellowship of the races; where the contribution of each people is encouraged and welcomed into our American life as the history, customs, literature, and folk-dances of the foreign races become known, and a better mutual knowledge issues in a better spirit of co-operation; where charity work is intelligently organized so as to cure distress rather than merely to tide the recipient over it; where the dependent and defective classes, the aged, the blind, the orphaned and the insane are ministered to with reason and tenderness.

7. *A City of Beauty*—where each man tries to beautify the city by beginning with his own backyard and front porch, where lawns and paint and whitewash render appropriate service, where prize competitions and school encouragement develop interest in flowers and home gardens and household adornment; where an alert public spirit is always striving to eliminate esthetic blemishes from the city life and add to it esthetic assets by putting wires into subways, prohibiting unsightly billboards and fences, insisting upon ornamental lamp posts and trolley poles, pushing a crusade against unnecessary noise and factory smoke, erecting municipal monuments which shall be worthy works of art, and encouraging in church and public buildings such outlays of money for purposes of beauty as shall create an atmosphere of refinement thruout the community.

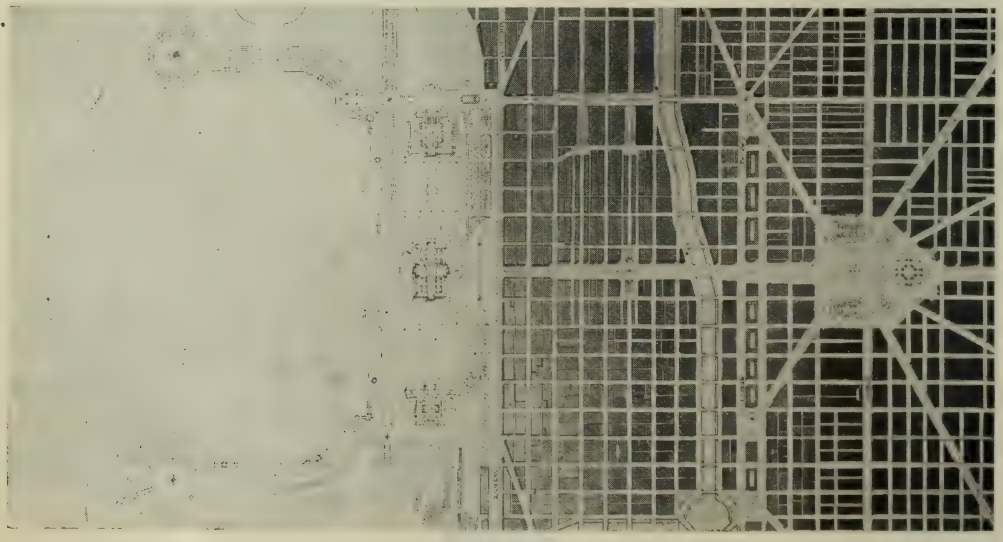
8. *A City of Spiritual Religion*—where the substance rather than the forms of faith are revered, where churches work with one another and in co-operation with all manner of uplift-agencies to bring about a nobler community spirit, where school education has its moral aspect, where the Sabbath is hallowed by (each human soul's attending) at least one service of worship, and where increasingly money consecrated to God and energy devoted to the service of man aid in bringing to pass the Kingdom of Heaven on earth.

New Britain, Ct.

CHICAGO FROM JACKSON PARK TO GRANT PARK, LOOKING TOWARD THE WEST.

New and Greater Chicago

BY CHARLES PIERCE BURTON



ST. GAUDENS, after listening all day to the conceptions of various famous architects during the inceptive period of Chicago's never to be forgotten World's Fair, exclaimed: "Do you realize that this is the greatest meeting of artists since the fifteenth century?" That meeting and the resultant World's Fair was the beginning in this country of the orderly arrangement of extensive public buildings and grounds. Out of this fair grew a sentiment which found expression three years ago in a movement to plan a well ordered and convenient city. The work was undertaken by the Commercial Club, composed of representative business men, who sought:

First, to make a careful study of the physical conditions of Chicago as they now exist.

Secondly, to discover how these conditions may be improved.

Thirdly, to record such conclusions in the shape of drawings and texts which shall become a guide for the future development of Chicago.

Their report, elaborately illustrated and illumined, epitomizing the results of three years of expert study, was published recently, and has awakened an interest which is international. As the printing alone of the 1,650 copies issued involved an expenditure of $21,000, some

idea may be obtained of the thoroness with which the Commercial Club has undertaken a solution of the municipal problems.

Chicago, the metropolis of the Central West, today has a population of more

VIEW LOOKING SOUTH FROM CHICAGO.
Over the lagoons of the proposed park for the south shore.

than 2,500,000 people. There is every reason for believing that in fifty years the population will equal that of London today. In the language of the report, "Chicago is a portion of illimitable space now occupied by a population capable of indefinite expansion." With a congestion in the retail district already almost beyond endurance, it will be seen that the certain doubling of the present population will bring serious problems and make inevitable stupendous changes in the arrangement of the physical city.

The plans of the Commercial Club by Architects Daniel H. Burnham and Edward H. Bennett, with expert assistants, are suggestive only. They present an ideal toward which this and coming generations can work in the orderly development of a city which shall make possible the greatest amount of individual comfort and efficiency and the highest expression of citizenship.

It is impossible to more than outline such a plan in the limits of a single article. The report divides the plan into six heads, briefly stated as follows:

First—Improvement of the lake front.

Second—Creation of a system of highways outside the city.

Third—Improvement of railway terminals and the development of a completed traction system for both freight and passengers.

Fourth—The acquisition of an outer park system and of parkway circuits.

GENERAL DIAGRAM OF EXTERIOR HIGHWAYS.
Encircling or radiating from the city.

Fifth — The systematic arrangement of streets and avenues with the city in order to facilitate the movement to and from the business district.

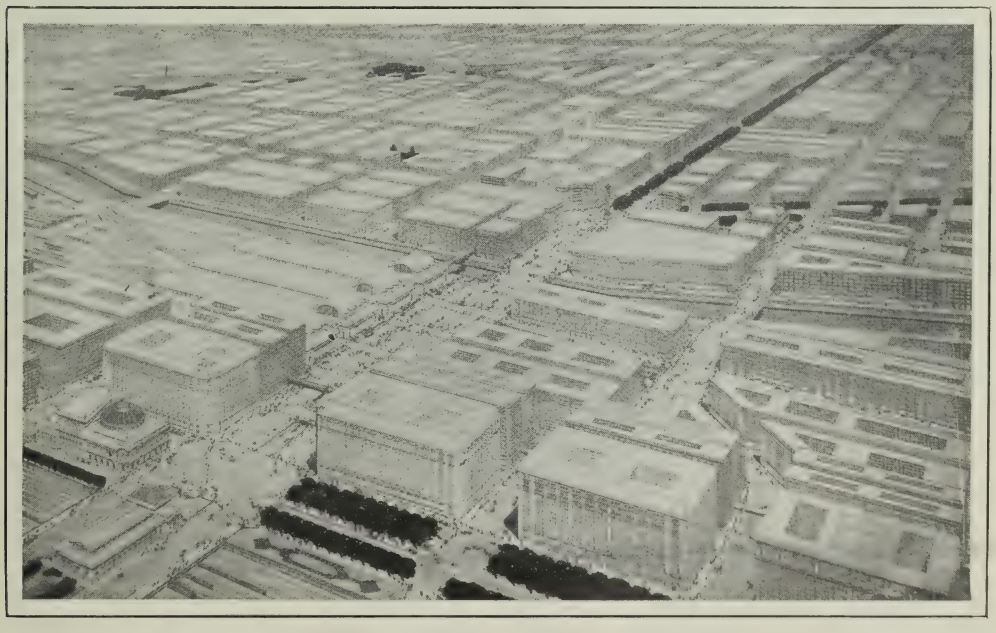
Sixth—The development of centers of intellectual life and of civic administration so related as to give coherence and unity to the city.

The improvement of the Lake Front from Winetka on the north around to the Indiana State line, naturally is the first point of attack. It is an immediate economic necessity. A million cubic yards of waste material must be disposed of each year, and this amount will increase enormously with the growth of the city. The practice has been to dump this waste into the lake. The plan merely utilizes this waste matter in the creation of an elaborate park system on the water front with a lagoon five miles in length, available at all seasons for outdoor athletic sports. One detail of the plan is a yacht harbor, reaching the entire length of the park, enclosed on the north and south by recreation piers extending a mile and a half into the lake, with provision for transit lines.

In this way, in less than six years, without cost to the city, and almost without public knowledge, Grant Park of 170 acres already has been formed on the water front east of the Illinois Central tracks, and the entire lake shore is in the hands of a commission eager to carry out the scheme. The State of Illinois has authorized the park boards to connect Grant Park with Lincoln Park on the north and Jackson Park on the south and has granted submerged lands along the lake shore for that purpose, subject to amicable understanding with riparian owners. Under this authority the reclaiming of the North Shore already has begun. The State further has authorized cities, towns and villages to grant to park authorities the right to take and improve streets not more than one mile in length without consent of the abutting property owners.

Chicago has outgrown its park facilities until today at least one-half of the population live more than a mile from any large park. In congested districts there are nearly 5,000 people to each acre of park space, and an average for the entire city of 500 persons to each acre, whereas for health and good order there should not be more than 100 to the acre.

On the south side alone seventeen new parks, with a total area of 671 acres, are being created in harmony with this plan at a cost of several million dollars. Special features of these new parks are neighborhood center buildings provided with baths, gymnasia, refectory service, club rooms, reading rooms, etc. The aim of the commission is to improve the health and morals of the people, and the work already has attracted international attention. The plan involves the acquisition and improvement of nearby woodland and an area of forest park entirely surrounding the city, with park connections in conjunction with existing interior boulevards. The whole will make a park circuit of about 100 miles, every portion of which will serve an adjoining portion of the city.



Every great metropolis has a close relation with the smaller towns and cities in its vicinity. Within a radius of sixty miles all roads lead to Chicago. In the treatment, therefore, is included all this adjoining territory. The report suggests suitable highways that are necessary to facilitate the movement from town to town and from the various towns to Chicago, their commercial center. In the plan are four encircling highways, reaching from the lake on the north to the lake on the southeast, connecting all the

towns within the established radius, and a system of highways radiating from the city to those various towns. Boston first among American cities, realized the advantages of co-operation between a great city and the outlying district, when in 1889 the Massachusetts Legislature created a metropolitan sewage commission and later a metropolitan park commission with jurisdiction over thirty-seven district municipalities. The report recommends a similar metropolitan commission for the treatment of the entire area involved. In the meantime the authorities or improvement associations of the towns are requested to confer with their neighbors and agree on routes of connecting highways. Ultimately, if the plans carry, these highways will consist of a work road, a pleasure drive, a central parkway and ample shade.

"The time has come," says the Commercial Club, in discussing the improvement of Chicago's transportation facilities, "to develop one common system for the handling of freight—a traffic clearing house." Comprehensively stated, the traffic scheme provides for a north harbor at the mouth of Chicago river, with docks for package freight steamers; a south harbor at the mouth of Calumet river, with docks for bulk freight steamers, and a freight clearing yard to the west of the city, all connected by underground freight lines. Under the adoption of this plan, no goods will be carried in and out of the congested business center except those needed for construction, for retailing, or for consumption in that territory. The plan proposes to group the passenger terminals along Canal and Twelfth streets.

These two outer harbors reached without entering the river and the new conditions which will result from the establishment of a freight clearing yard, which will be the center of warehouse and industrial activity, will make possible the reclamation of Chicago river. The plan contemplates boulevards and streets for teams along the river at different levels, the treatment being similar to that in Algiers, Budapest, Geneva and Paris.

If the site of Chicago were a lake the receding and ever widening wave formed by a pebble dropped into the center of the proposed yacht harbor would represent in a measure the street plan recommended. This proposed street plan is based on a system of circuits and radials, carried, as we have seen, into the surrounding country as far as La Porte, Ind., on the east, and Kenosha, Wis.,

PROPOSED TWELFTH STREET BOULEVARD.
At its intersections with Michigan avenue and Ashland avenue.

and Dekalb, Ill., on the north and west. This is true also of the transportation facilities.

To secure an adequate means of circulation at that not distant day when the population of Chicago will have doubled of course is a prime requisition. At no period in its history has this remarkable city looked far enough ahead, and it is felt that the broadest plans which the city can be brought to adopt today will prove inadequate before the end of a quarter century. Even now the downtown congestion demands new and enlarged channels of circulation. More than a million people, not to mention the thousands of teams and vehicles, enter what is called the loop district every work day, and so great is the congestion that during busy hours the human rivers overflow the sidewalks into the equally congested streets, where the risk to life and limb is great. The city of Chicago now extends twenty-six miles along the lake front and has a width of not more than seven miles. As the population increases, the entire territory between the present western limits and the Desplaines River will become thickly settled, and serious congestion of the business streets will ensue unless additional thorofares are created.

Says the report:

"The entire area extending westward to the Desplaines should be laid out to meet future requirements, with the requisite area for residences as well as wide thoroughfares for traffic, well planned diagonals to gather and distribute the travel, and adequate park spaces."

In elaborating the street plan, Michigan avenue, on the lake front, is taken as a base line. This avenue, already a broad and popular thorofare, is probably destined to carry the heaviest movement of any street in the world. It is now a proposed boulevard connection. The report recommends for this avenue a width of 246 feet, every foot part of the lake front parkway already described. This

LOOKING NORTH ON THE SOUTH BRANCH OF THE CHICAGO RIVER.
Showing the suggested arrangement of the streets and ways for teaming and reception of freight by boat at different levels.

great boulevard will be the base of Chicago's street circulation and one of the most magnificent highways in the world.

Another great avenue varying in width from 200 to 300 feet will be developed, extending from Michigan avenue thruout the city indefinitely. Congress street has been selected for this thorofare, which will in time become to the city what the backbone is to the body. The plan provides for the widening of La Salle and Halsted streets, which latter is one of the longest business streets in the world and is destined to bear a much heavier traffic; also the widening of Canal and Twelfth streets along which it is desired to group the railway passenger terminals of the city. Other streets will be widened and broad thorofares will be cut thru the slum districts

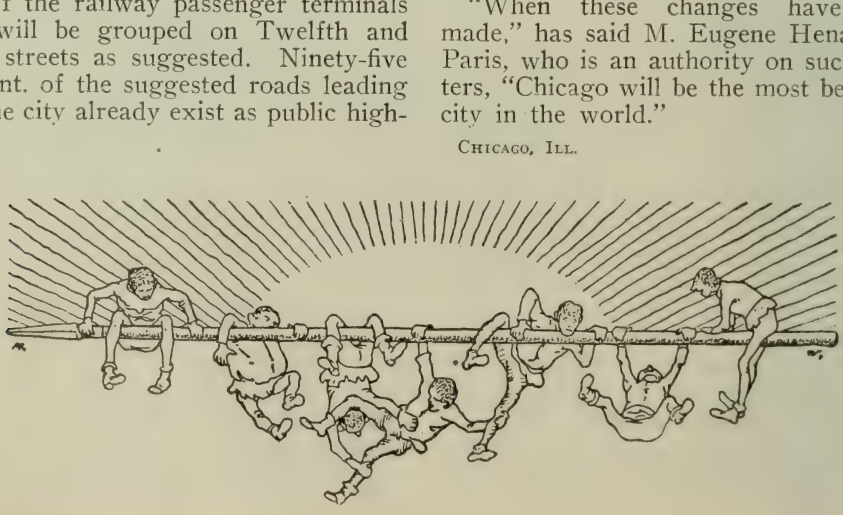
In Grant Park, facing the great Michigan Boulevard, it is proposed to group buildings pertaining to art, literature and science, and at the axis of Congress street, where it intersects Halsted, to establish the civic center of the city, at which radiating street arteries naturally will converge. Here are to be grouped impressively as one composite whole, the Federal, courts and city buildings. Such a group of buildings would be for all time to come what the Acropolis was to Athens or the Forum to Rome, and what St. Marks's Square is to Venice. Says the report:

"Important as is the civic center considered by itself, when taken in connection with the plan of Chicago it becomes the keystone of the arch. The development of Halsted street and Ashland and Michigan avenues, flanked by the great thorofares of Chicago avenue and Twelfth street, will give form to the business center, while the opening of Congress street as the great central axis of the city will at once create coherence to the city plan. Nowhere else on this continent does there exist so great a possibility combined with such ease of attainment. Simply by an intelligent handling of the changes necessary to accommodate the growing business of Chicago a city both useful and beautiful will result. The lake front will be opened to those who are now shut away from it by lack of adequate approaches. The great masses of people who daily converge in the great congested center will be able to come and go quickly and without discomfort. The intellectual life of the city will be stimulated by institutions grouped in Grant Park, and in the center of all the varied activities of Chicago will rise the towering dome of the civic center, vivifying and unifying the entire composition."

PROPOSED PLAZA ON MICHIGAN AVENUE.
West of the Field Museum of Natural History in Grant Park, looking east from the corñer of Jackson Boulevard.

Such in brief is the vision which has come to far-sighted men of Chicago. Its realization will make for greater comfort in living and in higher citizenship at home, and will turn the eyes and footsteps of every nation of the civilized world to her doors. Nor is its realization in a large measure at all improbable. The plan makes no pretense at finality in expressing the future of Chicago, but seeks to give orderliness and uniformity to a development which is certain to take place. The very fact that a great asso-

ciation of representative business men have given their time unstintingly and poured out their money unsparingly to secure a working plan for the expression of their civic ideals, shows the municipal spirit of Chicago is very much alive and is equal to the occasion. The spirit which has fairly ploughed the motto "I will" into every phase of civic life; the spirit which raised the street levels of the city sixty years ago when Chicago was little more than a village; which brought into existence a great park system fifty years ago; which created the unsurpassable World's Fair; which built the drainage canal—all projects presenting unprecedented problems, in time will give to this glorious dream a reality which will make Chicago in attractiveness and efficiency rank with the best the world has produced.



Grant Park, created on the submerged lake front, practically is completed. The utilization of the city's waste material, even should the volume not increase, would complete the entire lake parkway planned in the short space of thirty years, without cost, except for breakwaters. There still remains much picturesque woodland adjacent to the city, available for the outer park suggested, which can be acquired in ten years without burden to tax bearers. Plans have been drawn for the Field Museum, a gift from the late Marshall Field, to be erected in the lake front park. Plans which are developing and have been made public seem to indicate that a great part of the railway passenger terminals soon will be grouped on Twelfth and Canal streets as suggested. Ninety-five per cent. of the suggested roads leading into the city already exist as public highways. The expense of acquiring the remaining 5 per cent. and of widening and improving the others will be comparatively small. The traction recommendations are already in progress and will be carried out. Some of the suggestions regarding the traffic lines, their right of way, terminals, etc., may take years to accomplish, but equally effective conditions necessarily some day must be worked out in the interest of economy.

There is no time limit to Chicago's development, and it is well understood that to carry out the proposed plans will take a great deal of time. Paris with one-half million people completed a street improvement scheme in thirty-five years, that involved an expenditure of $260,000,000. Regarded from the viewpoint of dollars and cents even that investment has paid large returns, for no matter where any of the wealthy people make their money, they go to Paris to spend it and enrich the city almost beyond estimate. Says the report:

"Conditions in Chicago are such as to repel outsiders and drive away those who are free to go. The cream of our own earnings should be spent here, while the city should become a magnet, drawing to her those who wish to enjoy life. The change would mean prosperity, effective, certain and forever continuous. If, therefore, the plan is a good one, its adoption and realization will produce for us conditions in which business enterprises can be carried on with the utmost economy and with the certainty of successful issue, while we and our children can enjoy and improve life as we cannot do now. Then our own people will become home-keepers and the stranger will seek our gates."

"When these changes have been made," has said M. Eugene Henard, of Paris, who is an authority on such matters, "Chicago will be the most beautiful city in the world."

CHICAGO, ILL.

Australian Defense

BY H. T. BURGESS, LL.D.

[The militaristic movement now growing in the British colonies, especially in Australia and Canada, has excited world-wide comment. We have asked Dr. Burgess to explain it as far as Australia is concerned to American readers, which he does in the following article. —EDITOR.]

AUSTRALIANS have always been sensitive about the vulnerability of their country. Its relation with the mother country, geographical situation, wide area, generally attractive character, extended coast line, immense unoccupied spaces, scanty population, and rich but defenseless cities, have all singly or collectively contributed to this feeling. These considerations have varied in their relative importance and the weight of their influence with changing circumstances, but none of them have ever been permanently absent from the public mind. They are in operation now. They go far to explain the scheme of national defense which has been framed by the Commonwealth Government and its general acceptance by the people. To understand correctly the Australian attitude on this question there must be some acquaintance with its causes and the progress of its development.

Before telegraphic connection with the northern hemisphere was established, and while communication was slow, sinister rumors were liable to arise and could not be speedily contradicted. Whenever the war cloud over Europe hung low apprehensions were excited, sometimes amounting to alarm. War scares were frequent, and the organization of volunteer military forces was a consequence. At a later period military and naval experts were invited or appointed to examine and report upon the conditions, with the result that forts were built and armed, and other harbor defenses provided, military forces being perhaps organized on a better system at the same time.

Tentative and desultory efforts of this kind could not satisfy those who took the subject seriously. A common impression was that Australia had less reason to dread an invasion in force with a view to permanent conquest than a raid on its commerce and the levy of a contribution on its cities, by a compact naval force taking advantage of a time when Great Britain would have its hands full with hostilities nearer home. When the permanent presence of an imperial squadron in Australian waters was secured it was supposed to avert this danger, but the objection has never been silenced, that tho a part of the cost was borne by the colonies, the fleet was neither locally manned nor under local control. Hence the desire for ships that were manned by Australian sailors, and not liable to be called away just when most needed, was left unsatisfied.

By the emergence of Japan as a great naval power a new factor was introduced. No national ideal is held so tenaciously as that of a White Australia, yet it is consciously held on sufferance. There are only four millions of people in an area larger than that of the United States, living mostly near the coasts; and consequently thousands of square miles together, with excellent mineral, pastoral and agricultural possibilities are practically vacant. Port Darwin is one of the finest, most spacious and secure harbors in the world, and there is nothing to prevent Japan, if at war with England, from taking possession of it as an opening thru which to pour as large a stream of its surplus population into the northern territory as it sees fit. If to this contingency be added those arising from German activity in the Pacific, with a prospective naval base at Simonshafen, and French enterprise at New Caledonia and the New Hebrides, it will be seen that Australian sensitiveness is not without some excuse.

In pre-federal times each State dealt independently with the question of defense, with the result that, tho consultations took place, there was neither uniformity of method nor concurrent action. The inevitable weakness this occasioned had its share in bringing about the federal union. It was the report of General Edwards, disclosing ineffectiveness everywhere, which avowedly prompted Sir Henry Parkes to take action, and tho the convention held under his auspices was abortive in other respects, it framed the constitution which became the basis of federation as subsequently

accomplished. "Defense" was naturally one of the departments transferred from the States to the Commonwealth in 1901, and the Federal Cabinet has always included a Minister of Defense. Each Parliament has legislated on the subject, but the latest development is radically different from as well as a great advance upon its predecessors.

Ever since its establishment, the Defense Department has been engaged in the work of unifying local arrangements, with the view of increasing the efficiency of the organization, but among the special and immediate causes of the new departure must be noticed the impulse that was given during the early part of the current year. When the people of Great Britain were startled out of their customary equanimity by the intimation that the naval supremacy, never seriously challenged since Trafalgar, was menaced, a sympathetic wave swept over the southern world. In Australia and New Zealand suggestions to offer Dreadnoughts were simultaneously advocated. Sir Joseph Ward promptly gave effect to the feeling of the Dominion, but the Labor Government of the Commonwealth, which was then in power, while expressing readiness to assist, declined to commit itself to the particular form that was proposed.

Following upon this movement and the expression it elicited, was the Imperial Defense Conference in London, which Colonel Foxton attended as representative of the Commonwealth, and however previous plans were or were not modified thereby, the entire question was lifted up to a higher level. Recent discussions have shown the operation of new ideas and the consciousness of a wider horizon. Australian defense is regarded not as a thing standing alone, but as part of a much larger undertaking. The object in view is not merely local safety, but the integrity of the Empire, on behalf of which it is held that the Commonwealth must do its share. Accordingly, the program is the embodiment of a policy, and not a hastily arranged provision for a sudden emergency.

With regard to the navy, it was decided at the London conference that the Pacific fleet should consist of three practically identical squadrons—one for Australia, one for the China seas, to have its headquarters in New Zealand, and one in the East Indies. The Australian squadron will consist of one armored and three unarmored cruisers, six destroyers and three submarines. All these, as in the case of the other squadrons, will be of specified types, so as to be interchangeable with corresponding vessels of other fleet units. They will be built and maintained at the cost of the Commonwealth, which will have absolute control of their movements, while in its own waters, except in time of war; and only by the consent of the Commonwealth Parliament will its squadron in war time form part of the general naval strategy of the Empire. The annual cost will be £750,000, but for some years the British Government will contribute one-third of the amount, the entire charge being eventually undertaken by the Commonwealth. The officers and men will number 23,000, and the standard of efficiency will be that of the imperial navy. The personnel of the fleets, like the vessels, will be interchangeable; and it is to be hoped that by this means careers will be opened for those whose impulses are toward a naval life. Dock yards, arsenals and everything else requisite for accommodating vessels of the navy will be provided, so that periodical changes may be facilitated, thus preserving unity of interest as well as standard thruout the fleet. The strong recommendation of this scheme is that the squadron will be Australian in fact as well as in name, locally owned and controlled as really as the mercantile marine, or, rather, as the railways, which are public property everywhere.

It is, however, the provision for land defense which has attracted the largest amount of attention, and has perhaps raised the question in certain quarters whether some new emergency has arisen. To this the simple answer should be sufficient that in Australia, as in Great Britain, it is felt that absolute dependence ought not to be placed on the first or naval line of defense; while it is also realized that to erect a second and efficient line must be a work of years. In that respect the present position is one of mere impotence. The Minister of Defense, when introducing his bill, said no force could be organized on the Aus-

tralian continent that would withstand a march of 20,000 men, and such a body of hostile troops could be landed anywhere without effective resistance. He said: "If a raid were made tomorrow and immediate mobilization were ordered, we should find ourselves in difficulties. To man the garrisons we should need to borrow 6,000 men from the field force, and altogether we should have only 16,000 men to nine forts, while 6,000 men in the field would be distributed in six different places. The field force would be three or four weeks in organizing itself into a fighting body; meanwhile the enemy would be at our gates. The men available would have no officers and no equipment, and would be distributed over thousands of miles."

To remedy this condition the Minister declared that the Australian military should be as much after the imperial military pattern as possible, so as to be serviceable in any contest for national existence. There must be a sufficient force to garrison the forts, and a field force also capable of being rapidly moved to any point. To meet such a demand troops must be adequately trained, and there must be trained men in the reserve.

Details of the means that are to be adopted toward this end would be uninteresting, but the leading features may be briefly summarized. There is to be compulsory physical culture of all boys from twelve to fourteen years as junior cadets, averaging half an hour per day, with miniature rifle shooting, to be carried out by the schools. Senior cadets from fourteen to eighteen years will be organized uniformly in battalions and have elementary military training and rifle shooting, to the equivalent of sixteen days per annum. Adult training will be continued from eighteen to twenty years, with field and camp work for sixteen days altogether (scientific corps, twenty-five days), part of the time with payment. Military training will be continued after that age, volunteer forces organized as militia, adult reserves organized in arms and units, and rifle clubs are to receive improved musketry training. When complete in about eight years, the scheme will give a militia force 29,000 strong, with a reserve of 80,000 trained men, a rifle club reserve of 60,000, and a total of 206,000 more or less effective trained soldiers, with a first line of 48,500 capable of being immediately mobilized. The compulsory clauses will at first only be applied to the more closely settled areas, containing about 60 per cent. of the population, but all male citizens of the Commonwealth are included within the sweep of the measure, and all from eighteen to sixty will be liable to be called out in the event of war. Arms, equipment and training are to be on the British basis, and the peace cost of the military establishment will be £1,742,000 per annum. Considered as an insurance premium, the naval and military expenditure together will run to about 10/6 per head of the population, which is considered cheap as compared with what is paid by Great Britain.

Concerning the scheme as a whole, the general sentiment has thruout been one of marked approval. It has had to run the gauntlet of free criticism both in the Parliament and the press, but there were more exceptions to its assumed inadequacy than complaints that it attempted too much. Among the members of Parliament are several who saw service in South Africa, some of whom strongly urged that longer and more thoro training is requisite than is provided for. On the other hand the intimation by Mr. Cook, the Minister of Defense, that Australia will be made a buttress of the Empire and not a burden upon it has been warmly endorsed. The prospect of compulsory training and service in particular is welcomed instead of being objected to. While avoiding what has been called the "blood tax" of Continental militarism — the conscription — it gives every citizen a personal share in the defense of his country, which it demands from him as his first duty.

As every boy, from the time he is twelve years old till he is twenty, will come within the operation of the new law and pass under the discipline of the machine, it is believed that the physique of the next generation of Australians will benefit its character. Hope is exprest that the delight in outdoor exercises, the passion for sports, and the superabundant energy so characteristic of Australian youth, will be diverted into useful channels, instead of being wasted or worse.

Norwood, South Australia.

Literature

Feminine Novelists and Scarlet Heroines

MEN may write immoral novels but it is a question if women nowadays are not the authors of the majority of them. Women writers see farther into immorality than do men. The latter are objectively immoral, whereas the former appear to be in addition subjectively so in their analysis of character. Moreover, just as men can shed their sins so their stories can shed them and produce virtue. But, just as women sink under immorality so their stories sink under it, and in such a one a virtuous conclusion is no more than rouge upon the face of a demi-monde.

These five books, each by a woman, are studies in the effect of broken chastity upon the heroine or her descendants. "Poppy"[1] is a real Old Testament scarlet woman with an injection of modern insouciance, that would have amazed the Biblical harlot that sat at the gate of the city. The author of this novel has written a lotus-eating romance. She has laid her scene in South Africa where people seek to forget themselves or the world they came from. She has called her heroine Poppy, the exotic emblem of forgetfulness and languorous sleep. The girl is of Irish parents. She becomes an orphan while a child and is rescued from the hardships of her position by an Englishman with a scar across his face and evidently one across his disposition. He keeps Poppy closely confined till the ardor of her youth and the fire of her Irish blood makes her ready to lapse at the slightest provocation. The author can not resist the scandalous excitement of a crash in the fine china of womanly virtue. So, she allows Poppy to meet an equally Poppyish Irish gentleman. Thereafter the story is concerned with the raw details of shame. Not that the author wishes to impress this upon us as a consequence of sin, but rather she seems to see some dramatic quality in shame that makes it good for her story. Poppy rejoices to be the mother of her lover's child, and if she ever had a virtuous qualm she quiets it with that old reflection that love makes all things right. The difference between this book and Mrs. Glyn's "Three Weeks" is that the latter covered her story with tiger skins and red roses while this comes to us naked and unashamed.

The author of *Over the Quicksands*[2] is more concerned with the nemesis of sin than with the sin itself. The scarlet woman of this story stays behind the scenes in the penitential robes of a nun. She is finally forced to confess the sin of her girlhood to avert the catastrophe of a love affair between her illegitimate son and daughter. The picturesque descriptions of life in and about Quebec save the story partially from the romantic hysteria of its plot.

In this novel[3] the author introduces a heroine to all appearances pure and good but gradually we begin to suspect. The scene is laid in California. The heroine is a woman of wealth and, from the veiled innuendoes of the author, with a past. When love comes her way she refuses it with one of those noble pale-faced tremors so characteristic of the heroines created by women writers. Naturally the man with hopeful conceit attributes her agitation to the pain of renouncing him and carries forward his campaign with the slogan of platonic friendship. And she is, of course, content to play saint before the altar of her hidden sorrow with him for an incense bearer. After we have been led to believe that the woman was in her younger days an unwed mother, the author proves that everything was legitimate and then, with true consistency, wipes out whatever other stains she may have cast upon her heroine with the sponge of divorce. This author seems to understand that whatever apparent disorder there may be in some of the works of nature she never so far forgets herself as to create a man to whom love is the main issue, and a woman to whom it is incidental.

It is hardly fair to accuse this chatter-

[1] POPPY. *By Cynthia Stockley.* New York: G. P. Putnam Sons. $1.35.

[2] OVER THE QUICKSANDS. *By Anna Chapin Ray.* Boston: Little, Brown & Co. $1.50.

[3] THE HEART OF DESIRE. *By Elizabeth DeJeans.* Philadelphia: J. B. Lippincott Co. $1.50.

ing little vacation romance[4] of harboring a scarlet woman and possibly she would not look so if the other women were not so eminently good. She is one of a common class of feminine bullies who nag and tease the affections of men, taking unscrupulous liberties but ready to run in a flutter of propriety if the victims turn and respond too cordially. The scene of this story is a house party at a small German resort. Now congenial house-parties like good poets are made in heaven, and if the party is not so predestined no agency of mere mortals can make it happy. This party was not elected. The uncongenialities of it were fermented by the misdemeanors of a married woman with a lean heart eager to satisfy her hunger from any man's largess. After she has thoroly frightened the women with her Lorelei enticements she leaves, and the author settles down to comfort and soothe her harassed characters. Few writers have succeeded so well as this one in making the people of her story carry on incidental conversation composed of the odds and ends of events in a quiet place.

For some time past there has been an attack made in fiction upon the chastity of women. But, heretofore, in all such novels the women have had some temperamental overgrowth of emotionalism to soften the outline of their sin. This author has succeeded in fashioning a scarlet woman out of a passionless pedant, not by giving her passion but the experiences of passion, bare of any saving shred of impulsive instinct on her part. Olivia Carew[5] is a New England school mistress with an unscrupulous desire for annotated information. She is a fool. Not a nature made fool but man-made by generations of spectacled gardeners who believed they could fertilize and grow their minds according to themselves instead of according to the seasons which Providence sends to mortals as well as to flowers. When Richard Carew, a young cosmopolitan architect, falls in love with her blonde beauty and quaint mental starchiness she accepts his proposal of marriage not because she loves him but because she perceives that as his wife she will have better opportunities to feed her parasite mind. Very soon he learns that he has married a woman who recognizes no functional duty to him or to society and who is so undeveloped morally that she becomes immoral in her passionless chastity. They go abroad and there he sees that his wife is one of those unfortunates whose respect for the facts and dates of beauty is greater than that for beauty itself. And Olivia, out of the school-room atmosphere of the New England village, for the first time suspects that some little sprout in her mind has failed to come up, that she is different from her husband and his friends who see everywhere the gentle hand of art while she fumbles with her Baedeker. It does not occur to her that this absence in her of artistic appreciation is a short-coming until she meets Hugh Alison, a novelist, and one of those enquiring students of feminine psychology. With characteristic servility she prostrates herself before the man who has garnered his thoughts in print. Hugh is one of the anemic cup-tasters of love. He estimates his value by his ability to judge from a sip whether the cup is worth an honest draft, not that he ever takes the honest draft. He only permits himself to taste of the cup. He remains the dilettant libertine till the end. Olivia, listening to his hectic perceptions of life, concludes that she must learn to see with his eyes. Her husband eventually deserts her for another woman and she goes to Alison until he sets her aside. Olivia then touches for the first time the summit of knowledge that pains. Her moral eyes are opened and with the grief and remorse of a primitive Eve she sees the extent of her loss. The fact that her husband saves her and even loves her does not mitigate the truth that she sold her birthright for a mess of knowledge.

[4]Just Between Themselves. *By Anne Warner.* Boston: Little, Brown & Co. $1.50.

[5]Olivia L. Carew. *By Netta Syrett.* New York: John Lane Co. $1.50.

Eggleston's "The Confederate War"

Mr. Eggleston's two volumes may be criticised as history, but they are sure to be read as an attractive story of the Civil War.[1] The author calls the conflict a

[1]The History of the Confederate War. *By George Cary Eggleston.* 2 Vols. New York: The Sturgis & Walton Co. $4.

"public" war and rejects the term "civil," tho the distinction he makes between the two terms is not entirely satisfactory. He writes in a spirit of impartiality and gives praise and lays blame with an indifferent hand, North and South. His elemental sympathies are, however, Southern, and they are revealed here and there in an occasional careless judgment or in brief bursts of rhapsody. His impartiality is rather that of the literary man than of the scientific historian. It expresses itself in breadth of sentiment rather than in exactness of statement. Tho he praises Northern qualities with some of the same superlatives that he employs for Southern ones, he not infrequently, by inexactness, gives a partisan implication or a partisan judgment. In this respect his book is not to be compared with the "Memoirs" of Gen. E. P. Alexander.

His use of figures is often unprecise, and never quite satisfactory. There is no evidence that he has given much attention to Livermore, Fox, Casselman or the Rebellion records. He gives the same naïve estimate of the total Confederate forces—600,000 men—that nine out of ten writers nurtured south of Mason and Dixon's line have given since Pollard. Against this array he puts, without any qualification, a net total of 2,326,168 Northern men in arms. In his figures for the various battles he is often quite as indifferent to the records.

Then, too, he exhibits many of those delightful inconsistencies so dear to the Southern historical writer. He speaks serenely of the South as a unit, and yet does not blink his eyes at the rigorous conscription acts, the wholesale desertions beginning as early as the time of Antietam, and the growing disaffection, such as that in Georgia and North Carolina, which amounted almost to a counter-secession. This is but one instance out of many. There is a perennial charm about this sort of thing, even tho it fails somewhat of being history.

His judgments of the leading figures of the war are on the whole admirable. He has no crotchets to reveal, no singularities of opinion to advance. After forty years, historical judgment and popular acclaim have fairly well agreed as to who were the heroes of the war and what was the special distinction of each one; and this consensus the author in the main accepts. Perhaps a little more space than is necessary is taken to castigate Halleck; but no one will feel the denunciation to be undeserved.

The best and most interesting part of the work is the first, which deals with the causes of the war. Yet even here there is much to be desired. He has failed to give a true picture—such, for instance, as that given in Denton J. Snider's "The American Ten Years' War"—of the oligarchic structure of Southern society; and while he has sketched well the political and social causes, he has failed to make clear the underlying economic factors of the conflict. To the present generation it is not enough to say that the cotton gin fostered slavery and slavery caused the war. The reaction of various economic interests upon the thoughts and feelings of men, North and South, must needs be given more detailed treatment than is here given in any adequate discussion of the causes of the war.

The Evolution of the American Flag. From materials collected by the late George Canby. By Lloyd Balderston. Philadelphia: Ferris & Leach. $1.

George Canby was a grandson of Elizabeth Claypoole, the famous "Betsy Ross" of flag tradition. He spent many years in collecting data regarding the origin and adoption of the Stars and Stripes. His material, which has now been arranged and published by Professor Balderston, is a notably valuable addition to the literature of the subject. The tradition in the Claypoole family has been that the first Stars and Stripes were made by Mrs. Ross, on suggestions given to her by Washington, Robert Morris and George Ross, a little more than a year before the adoption of the flag resolution by Congress, on June 14, 1777. The truth of this tradition is well supported by the evidence given, and it would seem that Congress merely sanctioned in a formal way the use of a flag which was already being displayed by the army. Both Peale and Trumbull, in their paintings, show the Stars and Stripes in use nearly six months before the date of the flag resolution—the

former in his picture of the Battle of Trenton (December 25, 1776), the latter in his portrait of Washington before the Battle of Princeton (January 2, 1777). Both were soldiers under Washington at the time and both were exceptionally exact in matters of detail. Moreover, the diary of Lieutenant William Digby, a soldier under Burgoyne, shows that the Stars and Stripes were probably carried by the northern army on June 30, 1777, and certainly on July 8, 1777. It is not likely, considering the shortness of the time and the distance from Philadelphia, that the flag resolution had anything to do with the choice of standards at Ticonderoga and Fort Ann. The priority sometimes given to the Fort Schuyler (formerly Fort Stanwix) flag (August 3, 1777), and the one carried at Cooch's Bridge, Del. (September 3, 1777), it would seem, must be given over in favor of an earlier use. An interesting record discovered, which further supports Mr. Canby's position, is that of the payment to Mrs. Ross, on May 29, 1777, of a sum of money by Congress for the making of flags. The date antedates by two weeks that of the flag resolution, and the work done probably antedated by some time the payment.

The Quaker in the Forum. By Amelia Mott Gummere. Philadelphia: The John C. Winston Co. Pp. vii, 327. $1.50.

In a pleasant but somewhat desultory fashion, Mrs. Gummere passes in review, in her new volume, the various phases of Quaker political activity in England and America. She draws no conclusions, and she makes no effort to teach any lessons. She shows both lights and shadows in her picture—on the one hand she brings out the Quaker loyalty to conviction and duty, the quiet perseverance and conciliatory wisdom of the Society of Friends. On the other she does not conceal the fact that non-resistance to authority and the slow deliberation of the Quakers tended to make them Royalist in the time of the Commonwealth, and in many cases Tories during the Revolutionary War. Mrs. Gummere takes up the history of the Quakers chronologically, beginning with the persecutions of the later seventeenth century in England, and then following the Quakers in their emigration to New England and Pennsylvania. In America she tells the story successively of the New England colonies and of Pennsylvania and the Carolinas, contrasting strongly the treatment received by the Quakers in Massachusetts and in Rhode Island and Pennsylvania. In regard to Pennsylvania Mrs. Gummere adds little to Sharpless's "Quaker Experiment in Government." There are, however, some real additions to history in the letters of Governor John Archdale, of North Carolina, which Mrs. Gummere quotes from papers in the possession of Mrs. Charles Roberts. Thruout the volume Mrs. Gummere emphasizes the services rendered by the Quaker in insisting on religious freedom. "Wherever the Quaker settled," she writes, "there the influence of the clergy was lessened, and a system was produced, more or less complete, of election and legislative power." It might be suggested that the dominance would have conveyed Mrs. Gummere's meaning better than influence. It was the domination of the clergy and of the Church that was obnoxious to liberty in the old New England Colonies, and it was this domination that was broken by the independence and self-government of the members of the Society of Friends. Mrs. Gummere gives in footnotes full authorities and references, but a bibliography of the works referred to would have been a very useful addition to her book.

Some Musical Recollections of Fifty Years. By Richard Hoffman. With a Biographical Sketch by his Wife. Charles Scribner's Sons. $1.50 net.

THE recent rapid growth in the appreciation of music in America and the enlargement of facilities for cultivating it are frequently suggested in these scrappy reminiscences of Richard Hoffman. It is hard to realize that one whose work closed so recently as last year had difficulty in securing a grand piano for his early concerts in New York, because that rara avis of those days was made only to order. For more than fifty years Mr. Hoffman was a forceful teacher and upholder of the best ideals in the musical development of the city of his adoption.

Born in a musical English home, he was started on his career under the tuition of his father. Before coming to New York he received inspiration and direction from Liszt and Leopold Meyer, and one of his cherished and interesting recollections was that of his presence, as a lad of fourteen, at a Birmingham festival where Mendelssohn led in the production of the "Elijah," and the boy's heart was swelled with pride because he was allowed by the organist of the occasion to turn the music and assist in pulling the stops. From the age of sixteen his home was in America, where he became associated with many forward movements in the musical world. Especially interesting are his recollections of Jenny Lind, in whose company he traveled when she made her tour of the country under the direction of Mr. Barnum. Many curious customs and occurrences of the past are recalled, such as the serenading of Christine Nilsson by the Philharmonic and the keeping of the annotated scrap-book by Von Bülow. One closes the book with regret that more of these tales of earlier days have not been preserved. The volume is well illustrated and the biographical sketch by Mrs. Hoffman is a grateful addition.

Studies in the Gospel of the Kingdom. Series No. 1. By Josiah Strong, D. D. New York: American Institute of Social Service.

If any one tells you, as some people are apt to do, that the church is too other worldly and indifferent to social reform give him a copy of Dr. Strong's book on his birthday. This book is a thoro discussion of twelve great problems of modern civilization, such problems as: Civic corruption, Socialism, immigration and the organization of labor; and it positively bristles with statistics. The point of view is tolerant and impartial and the author states both sides of all debatable questions. The conclusions reached are moderate and thoughtful. There has not been in some time a more valuable, ready reference book for the student of social problems, or a better basis for a year's course in a Sunday school class in applied Christianity. If any criticism is to be made it would be that the references to Scripture are sometimes rather farfetched and inapplicable.

Poems, Letters and Prose Fragments of Kirke White. Edited, with an Introduction, by John Drinkwater. New York: E. P. Dutton & Co. 50 cents.

Henry Kirke White is best remembered by Byron's tribute in the "English Bards and Scotch Reviewers," and by his own passage, in the fragment "Time," where he pictures the savage sitting amid the ruins of London. He died at twenty-one, in the very dawn of his powers. For a third of a century his work enjoyed a certain popularity, but afterward passed almost out of notice. Mr. Drinkwater has selected such of the poems and prose fragments as he thinks the poet himself might have been willing to leave for posterity's judgment, and has prefaced them with a critical essay. He does not claim for White extraordinary powers, but insists upon his recognition for what he actually accomplished. "His work is possessed of a definite value and charm, and a little of it is worthy of a place in any comprehensive English anthology." White was one of the pioneers of what is rather inadequately termed the romantic revival. Born three years before Byron and seven years before Shelley, he felt the new influences earlier than they, and his verse has a peculiar significance in that it foreshadows the new era. It is, of course, idle to speculate upon what the young poet might have become; but the "Genius," the "To Contemplation," the fragment "Time," and several of the sonnets will always bring to the discerning reader the sense of great promise, of developing powers of a high order, blasted by an untimely death.

Literary Notes

....The budget bill recently passed by Parliament attracted greater attention in America than any foreign legislation in many years because some of its provisions, particularly those concerning the taxation of the "unearned increment," undeveloped land, mineral resources and bequests, are of considerable importance to us. The difficulties of establishing such a novel system of taxation were immense and

the bill was so complicated that its significance and bearing are hard to ascertain. The only authoritative work on the subject yet issued is *Land Values,* by E. S. Cox-Sinclair and Thomas Hynes, barristers of Gray's Inn, which gives an annotated text of the act with an analysis of it and a historical introduction. (London: Charles Knight. 10 shillings.)

....Dr. William J. Rolfe, the well known Shakesperian scholar and author of numerous standard works on the Bard of Avon's plays, etc., is dead. The end came on July 7 last at the home of his son Charles J. Rolfe, in Tisbury, near Vineyard Haven, Mass. Dr. Rolfe's death was due to old age. At the time of his death he was president emeritus of the Emerson College of Oratory in Boston.

The Spectator's book reviewer must have been sleepy when he reached *The Book of Chronicles,* by Prof. E. L. Curtis and A. A. Madsen. He gravely ascribes the book to Dr. *Cooper* (sic). What he finds worthy of mention in this excellent work is even more amazing. Such reviewing recalls the advice of Balak to Balaam: "Come with me unto a place whence thou shalt see but the utmost part of them, and shalt not see them at all; and curse we them from thence."

....The International Who's Who (*Who's Who In The World*) is now issuing a prospectus for its next edition. The forthcoming volume will be illustrated by portraits and heraldic coats-of-arms. If you are on the eligible list you can have your biographical sketch, as written by yourself, appear in the forthcoming book, provided you send the manager, Robert Leslie Williams, an international post office order for $5, payable in London, England. The book, so the circulars state, will be printed in English, French, German, and Italian.

....*The New York Times* Saturday Review of Books and Art, under its first editor, Francis Whiting Halsey, was an admirable and authoritative literary review. Mr. Halsey has had a number of successors, none of whom have reached the high standard which he established. Mr. Joseph B. Gilder, who now assumes the editorship, has an unusual opportunity before him. If experience counts for anything, Mr. Gilder should be able to build up the Review so as to make it once more an authority along literary lines. Mr. Gilder was instrumental with his sister, Jeanette L. Gilder, in establishing *The Critic* nearly thirty years ago, and he was identified with the magazine as editor and publisher for many years. With the merging of *The Critic* into *Putnam's Magazine* Mr. Gilder continued with the latter publication, in the meantime turning his attention to other fields. He has compiled and edited a number of books, including Andrew Carnegie's "Gospel of Wealth" and James Russell Lowell's "Impressions of Spain." We shall read with renewed interest the *Times* Review and bespeak for Mr. Gilder the success with it that he deserves.

"FRIENDS and fellow-citizens!"

The orator wiped his brow and took a swig of left-over pink lemonade.

"The hour," he resumed, "has now arrived!

"Some action is imperative!

"We should adopt some fierce resolutions!

"This, my friends, is July 5, the day after!

"Let us resolve to have next year a safe and sane Fourth of July!"

Then he sat down amid deafening cheers, due partly to his missing the chair and hitting the floor.—*Detroit News.*

"THE BREAKERS"
The great mineral melodrama by
BLACKSTONE
Adapted for the stage by George Sand.
MINER'S THEATRE
Plaster Cast:

William Rock	Laddie Cliff
Fred Stone	Ferdinand Gottschalk
Arthur Cole	Izzetta Jewell

and a chorus including Chrystal Herne, Pearl Andrews, Ruby Raymond and Bijou Fernandez.

Produced by Oscar Hammerstein and John D. Rockefeller. John Mason, stage manager; George C. Tyler, ass't. manager. De Lancey Nicoll, attorney.

No stone has been left unturned to make this play a veritable mine of hard facts and concrete information. The costumes, designed by Frank Marble and executed by M. Rock, provide for tile hats for the men and mortarboards for the women. Slater made the shoes, after plans by Otto Block. Gen. Shaler has drilled the chorus, and E. M. Ashe has executed the scenery. The pebbled program is printed from designs by Frederick Dorr Steele. Melville E. Stone is press agent, and Dr. Austin Flint the house physician.

Mineral water furnished in quartz.
Cole automobile, with Diamond tires, and
Steinway piano used in this production.

The tour will begin at Little Rock, Ark., and extend over the Coleman circuit.—*N. Y. Evening Mail.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Senator Aldrich's Rubber Interests

In an address made at Winfield, Kan., on the 9th inst., Senator Bristow, of that State, an insurgent Republican, asserted that in the recent revision of the tariff the duty on manufactures of rubber was increased for the benefit of Senator Nelson W. Aldrich and capitalists associated with him. In the old tariff, crude rubber was on the free list, but manufactures of rubber were dutiable at 30 per cent. The House did not change this duty, but the Senate Committee, of which Mr. Aldrich was chairman, increased it to 35 per cent. This was an example of that "substantial revision downward" which the President saw in the bill when he signed it. It does not appear to have been expected that revenue would be increased by the higher rate. In fact, while imports of crude rubber have been growing since the new tariff was enacted, those of manufactured rubber have declined. At the same time, as everybody knows, the prices of both the raw material and the manufactured products have advanced.

Mr. Bristow pointed out that Senator Aldrich and his son were large stockholders in a rubber company capitalized at $40,000,000, and that in this company they were associated with Senator Guggenheim, three of his brothers, and Thomas F. Ryan. We quote from the report of his address at Winfield:

The new tariff bill became a law in August, 1909. In September it was discovered that the organization of a Rubber Trust was being consummated, with Mr. Aldrich's son as the executive head. This trust was formed by merging a number of rubber companies then in existence. The Continental Rubber Company, of New Jersey, had been organized in 1903 with a capital of $1,000,000. In 1906 the Continental Rubber Company of America was organized, with a capital stock of $30,000,000. The same year there was another company formed, known as the Inter-Continental Rubber Company, with a capital stock of $40,000,000. How long the organization of this Trust was in contemplation before the final passage of the tariff law I do not know, but the consolidation of the Continental Rubber Company of America and the Inter-Continental Rubber Company became effective November 1, 1909, with the following board of directors: E. B. Aldrich, Nelson W. Aldrich, Herman B. Baruch, Henry A. Bingham, Daniel Guggenheim, S. R. Guggenheim, Paul Morton, Allan A. Ryan, William Sproule. On December 6 the Continental Rubber Company, the third of the companies referred to, was absorbed by the Inter-Continental Rubber Company, with the same board of directors, and E. B. Aldrich, son of Senator Aldrich, was elected vice-president and executive head of the consolidated company.

Since the organization of this Trust there have been rapid advances in the price of every rubber product, from automobile tires to baby rattles. The profits this gigantic monopoly is making for its incorporators and promoters, the Aldrichs, the Guggenheims and the Ryans, are illustrated by the dividends paid since these mergers became effective. The company is capitalized at $40,000,000—$10,000,000 of preferred 7 per cent. stock and $30,000,000 common stock. The final merger was consummated December 6, 1909. January 10, 1910, a dividend of 7 per cent. was paid on the preferred stock; February 10, 1910, thirty days later, another 7 per cent. dividend was paid; on March 10, 1910, another dividend of 4.2 per cent. was paid, making 18 per cent. dividends in three months and four days.

The Senator read from an article recently published in a New York financial journal, which gave a list of the stockholders. Among these were Senator Nelson W. Aldrich, 25,000 common and 5,250 preferred; the Guggenheim brothers, 50,000 common and 10,500 preferred; Thomas F. Ryan, 26,500 common and 5,565 preferred; E. B. Aldrich, 6,200, and Edward Brush, said to be a

representative of the Guggenheims, 48,900.

If the company in question is one by which control of the rubber manufacturing industry, as well as of the supply of raw material, has been obtained or sought, Senator Bristow has shown quite a clear case of tariff rate manipulation for the benefit of persons exercising great influence in tariff legislation. But his statement is not conclusive or complete. We understand that the Intercontinental Rubber Company deals only in the raw material, which is on the free list. Proof that it is intimately connected with the company which controls about two-thirds of the rubber manufacturing industry in this country has not been offered by Mr. Bristow. It is not furnished by lists of the officers and directors of the two corporations. The Senator should have made inquiry as to a connection before making his speech.

It is well known that prominent officers of the great company engaged in manufacturing are intimate friends of Senator Aldrich, and it is probable that the additional duty on manufactures of rubber has served the interests of his own company, the Intercontinental, by increasing the demand here for raw material and in other ways. The present high price of rubber goods is due mainly to an extraordinary advance in the cost of crude rubber. That advance may be due in part to the work of a combination.

The Senator from Kansas should make further investigation. In his speech he has given an insufficient foundation for his charges. He should seek to ascertain whether Senator Aldrich, or the company controlled by Senator Aldrich and his associates, is directly interested in corporations which manufacture rubber goods. The increase of duty was not warranted and the circumstances certainly tend to excite suspicion.

Builders of Babel

THE last number of *La Revue,* thru one of its contributors, takes up again the question of an international language. Shall it be artificial or one of the natural languages? Those who have not followed the progress of artificial linguistics may be surprised to learn that "Esperanto" is found to exhibit signs of decadence, and has already more modern competitors. "Ido," for instance, is in the field, claiming for its vocabulary a higher degree of internationality than is possessed by "Esperanto." And both now have a new rival in "Universal," which has gained much recognition in Germany, and which the Russian sociologist, Novicow, has declared to be the most perfect of all artificial languages. One's bewilderment increases when one discovers that no less than thirty-six artificial languages were invented between 1880 and 1902. M. Douzat takes occasion to say that those which failed to find promoters were not always the worst. The search after a common language, therefore, has only resulted in giving us another tower of Babel story.

The real difficulty seems to be that a viable language cannot be invented. Like life, and the products of life, it must grow. The Committee for the Adoption of an International Language, appointed at the Paris Exposition in 1900, has chosen "Ido," and thereby precipitated a wrangle between the advocates of a number of artificial tongues that desire to be galvanized into life. Probably before the conflict of this partisanship subsides new candidates will appear to prolong the futile search and debate.

More promising is the reaction in favor of elevating some natural language to the position of universal auxiliary But this form of election also has brought several candidates into the field at once. It was doubtless the difficulty of choosing one language where several appear to have equal claims that led Hermann Diels, rector of the Berlin Academy, to propose a French-English-German triad. Critics promptly and rightly objected that this linguistic triplicity still was Babel, tho reduced to its least common denominator. Least? Some thought not. It ought to be possible to reduce this number to two. At the International Congress for the Instruction of Living Languages Chappellier, in 1900, proposed an agreement between France, England and the United States with a view to the obligatory instruction of English in France, and French in England and the United

States. This, he maintained, would in a short time place linguistic intercourse between these nations on a bilingual basis, and, counting the population of their political dependencies, reduce 400,000,000 people to a common understanding. Of the three, German was sacrificed in this proposal because of its relative difficulty and its scant latinity. The project received influential support, but the Congress refused to consider it. The aforementioned Committee on an International Language would have none of it, because they were looking for a neutral, i. e., artificial, language.

That the Germans would tamely consent to be left out was not to be expected. Diels rushed into the arena with the charge that the proposed Anglo-French linguistic alliance was really a political move, and had, in the interest of international comity, better be consigned to the bone-pile. And to the rubbish-heap it went for the time being. But strangely enough, now that sentiment in favor of a natural language as an international auxiliary is growing, the Germans are first on their feet with a nomination of French for this distinguished office. Molenaar, of Bavaria, the inventor of the much praised "Universal," or "Panroman," as he originally named it, feels convinced that an artificial language, no matter how perfect, can never become universalized as an international language. "I no longer," he writes, "hope for the success of my language [Universal]. I shall sacrifice it in favor of French." Following a suggestion made at the Congress of Arlon, there was convoked at Brussels an International Scientific Conference for the Adoption of an Auxiliary Language. The leading initiators of this conference were Wilmotte and Fuerstenhoff. This body has now pronounced in favor of French, and its choice is reported to have received the approval of many universities in Europe and America!

Since English is at present the most widely spoken language the serviceability of French as an auxiliary tongue will have to be measured primarily by Anglo-Saxon standards of utility. The problem, as it now stands, exhibits more elements of diversification than ever. The confusion of tongues is worse confounded. In certain parts of Austria, Germany and Russia "Volapük" still numbers faithful followers who believe in its ultimate world destiny. "Esperanto" has many enthusiastic advocates. But its derivative "Ido" is also in the field, with the added advantage of being the official choice of a committee appointed at the World's Exposition of 1900. Meanwhile "Universal" has started on a world-conquering career. Now comes the announcement that the whole race of invented languages, being mere phantoms of the mind, must yield to the red-blooded reality of a living language, and that French is the most eligible candidate for the position of international auxiliary. Many will recall the fact that it has been adopted as the official language at the Hague Conferences.

There is abundant excuse for some one to discover that the interests of a population bigger than that of France or the German Empire have been overlooked in this inquiry. The teeming populations of Mexico, large parts of the West Indies and the Philippines, and Central and South America, not to mention Spain and its dependencies, surely have some claim to consideration. In our own country the opening of the Panama Canal, not far distant now, is bound to enhance the commercial value of Spanish thru increase of trade with Central and South American countries. For political and commercial, rather than literary, considerations as a rule determine the spread of a language. Therefore the choice of French as a *lingua franca* is sure to be questioned in many quarters, and there is likely to be another moult of opinion in regard to this much-debated subject. We are inclined to agree with those who regard the general adoption and success of an artificial language as hopeless as the artificial manufacture of life. If, on the other hand, a natural language is destined to become an international medium of expression, Nature, assisted by the increasing modern world-intercourse of travel, commerce and literature, will presently point it out by signs more definite and unmistakable than those on which the judgment of the Brussels Conference is based.

Weather, Prosperity and the Mind of Man

A SURE way to make money in America is to pin your faith to a few simple principles of physics, meteorology and political economy. An overwhelming majority of Americans cannot or will not do this. They do not admit that there are any conditions of existence imposed by Nature which "American enterprise" cannot defy, and as for principles of political economy, they are all right for college professors and such like theorists, but "practical" men know better. The investor who has the nerve to steer his financial course according to these despised principles, and adhere to it more and more closely as the multitude goes tumbling over itself on some other tack, can pile up his accumulations at the expense of his fellow men with mathematical certainty.

A beautiful illustration of this rule—for which we make no charge—is afforded just now by the consternation of the great Middle West over the certainty which, after two years of pooh-poohing, is now everywhere admitted, that we have entered upon another period of relatively inadequate rainfalls, with its inevitable consequence of annual crop shortage.

It is now just about a generation ago, as the census man counts generations, that the farmers west of the Mississippi, and of Kansas and Nebraska in particular, were mortgaging the arid lands they could not get returns from, and moving on from the lands that they could not mortgage. Cheap money crazes and populism presently became a dominant factor in politics, and William Allen White explained to an unfeeling world what was the matter with Kansas. Then, just as the cheap money people looked to see complete and final ruin follow upon the defeat of their political and legislative program, the farmers began to discover that life was worth living, after all. Abundant rains, enormous crops and good prices made them soon forgetful of their tribulations. They decided that things had permanently changed for the better. The "settlement of the country" was offered as the obvious and sufficient explanation of abundant rainfall. Kansas was going to be a good enough country for anybody. The financial bondage of the West to the East was a thing of the past. The West had a surplus and could loan money. New enterprises were sure to pay. There was no reason why any one should hesitate to put his money into anything "going."

The financial distress of two years ago was an unpleasant shock, but it was easily explained. It was a "bankers' panic." It was all due to a money power conspiracy, to "Wall Street deviltry," and the unhallowed alliance of the United States Treasury with the head devils. It needn't occur again. The "heart of the country" was all right. The "plain people" were prosperous and knew what they were about. Everything would be booming again, right away.

Undoubtedly the country has continued to prosper and undoubtedly it will go on prospering. But a fact to be faced is that in order to prosper it will have to be more economical, more scientific and a good deal more forehanded. Acting Secretary Hayes, of the Department of Agriculture, has been interviewed on the crop situation, and we are glad to see that he has been telling the truth about it. "The drought from which the West is now suffering," he says, "only verifies what many agriculturists have expected for a long time." The expectation has been based upon knowledge of the rhythm of alternating dry and wet periods, which has been observed since mankind began to keep records of such things in Egypt and Babylonia. "Many of us," continues Mr. Hayes, "knowing that the West had suffered from cycles of drought, believed that these cycles would again hamper the farmers there, but the period of many years during which rainfall had been regular caused the people to forget the real condition that faced them."

These cycles will certainly continue to dominate the agricultural situation, and the only way to adjust life to them, as Mr. Hayes points out, is to finance the farms in such a conservative way during the years of plenty that surplus money will be available with which to face the periods of non-productiveness. A cer-

tain administrator, known as Joseph, once gave advice not unlike this, a long time ago, in Egypt.

The cycle of immediate importance is the one which meteorologists know as the thirty to thirty-five year period. A part of this period is invariably wet, the other part invariably dry. This cycle is only a pulsation in a bigger cycle of three hundred to four hundred years duration; this, in turn, is a pulsation in a cycle of one thousand to two thousand years' duration, and the latter, finally, is but a pulsation in the great cycle which once in tens or hundreds of thousands of years treats each hemisphere to a prolonged ice age. The four hundred year cycle, and the two thousand year cycle, have been among the chief causes determining the course of human history. The desiccation of vast regions, especially those of Central Asia, compelling great swarms of mankind to seek new habitats, has over and over again reshaped the political geography of Europe.

Man is a clever animal, and he has accomplished marvelous things in making Nature serve him, but Nature rules in the long run. There are some things to which man has to bow.

The Socialist Rule of Milwaukee

THERE is one phase of the Socialist Democratic victory in Milwaukee that is most significant and encouraging. Mayor Seidel publicly announced, prior to taking his seat, that before any attempt was made to put the Socialist pledges into operation the best judgment of the best experts would be obtained. "I may say that ours will be a government by experts," were the words he used to express his views.

We are advised by those in close touch with the situation that Mayor Seidel and his advisers are ascertaining where they can secure the best and most efficient men to fill the important places in the municipal government of Milwaukee, and that they are not confining their inquiries to Milwaukee, but are seeking help and suggestions from all parts of the country. A Milwaukee correspondent advises us that he is confirmed in the belief which the first public announcements after the victory aroused, that the Socialists intend to give the city the best administration they can; to be conservative, cautious and intelligent to the extent of their ability in administering the affairs of the city.

There is another significant feature of the situation. No pressure for spoils of office is being made upon the new officials from their own ranks, and they are not likely to recognize any of these demands from the ranks of the other parties. It is reported that they are altogether likely to appoint a law department that will be composed of lawyers from outside their own party, which is short of men of that profession. The Public Works Department is, of course, the most important thing the Mayor will have to deal with. This for years has been the weakest part of Milwaukee's government. At present it is composed of three commissioners and the city engineer, with equal authority and no concentration of responsibility anywhere. A bill originating in the Council was passed by the Legislature in 1907, authorizing the reorganization of this department under a single head, but was made subject to a Council referendum requiring a majority vote to adopt. The same Council which ordered the bill drawn rejected the law by a tie vote, but the new Social Democratic Council will adopt the law and reorganize the Department of Public Works. Mayor Seidel wants a strong, capable man like Colonel Waring.

In a recent personal letter concerning the real inner significance of the Socialist victory, a well-known, public-spirited citizen of Milwaukee, who did not vote the ticket, said:

> You have no doubt seen it expressed in the exchanges and with absolute accuracy that the victory was a protest or a repudiation of twelve years of misrule and broken promises and high-handed disregard of public rights under the administration of Mayor Rose, and also the two years of Republican administration under the "boy mayor." This is really all there is to it. The citizens refused to take any more chances and the Republican ticket, which was a good ticket, was deserted by its friends, who felt that it did not hold out sufficient security of election. I have heard no dissatisfaction yet exprest anywhere as to the result. The city is on the tiptoe of expectation, and very hopeful expectation at that,

as to how the Social Democrats will conduct themselves, and predictions are very freely made that we may expect a very satisfactory administration.

Should the Socialists of Milwaukee establish a firm and sound precedent for the administration of municipal affairs by experts, they will have opened a new and highly important chapter in the story of American municipal development.

The School Question in France and Elsewhere

THE public or state schools in that pleasant land are called *neutral*, while the parochial or Church schools are termed *free*. Hence in reading about the school question now on in France, we must bear well in mind that *free* schools are Church schools.

Up to 1882 France had no public school system. In that year Jules Ferry had it established. For two years more —up to 1884—the religious orders had all the teaching in their hands. Owing to a thoro investigation, made under Waldeck-Rousseau, France rose in anger and chased the monks and nuns from the schools. It was proven to the hilt that those religious teachers, Jesuits included, were impressing on the youth of France that a monarchy was the only legitimate form of government, and the republic the offspring of Satan. The story of the many later steps, culminating in separation of Church and State, is familiar enough. While the Church was undergoing dislodgment, the State was perfecting its school system, so that today it is complete. Nor does the public school system of France exclude private schools. Anybody, Catholic priests even, may open a school, with only one exception: no religious, that is, monk or nun, can teach in any school, public or private, in France. It is an exception supposed to be required by the very exigence of self-preservation. And there are many such schools—Catholic, Protestant, Jewish and non-sectarian.

Now practical Catholics are lessening more and more. Sabatier a few years ago put them at not more than four or five millions in a population of thirty-five millions—one in seven. Of course, the burden of supporting Catholic schools is very heavy and the bishops feel it. They dare not admit bankruptcy. Luckily, in one way or other, they have found helps in the energy of their enemies. The hue and cry of "Save the children's souls!" is now widely heard. Notwithstanding their inexplicable political stupidities since Faure's death, the hierarchy are beginning to add to them. Ringing the changes on the spiritual welfare of the rising generation seems a good cry. Hence last September the French hierarchy issued a general pastoral letter on the school question. There Catholics are taught their duties and rights as parents, with not over-concealed hints as to their privileges as voters. And at the end of the letter, fourteen books in use in the State schools were banned. This index of prohibited books is a revival of former episcopal claims, which Rome squelched centuries ago in restricting the Index to its own Congregation. But as no echo of displeasure has thus far been heard from within the Vatican, it may be presumed that the new step of the bishops of France is not unwelcome. *Qui tacet consentire videtur.* Now, this pastoral letter was by no means extravagant in form, and it may be granted that both as citizens and as bishops the hierarchy were well within their rights. At the same time it is well to recall that it was separation that rehabilitated them in their citizenship. Under the Concordat they would never have dared to act collectively. Rome would have brought them to time in a jiffy. Of course, the "Outs" backed the bishops against the Government, which regarded the letter of enough importance to be brought up in Parliament. Meanwhile teachers suspected of lack of faith were chased from the schools; children in great glee burned the condemned books; the Catholic papers—*la bonne presse*—announced these victories with double-headed lines.

The action of the Government in meeting the bishops on their own ground resulted in their pastoral proving to be a bit of foolishness—*une sottise*. In the first place, it was shown that with 80,000 schools in France, with their large number of pupils and parents, only 1,500 fathers were enrolled under episcopal banners. "Fathers of Families" is the name of the Catholic league in favor of

"free" — *i. e.*, parochial — schools. The University of Paris, in its turn revived a medieval practice and created an index, in which twenty-four or so textbooks in use in Catholic schools were condemned. In some departments, the teachers' league sued the bishops. The chief suit was against Cardinal Luçon, of Rennes, who was adjudged in error, but not punished. Authors threaten to sue the bishops for the pecuniary losses resulting from the non-sale of their books. The Government was upheld in Parliament by a vote of 385 against 137.

Probably all lawsuits and similar legal actions will be allowed to fall out. But it is more than likely that the Government will enact measures which will require official examination and approbation of textbooks in use in Catholic schools. Up to this, the Church authorities had a free hand in the Catholic schools, but hereafter they may expect to be held in check. Above all must it be remembered that the choice of schools is even now free to French citizens. Since but 1,500 of them follow the bishops, we have a fair idea of how weak hierarchical authority is. Some time ago Briand announced that if any bishop would inform him of any objectionable book, he would probe the matter. Only one bishop—Belley—accepted the offer and lodged a complaint against a certain textbook. Briand had the book examined and thrown out of the schools. Likewise among the attacks made under cover of Lenten pastorals, there was also an exception. Mgr. Fuzet, Archbishop of Reims, chose farming as the subject of his pastoral. It is a curious subject for the chief center of the champagne industry. But Fuzet is the bishop who went to Rome in behalf of the clerical benefit societies — *mutualités ecclésiastiques*—and on his return announced that Pius X approved them, only to be flatly contradicted in a telegram by Cardinal del Val. Then the archbishop brought out a brochure which showed that these benefits were canonically lawful. Pius X, however, condemned them.

The discussion is at white heat. France, however, is not alone. Far from dormant is this same school question in Italy and Spain. In the former an entirely new program of schools and teachers has been mapped out. The Sonnino Cabinet may not be strong enough to push its plans, but, if it fail, a succeeding cabinet will take the problem up. In Spain, fully one hundred schools, which were closed after the Ferrer case in the Province of Catalonia and its capital, Barcelona, have been allowed to reopen. Moreover, the Spanish Government has given notice to the Vatican that the Concordat must be altered. Again, in Bavaria, the same school question is very much to the front, while in Ireland a strong undercurrent is growing against the religious teacher in the national schools. Nor is it unknown in the United States. As far back as 1875, the Holy Office sent formal instructions on the subject to the Catholic bishops in the United States. Again, when Satolli first came to America as representative of Leo XIII, at the World's Fair, Chicago, the whole question was threshed out at the meeting of the archbishops in New York. Then the fourteen propositions were laid down as the norm for the hierarchy to follow. In the following year, 1893, the letter *Clara Saepe Numero* was sent to Cardinal Gibbons.

The revival of the discussion in the United States, notably under Bishop McFaul, of Trenton, need surprise no one. It is in complete harmony with the forty-seventh and forty-eighth propositions of the Syllabus of 1864, which condemn non-clerical school systems.

Why, one wonders, if Catholic schools are so essential, did Pius X establish none while Bishop of Mantua and Patriarch of Venice? Why is there no parochial school system in Rome? There, in the Eternal City itself, the Socialists are in power, and do as they please with the schools, order the textbooks, and yet no one attempts to establish parochial schools.

Airships and Warships

Ever since aviation became a profession and those following it began to produce practical flying machines which were controllable, engineers in civil life have foreseen the end of the usefulness of the warship. The only apparent room for differences of opinion was

whether its relegation to desuetude was more or less imminent. Even this doubt seems to have been resolved by the rapid progress of the past year in the construction and management of air craft of one class or another. Concerning this progress the representatives of the naval establishment have maintained a discreet silence. Up to about a year ago they had plenty of good reasons why danger from this source was not great enough to warrant any hesitancy in multiplying ships as rapidly as possible until the exhaustion of the national resources of taxation should compel economy. They spoke confidently of the ease with which long-range rifles could destroy anything in the air within two or three miles of a ship, but were reticent about the impossibility of using such weapons effectively. Meanwhile, "peace bombs" and harmless oranges have very clearly shown how much easier is range finding from overhead, assisted by gravity, than range finding from below, for reasons well known to every mathematician. These experiments seem fully to warrant the conclusion that no hostile fleet or ship entering a port protected by aeroplanes would have much chance of leaving it again, or perhaps of even getting near enough to it to send a projectile from its heaviest gun ashore.

That such protection may exist in unknown and unsuspected measure, without assistance from Government, and quite independent of anticipatory appropriations, is the most interesting aspect of the new situation. Only a very small part of the actual progress made in designing practical air craft has as yet become a matter of news. A majority of the aviators who now occupy a conspicuous place in the public notice are rather to be classed as showmen than as mechanicians. There is a still larger class incapable of making any contributions of value to the art of flying who have the reckless courage which would lead them to essay any sort of flight for applause and profit. They are the professional aviators, with the confidence of half knowledge or the yet more dangerous confidence of ignorance.

But behind these are hundreds, and perhaps thousands, of whom the public has never heard—thoro mechanicians and mathematicians who are studying the problem in every aspect, and a multitude of whom have reduced to working drawings higher types of flying machines than have yet been built. Many of these students of air navigation are men occupying positions of large responsibility and emolument, who are not showmen in any sense. So far as they are concerned the real "state of the art" is unrecorded, and will so remain until a higher inducement than is found in competition for prizes or employment at amusement parks prompts its reduction to practice. Patriotism would be such an inducement. If any part of the coast of this country was menaced by a hostile fleet, the Government need but offer fair compensation to any one who would meet and destroy it at so much per ship, to call into being in incredibly short time, and at private expense, more airships with eager crews than it could find employment for. Our floating ships would not need to lift their anchors, and probably would not. It is difficult to escape the conclusion that the day of invasion by sea is over, and that with it will pass the battleship and armored cruiser, the torpedo boat and the destroyer, like the knightly mail, the hand weapons and the masonry fortifications of a cruder period. If this is true, what it means as a step in the direction of making war impossible is beyond estimate.

England and America

We are glad to see that the suggestion made at the last Mohonk Peace Conference by the Canadian Minister of Labor, the Hon. MacKenzie King, is beginning to bear fruit. Last week a distinguished delegation called upon President Taft to enlist his co-operation in the movement to celebrate in 1914 the approaching completion of one hundred years of peace between Great Britain and the United States. President Taft most cordially gave his support to the plan, and now it only remains for Great Britain to inaugurate a similar movement, so that a joint commission can be constituted to take entire charge of the program. Many suggestions have already been made as to how best to celebrate this centenary of concord. The Rush-Bagot treaty between Great

Britain and the United States, which has resulted in disarmament along the whole 3,000 miles of the Canadian-American frontier, is the great example before the world of the limitation of armaments by international agreement. Certainly this fact will be prominent in the addresses of all the speakers who attend the proposed international peace conference at Niagara Falls. It is also suggested that a noble bridge be built across the Niagara River by the two governments as a symbol of the fraternity of the two nations, and that great buildings be erected in New York and London in which our international organizations can have their offices. Perhaps the most important suggestion, however, is to revive the famous Hay-Pauncefote treaty, which only failed of passage in our Senate in 1897 by three votes of the required two-thirds majority. Much water has passed under the bridge since the defeat of that treaty, and the Senate is not what it was then. Unquestionably a treaty could now be formulated in which questions, even of national honor, could be submitted to arbitration. Up to the present time all the arbitration treaties are modeled on the elastic Anglo-French treaty, in which honor and vital interests are reserved for the arbitrament of war, and as the nations refuse to define what are their vital interests or what involves their honor, these treaties mean anything or nothing. Indeed, the possibilities before such a joint commission for promoting international solidarity are almost infinite. Who knows but that the joint commission might itself remain as a permanent organization to promote closer relations between Great Britain and the United States, and thus eventually it might be the means of actually federating the whole Anglo-Saxon world, so that England and all her colonies, including the now independent United States of America, might again become one nation, the greatest on which the sun has ever shone.

Governor Harmon and the Lynchers

We do not see how the Republicans of Ohio can find a candidate who will make a winning fight against Governor Judson Harmon at the polls. Whenever an opportunity is offered, the Governor commends himself to the good people of his State and other States, taking advantage of it by simply doing his duty. He has now set out to punish the men who lynched an Anti-Saloon League detective in Newark, and the public officers who permitted or even abetted this crime. He suspended the Mayor, who is a Democrat, knowing that authority would be transferred to a Republican, and that the Republican could remove from office other Democrats. The Governor appears to have desired to see such a political revolution in Newark, a city which, the judge who has summoned a special grand jury says, "has for years been in the hands of lawbreakers," and whose "high officials have openly connived at violations of the law." The weak Mayor and the cowardly sheriff are out of office, the police force is undergoing reorganization, fifteen men who took part in the lynching are in prison, and others will be placed there. The Governor has done very well. But it is not the first time that he has shown to the country his possession of qualities which no candidate for a Presidential nomination should lack.

The Juvenile Courts

The juvenile court has become an American institution, and it has proved to be far more effective than at first was anticipated. The first court was established in Chicago in 1899. It seemed to be only a new method of dealing with delinquent children or juvenile criminals. The movement has spread into every large city, and has rooted in many of the smaller ones. It has reacted on home life with immense power, waking up a sympathetic good will between our courts and family discipline. It has already an immense power over police work. Mayor Gaynor only expresses this general sentiment in his demand that the brutality of police work shall be eliminated. It is beginning to work out of the courts the idea that the aim of law and the law *régime* is to inflict punishment, instead of reform the criminal. It is the one inspiration to thousands of children to lead better lives. It is a fact that at last the courts themselves, the judges and the probation officers, are a

supplementary force, a sort of substitute for good homes. Children who nowhere else get a kind word or a nudge toward a better life, or a bit of inspiration, get it where they used to hear nothing but condemnation. It is said that the gain in police work, in the way of arrests, is from one-half to two-thirds, and that 80 per cent. of the offenders never are returned by the police. In fact we have, at least in our juvenile courts, established the principle that society must reform its offenders if possible. Children are no longer shut in with vile adult offenders, and we may hope that our prison system will soon cease to be a propagator of vice, and a menace to society. We are certainly creating a great body of officials who are learning to sympathize with the weak, and give aid rather than simple condemnation. In St. Louis the investigation of girls' cases is done by women, and this is true of several other cities. Judge Baldwin adds that "the probation process is a process of education by constructive friendship. It requires sympathy, tact, good humor, patience, and, above all, a thoro knowledge of the needs of child life, and the manifold ways in which to meet them." An organization of volunteer officers along this line has recently been formed, entitled The Big Brothers. It is proposed to organize a Big Sister movement, in charge of the girls. In fact, we are entering a new age in which we hope after awhile to get rid of the brute force expression of social life.

Moral Growth

One of our honored contemporaries is very much alarmed at the present moral condition of American society. It sees signs of the decay of moral sense, not only in our State capitols and city councils, but in our business houses and in our social relations. It goes farther and almost despairs of the Church itself, demanding a sweeping revival of common, decent honesty, and "a sweeping sense of sin and its horror." We are inclined to sympathize deeply with this writer in his disgust at the revelations which come to us from our State capitols and our Boards of Trade. It is a cheap vulgarity that puts American honor to shame. However, we have no sort of sympathy with the outcry of despair, or the demand for a revival such as is designated. We are simply readjusting ourselves, and the growth of conscience in the last hundred years has been something marvelous. We no longer care for such doctrines as original sin and total depravity, and the poetic criminations that beat the breast and cry out in loud prayers are not to be looked for. In fact we do not any longer believe in sin of the old sort—that is tainted character by birth, and the necessity of appeasing an angry God. We have now got to see if we can create and sustain a conviction of honor for the right, and a thoro belief in our fundamental social axioms—the religious common sense of mankind. We see in every direction a growth of the social moral sense. The outbreaks seem to us to be merely the sloughing off of the vileness which has been heretofore allowed a homing in our individual and political life. The history of our cities does not disturb us in the least, for New York is a better city than it was fifty years ago. New York and Illinois politics are cleaner than they were in the closing part of the last century. Our industrial organization stands stronger for right; and the spirit of justice toward all nations and all races grows upon us. Pittsburg will hardly repeat its scandals; Albany is a cleaner city than it was ten years ago, and the outlook is thoroly hopeful. The growth of conscience in the nineteenth century was the wonder of that wonderful era; but its growth in the twentieth century bids fair to be even more remarkable.

Waste Land

Some time ago THE INDEPENDENT published an article on "Road Economics," in which the writer demonstrated that about one-third of the land now enclosed for road purposes in the United States was practically given over to waste. He advocated the use of the highways by adjacent farmers, under statute, for marketable crops. Governor Carroll, of Iowa, now proposes to lop off 10 feet from each side of the highways of that State and turn them over to corn growing. He thinks that a road very rarely needs to be more than 40 feet wide for the service of the public, and that anything wider than that is simply so much land given over to weeds. The Iowa law

does not compel the laying out of roads 60 feet wide, altho that is generally the custom. There are 100,000 miles of roads in this single State of Iowa, and it is a fact that they are mainly neglected. There are over 800,000 acres of land belonging to the highways, and if the people resume the cultivation of one-third, they will have added a good deal over 200,000 acres to food production. The annual net revenue per acre in Iowa is set down at $15, a very modest estimate, but this would make the income of the restored land at least $4,000,000. We believe that Governor Carroll's proposition is all right, and that it stands good for every State in the Union. We are confirmed in this by the correspondence called out by our own article advocating road economics. There is no reason why there should be broad strips of waste land running in every direction across our States. The roads that we do have should be better made, and whatever land belongs to the public on either side of the road should be made garden-like. At present the weed-breeding strips, called roads, are a nuisance and a preventive to good farming. They sow down adjacent lands, and make fine cropping more difficult. The worst weeds we have to contend with have mainly traveled across the country by way of the roads. But with proper culture these same land strips could be made beneficent models of culture and beauty. Governor Carroll talks like a farmer, and his proposition stands in with the economics of the coming civilization: "Larger crops; no waste land; no weed-breeding roads." A large party of Iowans agree with their Governor in all except the disposition that should be made of the reserved lands. They would have it cultivated by the public, and the proceeds applied to making better driveways of the portion not withdrawn for tillage. This will introduce a novel feature into our American farming, with a decided side-look toward socialism.

Troubles in Orthodox Church

A long and bitter struggle between the Ecumenical Patriarch of the Orthodox Church, Joachim III, in Constantinople, and the Jerusalem Orthodox Patriarch Damianus, has now been closed, ending with a complete victory for the latter, even against the clergy of his own synod. The issues involved were, on the one hand, the determination of the Ecumenical Patriarch to establish absolutely his hegemony over the other orthodox Patriarchs, which, at bottom, too, was an ambition to further the interests of a narrow-minded, specifically Greek nationalistic policy over against the other nations represented in the Orthodox Church, while the Jerusalem Patriarch headed the growing national tendencies within the Orthodox Church, and is partially the protagonist of the Arabian Orthodox, particularly, it seems, the common people. The Jerusalem clergy rose against their Patriarch, deposed Damianus, elected a "locum tenens," seized the orthodox cloisters at Bethlehem and Lydda and the school at Joppa, and appealed thru a delegation to the Ecumenical Patriarch at Constantinople, who was only too willing to become their protagonist, ignoring in this the Patriarch at Alexandria, to whom also an appeal had been made. At this stage the Government stepped in and, not heeding the protest of the Ecumenical Patriarch that this was a purely ecclesiastical affair, appointed a special commission, consisting of two Turks and one Greek, who, together with the well-known Wali of Syria, Nasim Pasha, who during the Armenian massacre had been Police Commissioner, as chairman, proceeded to Jerusalem to adjust matters, especially to investigate the rights of the Patriarch of that place on the spot. This commission succeeded in persuading the rebellious monks and priests of the Jerusalem patriarchate to recognize again the Patriarch Damianus, and in this way the intervention of the Ecumenical Patriarch of Constantinople was entirely thwarted. The defeat of the latter has been so complete that his deposition seems to be only a question of time. Even his own synod has now largely turned against him. Naturally, the activity of the Turkish Government in the whole matter has been instigated by its anti-Greek political tendencies. The whole agitation will be recognized as a new phase of the ever old yet ever new struggle between Turk and Greek.

Summer Clothes

Much profitless discussion is annually wasted over the question why men do not in summer adopt a style of dress better adapted to very warm weather. The answer is easily found: They do not want to. To gratify the desire for such summer comfort as appropriate dressing would insure is perfectly easy without annoying conspicuousness. A large proportion of the population of the United States habitually discard not merely coats and waistcoats, but collars, cravats and starched shirts when it is more comfortable to dispense with them. No one is surprised, shocked or mortified by such liberties with the conventions of masculine dress. It may be assumed, therefore, that those who elect to sacrifice comfort for appearance do so for reasons of their own. One of these reasons is doubtless found in the fact that, except for some twenty or twenty-five days in each year, at irregular and unpredictable intervals between May and October, our customary garments are not uncomfortable. Hence, we lack the experience needed for appropriate dressing at times of exceptional heat and humidity. Another reason discouraging ready adaptation to thermometric fluctuations is that not many men have available the garments suggested by these conditions. They know perfectly well that they may wear flannel shirts and discard their coats, and that no one would molest them or make them afraid; but they prefer to differentiate themselves from those who take these liberties. In a word, they are less uncomfortable by reason of the heat than they would be as the result of lowering their own standards of presentability. As a matter of fact, the progress from year to year in the direction of summer comfort is as rapid as the average man desires it shall be. Negligée shirts and two-piece suits of light and porous material are now the rule. The man who wishes to leave his coat at home or carry it over his arm is at perfect liberty to do so, but not many of those even reasonably careful as to personal appearance care to do this, and are not conscious of any great discomfort because they do not. In the last analysis, men dress as they do in summer chiefly because it pleases them to do so, from which it may be inferred that vanity as exprest in personal adornment is not exclusively an attribute of femininity.

More Modernism

Dr. Hugo Koch, the Catholic professor in Braunsberg, the excellent academy under German state control, is the latest addition to the ranks of modernists. He published in Harnack's "Kirchengeschichtliche Studien" an excellent work entitled "Cyprian and the Roman Primate." The results of Koch's investigations of this chronic *crux* are not in harmony with the teachings of his Church, but in perfect agreement with the outcome of unprejudiced historical records. Indeed, they are in pronounced antagonism to the dogmas and claims of the Catholic Church. Prof. Joseph Schnitzer, of Munich, discusses the work in the *Neue Jahrhundert*, a Catholic progressive paper, and, in addition to declaring it a scientific work of the first quality, says it is "Eine ethische Tat, eine Bekenntnisschrift," which could possibly secure the martyr's halo for this author. This fear has been promptly realized. It is officially announced that Professor Koch will, during the summer semester, not deliver the course of theological lectures which he had announced for the academy at Braunsberg.

The dissatisfied minority of the Cumberland Presbyterians who would not join in union with the Presbyterian Church are not finding that the courts generally sustain them. The highest courts in California, Georgia, Indiana, Kentucky and Texas have decided that the union is valid, while in Missouri and Tennessee the highest courts have favored the irreconcilables and given them the property, which includes the general publishing house, with its paper, *The Cumberland Presbyterian*. The future is not cheerful for the dissentients, unless they should get unexpected comfort from decisions in Alabama, Arkansas, Colorado, Mississippi and Oklahoma, where the legal conflict is yet going on.

Twenty years ago a man named Ennis, a poor teamster in the McDonald oil fields of Pennsylvania, was given credit for horse feed, when he sorely needed it, by Boyce Rankin, a clerk in a local feed store. Ennis declared at the time he would make Rankin his heir for this. The incident appeared closed, however, and twenty years rolled away. In the meantime Jack Ennis struck oil, and when he died not long ago worth a million of dollars it was found that he had kept his word, and the feed store clerk comes into the ex-teamster's fortune and will be in charge of the business interests of his old debtor. A thread of romance still runs thru life even if we may not always think so.

If preparation had been made for a South American movement against the United States at the Pan-American conference, on account of the attitude of our Government toward Nicaragua, Secretary Knox would not have been made one of the two honorary presidents, nor would the chairman of our delegation have been chosen to reply, in behalf of all the delegates, to the opening address of the Argentine Minister of Foreign Affairs. Secretary Knox very distinctly represents our policy with respect to Nicaragua. It does not yet appear that Zelaya and Madriz can exert any influence at the conference in Buenos Ayres.

At the recent aviation meetings abroad there has been an unusual number of deplorable accidents. The demand which an aeroplane makes upon brain and eye, as well as upon the courage and skill of the aviator, must be tremendous. That in spite of the obvious perils of its use there should be an unfailing supply of experimenters points to a vastly more hopeful aspect of modern civilization than the spectacle of the brute endurance afforded by the principals of the recent prize fight. The worldwide protest against the exhibition of the fight pictures is another hopeful omen.

After the Mayor of a city has been convicted of bribery and sentenced to be imprisoned for three years, he should be prevented from continuing to perform the duties of the office which he has disgraced. But the convict Mayor of Lawrence, Mass., even in jail is signing papers, making appointments and the like. Lawyers who have defended him assert that he is still the lawful Mayor. We are confident that law and authority for his definite and permanent separation from the office will soon be found.

Scholars have often amused themselves by discovering unintended hexameters in sober prose authors, or in the English Bible; but it is left to the London *Tablet* to have discovered an actual limerick embodied in the Prayer after Communion by St. Thomas Aquinas, and given in the Missal. Put into lines it reads:

"Sit vitiorum meorum evacuatio,
Concupiscentiae et libidinis exterminatio;
Caritatis et patientiae,
Humilitatis et obedientiae.
Omniumque virtutum augmentatio.

Dr. Crum, whom President Roosevelt kept in office as Collector of the Port of Charleston, but whom President Taft removed, has been appointed Minister to Liberia. The rule of the present administration has been stated as that of appointing a white man for white people and a black man for black people. But the majority of the people in South Carolina are negroes, so the rule does *not* hold. This new post for Dr. Crum will not quite balance the former removal.

There is an ecclesiastical boycott of the severest sort in the Amish Mennonite Church. It is a rule, and it is now being enforced, that if a member has been excommunicated no member in good standing shall either eat or work with him. It is not surprising that it is a small sect.

That postal savings banks are likely to be popular is indicated by the fact that 175 postmasters have already made application to have their offices designated as postal banks. This is the more notable since no extra compensation goes with the granting of such applications.

Insurance

Death of Leslie D. Ward

Dr. Leslie D. Ward, first vice-president of the Prudential Insurance Company of America, died in London last week, from acute Bright's disease complicated with pneumonia. He was in a state of coma from July 6th until the 13th, the day of his death. Dr. Ward's son, Leslie Perry Ward, and Frank Munsey, the publisher, were with him when he died. The body will be shipped to New York for interment. Dr. Ward was one of the pioneers in the industrial insurance business in this country, having been associated with John Dryden in the introduction of the system in this country. He helped organize the Prudential Insurance Company of America, the home office of which is in Newark, N. J. In 1874, when President Dryden founded the company, he was practising medicine in Newark and acting as county physician of Essex County. He aided Mr. Dryden very materially and took office with the company in the beginning as medical director. He was elected first vice-president in 1884 and was in charge of both the home office and the field force. Dr. Ward was also a director in the National Surety Company, the American Steel & Wire Company, the Fidelity Trust Company and the Union National Bank of Newark. He was also actively interested in the Public Service Corporation of New Jersey. He was born in Madison, N. J., on July 1, 1845, of Connecticut ancestry. He belonged to the Union League, the Lawyers, the Essex, the Morristown and the Morristown Golf Clubs, and was president of the Essex County Country Club. He was for many years staff surgeon of the Essex Troop, the crack cavalry squadron of New Jersey. He turned the farm on which he was born into one of the show places of New Jersey. It has twelve miles of park drives, a Roman villa on the site of the old farm house, an artificial lake and a game preserve. He was a Republican in politics and was well known for his knowledge of and interest in art. He was president of the commission having charge of the two million dollar Essex County Courthouse in Newark, which was completed about four years ago. The elaborate decorations of both the interior and exterior were chiefly the result of his suggestions and work. He had made valuable collections of rare pictures for his home in Newark and his country estate at Brooklake Farms, near Madison, N. J. His library contains thousands of rare and valuable volumes. On March 5, 1874, Dr. Ward married Miss Minnie Perry, daughter of James Perry, of Newark. She died several years ago. One son, Herbert Edgar Ward, also died several years ago, leaving a daughter. Another son, Leslie Perry Ward, survives him.

A life insurance agent is often tempted toward discouragement. He may be quite unable to perceive any indication of return for the efforts he has made, it may be, for weeks. Canvassing is not always full of joy, but Rome, which finally proudly sat on seven hills, took longer than a single day in the building. Keeping everlastingly at it is quite as effective in the field of insurance underwriting as it is in the advertising line. A chance remark, an unexpected conversation, a trifling circumstance, will often conspire together to work up a case that will mean a credit on commission account. The main thing is diligence applied with intelligence. Success in the life insurance field is based on exactly the same qualities that command success in any other department of life and the man who is overcome by discouragement is not the one who is going to win out.

The Fidelity Mutual Life has figured it out that each life insurance interview is worth to each agent a total of $4. This is on a basis of one application in ten average interviews. Each agent is consequently expected to report at least six good life insurance talks each day.

Financial

Postal Savings Banks

It was said some weeks ago that the first postal savings banks would not be doing business before January next. The President, however, is unwilling that a beginning shall be so long delayed, and it is now expected that the ten or twenty post offices which are to be selected as experiment stations will be ready to receive deposits in October. About four hundred banks have sent to the Treasury Department their applications for deposits, and about half as many postmasters have asked that their offices be authorized to receive money under the new law. Among the applying banks are many large and powerful ones. It is the intention of the Government to name only a few post offices at first, and it is probable that the number will not be greatly increased during the coming twelve months, as Congress appropriated only $100,000 for putting the system in operation and maintaining it in the current fiscal year.

Foreign Trade of the Fiscal Year

Our foreign trade, exports and imports, in the last fiscal year, amounted to $3,302,821,057, a total exceeded only in 1907. When comparison with the figures for 1909 is made, the increase is nearly $82,000,000 in exports and almost $246,000,000 in imports. These changes reduced the excess of exports to $187,000,000. The excess was $351,000,000 in 1909, and $666,000,000 in 1908. Last year's excess on the export side was the smallest since 1896. The totals for last year and since 1903 were as follows:

Year.	Exports.	Imports	Excess of Exports.
1910 ..	$1,744,966,203	$1,557,854,854	$187,111,349
1909 ..	1,663,011,104	1,311,920,224	351,090,880
1908 ..	1,860,773,346	1,194,341,792	666,431,554
1907 ..	1,880,851,078	1,434,421,425	446,429,653
1906 ..	1,743,864,500	1,226,562,446	517,308,054
1905 ..	1,518,561,666	1,117,513,071	401,048,595
1904 ..	1,460,827,271	991,087,371	469,739,900

Imports were of greater value than ever before, exceeding even those of 1907, the record year, by $123,000,000. This advance was due mainly to an increase in the quantity of manufacturers' materials brought from abroad, an increase of about $200,000,000 over the similar imports in 1909, and of $275,000,000 over those received in 1908. On the other hand, our agricultural exports were less by $46,000,000 than in 1909 and less by $156,000,000 than they were in 1908. Shipments of breadstuffs were the smallest for fourteen years, 1905 excepted. It should be noted that imports were declining in the last three months of the year. A new record for gold exports was made, and the excess of exports ($118,563,215) over imports ($43,339,905) was a little more than $75,000,000. In 1909 the excess was $47,000,000, and in 1908 and 1907 the movement was in the other direction, imports showing an excess of $76,000,000 in 1908, and of $63,000,000 in 1907. Exports of silver last year exceeded imports by $10,000,000.

....Exports of iron and steel manufactures in the last fifteen years exceeded imports by $1,400,000,000, while in the fifteen years immediately preceding the imports exceeded exports by $300,000,000.

....A New York Stock Exchange membership was sold last week for $65,000. This price shows a decline of $11,000 since the latest preceding sale, and of $30,000 from the highest figures of last year.

....The Massachusetts Railroad Commission has given the Grand Trunk Railway permission to build a line from Palmer, Mass., to the Rhode Island boundary. As the company has been authorized by the Rhode Island Legislature to build from the boundary to Providence, the construction of the new road to that city is assured.

....The business affairs of Col. J. M. Guffey, Democratic leader in Pennsylvania, member of the Democratic National Committee, and for many years prominent in the coal and oil industries, have been placed in the hands of a receiver. His assets, consisting mainly of West Virginia coal lands, are estimated to be $17,000,000, while his liabilities are $6,700,000.

The Independent

VOL. LXIX NEW YORK, THURSDAY, JULY 28, 1910 No. 3217

Survey of the World

Political Topics

Mr. Bryan publicly supports the candidacy of Richard L. Metcalfe, editor of his weekly paper, for the Senate in Nebraska. Mr. Metcalfe's leading opponent is Gilbert M. Hitchcock, who, it is said, refused to join Mr Bryan in his fight for county option. Mr. Bryan has been able to gain the instructed support of only five out of sixty-four counties in this contest, and it is clear that in the Democratic State convention a considerable majority of the delegates will oppose his plan for dealing with the liquor question. On the other hand, it is understood that county option will be demanded by the Republican convention, and certain newspapers are asking whether Mr. Bryan will go over to the Republicans. ——Speaker Cannon made several public addresses in Kansas last week, defending the new tariff and criticising the insurgents. Senator Bristow, Senator Cummins and Representative Murdock responded vigorously. Mr. Cannon remarked that the muckraking magazines and insurgents could not make him say he would not again be a candidate for the office of Speaker:

"If my constituents are as kind to me as they have been for 36 years, I shall go back and shall be in the next Congress, either in the majority or in the minority. And I would rather be there in a Republican minority, a real virile Republican minority, than to be one in an apparent majority that could not take account of stock and know from one day to another whether it was a majority."

Mr. Murdock said the Speaker was not a stand-patter, but a stand-stiller, having opposed progress for thirty years. Senator Bristow, defending the insurgents, said they did not seek to form a third party, but were fighting to obtain control of the Republican party. He asserted that Senator Aldrich and his associates had manipulated the duties on lead ore and pig lead for the benefit of the Smelting Trust, controlled by the Guggenheims and the Rockefeller interests. The Senate committee, he said, had so raised the duty on pig lead that it exceeded the duty on ore by $12.50 a ton, altho the Trust's manager had testified that the entire cost of smelting the ore ranged between $5.55 and $10.05 a ton. The insurgents, he continued, were not willing that the party should be used by the Cannon-Aldrich combination for the benefit of monopolists. He predicted that the maintenance of high tariffs would eventually cause an industrial panic. Pointing to the present condition of the New England woolen and cotton mills, he asserted that they were staggering under a load of excessive capitalization, and that high duties had led the manufacturers to "overcapitalize enormously." The original Railroad bill, prepared by Attorney General Wickersham, he declared, contained four sections for the benefit of the people and twelve drawn in the interest of the railroads. The insurgents improved it:

"If the bill had passed as sent to the Senate by the Attorney General it would have been a legislative crime. As prepared by Wickersham it legalized every illegal railroad merger, every dishonest transaction in stock watering, every unlawful consolidation or combination that has been made in the last forty years; and this was done under the guise of an effort to prevent future over-capitalization."

Senator Cummins, speaking on the 22d, said that under the leadership of Cannon and Aldrich the tariff was revised without the slightest heed to the cost of production anywhere:

"Speaker Cannon and Senator Aldrich are driving the country into a Socialist form of

government and industry because of their interest in promoting the cause of monopolies. They are unwilling to take measures to prevent the rapidly growing tendency toward monopoly or to disintegrate and destroy the monopolies already in existence, whereby the prices of commodities are fixed, not by the usual laws of trade, but by the will of a single man or a group of men."

On the following day he renewed his attack. Cannon, he said, had been so busy trying to look like Abraham Lincoln that he had forgotten what Lincoln was trying to do for the people. The Railroad bill, as it came from the Attorney General's office, was a repudiation of the party's platform:

"When Congress met, a bill came from the Attorney General. He forgot that he was attorney for ninety millions of people. But he remembered his long law practice in New York, where his chief business was to tell the corporations how to evade the law. This bill provided for the repeal of the Anti-Trust law."

Senator Aldrich, he continued, had vigorously opposed all regulation of the railroads by Congress since the bill creating the Commission was introduced in 1887. "I cannot and will not," said he, "follow the leadership of a traitor to his party and to the people."

Mr. Taft's Vacation Speeches

On the 18th, President Taft began a vacation voyage of ten days along the Maine coast in the yacht "Mayflower." Going ashore at Eastport, the northeast corner of the United States, on the 19th, he made a brief speech there. When he was a lawyer, he said, there used to be a legal maxim that the proper way to understand a written instrument was to take it up by its four corners:

"It seems to me that the same rule applies to the country. The proper way to understand the country is to go to the four corners and the places between. Now, I have been at Seattle, San Diego, the southernmost point of Florida, and now at Eastport, and I have found the same people, the same patriotic spirit, the same progressive civilization at each of these four points, and also between them. When a man has had that privilege he may be said to understand the American Nation. It is true that they talk a little more thru their noses in this part of the country than they do further south, but the style of a woman's bonnet is just the same here as it is way down in San Diego."

Eastport is almost surrounded by foreign territory, and the yacht had passed thru Canadian waters to reach the harbor. The President continued:

"I hope that in this audience I am addressing there are some Canadians. You are close enough to them to know them and to value them as neighbors. Canada is a great country and we are just learning how great a country it is. Speaking for the Administration, we are convinced that closer commercial relations with Canada will be well for both countries, and if in the next year we can come to any agreement by which our commercial relations shall be closer we shall think ourselves fortunate. We have reached a time when neither ought to be envious of the other, but each ought to be convinced that the more prosperous the one the more likely is the other to be prosperous, and that the growth of the trade of one means the growth of the trade of the other. It is pleasant to see that all the controversies between Great Britain and the United States, which in the past have been many, are now settled, or are in course of settlement by arbitration. This is the first time in the history of the two countries when that could be said."

In the course of an address at Bar Harbor, where he remained for two days, he spoke of vacations. The American people, he said, had learned a good deal in the last generation:

"In my father's time he thought, altho a hard-working lawyer, that two weeks was ample vacation time during the entire year, and when I came to the bar he suggested that if I stayed at home during the summer months I would make a good deal more money than if I went away. But the American people have found out that there is such a thing as exhausting the capital of one's health and constitution, and that two or three months' vacation after the hard and nervous strain to which one is subjected during the autumn and spring are necessary in order to enable one to continue his work the next year with that energy and effectiveness which it ought to have. Mr. Justice Strong of the supreme bench, who lived to be 88 or 89, told me that it was a part of his life to take sixty days each year out in the woods away from the people, exercising and living in the open air, and to that he attributed his long life. And so the American people have come to the conclusion that the women and children especially ought to have a change of air where they can expand their lungs and get exercise in the open. The men can go when they can."

The Pan-American Conference

Much interest is shown at Buenos Ayres in the reported purpose of Brazil and Chili to ask the Pan-American Conference for a resolution declaring that the Monroe Doctrine is accepted and will be upheld thruout South America. The movement for such

a resolution, under the leadership of these two Powers, is said to be a strong one. Argentina hesitates and is inclined to oppose, holding that such a declaration would be offensive to Europe. The United States delegates are noncommittal, and it is said that they will refrain from voting, if the question comes before the Conference. Their attitude is commended by the local press. President Bermejo says that if action is to be taken, the Doctrine must first be defined clearly.

Railway Men on Strike

The conductors, trainmen and yardmen of the Grand Trunk Railway went on strike on the 18th, their demands having been rejected by the company. An award was made by the Canadian Board of Conciliation two or three weeks ago. It granted an increase said to be an average of 18 per cent. This the men declined, holding that the standard maintained in the eastern part of the United States required higher rates. Moreover, a larger increase had been obtained on the Canadian Pacific. The Grand Trunk officers promised to meet the Canadian Pacific scale as soon as their road should receive such freight rates as are paid to the Canadian Pacific in the Northwest. The Grand Trunk has about 4,500 miles of road, between Chicago and Portland, Me., and 700 miles of this total are in New England, where the company reaches tidewater at New London by way of the Central Vermont or New London Northern line. About 5,000 men were affected directly by the strike, and their idleness threw nearly 10,000 more out of work. Thruout last week very little freight was moved on the Grand Trunk system. Efforts to procure arbitration were made by the Canadian Minister of Labor, Mr. McKenzie King, and other officers of the Canadian Government. The strikers proposed that the controversy should be submitted to E. E. Clark, of the United States Interstate Commerce Commission, and P. H. Morrissey, president of the Railway Employees' Association. These are the men whose decision in the case of the Baltimore & Ohio virtually fixed a standard which has since been accepted by the New York Central and other Eastern roads in the States. This is the standard which the strikers ask the Grand Trunk to accept. The Grand Trunk's president would not lay the controversy before these arbitrators. He pointed out that Mr. Clark had been the head of the conductors' union, and that Mr. Morrissey had been president of the union of trainmen. On the night of the 24th negotiations for a settlement were discontinued.——The threatened strike of 15,000 conductors and trainmen on the Pennsylvania road has been averted by a conference at which misunderstandings were cleared away.——The long contest between the Bucks Stove and Range Company, of St. Louis, and the Federation of Labor, ended last week when Samuel Gompers, president of the Federation, announced that the company had given up the open shop and hereafter would employ union men exclusively. James W. Van Cleave, president of the company, died in May last. For four years he had opposed the Federation. His discharge of thirty-six men in 1905 was followed by a boycott. In Washington he procured an injunction forbidding the Federation to carry on this boycott in its official organ. For disobeying this injunction Messrs. Gompers, Morrison and Mitchell were found guilty of contempt and sentenced to pass several months in jail. Their appeal is pending in the Supreme Court. Some time ago the controversy was taken up by the Anti-Boycott Association, which has carried on the suits and paid all the expenses. The association now says that the action of the company was taken without its knowledge or consent, and was in violation of an agreement. The association does not withdraw from the case.

Pacific and Other Islands

Dean C. Worcester, Philippine Secretary of the Interior, narrowly escaped assassination a few days ago, while on the island of Palawan, where he had attended the installation of a new Governor. He was attacked by Moro outlaws, three of whom were killed by

the Philippine scouts who came to his defense. Mr. Worcester has been a prominent officer of the Government at Manila for about ten years, and before he took office he spent much time in careful exploration of the islands.——A new Governor was required on the island of Palawan because of the death, by drowning, of Lieutenant Edward J. Miller, of the regular army. Lieutenant Miller had been Governor since the end of the war with Spain, taking the office when he was only twenty-seven years old. His service on the island was of remarkable character. He and his wife were the only white residents. The 34,000 natives living on the island (many of them classed as savages) had been the prey of marauding Moros, to whom they paid tribute. Miller drove away the Moros and taught the natives how to profit by agriculture. They revered him. Major General Bell said he was worth a regiment of soldiers. He asked nothing for himself, not even promotion, but was satisfied with his pay of $183 a month. After his death the piratical Moros again visited the island, and Mr. Worcester was attacked by a band of them. ——An agent of the Russian Government, after investigating the charges made by Samuel Gompers and others concerning the treatment of Russian immigrants on the sugar plantations in Hawaii, says it is not true that their pay is insufficient and that they are treated cruelly. They have been incited to make disturbance, he asserts, by professional agitators. His report agrees with one made by an agent of our Government.——Cuba's President has signed the bill providing that the Government's arsenal property on the waterfront shall be exchanged for the United Railways terminal on the Prado. Congress has adjourned. In the Senate, action upon the bill granting a concession for a kind of Monte Carlo, with bull fights and gambling, was deferred until November. President Gomez in a special message urged that a campaign against tuberculosis be undertaken. He also recommended that $1,346,000 of the lottery profits be used for new revenue cutters and a new Presidential palace.——Sales of agricultural land in Porto Rico have been made at high and rising prices. Considerable investments of capital from this country in the sugar and fruit industries are reported.

The Situation in Nicaragua

Estrada's army, moving westward, was within 40 miles of Nicaragua's capital at the end of last week. A battle was fought at Comolapa. Each side claimed a victory, but Estrada's men took prisoners and much ammunition. Our Government sent a gunboat to Cape Gracias, on the east coast, because the American consul there was said to be in danger. General Salinas and Señor Barrios, envoys representing President Madriz, started from Colon for Washington on the 19th, and it is said they were instructed to make terms with our Government. Madriz has appointed a new cabinet, selecting men who served under Zelaya. With one exception they are known to be openly hostile to the United States. Madriz's counsel at Washington, however, asserts that Madriz has never been in sympathy with Zelaya. Norway's recognition of the Madriz blockade at Bluefields checked traffic between New Orleans and that port, as the Americans who have been sending supplies employ Norwegian ships. On the 22d our Government virtually expressed disapproval of Norway's action by again declaring that Bluefields was an open port and by giving notice that American goods consigned to that port would be protected, even if they were on Norwegian or other foreign ships. Madriz's counsel at Washington protested against this. It appears that Norway was misled by the reports of her consul. He was also assistant to our consul, but his resignation of that office has been accepted. Clifford Sands, the youth from Seattle whom Estrada made a Brigadier General, and whose life was saved by Dr. Burgheim, has reached his home. He says he was condemned to death because he had attempted to destroy the "Venus" with dynamite. He went out in a canoe to do this, but was discovered. The canoe was wrecked by shot, and he swam to the shore.——The projected revolution in Honduras was started last week by ex-President Bonilla, who sailed from Belize with men and arms, landing near Ceiba. Bonilla has been helping Estrada,

and President Davila, whom he seeks to depose, has been lending men and ammunition to Madriz.——In the capital of Colombia, service on the street railroad owned by New Jersey capitalists was resumed last week, but was soon checked by boycotting and riots.——Francisco Madero, recently a candidate for the presidency in Mexico, has been released from prison. It is said that he will sell his extensive estates in Mexico and become a resident of the United States.

Great Britain

On the 19th of July about 13,000 switchmen and other traffic hands of the Northeastern Railroad suddenly went on strike. On the 21st the men accepted the terms offered by the company and returned to work. The futility of the strike became apparent when the Amalgamated Society of Railway Servants refused to recognize and finance the fight against the Northeastern Company. This society is one of the strongest labor organizations in the country and its aid was indispensable to the strikers. In spite of the speedy settlement of the strike shippers sustained great loss in perishable goods. About 15,000 workmen in collieries and shipyards who are said to have been thrown out of work by the strike, will go back to work on the resumption of railroad traffic.——Home Secretary Churchill on the 20th inst. delivered an impressive speech in the House of Commons in which he outlined some radical reforms in the prison system. Humane methods are to be adopted in the treatment of criminals. More time is to be allowed for the payment of fines in order to lessen the too frequent disgrace of imprisonment for non-payment.——He also advocated the more general substitution of curative methods of imprisonment in cases of youthful or minor offenders. Passive resisters and suffragets are to have better meals and some special privileges. Police supervision of released criminals and the ticket-of-leave system are to be abandoned. Provision is to be made also for lectures and concerts in convict prisons. ——At a meeting of bankers in London a resolution was adopted to the effect that after November American cotton bills of lading will not be negotiated unless they are guaranteed by an American banking institution. Last April it was discovered at Liverpool that there had been irregularities in the bills of lading on American cotton. The present action of London bankers is based upon the report of a committee appointed to inquire into the situation.——The police of London have been subjected to some criticism in Parliament for allowing Dr. Crippen, the murderer of Belle Elmore, to escape after having been under observation on suspicion. Scotland Yard is now offering £250 reward for information that will lead to his arrest. Dr. Crippen is an American dentist. He murdered his wife, Belle Elmore, an American music hall singer, and buried her body in the cellar of his lodgings in London. It is believed that he has gone to Spain. ——According to reports from Adelaide, Australia, there is a keen demand in that section for agricultural land. All farming and grazing country made available by the government is applied for immediately.——The Indus is overflowing its banks and causing much damage. The city of Dera Ghazi Khan in the Punjab, which the British Government has done so much to save from the ravages of the Indus, is seriously threatened. About a third of it is under water, and many mosques and temples are collapsing. In the Jessor district there have been a number of political murders and robberies. In Calcutta the police are finding many firearms concealed in unlikely places.——General Botha recently delivered a speech in Johannesburg. As Prime Minister, he said his policy and that of his Cabinet was to allow equal opportunities of instruction in English and in Dutch in the schools of the Transvaal. He also stated that the repatriation of the Chinese had proved to be the best thing ever done in the Transvaal. ——A deputation headed by Mr. Doyle, Lord Mayor of Dublin, had an interview in London, on the 20th inst., with Mr. Frank Hitchcock, the American Postmaster General. The eastbound steamers of the Cunard Line, carrying mail and passengers from the United States, have abandoned Queenstown as a port of call. There is much objection to this on the part of the Irish, and Mr. Hitchcock has

promised to give the matter his careful consideration when it is formally placed before him.

France

The directors of the French railway companies have refused the invitation of the railway men to meet a deputation of the union in presence of the Prime Minister and of the Minister of Public Works in order to discuss the claims of the men. They insist that each company must maintain its individual independence, because circumstances are not identical on all the railways, and therefore a general conference in which all companies participate is not feasible. This action of the directors has increased the likelihood of a strike.——A religious fraud perpetrated by an old gentleman is causing much talk in Paris. His victims were devout Roman Catholics. He had a collection of "holy relics" which he showed for money and bequests in support of alleged charities. One of these was an alleged lock of hair from the head of the Saviour. This he kept in a gold casket and exhibited only to his wealthiest contributors. He claimed to be a trusted confidant of the Vatican, and had many followers. The end came when the Papal Secretary of State denounced him as an impostor. He was arrested on charges of embezzlement and swindling, and it was found afterwards that he served a term in prison in 1886. His name is M. Dupray de la Maherie.——A bill has been introduced into the French Chamber to enable labor associations to make collective contracts with the representatives of capital. Breaches of a collective contract under this bill will be ground for an action for damages; an association will be corporately, and its members individually, responsible for such breaches.——On the 12th inst. the French Parliament rose for the summer recess, which will last until October. ——At Tours a tramp named Joseph recently confessed that he murdered, in 1901, five children of a farmer named Briere, near Chartres. The case attracted attention all over France because the father was by the police accused of the crime, found guilty and sentenced to life imprisonment. He died in prison. Briere stoutly maintained his innocence during the trial, as did his surviving daughter. On one occasion the judge left the bench and loudly proclaimed his belief in the prisoner's guilt, while spectators shouted "Kill him!" The police advanced the theory that the farmer, wishing to marry a woman of considerable wealth, found his children an encumbrance and murdered them.——On the 12th of July the King and Queen of the Belgians arrived on a state visit to Paris. They were received at the station in Paris by President Fallières, Prime Minister Briand and the presidents of the Senate and the Chamber of Deputies. The visit is regarded as renewed evidence of the close ties of race and language which exist between Belgium and France. The foreign editor of the *Siècle* remarks that "in the present state of Europe an independent Belgium can find true friends only in Paris and in London." ——The *Temps* has started an agitation against the public execution of criminals. The disturbances and rioting that attended the execution of Liabeuf at Paris furnish the occasion for protest. The news that even China is about to abolish public executions leads the *Temps* to remark that France " has allowed herself to be distanced by a nation governed by a despot."——A French bill on civil servants recently tabled by the Government has now been published over the signatures of the Prime Minister and the Minister of Justice. One of its most crucial phrases prohibits strikes. It points out that civil servants are privileged citizens, and hence have special obligations to the state. They cannot as union postmen go on strike to paralyze the public activities of the nation without exposing themselves to fines and imprisonment.

Church and State in Spain

The war between Church and State in Spain still goes on merrily. Among demonstrations that have taken place during the past ten days was one by women in Barcelona. The Civil Governor was given an album signed by 22,000 women who approve the religious policy of the Government. Similar meetings, numerously attended, were held at Saragossa. Toledo, Algeciras, Orense and Vittoria.

At Granada a counter demonstration by Clericals came into conflict with Republicans. The protest of the Vatican against the Cadenas bill, prohibiting the establishment of new religious associations in Spain until the negotiations between Spain and the Vatican are concluded, is said to be drawn up "in severe and energetic language." The Holy See denies the right of the Government to make such a prohibition without a previous agreement with the Vatican.—— On the 12th of July the negotiations between Spain and the Vatican were suspended, owing to the illness of Señor de Ojeda, the Spanish Ambassador at the Vatican. On the same date a decree was published at Lisbon, Portugal, censuring the Archbishop of Braga for suppressing a religious periodical at the Papal command without the concurrence of the Portuguese Crown. —— Señor Salvatella, a Republican, applied to the Spanish Chamber for an amnesty to be granted to Spanish refugees now in France. The application was denied by the Prime Minister on the ground that most of these refugees were dangerous revolutionaries.——Reports from San Sebastian, under date of the 18th inst., indicate a dangerous outlook for a political revolution in Spain. King Alfonso held a meeting with members of his Cabinet at which, it is believed, a military program was outlined. Labor agitators are working for a general strike all over Spain and are meeting with some success. Strikes are now in progress in Barcelona, Saragossa, Bilboa, Gerona and a number of other cities. Wealthy Spaniards are going in considerable numbers to San Sebastian, which is a frontier city. Notwithstanding official denials, it is believed that revolutionists barely missed wrecking King Alfonso's train last week when he was on his way to Madrid.——On the evening of July 23 Señor Maura, the former Prime Minister, was shot and seriously wounded by an assassin at Barcelona. Señor Maura was alighting from a train from Madrid when his assailant fired three shots at him, of which one struck his leg.——A serious mutiny broke out on July 22 in the prison at Madrid. Troops were called out and intimidated the mutineers by firing into the air. Advices from Madrid are censored so that it is difficult to tell how grave the situation in Spain is at present.

The Far East

Official dispatches received at Lisbon report that the operations of Portuguese troops against Chinese rebels and pirates on Colowan Island were entirely successful. Sixteen prisoners were released and forty-four of the Chinese pirates were captured. The trouble originated in the capture of a number of Chinese students by the pirates.——The troubles of Japan with the aborigines of Formosa have developed into a little war. Most of the fighting is in thick forests on mountain sides from 3,000 to 4,000 feet above sea level. This makes it difficult to use artillery. The Japanese forces are now building intrenched lines with blockhouses. The total length of these lines to date is over 300 miles. Mountain guns employed recently have had the effect of inducing surrenders of large bodies of natives.——The well-known volcano, Mount Asama, in Japan has recently shown signs of activity. Ashes have fallen in districts about the mountain, but so far the crops have not suffered any damage.——The Chinese Foreign Office made no comment on the Russo-Japanese agreement at the time the communication was made. It has now exprest its satisfaction at the decision of the two countries to adhere to the Portsmouth treaty and the *status quo* in Manchuria.—— The Chinese Viceroy at Hongkong, has replied to the protest of the British Foreign Office against the opium monopoly regulations. He disagrees with the contention of Mr. Max Müller, Councillor to the British Legation, that they form a breach of the Chifu convention. He makes the charge that the British have not complied with the terms of the opium agreement; that all civilized nations are assisting China in her policy of suppressing the opium traffic, while Great Britain is impeding it.——The Japanese Minister of War, Terauchi, before departing for Seoul, stated that Japan did not intend to rule in Korea with the "mailed fist." However, he gave it as his opinion that radical changes in the system of government would be necessary.

Julius Cæsar on Theodorus

An Intercepted Telepathic Communication from the Shades

HE that was Gaius Sallustius to him that was Gaius Plinius, greeting:

While you have been wandering over the face of the earth, watching the Daedalian exploits of the aviators, your friends who were Romans have whiled away some of their hours in the discussion of public affairs. When Cæsar takes part in our conversation, the talk, as you know, is apt to turn upon politics, and of late years it has turned not infrequently upon the politics of the American commonwealth. To those Romans who were before you—and especially to us who were of the city in its seventh century, when magistrates were chosen and laws were passed, not as in your time by a servile Senate, but (in form, at least), by the assembled citizens, and when there was not one princeps only, but two or more principes, leaders of parties contending upon equal terms—it seems (as you have heard many of us say) that the politics of the Americans are more like those of our own time than any that have been witnessed in the intermediate centuries. In this tract of time many commonwealths have risen and fallen, but not until now has a democracy again extended its sway over any considerable part of the earth's surface or come to count its citizens and subjects by tens of millions. With the accumulation of wealth, moreover, and the increasing division of classes, the Americans find difficulty, as we did, in adapting to new uses institutions of an earlier type, devised when the citizens were counted by thousands only, and when none of them was very rich and few free-born men were very poor.

Nothing has more interested Cæsar, in this new commonwealth, than the appearance of party leaders such as we were wont to call principes. Sulla and others who saw the beginnings of the principate at Rome remarked, many years ago, that leaders of the same sort were appearing in America, and that by the Americans they were described as "bosses." In America, as was the case at Rome, some of these principes gain and hold leadership by political ability of the higher sort, some by flattery of the populace, some by corruption; and for the most part the Americans have been inclined to call the party leader a boss only when his power is rooted in corruption. To us, however, the distinction between political leaders in general, such as have appeared at all times, and those whom we called principes, is this: that the princeps is not the servant of his party, but its master, and that he is its master by virtue of his control of its organization, which the Americans aptly call the "machine." We assuredly had the machine, although we had no name for it, confounding it with the party, of which it had taken the place. And we had principes who gathered money by extortion or from the award of public contracts or from the sale of privileges, and who spent some of this money in corrrupting the voters, as well as principes of a less sordid type; but in our view all these were equally principes. The princeps was he who had under him all the lesser leaders, captains of thousands and of hundreds; and it was he who decided which citizens should be named in each year for the various offices. After the principate was firmly established, the Roman citizens no longer selected their magistrates: they made choice between the lists which opposing principes laid before them.

Cæsar tells us, and I for my part think that he is right, that the princeps appears when the strife of parties for power becomes so keen that victory is not possible without discipline. Discipline signifies submission to authority: and in the prolonged and bitter strife of parties the princeps appears as surely as the supreme commander in war. Cæsar adds that party strife reaches this vehemence only when the state is completely ruled by one or another of two contending parties. The Roman com-

monwealth, he thinks, came into this condition because of excessive division of governmental authority. When the last king was driven out, in the third century of the city, our ancestors sought to prevent the revival of kingship by dividing governmental power, first between the assembly of the people and the elected magistrates and then between the magistrates themselves. In their continuing dread of monarchy, moreover, they multiplied magistracies, and then they created tribunes to check all the magistrates, even the highest. This did little harm as long as the commonwealth was small and its government a simple matter; but when Rome became mistress of many provinces and ruler over tens of millions of subjects, and when a few citizens became very rich and many very poor, it was no longer possible for the commonwealth to live under its ancient and simple laws. To those who, like the Gracchi, were dissatisfied with the condition of affairs it seemed necessary to make new laws; but they soon found that such laws as they desired could not be passed, much less enforced, unless all the separate authorities of the commonwealth were compelled to act in harmony. Such compulsion was exercised by the party of the reformers, which first developed the necessary discipline; and it was in this party that the first true princeps appeared, namely, Marius. Then those who were contented with things as they were found it necessary to organize their own party and to submit themselves to a princeps, and the first of the conservative principes was Sulla. From the time of Marius to that of Augustus, the Roman people no longer ruled themselves, but were ruled by principes; and as often as there were several principes in the same party, each with his own following and none supreme, it was necessary that these men should come to an agreement with each other, as in the triumvirates. The Americans, I understand, call such an arrangement a "deal."

Cæsar says that the Americans have come to be ruled by one or another of two contending parties for precisely the same reasons: because the Americans also, when from colonists and subjects of a distant king they became independent, feared monarchy above all things; and accordingly they acted like our ancestors, dividing authority between assemblies and magistrates and multiplying magistracies. Then, in order that the things which must needs be done might be done efficiently, they also subjected themselves and their assemblies and their magistrates to the rule of parties; and their parties also came to be organized like armies, and their party leaders became principes. Thus, says Cæsar, in the attempt to escape monarchy the people fall under monarchy; for it matters little, so long as one man rules, whether he be called king or boss. Cæsar indeed believes that monarchy is the natural form of government, to which all other forms revert. If the few rule, they must grant power, little by little, first to more and then to the many; and when the many try to rule themselves, they subject themselves to leaders. But in this we do not all agree with Cæsar.

Our latest discussion of these matters began with a remark of Titus Livius. He spoke of the return of Theodorus to America, and of the triumph which was accorded him by the magistrates and citizens of the American metropolis. "It seems," said Titus, "that on this occasion there were portents which our priests would assuredly have regarded as significant. For many weeks preceding the return of the princeps the weather was unseasonably cold and there was much rain; and on the very eve of the triumph the college of augurs doubted whether the heavens would be favorable. But as was written in flattery of Augustus, so with Theodorus:

'It rains all night; the games return with day;
Cæsar with Jove divides celestial sway.'

The heavens smiled upon the debarcation and favored the triumph. The weather, however, rapidly became sultry, and has, indeed, remained oppressive since that time. Moreover, immediately after the conclusion of the triumph and while the princeps was on his way to his villa by the sea, a tremendous storm descended upon the metropolis and its suburbs. The augurs report, indeed, that during the absence of Theodorus there has been no such storm, as regards either the volume and speed of the

downpour or the loudness and frequency of the thunder."

"One need not be a priest," said Cæsar, smiling, "to interpret these portents. But indeed I also, like his countrymen, am awaiting with interest the next actions of Theodorus. As I have said more than once, a principate of the entire American empire must needs be slow in coming. The Americans, as you know, are living under a form of union that is midway between a league of States and a true commonwealth; and by reason of the independence of the single States they have had, as a rule, only local principes. The American empire is commonly ruled by the associated action of the local principes, many of whom sit, as was the case with us, in the imperial Senate. Twice, however, there has appeared in America a princeps of the whole empire: the first to hold this authority was Andreas Jaxonius, twice chief magistrate, who was princeps of the popular party; the second is Theodorus, who is of the party that is not desirous of innovations, but who has nevertheless forced this party to make innovations. In doing this he showed himself a princeps. Andreas in his day set at naught the desires of the local principes, holding his entire party in the hollow of his hand. Theodorus has done the same. Moreover, each of these men, in leaving the magistracy, was able to name his successor.

"I do not know," Cæsar continued, "whether it has occurred to you that the position of Theodorus is, in one respect, like that which I held when I was slain and which my nephew held after me. At this moment he has no important rival in the principate, either in his own party or in the opposite party. Indeed, it almost seems as if there was no party in opposition to him. I destroyed the opposing party in war; Theodorus has ingratiated himself with his political opponents by adopting many of their policies. He is really antagonized only by the minority of his own party, those who are not desirous of innovations."

At this point some one said: "But do you think, Cæsar, that Theodorus or any American princeps who may come after him can become independent of the people, as you were when you were slain, and as were the later Roman principes?"

"A princeps," Cæsar replied, "cannot become independent of the people except by gaining control of the legions and warships of the empire. According to the laws of the Americans, the chief magistrate of the entire empire, who has no colleague and who is called 'president,' is commander of all the legions and of all the ships; and it is not unlikely that a princeps may again become president; but the Americans have a custom, which hitherto has always been observed, that the President shall not exercise military command in person. "And yet," he added, "if Theodorus should again become President and if in his consulate there should be a war, it would not be easy for a man of his temper to remain in the capital.

"I do not pretend, however, to divine the future. I only say that Theodorus is at this moment princeps of his party throughout the empire, and that there was no such princeps before him except Andreas, and that there is at this moment no other princeps in America except in the single States."

"But," said Titus Livius, "are you assured, Cæsar, that Theodorus is at this moment really princeps? He was not princeps, even in his own State, until he became chief magistrate of the empire; he has been absent from the country since he laid down his office, and has but now returned. Who can say that he still has power?"

"President or not President," Cæsar answered, "Theodorus is princeps, as I was at Rome even when out of office. The fact that everyone is waiting to see what he will do is proof that he is princeps. In a free commonwealth, it is the opinion of his fellow citizens that marks a man as princeps. If he is always in the public eye and on the public tongue as princeps, then assuredly he is princeps. This position may be attained by deeds or by words or by a mixture of deeds and words. As I have reflected on my own career—and Pluto knows that I have had the leisure—I have come to think that I relied over much on deeds. I think now that I fatigued myself needlessly and slew many more Gauls than my purpose required. I

wrote too little. It was only when my proconsulate in Gaul was nearing its end, and it was clear that the Senate would not prolong it, that I wrote the history of my Gallic war. At that time I expected to stand again for the consulate. I was aware that few of my fellow citizens knew precisely what I was doing. I was informed that my opponents charged me with wasting the blood of the legionaries; I was therefore constrained to describe my campaigns and to show with how little loss of Roman lives I had conquered the new provinces. I also made it clear that in every case in which any considerable number of legionaries had been cut off, it was because my legates or their centurions had failed to obey my orders. But I should have written earlier, for by so doing I might have created such a sentiment at Rome that the Senate would have been constrained to prolong my proconsulate. In this respect Theodorus is wiser. He writes continually, and all men know what he has done and what he is doing, even in small matters. He understands the temper of a democracy; and he knows how to write, and to cause others to write concerning him, the things that will please the people.

"If you would know whether Theodorus is princeps, recall to your minds the manner in which the Roman people honored its principes; consider the various powers which the principes of my time held in fact, and which were bestowed upon the later principes by vote of the people or of the Senate; and see which of these honors or powers is withheld from Theodorus. Imperator he is, for he has twice triumphed: once after the little war with Hispania and the second time, by all the gods! after warring in Africa with lions and elephants. Pontifex maximus he is, for he interprets the sacred law which the Americans call their 'constitution.' Censor he is, for he brands with infamy the citizens whose deeds displease him, and those also whose report of his spoken words differs from the true report, which is his. Tribunicial power he exercises, for he forbids that things be done; more than tribunicial power indeed, he asserts, for he calls upon magistrates and assemblies to do this thing or that and to adopt this or that measure."

It is not always easy, my Gaius, to be sure how far Cæsar is serious and when he jests; for he mixes jest with earnest in a disconcerting fashion and utters both with an unchanging countenance. While he was speaking, the evening edition of the *Ephemeris Inferorum* was brought in; and, as Cæsar paused, Titus said:

"Cæsar, Theodorus has requested, in writing, that a certain rogation which was before the assembly of his State should be accepted; but of the members of his own party a certain number have voted against the rogation, and it has been rejected. The enemies of Theodorus are exultant and declare that he is no longer princeps."

"We must wait, Titus," Cæsar responded, "and see what Theodorus will do next. It will also be important to see what will happen to those that have disobeyed him."

M. S.

The Endowment of Young Writers

BY UPTON SINCLAIR

ON May 14, 1903, THE INDEPENDENT published an article of mine entitled "My Cause," in which I told the story of the writing of "The Journal of Arthur Stirling." The article began as follows:

"I, Upton Sinclair, would-be singer and penniless rat, having for seven years waged day and night with society a life-and-death struggle for the existence of my soul, and having now definitely and irrevocably consummated a victory—having routed my last foe and shattered my last chain and made myself master of my own life; being in body very weak and in heart very weary, but in will yet infinitely determined, have sat myself down to compose this letter to the world, before taking my departure for a long sojourn in the blessed regions of my own spirit."

The article then went on to outline a plan which I had conceived for the endowment of young writers.

In the seven years which have passed I have not forgotten the subject, but have written about it occasionally, and have never lost an opportunity to suggest the matter where I thought anything might be accomplished thereby. Finally, on March 30, 1910, I addressed the following letter to over fifty of the leading writers of the United States and Europe:

"Seven years ago, apropos of my book, 'The Journal of Arthur Stirling,' I published in THE INDEPENDENT an article advocating the public or private endowment of men and women who had shown signs of great literary talent. Recently I had an opportunity to urge the matter upon the attention of a well-known philanthropist, and at his request I submitted an outline of a plan. He requested me to obtain the opinions of representative writers upon it. I would be pleased if you would state what you think of it. Those letters which are not marked 'Private' will be offered to THE INDEPENDENT for publication in the form of a symposium.

"What I have in mind is a permanent endowment, analogous to the 'Nobel Fund.' Its purpose would be the encouragement of vital creative literary work, by the establishment of scholarships or prizes, to be given for a period of two or three years, with the possibility of continuance if the candidate's work should make it seem worth while.

"First of all, the establishment of such a fund would call attention to the fact that there does not exist in America any provision for the maintenance of young men and women who wish to learn the difficult art of creative writing; nor any way by which genius may be recognized and saved from extermination.

"The provisions of such an endowment would have to be drawn with care. They should make clear that what is sought is young work rather than perfect work; work of a forward-looking tendency, by writers whose future is before them; and work of a new and path-breaking nature—not simply conventional and well-bred and academic work. The competition should be open to manuscripts published and unpublished; but only to writers who are dependent upon their own efforts for a living. Also we should exclude books which have had a considerable sale; for there is no need to help successful authors.

"The success of the undertaking would of course depend upon the selection of the judges. We could not please every one, nor hope for infallibility; we could only do our best: endeavoring to pick three men who (1) have produced vital work themselves, and (2) have shown penetration, sympathy and balance in their judgments upon the work of others. A certain number of the prizes should be by the award of all three judges; there should be at least one prize for each judge to award on his own individual opinion. In a matter of importance such as this, it would be worth making many mistakes to achieve one success. If we could save one Chatterton or Keats it would be worth all the cost and trouble.

"The awards should be for three classes of work: poetry, fiction and prose writing of an inspirational character. There should be in each class one prize of one thousand dollars for three years, and two prizes of five hundred dollars for three years. I estimate the other expenses: Salary of manuscript readers three thousand dollars, salaries of judges three thousand dollars, office expenses one thousand dollars—a total of $25,000 for a three years' experiment.

"The establishment of the 'New Theater' in New York has served to awaken discussion of the deficiencies of the commercial theater. The deficiencies of the commercial publishing business, the commercial book review and the commercial book store are fully as great; and all the world would be made to realize them if this plan were tried. If it worked—if really vital men were found and helped—then a great precedent would be established.

"I submit in conclusion a few facts:

"1. Milton, Shelley, Byron, Browning, Ruskin, Swinburne, Hugo and Goethe were all men of means.

"2. Wordsworth, Southey, Tennyson, all received incomes or pensions.

"3. Marlowe, Chatterton, Poe, Keats, and recently George Gissing and John Davidson died miserably.

"4. Men like Johnson, Carlyle, Whitman

and Meredith have left testimony to the neglect and poverty which handicapped them.

"5. Of the few poets we have now, ——— has a pension, and ——— recently went into bankruptcy. ——— and ——— are disgracefully poor, and ——— lives like a hermit in a hut. I might tell you of a score of other men who are in utter destitution, or who have to cheapen and degrade their work deliberately; for instance, ———. Men like this do not cry their woes from housetops, and they do not write begging letters. But they would accept an award which was made under conditions which made it a public honor."

I herewith submit to the editors of THE INDEPENDENT all the letters which I have received, except a couple which were marked "private." As will be seen, the opinions exprest concerning the plan are very diverse. There seems to be a general agreement that something ought to be done on the subject, but many question the efficacy of the method which I have suggested. I shall be glad to hear from others to whom the question may appeal.

EDGE MOOR, DEL.

* * * * * * *

The plan you outline is one which, if put into effect, would do good. Its promise of support for the writer might not turn out to be its most important benefit. Just think of the good it would do to his books! There are many fine novels produced every year—I don't believe that is too strong—but they are lost in the maelstrom of new things. The man or woman who happens to see a good book not possessed of striking qualities of "popularity" may never meet a person of similar tastes to whom the effective word of praise may be spoken. And unless it is spoken to the person of similar tastes the impulse dies.

Your plan would open a modest sort of "Hall of Fame," in which new works would be rated by people who, whatever their bias or lack of it might be, would not be advertisement writers. Such a recognition, making its way into the press, would in itself go far to bring a book into its own. The more I think of it, the more the utility and wisdom of the plan appeal to me.

I seem to have abandoned the novelist's trade for the moment, so I speak without selfish interest; but I wish some impulse might be given to the production of better books. Nowadays the tension upon even successful novelists is terrific—note the sense of scream and shout in the books of those who could do better if they dared.

HERBERT QUICK.

SIOUX CITY, IA.

I wish very much that such a scheme were possible, but I do not think it is. I advocated something of a kindred nature in my "Mankind in the Making" some years ago. The insurmountable objection to my mind lies in the nature of selecting juries; they invariably become timid and narrow and seek refuge in practical, academic and moral tests that invariably exclude the real men of genius. No respectable jury would have touched three of the six men named in Mr. Sinclair's list with a pair of tongs. Consider the way in which the Nobel prizes are being distributed, as rewards for longevity among the securely famous; and consider the life-long exclusions by the French Academy and the London Athenæum Club of some of the most brilliant French and English writers. On the other hand you may easily raise up against the struggling real men of genius, a class of subsidized rivals who will undersell him with all the prestige the prizes suggested would confer.

No, I strongly advise the millionaire in question to leave this scheme alone. If he really cares profoundly for literature, then let him follow his own tastes and seek out and know and help the promising new men himself. If he cannot do that, he had better leave literary patronage alone. Mr. Sinclair's paragraph five suggests scope for him. He might begin by looking up these men.

H. G. WELLS.

LONDON, ENGLAND.

I am indisposed to degrade the literary art by lending my name to the organization of an Order of Mendicants to cultivate it. The number of authors is already greatly disproportioned to the number of thinkers, while there is no end of the books that are writ to no end. No people fail as authors except such as have mistaken their vocation, or abused it. It is the misfortune of what is called the entire Christian world to

feed too much upon other people's brains than their own, because it is so much easier to read than to reflect. Hireling writers like hireling preachers rarely rise above the standard of the wealthy who feed them. Printing is so cheap with us that newspapers and magazines do pretty much all the thinking that is done by our people, and the evidence of this is nowhere more conspicuous than in our representative bodies. If you would repeal our tariff upon imports, and impose its 50 per cent. duty on the net revenue of newspapers, to proportionately raise their price, you would do more to elevate the standards of our literature, the character of our people and the purity as well as the wisdom of our legislation than if any part or all of Mr. Rockefeller's incalculable fortune were devoted exclusively to the "endowment of men and women who had shown signs of great literary talent."

Horace Walpole wrote a book expressly to trumpet the achievements of noble authors, none of whom, of course, wrote for a living; and when you compare the achievements of his heroes with the achievements of the great masters of English literature, you will see to what results your endowment would tend.

I could name many other objections to your scheme, but I have named enough I think to excuse my declining to associate myself with the enterprise.

With entire respect for your motives, and an entire distrust of the results at which you aim, I remain, dear sir,

JOHN BIGELOW.

NEW YORK CITY.

I do not think my inability to make up my mind as to the advisability of a literary endowment such as you advocate, is a sufficient reason for not answering your letter. So I write what it occurs to me to say.

Granting a perfect administration of the funds, there can be no doubt that the scheme would be of service. But this is a large order, in this imperfect world; and so far as my limited experience goes, maladministration of funds seems to be rather the rule than the exception.

If the selection of the beneficiaries could be placed in the hands of prophets, confidence in a good result might not be misplaced. But forecasts of what youth means to do in middle life are so often all wrong. And is it certain that hot-house culture would not weaken the plant? Is the human race growing stronger from its strenuous efforts to foster cripples and set them a-breeding?

However, if this sort of argument is carried too far, we shall come to sitting down and doing nothing!

So that really this sheet of note-paper carries no opinion with it. It only shows my way of looking at the matter, off-hand. Certainly the idea is not one to be lightly discouraged, and I hope you will meet with a less hesitating confidence in it elsewhere. WILLIAM DE MORGAN.

FLORENCE, ITALY.

I think very well of your plan for aiding young authors, provided you can secure a proper collection of judges. The whole difficulty lies there; in my opinion you require, as judges, neither authors who have produced first-class work, nor fairish authors who have only reputation with the public. The former would be too individual and impatient in their judgments, and the latter would be afraid of really original, powerful stuff. The stuff which you want to encourage and ought to encourage would almost certainly shock both these classes of men —I mean shock them artistically. Nevertheless the judges must be practising experts in literature. From what class, then, are they to be chosen? I should say, from broad-minded critics, *fond of and versed in some foreign literature besides their own,* who have produced *some* verse or fiction or drama, but whose main business is criticism. I do not mean, of course, that you should go out deliberately to find your judges in this class, and not elsewhere. I wish merely to give a general notion of my ideal of a judge.

Particular importance must be given, as you say, to the fact that what should be sought for is "young work rather than perfect work."

I think the prizes should be paid without any conditions whatever, and that they should not be larger than is absolutely necessary to support existence—at, say, the standard of an average young clerk. ARNOLD BENNETT.

FLORENCE, ITALY.

I have your notable proposal in the memorandum of March 30, and, while heartily admiring the generous instincts that inspire it, must regret that in my humble judgment your scheme presents little promise of aiding art.

It takes three generations, not three judges, to decide for a real, live, new form and weave the laurel. The big men who die young cannot expect to see their genius crowned; while those who are tough enough to weather the adverse tide and reach three score and ten—a Rodin, a Monet, a Wordsworth—do the trick. It is a matter of chance, the quality of the physical and mental machine, the blood in the veins, the way genius spends its spare time. I don't much believe in making the road smooth—even if we could. Every thinker must suffer from man. It is a test of original thought. The new is only born out of pain.

I cannot seriously believe with Mr. Herbert Quick that the lava-flood of mediocrity and drivel poured out here and in America smothers many treasures, as Vesuvius smothered those of Pompeii; for to obtain a hearing is very much easier than it was thirty years ago —thanks to general improvement in education. Moreover, an original man has a better chance to be heard in your country than in mine, because your magazine literature is alive and alert and fairly ready to welcome a new thing. It is not entirely under the thumb of religion, or in terror of public opinion, or hat off to the young person's parents. Here, these forces rule, because they represent the money, and an artist who lives by writing can only boil the necessary pot with discomfort. No; your budding genius is in better case than ours: you are going on all right, save for a stupid petticoat prudery in sexual matters; while for us, what we want are certainly not prizes for unrecognized merit in our writers, but an effort toward more merit in the readers. We and they alike wallow in the mean sties that our journals provide. We cannot get ourselves to them, because magazine proprietors will not suffer us to do so. We must appear before them in the moth-eaten garments that they know.

Twenty-five thousand dollars for a three years' experiment is a reasonable enough demand in any case.

But don't pay the judges. That mighty trinity should soar, on the wings of their "penetration, sympathy and balance," high above the dollar. Add their proposed emolument to the fees of the manuscript readers, for it is they who must have the hard work. After their weeding, those on the judgment seat will not find enough to do to tire them.

EDEN PHILPOTTS.

TORQUAY, ENGLAND.

Your circular letter has interested me very much. It is like your altruism; you seem always to be thinking of some new benefit for people. In the plan you outline I can see no objections; and I believe that even the most ardent theorist for social reform must eventually come to your way of thinking.

For even in the most perfectly organized society, poetry would still be in need of something more than popular support. In the very nature of poetry there will always be something a little in advance of our common aims, understanding, and aspirations. If it is worth while, it cannot ever be quite fully valued in its own day, or rather, I should say, widely enough valued to be self-sustaining. And as you truly point out, the best poets who have come to maturity have always had some means of livelihood at their command. The idea that any sort of an artist or workman is all the better for being doomed to a life of penurious worry, is such a silly old fallacy, one wonders it could have persisted so long.

A little hardship is good for every man at the beginning of his career, no doubt. Gives tone to his moral system, and tempers his character. But a continuity of it is crushing. The plight of bewildered and struggling genius is a disgrace to us all, but one which your noble purpose would do much to remove, I believe.

And then, too, in your scheme no man need feel that he is being endowed, that he is being removed from the universal brotherhood of workers (if he be sensitive on that point). It would really be only paying him decently for his time, recognizing him as a useful member of society.

I believe that genius can be educated, and ought to be. But, of course, we cannot expect the state to look after that just yet. It is trying to educate the average mind; that is something. And I for one am very glad that you are able to undertake this exceptional venture. There can be no question of its rightness. And if it is carried out with a fair amount of care, I believe it will succeed.

BLISS CARMAN.

NEW CANAAN, CONN.

Yes, I think your plan is all right, but it ought to be limited to young authors that show unusual aptitude in poetry or in economics. To encourage the writing of fiction is unnecessary, because we don't need any more fiction and the fiction writer has a chance for commercial returns. If we are to continue to live under the present wolf-den organization of society, we ought to take care of the men and women that are too fine to go out and fight. So long as literature is produced for profits, it will be more or less soiled, but poetry at least is too exquisite an art to be dragged about in the mire. If Swinburne had been obliged to earn his daily bread we should never have had the "Songs before Sunrise."

CHARLES EDWARD RUSSELL.

NEW YORK CITY.

I have read and considered your circular letter in regard to the literary endowment fund with a great deal of interest. The plan seems to me to have more in its favor than against it. Naturally the obvious argument against it is that it will tend to encourage writing rather than discourage it, which is, broadly speaking, a bad thing. A born writer cannot help but write, and will do so; and others are not only apt to produce mediocrity, but are drawn from more useful spheres of usefulness. The next most obvious argument is that it is indubitably true that a man's moral fiber is braced by struggle, and relaxed by subsidies. Furthermore, I very much doubt the wisdom of including fiction in the list of beneficiaries. However the conditions may have been even as late as ten years ago, at present a man who could show enough fiction talent to win a scholarship from any set of judges, could equally well get enough encouragement elsewhere to prevent actual starvation. I admit this is not true in the case of poets, nor to a very great extent in that of your third class. Your scheme would be most interesting, and probably valuable, if properly conducted, as applied to the last mentioned writers.

STEWART EDWARD WHITE.

SANTA BARBARA, CAL.

Let me answer frankly your circular asking for opinions about an endowment fund for youthful talent. I don't believe in it. The names you cite under heads three and four (3 and 4) fall outside the project under 5. What is much more needed, it seems to me, would be some sort of old-age pension for men unable to stand on their own feet.

A young man whose talent cannot find any recognition from editors or publishers in this day of lively competition seems hardly worth encouraging. In our scribbling age, what is publicly most needed seems to me to be some kind of machinery for suppressing literary production rather than for stimulating it.

What to my mind has for many years appeared as a desideratum is something to take the place of the old-fashioned "patron," or to perform the function exerted in England by the "Author's Fund," or the annuities awarded by the Privy Council. The really tragic cases are those of older men, victims of their genius, but without earning capacity. Often their *characters* are responsible, but that doesn't diminish the tragedy. I have two cases in mind now, for one of which I myself am the almoner. If the philanthropists you have in mind will establish a fund for such cases as this, I shall warmly applaud them. There would be no need of salaries, for the judges would decree upon recommendation and give their services.

As for the young, let them scratch as they may, and devil take the hindermost! To encourage men to keep on, who *need* the encouragement because they have no market quality in them, seems to me almost criminal.*

Excuse my brevity, and believe me

WILLIAM JAMES.

*Our "fellowships" at Harvard often seem criminal in this way of keeping men at the university till it is too late for them to change the career in which they turn out failures.

P. S.—My brother Henry, who is too ill to write, asks me to say to you that he fully agrees with the substance of my letter.—W. J.

RYE, SUSSEX, ENGLAND.

I am afraid that I am not in sympathy with the plan you have outlined. It strikes me as the sheerest palliative for a state of affairs that is radically wrong. I remember the great battle that has been waged in New York City against inside rooms. When the battle began fifty years ago, there were 60,000 inside rooms in New York City. Today there are 300,000 inside rooms. While this endowment you are seeking to establish might save one Chatterton or one Keats, nevertheless, the conditions at the present still obtaining, divers Chattertons and Keats will have been destroyed. I am in sympathy with the spirit that prompts you to outline this plan; but I am certainly not in sympathy with the plan. It strikes me as inadequate.

I remember reading the report of a society in London formed for the purpose of sending children who had never been in the country in their lives for a day's outing in the country. In this report, the society felicitated itself upon the fact that there weren't very many children left in London who, thanks to the society's efforts, had not had that one day in their lives in the country. Yet this is no more pathetic and inadequate than is your plan of rescuing a small number of geniuses from this howling desert of commercialism.

JACK LONDON.

GLEN ELLEN, CAL.

I have doubts as to the possibility of "the public or private *endowment* of men and women who have shown signs of great literary talent"; but, of course, I think that good has been done by such prizes as are conferred by the Nobel Fund and by the French Academy. I am not sure, however, that, as matter of fact, the poverty of the recipient is taken into consideration in the conferring of these prizes. Nor do I understand that they are given to "young work rather than perfect work." Their chief value, it seems to me, lies in the fact that they are conferred by bodies which have a distinct position and a high standard of excellence. This gives them the advantages which are pointed out by Matthew Arnold in his essay on "The Influence of Academies."

HENRY VAN DYKE.

PRINCETON, N. J.

The scheme that you outline for the endowment of creative effort in literature appears to me a happy inspiration, or, shall I say, a step in the direction of fair play.

I am not sure that it will incubate genius, but I think it will give the sincere and aspiring a chance to get their second wind, and I'm sure it's worth trying.

The difficulties that beset the administration of a scheme requiring the nicest judgment of creative work are sufficiently obvious and rather appalling; they will have to be encountered in the spirit of men whose backs are turned on "success" in the usual sense of that word.

I suppose that under the three headings—poetry, fiction and prose writing of an inspirational character—drama would find a place, for this needs support, if anything does.

JOHN GALSWORTHY.

MAHATON, DEVON, ENGLAND.

Your very important and interesting inquiry raises deep questions.

This is the first that offers itself:

Is it desirable that true genius be relieved of care? Would men like de Foe, Dickens, Carlyle, Meredith, de Balzac have written better if they were always kept free from struggle? Was not often financial need the origin of high-class production? Is not often the suffering and neglect a purgatory out of which the strong mind comes strengthened and fireproof? Is it not often wholesome for a creative mind to join in the common labor for subsistence?

I for myself can testify that neglect, misunderstanding and also material worry and need, however hard and unpleasant, served to acquire strength and independence that could not have been reached otherwise.

On the other hand, it may be said that

art cannot reach its full development without leisure and luxury, and that many a tender sprout of true genius was downright killed by adversity.

The general outcome of these reflections is that all depends on the wisdom and judgment of those who have to administer the endowment.

There is a psychological limit until which cares and difficulties are beneficial by hardening and purging the soul and deepening the artistic genius.

Tried beyond that limit the soul withers and perishes. This is part of the universal biological rule, that makes a muscle grow and strengthen thru exertion, but wither and atrophize by overexertion.

It would be the very subtle and difficult task of the board of trustees to distinguish accurately where a man ought to be left alone in his struggle or delicately relieved.

This would mean, in my view, that this board of trustees ought to be composed of men of great genius themselves. For the average man is unable to detect genius. Usually it is genius who discovers himself and convinces the average man of his superiority.

In the meanwhile I deem that the possible harm done by an experiment could never outweigh the possible good, so I heartly endorse your plan.

FREDERIK VAN EEDEN.

BOSSUM, HOLLAND.

I am deeply interested in the literary endowment plan which you have placed before me; there are many things to commend it and nothing to condemn it. For one thing, it would tend to give dignity to poetry and hope to poets. While it might call out more poetasters, it would also tend to increase the work of the bards, the authentic sayers. And anything that will add to the poetic treasure of the nation will add to the nation's glory. Verily, in these times of materialistic fatalism, anything should be welcomed that will add to the ideal element in our civilization.

All thoughtful minds are aware of these facts, and in England they try to solve the problem by granting ample pensions to her literary men. But nothing whatever has been done in this country to help her struggling geniuses, and yet there is no land where the sensitive spirit has a harder struggle with iron Circumstance.

EDWIN MARKHAM.

STATEN ISLAND, N. Y.

It seems to me that every bad thing and every good thing can both be said about the plan, the whole thing swinging one way or the other upon securing men with imagination and catholicity and with the modern spirit to act as judges. Even the men of genius themselves cannot discover one another, and it is still harder for the rest of us.

But I am very sure that men can be found, even tho they are not more immediately in sight, who could conduct such an enterprise in such a way as to make it a national asset and lay the foundation for our having a literature of our own. I am not going to say anything more about it in this letter.

It is a great crisis, and it seems to me it is not merely a crisis of literature, but a crisis of the nation. The nation is not efficient industrially or religiously unless it can have artists to interpret it —men who can make people see the unseen and lean out upon the intangible and live their lives enough ahead to make them amount to something.

GERALD STANLEY LEE.

NORTHAMPTON, MASS.

One Day in a Clairvoyant's Life

BY EARL DE COURCEY

[The following article by a professional clairvoyant is as frank as one could wish. We think it will interest most of our readers.—EDITOR.]

FEW human documents are of greater interest than those which give us some glimpses behind the curtains of the mysterious arts. I venture to class the daily routine of a clairvoyant as being within the realm of the mysterious—one which is surrounded with mysticism in the minds of most persons.

Many persons, be it said, worship at the altar of clairvoyancy, rightly or not, matters little, but if we can admit that every religious cult has at least a modicum of truth behind it, else it could not find enduring support or adherents, may we not yield something to one of the oldest beliefs of mankind? Apparently it will not do to say that an acceptance of the pretensions of clairvoyants denotes ignorance and superstition, for many—yea, the best followers of the occult are not the poor and illiterate, on the contrary, the intelligent midde class is the mainstay and most sympathetic as well as most remunerative (to the medium), of all our people. The reason for this condition is not difficult to trace. Those of us who know this class of our people know full well that culture, intelligence and sympathy is to be found among this class to a greater extent than in any other part of our population. The feelings and emotions are keenly vivid; mental suffering is much keener with them. The loss of anything dear at once assumes greatly magnified proportions. If it is the loss of a child the mother-heart longs to know where it may be, and in her affliction the parent knows not where to turn. The minister will tell her to pray and trust in God. In most cases such advice does not wholly meet the needs of the situation. It is just here the clairvoyant comes in. It is also at this point that psychics find full justification for much of the deceptions practised. In a word, the clairvoyant must gain the full confidence of the mother, if he is to cause her to cease worrying. The grounds upon which it is possible to justify the subterfuges of a medium are as broad as those of a doctor who deceives a patient under his care. The Jesuit is not the only metaphysician who believes and practises the doctrine that the ends justify the means. Nevertheless, going back to our original subject, we may say that, were there no substantial fabric behind the phenomena of mediumship, we may rest assured that the entire cult of clairvoyancy would doubtless long since have fallen to the ground. In as much as there are at least 10,000 persons earning some sort of a living, at this time, by the practice of clairvoyancy, in the United States, a demand is unquestionably being supplied. At the risk of being challenged, I venture to assert that there is, apparently, as much of a basis and foundation for psychic phenomena as for Christian Science, for example.

In this article it is proposed to peep into some superficial phases of the strictly routine part of what is known as "high class" work in the "profession." Confidentially, it may be said, that "high class" is in reality nothing other than in outward appearances and in the degree of refinement or education possessed by the medium—in other words, an emphasis upon the externals, which experience tells us, make for success or the goal sought—namely, to make a good and strong first impression upon the mind of the person sitting for a reading. To this must be added a word in justification of the surroundings in which our

medium works. Inasmuch as most persons have not reached to that standard of discrimination where a distinction is made between the plainness of true refinement and the bizarre of trumpery, a high-class clairvoyant requires an elaborate *entourage* in the form of an extravagantly appointed suite of rooms. The obvious intention is to have a display which shouts aloud generosity and prosperity by the lavishness of Oriental splendor on every hand. The equipment is not complete, however, until account is taken of the young woman, of pleasing disposition and considerable intelligence, whose time is given to anticipate the every need of the visitors. It frequently occurs that some callers are obliged to wait hours before having an opportunity of seeing the professor. For this reason the latest magazines find place in the scheme to detain those who would otherwise tire of waiting. Parenthetically it may be added that the needs of supplying reading for the visitor has induced the medium to read the best periodicals published—all tending to improve the powers of the medium, for knowledge is power. Such, then, is the base work—and no small part of the essentials necessary for success.

If it were not for the large expenditures made for newspaper publicity few of the luxuries mentioned could be enjoyed. For the patent medicine as for the grocer, newspaper advertisement spells success; so too, the itinerant clairvoyant depends for patronage upon the space bought, usually at highwayman rates, as many publishers charge double the regular rates for a medium's advertisement. Why this is done has never been satisfactorily explained to me as yet. The reader may form his own conjectures, and in many instances may not be far from the truth if he should fall back upon the old and trite adage, which asserts that the "second thief is the best owner." Frequently it happens that the paper that accepts money for space, even in its editorial columns, will the next day excoriate the medium in its news columns. Consistency seems to be a jewel quite unknown in a newspaper office. Personally my relations with the newspapers have always been of the pleasantest sort; in fact, many newspaper men I have known have for long been among the best men of my acquaintance. Some newspapers will not accept a clairvoyant's copy at any rate. These papers are invariably the very best sheets of the country and can be counted, I judge, upon the fingers of the two hands. Publicity is, as already said, the mainstay of the many good things obtained by a psychic; publicity as certainly draws customers to an office as molasses attracts flies in summer.

Let us now go back to the waiting callers. About ten o'clock the office doors are thrown open to the public, and thenceforth it is rare that there is not some one waiting for a reading, tho the callers arrive stragglingly, slowly, but surely. Usually at a well calculated moment a portiere is parted and, suddenly, the professor stands in the door with a cheery smile, or "wreathed in calm solemnity," as the case may be, tho at all times radiant with the oil of suavity. Much depends upon this first sight of the chief actor in the little drama about to be enacted.

Many things arise momentarily to change or modify the lines of the dramarettes that go to make up the daily kaleidoscope of a medium's experiences; nothing is rigid. In fact, few clairvoyants of the type we have in mind follow the same methods. One of the best (effectively speaking) plans, tested by a wide and varied experience, does not permit of perfect satisfaction to the client if more than one person is permitted to enter the "holy of holies" at one and the same time. Practically speaking, the audience chamber is comparable to a confessional where a soul is laid bare. If what I understand of the institution of confession is correct, that a formula is used by Catholics, I am not surprised; for I have found few persons capable of condensing what they came to tell me into a few words. Consequently I have found it wise to request each sitter to reduce his main queries to writing, in order to save time and enable the client to concentrate his mind upon the object of his quest, and not upon me. Invariably success ensues—that is to say, the client goes away satisfied and the clairvoyant has an increase of "filthy lucre."

Many persons have an erroneous no-

tion concerning the supposed tricks practised, which enable a medium to know what is written upon the slips of paper used, as alluded to before. Let us try to understand the *modus operandi* of this phase of a "reading." As soon as a client is seated before a table upon which paper and pencils lie, the professor explains what is to be done, the writing of the queries it is desired to have answered upon paper, for mental concentration upon the essentials of the sitting, to the exclusion of all else. Be it noted, the professor always leaves the room before the writing begins and does not return again until the client rings a small bell provided for the purpose. It is evident the medium has not thus far spied upon the writing which has not taken place. Now, each query is written upon a separate slip and folded or rolled into a small ball; at no time do the slips leave the sight of the sitter; hence it would seem plain that no spying could serve to indicate the contents of any particular slip; yet it is possible to answer any query taken at random after any amount of mixing has taken place. The folded slips lie upon the table in full view all the time; in spite of this the psychic readily answers any one without asking a single question for information, either directly or indirectly. In fact, to so fine an art has this part of the "reading" been reduced that a master worker offers no objection when a client writes his queries at home upon his own paper, and, in special cases, all are sealed in an envelope. Even a burning of the envelope and its contents does not prevent a reading from the ashes. It would seem that in such instances frauds would be quite impossible. One thing is certain, the caller is a stranger to the professor, and nothing is known of the client when he enters the audience room. Let us try fully to realize what it means to be told one's name, age, occupation, or any other detail desired as a preliminary test. Accordingly it is not surprising that many who come to scoff remain to worship at the shrine that holds such powers. Really it is nothing short of the marvelous when one reflects upon the cold fact as a sitter sees it all. It may seem, in the reading of these things in cold type, it is quite unemotional enough; but if one is in an audience in front of a magician witnessing some marvelous feat for the first time, astonishment naturally masters the faculties; as a rule, reasoning is out of the question under these circumstances. The aim of the occultist is well served if he has succeeded in stupefying the reasoning powers of his client by some marvel. Complete success depends upon a continuation of the unusual, which in the hands of an artist is now an easy matter for the given client. Why? The answer may be almost self evident, tho we may better elucidate it by a somewhat roundabout way to discover the psychology behind it all.

The reader of this article should bear in mind that no "client" calls on a clairvoyant without a specific purpose in mind; whatever that may be is of no moment to us just now. On the other hand, the aim of the clairvoyant is to gain the fullest confidence of the caller. It is not, as a rule, a very difficult matter to make a good impression upon a person you meet for the first time if you are gifted with pleasing manners, tact and fine clothes. By constant practice of these requisites, perfection is attained in the first two; the fine clothes soon follow. Evidently the medium knows his business. Success depends upon externals, as we have seen above; hence we should not be surprised if he makes use of legerdemain to attain his goal. Frankness compels it to be stated that what has been described is nothing more than a clever magician's trick, tho there is never a resort to cunning spying, as so many suppose. It is legerdemain, the technic of which I cannot venture upon in this article. The main point is that it serves to impress the client that the psychic has mysterious powers, thereby convincing the deluded one into believing that it would do no good to attempt to deceive or hide anything from such a man as one who can read your thoughts in ashes. Indeed, so successfully may this mysterious reading be that I have been told scores of times: "Professor, any one who can tell me so many wonderful things about my past I am sure can do all he claims he can." When enthusiasm has been keyed up to this pitch there are practically no limits

to which the medium can go in immorality or in fleecing the fanatic.

We have thus far merely considered the preliminaries of a "reading"; the real work remains to be inspected. During the time the professor was giving instructions as to the writing of the slips careful note was taken of the human being before him. Possibly the victim will not speak a dozen words, yet the medium will almost invariably know the education possessed. The hands and nails tell much. Every feature discloses a tale; the shape of the features is important; the care of the teeth, hair, clothes, as well as the shoes, are details that do not escape observation. Now it may be all this is noted in less time than it takes to tell it, yet the outlines of character are as clear before the medium as this page is before the reader. Moreover, the more extensive has been the practice of the clairvoyant the more adroit are his intuitive analyses of character. Possibly hundreds of quite similar cases have passed before the psychic; hence, a composite type or types unconsciously are formed in the mind of the medium; classification then is easy, for human nature varies but little. If our professor is skillful at repartee, a wit, a fluent talker, and endowed with some eloquence of delivery, there can hardly be put any limit to his possibilities, for he will be an adept in oracular declaration susceptible of two or more interpretations, quite as the old Greek and Roman deities. Supposing an error is made and taken up by the sitter; the latter is then readily put in the wrong. Experience is a wonderful teacher. Adding to this the clue or clues gained from the queries written upon the slips, nothing is wanting to know what it is necessary to say in order to give entire satisfaction during the reading.

Now let us glance at the callers for an instant. Considerable curiosity exists, I believe, in the minds of persons who do not make a practice of visiting clairvoyants as to the appearance, character and condition of those who do consult such a wizard. It is quite natural that one should have distorted ideas upon the question, as one usually does upon the appearance and character of inventors. The latter are usually associated in our minds with long hair and thin features, bulging eyes and hungry looks. In reality there are but few inventors of this type. Still the type has come about as the result of the comic supplement of Sunday newspapers as vaudeville artists have given us the Irish comedian, "hayseed" (farmer), and Dutch comedians—no more, no less.

In the parlors of the clairvoyant the people we meet are in no wise different from the ordinary crowd we meet upon the streets of our cities, or in our churches on Sundays.

In other words, the callers are from that great body of the public who are upon the surface quite chic, but lacking in depth and breadth of mind. It would hardly be fair to say, that all clients are of this type, tho the majority are.

In a Western city a woman called at my office. Her husband had been ill with what the doctors declared to be an incurable affliction of the spinal column caused by a strain. The man was a grain dealer in a small way and did most of his work himself. For nine months he had been in bed, leaving the arduous task of carrying on the business to his wife, a rugged, honest, homely, kindly, good-natured woman. She loved her husband and would go to any length to help him in spite of the declaration of the doctors. She could not bear to think that he must die. Could not the man of mysterious powers help her? "Could you not cure him, or, at least, save his life," was her despairing cry. When all else failed her this woman, a church member of a Protestant denomination, appealed to me—a psychic. Her faith in me was blind, absolute—as was that of the poor souls who pleaded with the Christ for succor—nothing doubting. I know to a certainty that she derived good from her visit to my office. Her husband did not die, in fact, he partially recovered. The credit for this marvel was given me rightly or wrongly. Confidentially, I should attribute the good accomplished to faith, precisely as in the case of those who were benefited by faith in the powers of Christ. We have not yet developed enough psychically to appreciate the profundity of that which the Christ so well understood two thousand years ago.

Surely we cannot class this woman as one wholly thoughtless or frivolous. She was at a crisis in her life. Her love for her husband and agony over his affliction were too great for her to master; she had to rely upon one whom she believed capable of solving her problem.

The same day upon which this woman came, there came another whose husband had not been heard from in over a year. Could I not help her? I did. I found him for her in less than two weeks by very ordinary methods of inquiry—but methods that were beyond her powers. She would have been classed as a bright woman. She had a fine home, fully paid for; she read somewhat of the ordinary literature of the day, but she was shallow, as one readily discovered after a few moments' talk with her upon the deeper personal subject concerning her life. She could tell glibly of any event chronicled in the papers, but of herself she knew nothing. Here we strike the keynote of the matter—we do not know ourselves. "Know thyself," said Shakespeare. No greater truth was ever uttered.

Another woman came in. She arrived in her private carriage. This type usually comes for one of two things only—money or love affairs. This one was a woman living beyond her means. She had a few hundred dollars and said to me: "Are not your powers equal to the task of exerting the mysterious power of magnetizing these so that they might multiply endlessly and enable me to gratify my every wish?" In such cases fools and their money are soon parted. That tells the tale fully. Sending good money in search of bad corrupts the good is a general truth that has but few exceptions.

Others called as well as these we have mentioned. Some from mere curiosity, having little to disclose or to ask, except vague questions concerning the future which are easily and readily answered. There is no possibility of disputing these answers; time alone can reveal this, but the client cannot accept the oracle's prophecies, unless it is first proved to his or her satisfaction that the medium knows of past events which one would hardly expect a stranger to answer except by some mysterious arts or powers.

It has doubtless appeared that women are the main source of revenue to the clairvoyant. It is quite logically so. As a rule, women are more impulsive than reasoning creatures; feelings govern even with highly educated women oftener than otherwise. But it is not solely a traffic with women that is carried on.

Inventors without number called to see us. Plans, drawings, schemes, financial propositions of every sort, are proposed, for which liberal portions of the proceeds are offered for the medium's services, should he be willing to lend the aid of his mysterious powers to further the projects. It need hardly be said, however, that most of these are wholly valueless. Nevertheless, they are fruitful of much revenue to the medium.

Some business men in financial straits seek advice and help to tide over some crisis. Speculation seems to be their favorite medium by which they would avoid failure, tho they feel they cannot afford to risk anything in such affairs other than upon a "sure bet," as the horseman would say. But it is like dropping money in a bottomless bucket—it never returns. There are many methods by which the clairvoyant is able to obtain an immunity bath, for skilled lawyers have been enlisted to draw up forms of contracts of partnerships whereby the speculators who deposit money with a medium have absolutely no recourse at law. Thus the legitimate professions assist the black arts of psychics.

Another considerable class of callers is made up of young men, mainly such as hold clerical positions, and widows. A surprisingly large number of the latter call at our offices, especially those who feel themselves to be above the rooming-house keepers, domestic workers or factory hands. These as a class come to acquire the art. Sometimes extensive schools are conducted as a side line. Oftentimes those who join these classes have a laudable purpose in view. They have read more or less of the winning powers of "personal magnetism," and clairvoyants have long ago seen clearly how to supply this demand. Some of these young men and widows desire to enter the profession as practitioners, but most of them seek to de-

velop magnetic qualities that will enable them to succeed in achieving some coveted financial advantage, such as a better position at more remunerative wages, or to acquire the ability of controlling the wills of others; in other words, to influence others to their own profit or advantage, not only financially, but in the more tender affairs of the heart.

Plainly, the subjects with which a clairvoyant deals center mainly upon love and money affairs, and the reflective individual will readily grasp the nexus of the fundamentals which give most confidence to the artistic medium. For instance, Dun and Bradstreet have computed that 95 per cent. of the business concerns in the United States are sure to fail at some time in their career. Experience has taught the clairvoyant that it is quite safe to add 5 per cent. more to the original and use 100 per cent. as a working basis to represent the totality of dissatisfied persons in this world. Either money, love, fame, or family affairs have proved a failure, or at least a disappointment. Besides these there are scores of other incidents, tho in decreasing ratios, sure to have occurred in nearly every life. Oftentimes these are instinctively suggested to and uttered by the skilled psychic medium. These few matters emphasized in this paper, in the hands of an eloquent talker, whether educated or not, has very often been of surprising potency.

When words of encomium are dinned into one nearly every day, the degree of confidence instilled in the medium is hardly to be wondered at. In many cases the faith or belief in his "gifts" and "powers" amounts to a real obsession on the part of the medium, tho a transparent absurdity to all beholders. I am satisfied that there are many conscientious workers, even tho devoid of real powers, who give no advice other than that they actually believe to be true and the direct promptings of the "gift of God." Conceding this much, it is only fair to add that most of them are out and out frauds. Still, even fraudulent practitioners do an amount of good that is little considered by condemners of the cult. When it is taken into account that by far those who consult a medium are persons whom none of the recognized professions can adequately meet, inasmuch as the persons are suffering from mental anguish, due to losses of affection, betrayed confidence in love affairs, money losses, and many such illusive conditions. Many persons who visit a medium are so distracted as to be actually irrational; suicide seems the only possible recourse. The young woman whom the community abhors because she has had the misfortune to have been betrayed by some dastard who, once his purpose is gained, leaves her to her horrible fate, is such a case that I have in mind. Many a respectable girl is so ruined when in the blind throes of love that would sacrifice all to the object loved. Such is a common case to a clairvoyant. I dare to make bold the assertion that a clairvoyant who saves one such person from suicide does a service to the community far greater than the injury his arts may possibly inflict upon others. It may be that years in this work has prejudiced me: I will not venture to argue the question. The worst charlatan should be given his just due for the good he may do, while we are right in condemning his injurious frauds. Upon this question we may differ; it is a matter of opinion. So let us back to our theme.

Tho the outline we have given covers the essentials of each "reading," the details vary slightly. Few go away dissatisfied. As proof of this, most who have come once will come again for various reasons, or send some friend, who is sure to tell the professor who sent him. Such clients as this are the hardest to satisfy, because they are led to expect too much after the exaggerations of pleased patrons.

With a clairvoyant, as with other business enterprises, the financial question cannot be ignored. Bargain sales are resorted to during slack periods; at such times it often happens that free readings are advertised. To some this may seem preposterous, that large expenses should be incurred for office rent, clerks, servants, newspaper advertising and heavy hotel expenses, and still receive no pay for readings, which most persons assume to be the principal source of revenue. The same misconception is often entertained anent a dentist. Should the latter

depend for a livelihood upon the pulling of teeth at 25 cents each, it is to be feared the dentist would soon close up shop. The fees of a high grade clairvoyant would hardly pay hotel living expenses, to say nothing of the other expenditures. As already mentioned, most clients have some specific reason in seeking advice from a psychic, as one in trouble seeks a lawyer; it is not surprising, therefore, that it is possible to charge $25 upward for special work in addition to the first reading. It is plain that it is far more desirable to have ten clients a day who will pay a deposit of $10 each, on account, than to give $1 readings to one hundred persons. All work and no play is not in the curriculum of the professor of the occult. A typical month's expenses in a city of about the size of Toledo, Ohio, is $1,500. This includes the items mentioned.

Tho nothing has been said in this article but of the legitimate work of a clairvoyant, it is quite natural that under such a voluptuous life the conscience is apt to become callous in many ways; but charity and love of one's fellow men is never lost, for with the medium, as with so many of the dwellers within the shadows of the *demi-monde,* money easily gotten is in turn readily parted with. It bothers one not at all to spend the last dollar before morning, so long as the rent and advertising bills are paid. As sure as night follows day and day the night, so sure will a clever advertisement allure clients to replenish the empty pockets of the well-dressed pauper professor who stands smiling at the door at 10 a. m. (fresh from the hands of a skillful valet), to greet the clients who have come.

If what has been aimed at in this sketch has been made clear, it doubtless has been made plain that a clairvoyant is pre-eminently a student of human nature. He knows humankind far better, oftentimes, than the famous character, Sherlock Holmes, or the close-mouthed confessor. In fact, it is a constant series of confessions that a medium hears. The endless variety makes the work one of the most fascinating occupations in the world. It has a charm which, to me, is unsurpassed. Yet, in spite of the intimate and personal secrets discovered, it is extremely rare that blackmail is resorted to. When one considers the really low plane of morality subsisting in the business, an outsider might be surprised to hear this. The clairvoyant has his personal weaknesses and respects those of other mortals. There are exceptional cases, to be sure. If I were to record some of the despicable traits in men and women as revealed in some of those who have visited my office, the accounts would be almost unbelievable. The tales of the Inquisition hold no greater horrors than the crimes often attempted to have a psychic commit by subtle occult means. The murdering or maiming of a husband or wife is a common request. Worse crimes even than this are begged of the medium—crimes unmentionable in these pages—by cowardly fiends who would gloat over the most horrible tortures of others who look upon them as friends. Analyzed, these crimes all center around love intrigues or money affairs—sinful, illicit passions or greed. A wife guilty of immorality would have her loyal husband murdered in some subtle manner, painlessly, because she fears detection and its consequences. Mental obtuseness will not permit of such a one seeing the one only right course. What is the clairvoyant to do? If such wretches are badly fleeced by a medium I am inclined to believe that most individuals will side with the clairvoyant, who accepts the money and refuses point blank to injure an innocent, or at least an unsuspecting, victim. I recall a case of a supposedly respectable woman who owned unincumbered property valued at $7,000. This woman had been made the sole legatee of the estate of her mother, but a quarrel having taken place, the money was to be given to charitable institutions. The services of a clairvoyant were sought and $3,500 paid to incapacitate the elderly mother from altering her will. No limit was to be considered to gain the ends sought—even murder was hinted. The $7,000 were spent and the will was changed. Not only did the first lose her $7,000, but got not a penny of her mother's $50,000 estate. This is but one of scores which readily come to mind. When last heard of this case was in the courts; its finale I do not know.

This is hardly the place to record the shady side of the practice, with its stock gambling phases, so profitable to the medium. Enough has been said, however, to indicate the shady social scale of a medium. Still, I venture to assert that his ideal of his work is frequently as high as that of many clergymen; of most doctors; and by far above that of many lawyers I have known in a varied experience and practice as a clairvoyant in all parts of the United States, Canada, Mexico, England, France and Australia. One may be a clairvoyant and retain some ideals. But to a weak character the pathway of a medium is a sure road to the reefs of damnation. I have drank deeply of the waters of charlatanry; I have hugged the border line and fallen over at times; I know the bitters and the sweets; yet I say again, no occupation is more fascinating and pleasing. If for myself I must needs take home the nether side of the Scriptural admonition, "He who is unclean let him be unclean still," I may add he who is clean let him remain clean and free from the blighting influences of the manifold temptations of clairvoyancy. The honey may intoxicate, but to sell one's soul to gain a few gilded baubles and vain gratifications is found to be hardly worth while in the end.

NEW YORK CITY.

Theosophy at Adyar

BY POULTNEY BIGELOW

[This is another of Mr. Bigelow's travel articles which he has been sending our readers from various points on his trip around the world.—EDITOR.]

YESTERDAY and today were spent mainly in the colony of the Theosophical Society at Adyar, about five miles from Madras. A beautiful drive under big, shady trees; the road alive with naked natives and bullock carts; little mud huts everywhere and little brown babies tumbling before the doors. Once inside the grounds I appeared to have invaded the precincts of a Hindoo temple garden. The gateways were old Hindoo carvings, tho on the first one were the initials of the two founding spirits, H. S. O. and H. P. B. —Olcott and Blavatsky—also the dates, 1875-1905, the first being the date when Blavatsky and Olcott united in founding the Theosophical Society in New York, and also of his finding in Blavatsky a spiritual affinity for life, tho she was a year his senior.

The first member of the colony to greet me seemed like a something from a spiritual sphere. Her dress was that of a Greek divinity—merely a gauzy shawl gracefully draped; on her godlike feet were classic sandals—thank God, no hideous stockings. She looked like one exalted by spiritualistic experiments. Tho a beautiful woman in feature, to me at least she was another Psyche. What could a mere mortal say to such an apparition!

To my request for permission to see the place, she answered graciously; told me her name (Schurman, so near as I can recall), and said that her husband was at the "Olcott Garden"—or if not, that I would there find other members of the community, mentioning Dr. Schrader, the librarian, who had that morning delivered a lecture in the hall.

She kindly sent a little Hindoo boy as guide and off I drove thru beautifully kept and carefully irrigated gardens, past one or two handsome villas or bungalows, to the designated building.

Here a Miss Christie took pity on me an active-minded Irish girl full of the social tact distinguishing her mercurial countrymen. She introduced me to an upper room of this stately and beautiful building—it was the roof of the veranda, as I recall it. Here were seated a group of theosophists. After a few moments of general conversation, during which I noted that the members copied the Hindoo not merely in thought, but in

dress as well, Miss Christie offered to show me about the beautiful park, more particularly to see the spot where Colonel Olcott was burned in 1907 with all the Hindoo honors, Annie Besant officiating as high priest and distributing relics of the late departed to the throng of natives who worshipped him as a holy man.

An eyewitness, also a theosophist, recorded that the ceremony was most impressive, and yet when the smell of roasting meat reached her it made her sick, and she disappeared.

Of course, Colonel Olcott was roasted in the open, upon a half cord of sandal wood, which is different from what we associate with the word cremation.

His ashes were afterward scattered in the Adyar River, and in a few minutes mingled with the Indian Ocean, only a few hundred yards away.

This spot is now holy ground, where natives remove their sandals. Of course I was made to take off my hat, for a male theosophist joined us and he gave me the living hint.

Verily, how easy must it be to worship one another; and how natural for the children of Israel to make a golden calf their God.

Here was a species of altar on which rested the bust of a man with a long beard and a modern frock coat. It was (according to my guide) a wonderful piece of work, done by a pariah Hindoo: "So like the Colonel," said she; "even to the squint of the eye!" The plaster work was so defective that a dozen squints might have been there, for aught that I could tell.

From here we strolled to the magnificent main building and I was shown a plaster group representing Madame Blavatsky seated in a chair and Colonel Olcott resting an enormous hand on her shoulder, he standing erect on abnormally short legs. Neither Miss Christie nor Mr. Schrader could name the perpetrator of this group or the one over the sacred spot where his body was burned. They said, however, that it was done by native pariahs, and I had no difficulty in believing this.

I wanted to get a nearer view of this strange group and was about to mount upon the platform upon which it rested when I was reminded by my theosophical friends that I must first remove my shoes, for this also was sacred ground.

At this my interest weakened, and I turned to admire other features of the theosophical lecture hall. The decorations were to me Hindoo, and barbarous from an art point of view. Four big panels covered one side of the big hall; relief figures of Buddha, Krishna, Zoroaster and our Saviour—and all four treated as of equal relative importance. These panels were also obviously of Hindoo workmanship, plastered with whitewash and suggesting the atelier of a pastry cook or confectioner.

The main building is like an Oriental palace—spacious, cool and breezy. Below is the lecture hall and theosophical library; upstairs I was shown rooms where members meditate, that is to say, retire, and by inhaling and exhaling according to Vedantic formula and concentrating their minds upon a single idea, they separate their spirit from the body and reach a state of beatitude suggesting heaven—at least to them. Miss Christie vouched for many miracles performed under these conditions, and who am I that I should question such authority?

Afterward she took us upon the roof—it was sunset hour—the Adyar River winding lazily at our feet and emptying close beyond us into the fringe of breakers that mark the western limits of the Bay of Bengal. A few native craft were on the water—the great cocoanut palms cast long shadows across some humped-back cattle that were wading in the stream—silence and strips of setting sun—infinite firmament above—a new moon showing faintly—not a word to mar the majesty of that moment.

Then we went down again and drove home in the darkness—five miles of palm-lined avenue—little native huts lighting fires for the evening meal—lanky brown men wondering what this colony of white Hindoos meant.

Next morning at daybreak I was off again to the theosophical colony—Miss Christie and Mr. Knight-Eaton having invited me to go with them and inspect several native schools founded by the late Colonel Olcott.

First I drove to the palace of an

American theosophist — Princess Gagarin, and while waiting for her to come down stairs in walked a glorious young man—perfect features and complexion, admirably shaped ears and hands. He might have been twenty-four years old. Hair short, inclined to curl. His clothing consisted of a gossamer web round his middle — white with colored border. Scarf broad and long that frequently exposed his shapely body beneath. His name sounded like Clark —he had been in the British Colonial service—East and West Africa—conducting engineering parties, and had become a student of theosophy seven years ago while convalescing from a six months' siege with fever.

He and the others, notably Knight-Eaton, regarded meat diet as bad for men in general and particularly bad in the tropics. Eaton had been in the army and on the African West Coast had served where every third man was expected to die.

Eaton was in ordinary morning dress, but bare feet and sandals.

Miss Christie had bare feet and no corsets, but slippers instead of sandals, because she was dressed for going outside the grounds.

Learning that the Princess would not be down until later, we hurried away for the native schools—a German lady joining the party, Mrs. Kobell, it sounded. On reaching the school, which was little more than a roof, the little ones set up a sing song of welcome holding their hands together as our children do in supplication or prayer. Their native teachers did the same and my theosophical friends returned their compliment in kind.

I was a little startled to see a bust of Colonel Olcott enshrined in a Hindoo niche much as tho he were one of the many gods of the country—maybe he is by this time. It shows at any rate that the gallant Colonel has left a fragrant memory.

The little brown children were doing kindergarten work—singing, and drawing and gymnastics apparently uppermost at the time of my visit. The Madras inspector of schools (an Englishman), was seeking to determine the character of this education in order to advise his government regarding the amount of public money that should be allowed. Of course, this education was of European character and unsuited to these children of day laborers who would have been better employed at home with the members of their own family than under teachers whose ambition it is to copy things of Europe.

I was glad to get back to the peaceful premises of the theosophists where, according to Miss Christie, there are 150 acres—to say nothing of a glorious prophecy by one of the theosophists (Mr. Leadbeater), according to which they were soon to absorb the splendid grounds and buildings now owned by the Jesuits.

Miss Christie spoke of this as serenely as tho the deeds were as good as drawn, signed, sealed and delivered! Miss Christie also told me that there was a lady here who painted psychic pictures —themes seen only by spiritual eyes. She, the paintress, was now building a studio at the top of a tower which she pointed out to me. I said I wanted to see these occult canvases, but she answered after the manner of one shocked by a profane request, that no one but the very highly initiated was permitted to see these things—that they must remove their shoes and stockings before entering—indeed that some of these art works were so awful as to seriously affect the minds of such as might see them without having been prepared for the shock by a preliminary course in Blavatsky metaphysics.

I assured her she need feel no responsibility on my account—that most of my friends were a bit mad—that I was weary of being the only sane member of my community—that I was just the party to view those metaphysical canvases in the mystic tower—that—— But all my pleading was vain. I was compelled to put up with my own every day sanity. The subject of the spooky studio was dropped. Next she referred to Mr. Leadbeater as the most remarkable spiritual force of today. He had, she said, not only foretold things that had come to pass and were soon to be fulfilled, but he had traced back genealogical incarnations for a period of 23,000 years. It did me good to hear this, for

it helped to prejudice me against Darwin's theory of evolution.

It was now breakfast time and I was shown into a large hall of the Palace. This time Princess Gagarin was present —a handsome American type of about twenty-two, with whom I had some chat. By the way she had a husband somewhere else in India, also a theosophist.

We sat about a long common table, waited upon by native servants in tidy uniforms and bare feet. Of course, vegetables alone were served—rather flavorless and watery they seemed to me —and not cooked enough. However, the vegetable curry and rice were faultless. The members are supposed to have but two meals a day—10.30 a. m. and 6.30 p. m. But Miss Christie admitted, with a twinkle of her expressive Irish eye, that a bit of tea on rising and likewise early in the afternoon was sometimes taken—albeit not quite orthodox.

Mr. Schrader, at the breakfast table, sought to explain the breathing methods of the initiated. He placed a thumb on one nostril and inhaled for one minute by the other nostril, his four fingers meanwhile suggesting a movement far from respectful to those facing him. Then for a minute he pinched his nose with thumb and forefinger, thus retaining the breath he had just inhaled; then stopping only the nostril thru which he had first inhaled, he breathed out slowly thru the other. This he did after the manner of a professional demonstrator. It was interesting in spite of a certain lack of dignity, owing perhaps to the time and place. Princess Gagarin and Miss Christie looked on in envy; for Miss Christie had told me how she had fallen to the ground senseless (from the blow on her head), so deeply had she been affected by her attempt to inhale and exhale after the manner of the Hindoo yogi.

Mr. Knight-Eaton admitted to me that climate had much to do with the success of this colony—the tropical conditions of life—nudity—closeness to nature—rising at five or before the sun—living day and night out of doors, or at any rate never behind windows and never being smothered by artificial heat. From what was said to me on the way from the breakfast to the library I drew the inference that the members of this society must all be personally agreeable one to the other, and above all to Annie Besant. On her shoulders has fallen the mantle of Madame Blavatsky, the founder of theosophy and a species of transatlantic Mrs. Eddy.

In an official notice of her life, published 1909 by the Rajput Press, Blavatsky is said to have married "when quite young" a Russian, and without further mention of details says that she went to the East at the age of twenty-one with "a prince of India," with whom she remained "some years" in theosophical communion. A "prophecy" ordered her to America to meet Colonel Olcott, who then was a journalist. The society was founded in November, 1875, at which date my little self was well on my way to the Far East in a sailing ship—my first voyage 'round the world—profoundly ignorant of the Blavatsky-Olcott combination.

In Tokio, however, I was guest of a Buddhist and for the first time learned that in matters religious it is not wise to be too dogmatic.

The Blavatsky died in 1891, and from that time on Colonel Olcott, "U. S. A. Army" (to quote the inscription on his monument) became (with Annie Besant), the leader; and when he died in 1907, of course, the lady whom Anglo-Indians refer to as "A. B." succeeded, and she is now the lady pope of the new religion.

There is but one thing that a layman can understand about the Theosophical Society as it manifests itself at Madras and Benares—it owns much real estate, it must be in receipt of goodly revenues. Personally it does not attract me, in spite of the many wonders credited to occultism, none of which I am prepared to dispute. I see several charming ladies and gentlemen leading lives of serene beatitude, dressed after the fashion of Homeric gods, and professing a moral code of prehistoric independence. Their simple diet and deep breathing are admirable, but their ways are those of persons shunning the world's temptations rather than those who fight to overcome them.

What can the simple native of India

learn from a religious society that rears shrines to Colonel Olcott, "U. S. A.," and makes a suffraget bishop of Annie Besant.

Farewell Madras! My chief interest in going there had been to visit the scene of Elihu Yale's official activity as servant of the great East India Company. It was while governing this superheated province that he no doubt stored up the money wherewith he founded the college that makes New Haven respectable and the name of Yale a household word on both sides of the Atlantic. From Madras to Connecticut was a violent change for Governor Yale in the seventeenth century, particularly in February; but, after all, not more so than mine two centuries later from the land of Puritanism straight into a Parnassus of fair maidens and gallant swains, clad like Greek divinities, cultivating Hindoo theosophy, and all talking Christian English!

MADRAS, INDIA.

Economy in Systematic Appropriations

BY THEODORE E. BURTON

UNITED STATES SENATOR FROM OHIO.

THE peculiar situation obtaining today, in which political parties and the people clamor both for national economy and increased appropriations, is not without explanation and reason. There are many public expenditures which could be and ought to be curtailed while, on the other hand, there is much to be gained in certain instances by liberal appropriations and, what is more important, it is possible to derive, by a scientific system of appropriations a much greater benefit from our present expenditures—which is the truest form of national economy.

In the abstract national economy is largely theoretic. It is only advocated on general principles—principles which are always applied to some one else and without material energy or specific backing; while appeals for appropriations always have ready, determined and vitally interested supporters. As it is difficult to overcome something with nothing, the appropriations continue to increase, in spite of the cries for economy.

There is this, however, that we can do —and I believe that if the people would study and understand the situation they would insist that we must do it—we can regulate most of our appropriations according to a scientific system whereby they will yield us adequate returns.

The frequently recurring River and Harbor bill, this year carrying an appropriation of nearly $52,000,000, is an excellent example of what I am saying. Its various items are all vigorously pressed by those who are personally interested in individual claims, without due regard to the rest. There is no adequate consideration of the vast interests of the public as a whole, and no effective supervision of its items, because there is the total lack of an intelligent *demand* by the public and also of a proper public appreciation of the benefit which ought to accrue to the nation as a whole from the vast sums expended.

This is a subject to which I have given careful study during my long connection with the House Committee on Rivers and Harbors, and with the Senate Committee on Commerce, with the constantly growing conviction that if the people could be brought to take intelligent interest in the proposition as a whole—the practical development of our waterways —much less money would be injudiciously expended, and much greater benefit would be derived by the public from the expenditures.

It has repeatedly been said that our Government has been niggardly in providing for the improvement of its waterways, but this is entirely incorrect. The present bill carries more money for this purpose than any three countries of

Europe are expending in a year and I think I am right in stating that there is more money in this bill than the annual average appropriations made for rivers and harbors by the central governments of all civilized nations of the world. It has not been lack of generosity on the part of Congress, nor has it been because we have disregarded the multitude of projects presented, that the Government has been called niggardly. But it is true that much of the money has been spent where there has been a paucity of results.

For this no one is particularly to blame, for we are facing conditions which are changing all the while. Methods of transportation of barely five or ten years ago have been superseded, and while events have proved that much has been unremunerative, it cannot be denied that in the past as well as in the present we have been making generous appropriations for the improvement of our rivers and harbors. I care not if some one may say that this is an immense country; that our mileage of rivers is so great that we ought to spend much more than all the rest of the nations. A great many of our rivers in sparsely populated areas are not profitable objects for expenditure. There must be selection. The time is coming, perhaps, when they can all be profitably improved, but that time is not yet. It should always be a question of comparative cost and benefit.

It is not wise, for example, because a river, flowing thru a sparsely settled area, is without railway facilities, to pay more for the improvement of a river than the entire cost of a railway, as we did in a case I have in mind, when, in a whole year, only 2,000 tons of freight went thru locks and dams which had cost us nearly $300,000 to build, exclusive of maintenance. This is not such an investment as the United States ought to be called upon to make. Neither is it fair to make vast demands based upon the problematic increase in transportation which experience has taught us does not always follow.

Even the Mississippi River, between the mouths of the Missouri and the Ohio, a stretch of 206 miles, upon which is situated the city of St. Louis, is an illustration of unprofitable expenditure. Below the Missouri, from Cairo to the Gulf, there has been for years a reliable channel of not less than nine feet in depth. The money expended by Congress on the stretch of 206 miles exceeds the amount expended by the central government of Germany in the improvement of the Rhine, from Strasburg to the frontier of Holland, a distance of 355 miles, while the amount of tonnage transported on the Rhine is from 80 to 107 times greater than that on this portion of the Mississippi. More than this, while nearly $13,000,000 has already been expended upon this stretch from St. Louis to Cairo, and for several years there has been an eight foot channel there, the amount of traffic on the river has been steadily declining, all the time. In 1881, when there was only a four and a half to a five foot channel, there was fourteen times as much traffic received and shipped from St. Louis as there is today. Yet we are now called upon to make an expenditure of twenty millions to secure the permanence of the eight foot channel.

A most serious waste, in projects for the improving of navigation, is met in the canalization of streams by locks and dams. Unless rivers are capable of becoming great arteries of commerce such expenditures are usually unprofitable Take, for example, the Muscle Shoals Canal, beside the Tennessee River. The mere expense for maintenance of that canal for the last year was more than $4 for every ton of freight carried thru it. If 3 per cent. interest on the cost of construction be added, the cost to the Government was $11.50 for every ton of freight carried thru the canal. Another illustration is the lock and dam in the Wabash River, at Grand Rapids. About $38,000 was expended in 1909 for operation and care while, excepting lumber and timber which did not require the dam, only 680 tons of freight were carried thru the lock, making the cost of maintenance alone amount to nearly $60 for every ton of freight. The expenditures for operation and care of locks and dams in the Big Sandy River, in West Virginia, for the fiscal year of 1909, amounted to approximately $23 a ton for all the traffic, exclusive of lumber, carried on the river.

Then there are other cases where the improvement of the river was once of

great importance and where the expenditures are still continued, tho the value of the river for transportation has almost disappeared. The Red River, for 500 miles from its mouth, illustrates as forcibly as any river can the changed conditions in inland waterway transportation. It was of very great usefulness as a freight carrier, in early days. Over $2,500,000 have been expended in improving this river. During the last year for which statistics are available over $78,000 was expended—which in that year amounted to $93 per ton, for every ton of freight carried on the river, exclusive of lumber. From perfectly natural causes traffic has left the river and the large amounts still expended have no influence in inducing it to return. Such expenditures are not remunerative investments of public funds.

Another wasteful habit into which we have fallen under stress of the demands of localities, is that of making partial appropriations of a multitude of improvements without providing for their completion. Such a plan would be considered altogether injudicious in private enterprise and it is not the policy followed by any European government. In France, before the improvement of a river or harbor is undertaken, a careful examination of the proposed work is made—the cost, the length of time necessary for completion, the amount of traffic which will probably result, are all thorolly considered—and when the investigation is completed and the improvement adopted, provision for the whole expenditure is made before the work is begun. The same is true in Germany. By our system of piecemeal appropriations the completion of the work is very often delayed and the total expenditure is materially increased. Still worse than that, it is practically impossible, upon this principle, to avoid the expenditure of public money upon unworthy and unimportant improvements, because the magnitude of the undertaking is not carefully considered when the first moderate appropriations are asked for and granted, while, after the first appropriation for a mere fraction of the cost is once secured, the insistent demand is that the improvement be continued, whether desirable or not. There are many items clinging year after year to our river and harbor bill on the strength of these partial appropriations, which should either be dropped and abandoned, regardless of the money already expended, or upon which a substantial saving to the Government might be made and more immediate benefit to the public secured by providing at once for immediate completion. New projects of doubtful merit are still continually creeping in under this system.

As an illustration of this take the work on the Sandy Bay Harbor of refuge, in Massachusetts. The work was begun there twenty-five years ago. The total estimated cost is a little over $5,000,000. So far a little over $1,500,000 has been expended. The corps of engineers asked for $500,000 to continue the work this year. The amount appropriated for its continuance is $100,000. At this rate it will require fifty-one years more to complete the harbor of refuge. For twenty years a breakwater near Bar Harbor, Me., has been in course of construction. Twenty-five thousand dollars was appropriated this year to carry on the work, at which rate the breakwater may be completed in eight or nine years. The engineers at work on the Harlem River improvement asked for $300,000 for the present year. It was cut down to $150,000. meaning seven or eight years more for completion. The existing project on the James River has been under way since 1884. The engineer in charge estimated that $500,000 could profitably be expended in carrying on the work thru the present year. An appropriation of $250,000 was made, at which rate the work will not reach completion for over fourteen years. In this latter case there was manifest reluctance as to making larger appropriations for the reason that in spite of the increased channel depth already obtained the traffic on the river is constantly declining. Nevertheless the reduced appropriation continues; and in any case the "dribbling policy" of providing for waterways improvements is pernicious.

It is heralded as patriotic economy—this cutting down appropriations—but instead of being economy at all it is gross extravagance. In the simple matter of cost it materially increases the expense, and besides, if the project is

worthy and of sufficient prospective value to the public to warrant expenditure at all, what possible virtue can there be in depriving the people of the benefit for twenty or fifty years, in order that hundreds of other projects can be slowly carried on at the same time? As a mere matter of mathematical computation it would be far better to finish one project and give the public the benefit of it, then finish the next. Or if the project is not worth finishing it should be abandoned. It should not stand, year after year, in the way of completing the rest.

In this respect the act of 1907 was a long step forward. Several projects of great commercial importance were pushed to completion and made available as the result of this act; notably the completion of the Boston Harbor, of extensive work in the New York Harbor and of the thirty-foot channel in the Delaware River to Philadelphia. But along this same line one of the most serious steps ever taken is the appropriation, this year, of a million dollars toward the scheme of the fourteen-foot Lakes-to-Gulf waterway, with the curious proviso attached that it shall wait till next winter before any action is taken. The manifest object of the pressure which secured the item was to commit the United States Government to a scheme upon which it is as yet wholly unprepared to act, so that next year the friends of the project can come back again with the additional argument that a million dollars has already been appropriated for it.

The total estimated cost is, I believe, $150,000,000—a pretty large project. Most elaborate surveys have already been made by the army engineers, with a distinctly *adverse* report. Yet here is a million dollars, pledged by the Government as an entering wedge, for something which has been condemned by the Engineer Corps and members of the Mississippi River Commission, including the member from the State of Louisiana and the member of the Coast Geodetic Survey, as the result of the insistence of its promoters, while other rivers and harbors must wait, tho important work is already in progress, and tho they have the strongest kind of official recommendations behind them, ostensibly to gratify the popular cry for economy—which has persistent personality or interested locality behind.

I am no enemy of the Lakes-to-Gulf waterway. I think it very possible that such a project may succeed; but it must first have more careful and unbiased consideration, not only by Congress but by the people who send their representatives to Congress, before such an important step can safely be taken. We must not only be sure we are right in what we are going to do about this individual project, but we must be sure that no more important projects already under way demand the present appropriations. And we must be sure that when once we begin we are ready to go ahead with the work to completion as rapidly as it can be economically accomplished.

I do not believe, for instance, that a *fourteen*-foot waterway would ever be a success. It is just half way between the regulation 8 or 9 foot channels in our navigable rivers and the 19 or 20 foot navigation of our lakes. Boats that require only a 14 foot channel on the lakes are going out of date. They are rapidly disappearing from the great freight waterways. They are restricted to the shallow-draft harbors and short routes because deeper draft vessels are found to be more efficient. More than that it would be impossible to carry freight 1,500 miles down the Mississippi in those 14 foot boats. They could not be readily maneuvered thru an artificial ditch or in a river where there are crossings and currents as there are in the Mississippi. Perhaps as a matter of experiment you might steer one thru, by using tugs before it and behind it, but commerce will not be conducted in that way. It is found more economical, all over the world on shallow rivers and canals, to handle freight on barges. The roseate dream of ships coming up to Chicago thru all the narrow passages of the Mississippi, the Illinois, and a canal, is one that in the future we shall look upon as a fantasy, very pleasing to the imagination and oftentimes attractive to undiscriminating audiences, but as one which is entirely inconsistent with the necessities which govern the propulsion of ships and the handling of freight.

It is not with any one year's appro-

priations that we can most advantageously concern ourselves, but with the problem of developing a unified system of waterways. Widely different plans have been pursued in the preliminary steps relating to proposed river and harbor improvements and widely different purposes have instigated ambition and energy in pushing them. Public approval is excited in one part of the country along one line and in another part along entirely different lines. There is no co-ordination of desire or design. And in justice it should be said that whatever is objectionable in the present handling of the subject by Congress, whatever mistakes our present policy may contain, is largely traceable to the vicious system under which geographical and personal considerations have received far too much attention. The more objectionable a proposed improvement presented to Congress is, the more strenuous is the demand by those interested that it shall be adopted. The greater the benefit to individuals or to limited areas the larger the delegation coming to Washington to favor it. Pressure from outside is frequently in inverse ratio to merit.

Our river and harbor improvements are the result of growth. We have an inheritance from the past of improvements which have been begun, estimated at millions, upon which only thousands have been expended, where local hopes of prospective profit of some kind have been encouraged, which it is extremely difficult to abandon. Thus by a combination of these factors, inheritance from the past and insistence of the present, it is almost impossible, without intelligent and concerted aid from the public, to frame a measure which shall be satisfactory to all. There is most urgent necessity for the classification of projects according to their merits and the omission from future bills of those unworthy of further attention from the Government.

It is proposed by many enthusiastic and intelligent advocates of inland waterways that a comprehensive plan should be adopted for the whole country embracing all rivers and the construction and rehabilitation of canals as well. Such a plan would be useful if only those projects were undertaken which it is desirable that the Government should adopt, and if they could be taken up in the order of their importance to the whole public without giving controlling effect to local considerations and without dividing appropriations among States and localities, not according to the merit of the projects, but according to the pressure brought to bear in their selection. But no system of public works can be wisely or profitably conducted which proposes the adoption of plans without careful investigation and expert opinion of the highest order.

It is often the case, too, that the real object and result of river improvement is bank protection and the relief of adjacent lands from overflow, where benefits accrue in far greater degree, at least, to property owners than to navigation. Where the benefits are mutual there might be a division of the cost, and where the improvement inures exclusively to the benefit of individuals or communities it is surely unfair to call upon the Federal Government to bear the expense. A policy should be adopted which will impose a fair share of the expense of all such improvements upon those who receive individual benefit as distinguished from the public at large. I believe that the time will come when in all our river and harbor improvements there will be a division of expense between the Federal Government and the localities most interested. It is the system in vogue in the most advanced countries of Europe. Much of the pressure which is brought to bear upon Congress today would be entirely avoided if the community in question were obliged to contribute its share of the expense. There are difficulties in the way of any plan of co-operation, but when I recall the conditions under which some of the items have been forced into our river and harbor bills, I think it would be a long step in the right direction if those who propounded these improvements felt that responsibility which comes from paying a portion of the expense. There are a great many items which never would have been there if those who had pressed them had been obliged to share the cost.

When all other arguments are exhausted, when a stream is shown to be

needless and useless as a carrier, the applicants for appropriations still press their claim on the ground that if navigable, whether used or not, the stream will be a menace to the railways in keeping down freight rates. I am afraid that there are many who believe this and that there are items in our appropriations put there for this purpose. A waterway which has been in use for years and found to be utterly without value, is still maintained at the expense of the Federal Government because it may regulate freight rates. Now the armory of the law is not so poor that we are obliged to resort to this expedient to secure reasonable rates. With all due respect to those who advocate it, it seems to me an absurdity and a waste. The railroads do not constitute an entrenched and uncontrollable monopoly which cannot be reached by orderly and legal methods. Is it necessary to canalize a river at a cost of $10,000,000 just to make a $5,000,000 railroad behave itself? On the other hand I do not believe that there will ever be a salutary development of our waterways until there is co-operation between these two agencies of transportation. So long as there is competition it will be a case of the survival of the fittest. By mutual agreement or by law it must be provided that these two great means of carrying the products of the country shall prosper together, shall work together in harmony, so that we may have the most highly developed transportation system possible for the benefit of commerce. The subject of transportation should be considered as a great economic problem; for the cost of carrying freight, however borne, is a burden upon the resources of the country and should not be needlessly increased by being divided against itself. The real test as to whether a waterway should be improved is this: is it, independently, a profitable route for carrying freight? and each proposition should stand on its own merits with respect to its possibilities.

I believe that in the future, perhaps not very remote, the time will come when the great majority of our streams will be clarified, when all steps which can be suggested in the way of preventing floods will be undertaken, and I hope that on a very large share of our rivers boats will be plying to carry the products of the country, bringing the people into closer communication with each other, and giving them the opportunity to increase their wealth and prosperity in every way possible. But this goal cannot be attained so much thru popular agitation in favor of all kinds of expenditures as thru a campaign of education on the subject which shall result in the public demand that we raise our river and harbor legislation to the very highest standard, not only by freeing it from objectionable features, but by giving it efficiency to promote the welfare of the whole country. Such a movement will not only result in great economy, but will lead to a substantial and judicious development of our waterways.

WASHINGTON, D. C.

The Quiet Hand

BY MARIE HEMSTREET

GAY World, play World, how you smile at me!
Wine of life within your cup brewed enchantingly!
Heart of hope is beating to the footstep of the free!

Wide World, tried World, give me of your best.
Give me savor of the sea and the sea's unrest.
Bitter bread if needs must be, but courage for the quest.

Old World, cold World, wearily I plod.
Shadows on the traveled road, dusk on ways untrod.
Hast been with me all the while, quiet Hand of God?

NEW YORK CITY.

Literature

Some Nautical Books

Captain James Parker is a fine old salt, a former officer of the regular navy, captain of a gunboat during the Civil War, and the possessor of a most creditable record for gallantry, especially at the naval attack on Fort Fisher. As a partisan of Rear Admiral Schley, he has administered many swashing blows, and wishing even at this late date to deal some more of them, he now produces a book[1] which, to say the least, is mighty lively reading. The worried and anxious Long, the calmly strategic Mahan, the exasperating Crowninshield, the vitriolic Lemly, and all the figures of the author's whilom antagonists in the Inquiry Court of a decade ago stride across his pages like the aristocrats from the Abbaye, only to be mowed down by his doughty cutlass. But the same fatality which seems always to pursue the outgivings of the Schley adherents chases this one Schley's presentation of his own case came out long after most people had forgotten all about the trouble, and here is Captain Parker's book preceding, and not following as it should, Rear Admiral Chadwick's long anticipated history of the Spanish War. Think what a commotion there might have been had Parker's marlinspike pounded the former Captain of the "New York"—the alleged Mephistopheles of the whole Sampson cult—instead of idly beating the empty air some miles in advance of him. And to make matters even more regrettable, Captain Parker does not tell us much of anything new—not even why the testimony of the navigating officer of the "New York" (whose business it was to know better than any one else the position of the flagship on the morning of the battle of Santiago) was suppressed, and he railroaded to China and subsequently driven to the retired list.

But now that Captain Parker's wonted fires have had their glow, surely the whole matter might best be left to oblivion. It alienated many lifelong friends, did the Navy endless harm, and the President's dictum that Santiago was 'a captain's fight" left everything in an impossible muddle. Rear Admiral Schley, perfectly contented with the favorable verdict of the people, is enjoying a green old age in placid retirement, and all the prominent participants in the row have either left active service and official position, or else have finally lost interest in all sublunary things. Never again, it may be hoped, shall we have a Navy Department so anxious and so incapable, never again people afloat so harassed and muddled, and so we close Captain Parker's book—with a farewell smile at his amusing criticisms of the redoubtable "Fighting Bob"—in the trust and faith that there are no "lessons" to be derived from the dispute, now ancient history, likely to need application hereafter.

Speaking of histories, we have once more to remark—this time in full view of Mr. Hill's book[2] on *The Romance of the American Navy*—that the history of our Navy is not yet written; nor does it seem likely to be, so long as writers like Mr. Hill, possessing the requisite leisure and capacity, persist in concocting warmed over messes of old and used-up material. There is neither need nor excuse for Navy books of this sort. Cooper, Maclay and Spears—not to mention the biographers of Bainbridge, Lawrence, Farragut, Porter and most recently John Rodgers, or even Mr. Hill himself, whose "Twenty-six Historic Ships" of a few years ago covers similar ground, have literally exhausted all that can be said about the romance of our past sea fights. What we want now is an intelligent history of the organization, reorganizations and development of the Navy; and we need it badly, if only for the education of Congress. The Naval Historical Society, just formed, is already searching for and gathering mate-

rial for such a work, and, without doubt, could be induced to put its collections at the disposal of any one bringing as much ability and enthusiasm to the writing of naval books as Mr. Hill has always shown.

Professor Poor's volume[3] is one of the sort which always gets perfunctory favorable notice as "containing much useful information." One is tempted to ask —useful to whom? The "nautical science" part of the book is made of 146 pages on navigation far too elementary for the professional sailor, and far too recondite for the rule-of-thumb mariner. This is sandwiched between disquisitions on astro-physics, and on a theory of the tides. Tidal matters, in practice, usually belong to pilotage, and what the physical constitution of the heavenly bodies has to do with "nautical science" is past understanding. As for this being a successful effort popularly to explain to anybody the finding of position at sea, it is enough to note the inclusion of such formulas as

$$\sin^2 \tfrac{1}{2}t = \frac{\sin \tfrac{1}{2}[Z+(L-D)] \sin \tfrac{1}{2}[Z-(L-D)]}{\cos L \cos D}$$

This may be popular explanation from the viewpoint of a university professor of astronomy, but oh, ye many disciples past and present of the immortal Bowditch, who have measured solar altitudes by splayed out and extended fingers and handled the log and logarithms with equally fine ignorance of all the 'ometries man ever devised—we can only wonder where your gallant barks would fetch up did you try to get them from "Cape-Cod-way daown to Philadelphy" by the aid of $\sin^2 \tfrac{1}{2}t$.

The Story of the American Merchant Marine[4] is so interesting and yet is told by Mr. John R. Spears with so much brevity as to make one wish that he had expanded his work into many volumes. In point of real romance, no history of the Navy can touch that of the merchantman, and indeed no small portion of what are usually considered naval annals are in fact the doings of the armed private vessels, which, during the War of the Revolution, kept the colonial army supplied with arms, ammunition and clothes taken from captured British troop ships. It is no small credit to Mr. Spears that he has been able to make his book, despite its extreme condensation, so genuinely entertaining. He begins with the first keel laid in Virginia in 1607, shows the growth of the fine seamen of New England, and then the evolution of the smuggler and the pirate. Then follow the foreign aggressions upon American shipping and the story of the China trade, the French spoliations, and so on up to the era of steam navigation. Meanwhile the terrible recitals of the slavers obtrude themselves, and then more pirates of the sort that Farragut spent his youthful days in chasing in the West Indies, and then the whalers and the rise and fall of the adventurous quest for oil, long before we knew of the inexhaustible supply underground. The famous crack clippers between Liverpool and New York are all marshaled, and their victories, sometimes over the steamers themselves, are well retold; and finally the painful history of the decadence of our merchant marine closes the work. The author's discussion of the subsidy question is timely and good. He is no believer in direct aid, but, singularly enough, takes exactly the same ground with respect to the merchant marine as that already taken by the strongest opponents of naval expansion, namely, that salvation lies in the American inventor. He demands a new merchant ship, just as they demand a new warship—something deducible from the environment and not existing in spite of it. The whole story of the American Merchant Marine, he says,

> "sets forth unmistakably that the superior intrinsic efficiency of the American sailor of the sail, during the contest that culminated with the perfection of the ship of the sail, gave supremacy to the American flag."

Let the American environment evolve once more "by natural process the nautical unit as efficient for the modern day as was our ship of the sail in the days long past," and then, but not until then, we shall "see the Stars and Stripes triumphant on the high seas." Apply the same rule to the warships, and the fifteen million dollar Dreadnoughts of today will steer straight for the scrap heap.

An Old Fashioned Senator

One after another the old guard of "stand-patters" in the Senate of the United States succumbs to the inevitable, and his record is marked with a star. Of those of the true breed, men trained in the Macedonian form, standing four-square to all attack, slow to move, and the first in every proposed advance to lift the watchword: "It is a good time to go slow," was Orville H. Platt, of Connecticut. His life,* begun in the early days of the anti-slavery contest, among lonesome fighters on the frontier—obscured later, for a brief time, while the Know-Nothing party was maneuvering in the woods—came to an end five years ago, at the moment when the Macedonian phalanx was practising a new step to avoid attacks on the left flank, which the old tendency of every man to creep under the shield of his right-hand neighbor left exposed. Senator Platt loved the old order, but thought and the new leader of the light-horse cavalry led him to advise the new step, and his last years were spent in an effort to catch on to the drum beat, even while muttering his dear old catchword, "It is a good time to go slow."

Mr. Louis A. Coolidge traces, with a somewhat forbidding dryness of method at times, the long course of the Senator's active service on his chosen lines. A practising lawyer for twenty-eight years, Mr. Platt was a Senator for twenty-six. His practice being given to the intricacies of patent law, to corporation law and the fences of real estate, he very naturally in the Senate fell into line with the defenders of property rights and privileges of every sort. He became the arbiter of the destinies of copyright law. Tho doubtful of our title to any part of Cuba except two or three bits of land suited to the purposes of our naval squadrons, he saw very clearly the justice of our claim, under international practice, to the thousand islands of the Philippines, and was ready to lead the phalanx under Harrison across the Pacific to encompass the Hawaiian Islands. Six new Territories became new States under his guiding hand. An eager eye was cast toward San Domingo, and he was in the front ranks with a telescope. He was a defender of all inventive achievement, a perfecter of title to all improvements on the big American farm. If an American sheared a lamb, or rolled a cigaret, or persuaded a cornstalk to yield a succulent morsel, the act deserved to be entered on the minutes of the Patent Office. It was an American industry, and the deed should be made to redound to the credit of the Republican party.

"I am a Republican all over," he said in 1892. He stood four-square against any interference with Republican doctrines. His course on the tariff was a straight road from his beginning to his end, and in pursuing it he seemed to good men to use no forbidden tricks. He marched in the open, and fought fairly, but his battle was always for the American patent, for the high-fenced American industry, for the Connecticut view of foreign interference. "There is no more hateful word in the English language than that of 'free-trade,'" he declared. And he chased it out of every corner of the land. Only very slowly did he wake up to the fact that many of the patentees had got their reward and gone to their long homes, that the usufruct of improved farms and improved tools had gone abroad in subsidized foreign bottoms, that the legal fences were running so high as to obscure the heavenly bodies, that the new patent shovel was scooping up the paleozoic age. He was unwilling that the Republican party should revise the tariff, and when the party was told to step aside for a time and let the Wilson bill go thru as a clean attempt to solve the matter in the interest of the seventy-odd millions of people who had invented nothing, but must pay the bills for everything invented, he stood with the old phalanx in what many thought the unholy alliance with the Gorman black-horse cavalry. Yet his action came from the heart, which, unfortunately, in most of us beats so nigh the pocket. His personal integrity was not touched, and Mr. Coolidge finds him in happy relations with Mr. Roosevelt in the last years of his life—a man whom one did not look for in the "Ananias Club," nor in the

*An Old-Fashioned Senator. Orville H. Platt, of Connecticut. *By Louis A. Coolidge.* Illustrated. New York: G. P. Putnam's Sons. $3.00.

den of thieves, nor think of labeling a "pious fraud," nor expect from him a large contribution to election campaigns. He fought many of the new policies of reform—the Pure Food bill, revision of the tariff, which were endorsed among the "Roosevelt policies," and yet the new leader of the light-horse cavalry, riding round the Macedonian phalanx, was always glad to see in its front rank a man of whom he could say, as he said of Orville Platt: "He was the grandest and noblest man I ever knew."

The Person and Work of Christ

THE engaging power of Jesus Christ is well illustrated in the perennial attempts to solve the mystery of His person, find the secret of His influence, and trace the history of His elevation from the humility of a "servant" to a divine object of worship on the part of the most enlightened portion of humanity. This life-giving soul of Christianity has never before called forth such earnest and devout study from so many different angles and points of view as He does today. Recent work in many fields, particularly in that of New Testament criticism, has cleared the way for a modification of the older dogmas and the projection of new theories in regard to Christ, and the opportunity is eagerly accepted on every hand. The tendency is doubtless toward liberalism, but if any one imagines that liberal leaders are slipping into new ways of thinking because of the *Zeitgeist* without any adequate criticism of their utterances, he may be rescued from such a delusion by reading Principal Forsyth's searching inquiry into *The Person and Place of Jesus Christ*,[1] which often assumes a strenuous polemical tone. The author, who is acknowledged to be the great aggressive leader among conservative English theologians, is master of a pungent, antithetic style of writing, which gives his arguments peculiar clearness and force. He declares his belief in reconstruction, but thinks it should not be carried on by "amateurs, with but a natural religion and a poor education or none on the subject," holding that "the worst heresy is quackery." Nor has he scorn enough for "those free lances of the genial heart and sterile mind, who face theology as a bull greets scarlet," and who take an "unholy joy" in the collapse of the old theological structure. Principal Forsyth feels that there is a great and alarming tendency today toward a "lay religion," which is coming to be understood as the antithesis not only of sacerdotal, but also of theological and atoning religion. This he cannot look upon with any degree of allowance, for he holds that Christianity is at heart the experience of forgiveness thru the atoning death on the cross, and such a result demands no less than Deity in Him who suffered, and this explanation takes the Christian teacher and leader into the realm of theology and metaphysics. The book is full of passionate appeals couched in bold and striking language, but one feels that Principal Forsyth has fallen far short of establishing the essentials for which he contends, that the key to Christ's life is in His atoning death, and that the experience of forgiveness thru that death authenticates the doctrines of the preexistence, the kenosis, and the Godhead of Christ. The thought moves on a high plane, but it is not articulated with experience in any convincing way. However, if one feels compelled to hold the old dogmatic views of Christ and His work, he could not hold them in a more vital or attractive form than is here set forth. How far Principal Forsyth has gone in modifying the substance of the old doctrines may be learned from his fine chapters on "The Moralizing of Dogma," and from his address before the last international Congregational Council, which, with some expansions, he has recently published under the title of *The Cruciality of the Cross*.[2] In this book, which deals with one phase of the same subject, the author has placed a much needed emphasis upon conscience and justice, without which love is a mere travesty.

The late President Merrell has emphasized the importance of a true con-

[1] THE PERSON AND PLACE OF JESUS CHRIST, THE CONGREGATIONAL UNION LECTURE FOR 1909. *By P. T. Forsyth, M.A., D.D., Principal of Hackney College, Hampstead.* Boston and Chicago: The Pilgrim Press. $1.50.

[2] THE CRUCIALITY OF THE CROSS. *By P. T. Forsyth, M.A., D.D.* New York and London: Hodder & Stoughton. $1.50.

ception of *The Person of Christ*,[3] since that doctrine is so intimately related to other Christian tenets. He rightly declares that the separation of Unitarians and Trinitarians is due largely to their fundamentally different notions of the Founder of Christianity. Dr. Merrell lays great stress on the value of the orthodox view, for the practical work of the ministry, for evangelization, and for authority on the great mysteries of life.

Holding to the same "catholic interpretation of the nature and person of Jesus" as that upheld in the books of Principal Forsyth, the Rev. J. C. V. Durell tries in his new volume[4] to set forth the claims made by Jesus and show how the disciples and apostles were led slowly but surely to this "catholic interpretation" as the only one that would do justice to the self-revelation Jesus made. The book is written in a spirit of concession to the newer critical views of the New Testament, but hardly with the open-minded, scientific spirit which should characterize historical investigation. It is, however, a good omen that such men as the author find distinct stages of development in the New Testament Christology, and conclude that Jesus, during His ministry, made no direct claim to be divine, even tho His words can be adequately understood only on the supposition of His divinity.

Approaching the subject from the standpoint of the liberal critic, Principal Adeney has given us, in his little volume on *The New Testament Doctrine of Christ*,[5] a very lucid and readable historical treatment of his theme. He recognizes a gradual development in the doctrine from the primitive apostolic to the Pauline type and that of Hebrews, thru the later apostolic form to the Johannine doctrine of the Logos, yet he believes the teaching to be harmonious thruout and essential as a whole to a proper explanation of the character of Christ. Principal Adeney's book would have been more effective had he recognized earlier and more freely the influence of Græco-Roman thought and culture on Pauline and post-Pauline Christology.

From an entirely different angle comes the sweet-spirited, almost devotional volume of the late Dr. George Matheson, entitled *St. John's Portrait of Christ*,[6] and issued in the series of "Little Books on Religion." While meant as a contribution to the problem of the authorship of the Fourth Gospel, the book may better be regarded as one more evidence of the spiritual power of that character which the Fourth Gospel tries to present in such a way that men believing "may have life in His name."

In the interesting and suggestive book of Professor Leonard we have a contribution to our subject by one who is familiar with the results of the literary study of the Gospels, but who keeps within his own special field and prefers to consider Jesus as *The Poet of Galilee*,[7] holding that even "Jesus's power over the human heart is perhaps His power above all other powers as poet." The presentation of Jesus as an observer, humorist and story-teller gives one a finer appreciation of many of the Master's sayings.

Thus is this character who holds the growing religious interest of the world, the object of the most earnest thought and study among men of all viewpoints, from those who, like Principal Forsyth, can only understand Jesus as God veiled in the flesh, to those who, like Professor Leonard, reject the miraculous and the divine, but exalt the humanity of the Man of Nazareth to a place the angels well might envy.

Confessions of a Barbarian. By George Sylvester Viereck. New York: Moffat, Yard & Co. $1.25.

Mr. Viereck journeys to Europe and writes about his experiences. He visits several countries, Germany and Denmark in particular, meets Georg Brandes and a number of other men and some

[3] THE PERSON OF CHRIST, Being a Consideration of the Homiletic Value of the Biblical View of the Nature of that Person. *By Edward H. Merrell, D.D., LL.D., Lately President and Professor of Philosophy in Ripon College.* Oberlin, Ohio: Bibliotheca Sacra Company. $1.00.

[4] THE SELF-REVELATION OF OUR LORD. *By J. C. V. Durell, B.D., Rector of Rotherhithe.* New York: Imported by Charles Scribner's Sons. $2.00.

[5] THE NEW TESTAMENT DOCTRINE OF CHRIST. *By Walter F. Adeney, M.A., D.D., Principal of Lancashire College, Manchester.* New York: Hodder & Stoughton. 40 cents.

[6] ST. JOHN'S PORTRAIT OF CHRIST. *By George Matheson, D.D.* New York: Hodder & Stoughton. 50 cents.

[7] THE POET OF GALILEE. *By William Ellery Leonard, Ph.D., Assistant Professor of English at the University of Wisconsin.* New York: B. W. Huebsch. $1.00.

women. He is not interested in museums, art galleries, anthologies or the ocean. Beer, women, militarism, the so-called intellectual drama and his own personality, however, interest him greatly. No doubt his larger interest is in himself; he lets it be known that he is no inconspicuous figure. "I am a considerable personage myself," he tells Brandes. "I am the author of several books. My poems mark a new epoch in American literature. I have given a new impulse to the poetry of my age." Naturally the reader turns with some trepidation from this information for light upon the character of his influence. The revelation is made on page 205: "I shall not corrupt America," he says. "I am myself uncorrupted at heart." By how narrow a margin America instead of Europe won this inestimable prize we learn on the same page: "There was a time when I wavered between two literatures. I consulted with friends on both sides of the ocean, and it was finally agreed upon that America, being poorer than Europe, needed me more. I decided to become an American classic." There are 206 pages of this kind of thing, not to speak of four and a fraction lines on page 207 and a two-page preface.

Johnson's Wonder-Working Providence, 1628-1651. Edited by J. Franklin Jameson. (Original Narratives of American History.) New York: Charles Scribner's Sons. Price, $3.

Mr. Jameson's familiar series of reprints of original narratives relating to American history is continued by this volume, which he has himself seen thru the press. Edward Johnson, who wrote it, came out to Massachusetts in time to take active part in the religious settlement of the province, as well as in its agricultural extension into the wilderness. His book, written about 1650, was the "first published history of Massachusetts." It reflects the mental attitude of an honest observer who was at the same time a thorogoing supporter of the peculiar Puritan amalgamation of Church and State. For a long time it has been known to historians, and it has been reprinted once or twice in small editions. It is now brought within reach of all libraries and private collectors. The editing is entirely adequate.

Literary Notes

....Francis E. Leupp, sometime Commissioner of Indian Affairs and whose study of the Indian, called "The Indian and His Problem," was published last spring by the Scribners, received the degree of Bachelor of Laws from his *alma mater*, Williams College, on its last commencement day.

....Brander Matthews, Professor of Dramatic Literature at Columbia University, is summering at his cottage, "Shingle Nook," Narragansett Pier. Professor Matthews will blend work with his recreation, and will concern himself with the putting into final shape his biography of Molière, which will be brought out by Scribners in the early fall.

....*The Woman's Journal* of Boston, Mass., edited by Alice Stone Blackwell is a very sprightly paper. It is bright and readable. The publication has just been made the official organ of the National American Woman Suffrage Association and *Progress* has been merged with *The Journal*. It will go into the "votes for women" campaign with the highest enthusiasm.

....According to a dispatch to *The World* the Minneapolis Public Library has been "getting gay" with some of the modern fiction and "The Danger Mark," by Robert W. Chambers; "Together," by Robert Herrick; "The History of Mr. Polly," "Tono Bungay," and "Ann Veronica," by H. G. Wells, have been excluded from the shelves of that institution. The "Decameron," "Rabelais" and other similar classics, in unexpurgated editions, have been retained however.

....Mr. Ellis Parker Butler, the author of *Pigs Is Pigs*, in a recent interview stated that his method of working resembled a cat having fits. "When the cat gets ready to have a fit it goes ahead and has it; sometimes it is a good fit and sometimes it turns out to be a mere fizzle; the cat often thinks it is having one of the best fits it ever had, but the critics say of it that it is a mighty poor fit. I may have a lot of fits this summer and I may not have any." If Mr. Parker happens to have a fit this summer that produces another story like *Pigs Is Pigs* we earnestly hope that the fit will not be long delayed.

....A scholarly, readable narrative of the growth and development of Christianity in the first four centuries is Prof. Henry Melvill Gwatkin's *Early Church History. To A. D. 313* (Macmillan. In two volumes. $5.25 net). The relation of Christianity to events in general history is constantly borne in mind. Dr. Gwatkins is Dixie Professor of Ecclesiastical History at Cambridge. A few years ago he published a work in theism entitled "The Knowledge of God."

....The *Kölnische Volkszeitung*, next to the *Germania*, the leading Catholic journal of Germany, reports the organization of a Catholic

International Pædagogical Association in which national Catholic societies of Germany, Austria, Switzerland, Holland, France and England have joined hands in the interests of Catholic educational ideals and works. International meetings will be held from time to time, journals will be published, the different members will exchange their publications, and the whole movement will be under the general direction of the church authorities, the chief purpose being to keep particularly elementary education under Christian influences. The whole movement originated in the suggestion of the Catholic Teachers Association of Bochum, and the *Katholischpädagogischer Weltverband* has now entered upon its mission.

Pebbles

[The subscriber who writes us and sends the accompanying jokes fears our "pebbles" are not as good as they were when he was a boy. This may be true. It may also be true that the doughnuts he now eats do not seem so satisfying as did those which "mother used to make." We doubt very much if his pebbles are superior to ours. We are content, however, to leave it to the infallible judgment of our readers, whose discriminating taste in the matter of humor, it has been our constant endeavor for many years to cultivate.—EDITOR.]

To the Editor:

"THE INDEPENDENT," 130 Fulton St.,
New York, N. Y

DEAR SIR:—Since the days, when as a very small boy supposedly too young to read so dignified and weighty a periodical, I used to slip away from home and go "up to Grandma's" and there furtively capture the latest copy of THE INDEPENDENT, then printed in the old large form, and take it to the seclusion of the grape arbor or the attic to devour greedily the "jokes" of the "Pebbles" column, I have watched these "Pebbles" as they have come weekly, sometimes bright and shining and sometimes dull and perhaps a little rough, and it has become to me in recent years an increasingly strong conviction that the gravel pit or river bed from which the pebble digger has been excavating all these years has become exhausted, or at any rate the character of the material has seriously deteriorated, as is only natural, for surely neither the size, quality or condition of the material would pass strict inspection for concrete use. And so, since fate, circumstances and conditions have conspired to cause me to become a practical constructing engineer, and therefore accustomed to dealing with concrete examples (speaking both in the constructional sense and editorially) it seemed to me proper that I should give you a concrete sample or two, as proof of my interest in and familiarity with this class of material, for use in your column; for columns, you know, are a most important part of any structure supported by them, and best built according to most recent practice, of re-inforced concrete. Therefore I send you with this a few pebbles, from a new deposit, possessing a fair degree of brightness, sufficient roughness for good bond and about the usual allowable percentage of "voids." I take no credit for this material other than the discovery of it, and the regular and careful "screening" and "washing" to which as a conservative engineer I should always subject such material.

If satisfied with the way this material "works" with the other ingredients of the "mix" a reasonable quantity can be had from time to time, on receipt of your shipping instructions at the usual yardage rates, and when your "forms" are ready for the re-inforcing I shall indeed be pleased to assist you.

Yours sincerely,
JO KERR MANN.

As the "Katy Flyer" drew near to the town of Eufala, Okla., the trainman called the name loudly. When the train stopped at the station an elderly woman with many baskets and packages who had given the conductor a ticket for the town remained in her seat. With some impatience the trainman came down the isle, picked up her baskets, shouted the name of the station "Eufala"—and *she followed.*—[Rank! Pebble Editor.]

Mrs. T. Winkle Hise, always keen for the humor of everyday things, was pained one day to learn from her husband that the newly wed wife of their great friend Mr. Wanderhoff was very ill. "Acute indigestion, the doctor pronounces it," said Mr. H. Looking down at the sleeping form of their three months old first-born, she remarked sadly: "Isn't it strange, Mrs. Wanderoff has acute indigestion —and I have a cute little baby."—[Not even fair. Pebble Editor.]

Monsieur Peticolas, representative of a French bond house, found himself one day in a small Western city stopping at the typical "country hotel" kept by an old German, Max Jaeger, whom every one called "Uncle George" (because George was not his name) and who had no less than his inherited portion of prejudice against Frenchmen. M. Peticolas, expecting a telegram, charged Uncle George, with much repetition and insistence, to advise him promptly if one should arrive; which because of tone and manner served to increase Uncle George's dislike. When the "wire" came, Uncle George rushed into the group surrounding the "base burner" in the hotel "office" waving the telegram and shouting, "Ver iss dot Petee—Petty—dot Pettycoat—dot Underskirt!"

Wherefore, ever after M. Peticolas was known among his American associates as "The Underskirt."—[The worst yet. Pebble Editor.]

A tutor who tooted the flute tried to teach two young tooters to toot. Said the two to the tutor, "Is it harder to toot or to teach two young tooters to toot?"—[Over three thousand years old. Pebble Editor.]

MARY HAD A LITTLE LAMB.

(At the Club.)

Mary had a little lamb—
With mint sauce on the side;
When the waiter brought the bill
The young man nearly died.

[Unless you can do better next time, fare well.—Pebble Editor.]

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Ignorant Vandalism

WHEN two years ago Mr. Garfield, then Secretary of the Interior, granted to San Francisco a revocable permit to flood the Hetch-Hetchy Valley as a water supply, we took the ground that this was an unjustifiable invasion of a national park, and would need to be revoked. Realizing how flimsy was the pretext under which the permit had been obtained, the representatives of San Francisco cast about for means to prevent a subsequent Secretary of the Interior from revoking the grant. They had a bill introduced in Congress which involved the confirmation of the permit by legalizing an exchange of land areas in the incomparable Hetch-Hetchy Valley with equal areas owned by the city outside the park, and not improperly known as Hog Ranch.

In the hearings before the Public Lands committees of both houses, this new move afforded an opportunity to the disinterested opposition, headed by the veteran naturalist, John Muir, to expose the unworthy purpose of the project. It was shown that a local quarrel with a water company, and the hope of being able to exploit municipally many million dollars' worth of electric power rights, which the grant conveyed, were the real motives behind the scheme. Ex-Secretary Garfield had been led to believe that Hetch-Hetchy and Lake Eleanor, in the Yosemite National Park, were the only reasonably available sources of water supply for San Francisco. In view of the ease with which it was shown that San Francisco has at least a dozen adequate sources of supply outside the Park, it is not possible to acquit Mr. Garfield and his advisers from the charge of having acted hastily and without a thoro investigation of the facts. The bill, very properly, was pigeonholed.

Meanwhile an aroused public sentiment, led by more than a dozen public-spirited organizations and nearly the entire press of the country, applied to the new Secretary of the Interior for a revocation of the permit.

Secretary Ballinger visited the valley in person and had an investigation made under the direction of the Geological Survey. On the basis of this report, which shows that Lake Eleanor and Cherry Creek are alone sufficient to supply the needs of San Francisco and adjacent cities, Secretary Ballinger issued an order calling upon the city to show cause why that part of the permit relating to Hetch-Hetchy Valley should not be at once revoked. At the hearing, set for the middle of last May, the legal representatives of the city asked for more time in which to gather evidence for a showing, altho two years earlier they claimed to have evidence which convinced Mr. Garfield that the spoliation of Hetch-Hetchy was necessary to the life of San Francisco. The real object, doubtless, was to evade exposure by delaying action long enough to enable another Secretary of the Interior, more favorable to their designs, to take office.

Secretary Ballinger deserves commendation for the manner in which he met the issue. He secured the appointment of three army engineers, who are to act in the capacity of an advisory board to the Secretary of the Interior during the extension of one year which has been granted to the city authorities. This board of engineers will pass upon the evidence submitted, and will make

such independent investigations as the circumstances may demand. The new order, just issued by the Interior Department, enjoins the city from acquiring any further rights in the National Park, and expressly reserves for decision at the final hearing "all questions as to the validity and legality of said permit."

It is a sufficient condemnation of San Francisco's proposed violation of the integrity of our fairest national park to know that not necessity, but comparative cheapness and the reduction of the city's taxes, were the motive power of the project. The amazing misinformation printed on the dodgers which were distributed to catch the city's vote shows that some promoters of the project were not troubled by scruples about the truth. The leading San Francisco dailies conducted a campaign of misrepresentation from the start, boldly asserting, in substance: "The question is not whether this is right, but whether we can get it." Apparently municipalities as well as individuals can play at the game of "grab."

We may rest assured that this feature of the case will not receive an *ex parte* judgment in the pending investigation. But we wish to call attention to a consideration which was entirely overlooked in the initial discussions. It concerns the present trend of sanitary science in relation to domestic water supplies. This most important matter clearly received no attention when former Secretary Garfield, in the permit, took for granted the possibility of a divided use of the watershed—as a source of domestic water supply and a public recreation ground at the same time. Since modern science holds these two uses to be incompatible, it was soon perceived that the nation is facing in this grant the ultimate loss of one-half of Yosemite National Park.

The case is even worse. One of the editors of THE INDEPENDENT has been at pains, during the past year, to investigate the best managed water supplies in Germany, Switzerland and England, and to consult hydraulic experts. The gist of it all is that *no wise and provident city, at this stage of sanitary science, and with the demonstrated results of sixty years of European experience in filtration, will jeopardize the health of its inhabitants with an unfiltered water supply.* If it does, nevertheless, public sentiment, scientific knowledge and the welfare of the supplied communities demand the rigid exclusion of the public from the drainage area, in this case 500 square miles of the park. It is the occasional pollution of water by typhoid bacilli that proves so dangerous to unfiltered domestic supplies. For this reason the German Imperial Board of Health, the greatest sanitary tribunal in the world, has declared that *all* surface supplies, from whatever source, must be adequately and systematically filtered just before use.

It will no doubt be a pleasing function for the board of army engineers, with Colonel Biddle at their head, to save San Francisco's inhabitants from the fatal stupidity of its politicians, and Hetch-Hetchy from the useless sacrifice of a watery grave, by directing the city to filter its water from abundant sources nearer home. For as long as water must be filtered, it would be an economic crime to pass by nearer sources, and a gratuitous piece of vandalism to destroy Hetch-Hetchy while wasting the city's revenues.

With the example of Switzerland before one's eyes, reaping from tourists a harvest of many million dollars annually, the economic value of scenery has ceased to be a negligible asset of national resources. It is proper to inquire into the economic loss of needlessly submerging a valley and blocking a canyon whose combined scenic features surpass anything of the kind to be found in Switzerland. He would be bold who would seek to estimate the numbers of tourists that will in the near future be attracted by the fame of the Tuolumne Canyon. Nearly five thousand feet in twenty miles the river comes tumbling down a colossal granite gorge, on its way to Hetch-Hetchy. The accompanying photograph is but one of many steps in the regal stairway of falls and cliffs and forests that lead up to the throne room of the High Sierra—the Tuolumne Meadows. Any project that involves the destruction or withdrawal from public access and enjoyment of this unique portion of the

A TYPICAL FALL IN THE TUOLUMNE CANYON.

park should be compelled to justify itself before the nation to whom this property belongs. It indicates little sagacity on our part to esteem lightly our national parks and their future health-giving and economic influence upon the nation's life, when beyond the Atlantic two nations—Italy and Switzerland—are now starting a movement to establish at infinite cost what we already have and hold with a careless hand.

A New Movement for Christian Unity

THE latest movement toward Christian unity has started within the pale of the Protestant Episcopal Church. Twelve laymen and twelve clergymen have combined to form a Christian Unity Foundation, incorporated under the laws of the State of New York. Its object is "to promote Christian unity at home and thruout the world." An Episcopalian convention in Chicago, about two decades ago, also made a pronouncement in favor of Church unity, on the basis of the Quadrilateral. The Presbyterians had a conference with Episcopalian representatives. But one plank of the Quadrilateral was the historic episcopate, and the Episcopalians thought they had the exclusive right to stand on it. Of course, the conference came to nothing.

Since the present movement does not profess to start with the Quadrilateral or with any statement of doctrinal essentials, the case looks more hopeful. It certainly affords a more conciliatory approach to the problem. The means by which the purpose of the foundation is to be effected is (quoting from one of the articles of incorporation):

"To gather and disseminate accurate information relative to the faith and works of all Christian bodies: to set forth the great danger of our unhappy divisions and the waste of spiritual energy due thereto: to devise and suggest practical methods of cooperation, substituting comity for rivalry in the propagation of the common faith; to bring together all who are laboring in the same field, and this in the belief that full knowledge of one another will emphasize our actual membership in the one body of Christ and our common agreement in the essentials of faith."

It may be as difficult as ever to agree on "the essentials of faith," especially if the historic episcopate is among them. But the Foundation will do much to clear

the way if it succeeds in working out practicable methods of co-operation between denominations. Unfortunately, the movement is apparently not one for which the denomination accepts official responsibility, altho the Rt. Rev. Frederick Courtney, sometime Bishop of Nova Scotia, is the president, and the Bishops of Albany, Southern Ohio, Chicago, Newark and New York, are vice-presidents of the first board of trustees. It is a denominational corporation, officered by influential Episcopalian clergymen and laymen. The Rev. Arthur Lowndes, of New York, is secretary.

The incorporators' intended mode of procedure apparently is to arrange for private, unofficial conferences with members of other denominations in order to ascertain on what basis a union could be effected. Naturally, those denominations which are most akin to the Episcopal Church will be consulted first. There ought, for instance, to be little difficulty in coming to an understanding with the Unitas Fratrum, or Moravians. While they lay no stress upon that point, their historic episcopate seems to be well established, and their history, polity, ritual and doctrinal beliefs afford many points of contact. One such union achieved would perhaps have the effect of starting the procession.

One of the aims of the corporation is comity. We wish to make a suggestion. Why should not this foundation address itself vigorously to the task of promoting interdenominational comity? The General Federation of Churches, we understand, already has committees on comity with whom it would be possible to co-operate. The different denominations could appoint official committees of their own, so that it would be possible to support decisions with authority. Certainly no more practical and useful result could be desired at the present time than to devise and render effective some means of checking an overgrowth of struggling little churches in small towns. There must be an agreement as to policy and official co-operation between Christian bodies to effect this saving of hate and effort. The net result of such activity must in the end be to foster Christian unity. Since so many attempts along other lines have failed, this new corporation is entitled to the good wishes of all who deplore the unchristian rivalry of Christian denominations.

Acceleration Mad

Mr. G. Lowes Dickinson tells us that when he first sojourned in America he was of opinion that our ruling passion was the lust of wealth. On closer acquaintance he revised his judgment, and concluded that it was not crude wealth that we cared for, so much as power. Coming again to see us, however, after the interval of some years, he once more changed his mind, and decided that what we really are mad about is mere "acceleration."

A good many foreigners that have confided to the literary world their impressions of us, at so much per, have been worse observers than Mr. Dickinson. His final generalization seems to have been reached quite independently by the Westchester Bankers' Association, which has recently announced that the American people have gone "automobile crazy," and given notice that it has decided to "use extreme caution" hereafter in discounting the paper of applicants who are borrowing money for the purpose of purchasing automobiles. Hundreds of families, they say, in the last six months, have mortgaged their homes or hypothecated securities for this purpose. This is, in fact, an understatement. The mortgaging has been going on for more than two years, and the mortgagors are numbered, not by hundreds, but by thousands; no one need be surprised if, when the day of reckoning comes, the number turns out to be tens of thousands.

This circumstance shows, for one thing, the quality of the argument which has diligently been circulated of late, that rising prices have not in fact to any great extent hastened the destruction of the middle class, ground between combined corporations and a unionized proletariat. "If," the argument runs, "the well-to-do middle class is disappearing, how does it happen that the nation's automobile bill, including purchase price

and running expenses, is close upon a billion dollars annually?" The exact value of this argument will appear *when the bill is paid.*

The facts are significant of something more, also. The craze for speeding, in a literal sense, is only one phase of our acceleration madness in general. "Hustle" is an American word, and no other one word, long or short, expresses so much that may truly be affirmed of American character and American life. It ought to replace all other legends on American coins and coats of arms.

The American not only tears and sweats to catch his car or his train, to catch the fastest train, to "turn over" his capital, to make record time in building skyscrapers, and, in general, to keep the physical elements that he works with in a cyclonic turmoil; he also accelerates his "education" and his "culture." He sees nothing absurd in paying "big money" to "accelerate public opinion" or in "promoting progress." He would accelerate the kingdom of heaven, if it could be made to come within observation, so that he could watch the speedometer.

Incidentally, he accelerates Bright's disease, heart failure and the distribution of his estate. We shouldn't mind this so much if nothing more happened. But, unhappily, he incidentally also accelerates the disintegration of civilization, which is not so trifling a consequence. It happens that we live in a universe in which everything is in process, either of evolution or of dissolution. Evolution may proceed rapidly or slowly, and results to which the mind of man cannot be indifferent turn upon the rate at which evolution proceeds. A living organism, or a community, may rapidly acquire and consolidate its substance or its parts, just as a cooling mass of matter may rapidly lose its molecular motion and contract into a crystalline lump. If the loss of energy and the compacting be quickly accomplished there is very little internal rearrangement of parts; that is to say, there is but little evolution. The organism or the community that gets its growth or its aggregation and consolidation rapidly never acquires the nicer complexities of organization, the more delicate adjustments of means to ends, fullness, richness or perfect adaptability of life. It has "hustled" thru a crude, imperfect evolution to premature senility or early death.

The Greek ideal of perfection, with a relatively unchanging or slowly changing way of life and social order, does not appeal to the modern mind. But surely the day will come when men will begin to ask whether incessant turmoil, "a dynamic state" that allows few possibilities for the attainment of solid excellence, thoroness of knowledge, completeness of understanding, permanence and harmony in human relationships, delicate adjustments of thought and feeling, the contemplation of beauty and excellence, and the quiet enjoyment of an existence rich with variety of interests is, after all, so much better than the relatively "static order" of that earlier world. This is a most "un-American" thought, we know, but we have no fear that it will be seized upon by our countrymen with such avidity as to throw the traffic squad out of employment.

Midsummer Tariff Madness

Senator Aldrich's personal interest in the increase of the duty on manufactures of rubber from 30 to 35 per cent. was the subject of heated controversy in Kansas last week. Senator Bristow insisted upon consideration of the evidence that Mr. Aldrich and his son were largely interested in a formidable new corporation, which he called a Rubber Trust, holding that the Aldriches and their associates must be beneficiaries of the additional duty. Speaker Cannon attempted to answer him, but carefully avoided the effective reply which he could have made. Mr. Aldrich himself, we presume, regarded the controversy with serenity, and possibly with amusement, knowing that Mr. Bristow had made no case against him.

Mr. Bristow could easily have ascertained before his first speech on this subject that the Aldrich and Guggenheim corporation (Intercontinental Rubber Company) is concerned with the production and importation of crude rub-

ber, which remains on the free list. If he did not know this then, he has since had time to make inquiry. There is nothing in the lists of directors and officers of this corporation and of the company which controls two-thirds of the manufacture of rubber goods to indicate that the two are connected. All this could have been ascertained by Speaker Cannon, who might have shown that Mr. Bristow had missed the point and made no case. But the Speaker has not been noted for an intimate familiarity with the tariff.

Mr. Aldrich's interest in a company which imports and sells crude rubber does not prove that he increased the duty on manufactured rubber for the enrichment of himself and his son. Mr. Bristow must know this. If he can show that Mr. Aldrich and his son are officers or directors or stockholders in the United States Rubber Company, or any other corporation engaged in the manufacture of rubber goods, and therefore protected by the duty which was increased, he will have a case against the Senator from Rhode Island. At present he has none. Speaker Cannon could not perceive the weakness of Mr. Bristow's position.

We suggest to the Senator from Kansas, as we did a week ago, that before he speaks again upon this topic he should attempt to find out whether Mr. Aldrich or members of his family have made investments in the rubber manufacturing industry. Thus he may obtain evidence that will be worth something.

Our readers know what our views are about the recent sham revision of the tariff, and about the influence of Mr. Aldrich upon tariff legislation. Thruout the revision debate the criticism of the insurgents was keen and frequently effective. As a rule, since the bill was passed, it has been just. This blunder in Kansas is to be deplored, because it tends to take away a part of the weight which that criticism should have with the discerning public. Those who fight against the Payne-Aldrich tariff should be sure of the foundations of their arguments. Careful inquiry should precede the publication of such charges as have been made in this rubber case. Loss of influence may be caused by haste and errors.

Flying as a Business

If all the fatalities of aviation since the aeroplane was devised were tabulated, the conclusion would be irresistible that navigating the air cannot be classed among the extra-hazardous occupations. Indeed, considering the number of amateurs and beginners for whom flying has strong attractions, the wonder grows that accidents are not much more numerous and more serious. Evidently flying is a business which may be easily and quickly learned by almost any one who is neither timid nor nervous. New names are almost daily added to the growing list of record-makers and record-breakers. Men not previously mentioned in press dispatches and wholly unknown to the public do surprising things which command international attention. When and how did these men learn all it has been assumed an aviator should know? The answer is not difficult. Some of them never learned at all and qualified to fly in much less time than would be needed to fit them for employment in driving a good team of horses. Some had a few lessons, which were chiefly useful in showing them how to handle the motor and keep it running. A few, perhaps, have been carefully trained, but it is safe to say they learned more in their first independent flight than had been imparted by their instructors. Only a few months ago even a short flight of fifteen or twenty minutes was deemed wonderful. Today a race from New York to St. Louis for a considerable money prize would attract hundreds of entries if as many builders of areoplanes were ready to supply the apparatus. Obviously, flying is neither very difficult nor dangerous from the point of view of the aviator; less so, indeed, than racing motor cars on land. Perhaps the real danger of flying is that it is too easy, and for that reason tempts the inexperienced and temperamentally reckless. That some of these fall is to be expected. It is also to be expected that occasionally one who is neither inexperienced nor reckless will find himself the victim of an accident resulting from faulty design or bad construction. It is quite certain, however, that very few of those who have won success in the air

have given to the work of preparation for flight a fraction of the time or pains needed to master the simplest of the mechanical trades.

Strikes and Lawlessness

Almost up to the hour of this writing, the great strike which has tied up the Grand Trunk Railway of Canada challenged attention and commanded respect by reason of the fact that it promised to be quite free from violence and destruction of property. So it began, and had it so continued it would have been the most interesting and instructive of recent great strikes. The issue was one of wages. So far as we are aware, this was not complicated by any sentimental demands. The men asked for higher pay, were refused it, gave notice of the intention to strike at a given time, carried out their program to the letter, and left the road to do the best it could without their services. In all this the men appear to have acted well within their rights. The right of the company to fill their places with new men was not affirmed by the strikers, but it did not need to be affirmed. They knew the company would do exactly this if it could, but they do not seem to have believed that it could. If it could not, peace overtures might be expected from the board room in a few days. Evidently it was less difficult to fill the vacant places than the strikers had expected. In these circumstances the purpose exprest by the strikers and adhered to for several days seems to have weakened. On the 23d inst. a serious outbreak occurred at Brockville, in which the station was partly wrecked, and a number of new employees were mishandled with murderous intent. It was a typical mob of strikers and strike sympathizers, and necessitated the calling out of troops for its suppression. This is much to be regretted. The issue is no longer one of wages, but of law and order against anarchy. Now that the tocsin has sounded, similar outbreaks of mob violence may be expected all along the line. What effect the outbreak at Brockville will have upon the great body of sane, observant and generally law-respecting men immediately concerned in the Grand Trunk strike is uncertain. Probably it will have less effect than it might be expected to have if they were in a position to consider the matter from a point of view less intimately personal. Are the men qualified for train service by character, habits and attainments ready to assume and defend the position that their unions can secure what they desire only by bloodshed, incendiarism and dynamite? We hope not.

Indirectly Attacking the President

It has recently come to be understood that Mr. Roosevelt longs to harmonize the factions in the Republican party. Last week's insurgent speeches in Kansas show that the task, while not necessarily hopeless, is a very formidable one. Senator Cummins and Senator Bristow have turned from the tariff to the Railroad Bill, sharply attacking Attorney General Wickersham. The original bill sent to Congress by this member of the Cabinet, Mr. Bristow says, had sixteen sections—four for the benefit of the people, and twelve "drawn in the interest of the railroads." These twelve would have "legalized every illegal merger, every dishonest watering of stock, and every unlawful consolidation made in the last forty years." Senator Cummins is not less severe. He remarks that the Attorney General, in preparing the bill, forgot that he was attorney for the people, but "remembered his long law practice in New York, when his chief business was to tell corporations how to evade the law." If, as the Senator asserts, Mr. Aldrich was a "traitor to his party and to the people" because he supported the provisions of Mr. Wickersham's bill, then it follows that the Attorney General also was a traitor. But where does Mr. Taft stand? Mr. Wickersham represented him, and the bill had his approval. He publicly exprest regret because of the omission of certain parts which, the two insurgent Senators say, were drawn in the interest of the railroads. Does it occur to these gentlemen that they are virtually asserting that the President himself is a traitor to his party and to the American people?

Is It Hot Enough for You?

A correspondent of the *Herald* recently set forth his scheme of keeping cool in hot weather. Briefly it was to leave off all his underwear. Some one long ago suggested an even better way than that, which was to remove one's skin and sit down in one's bones. When the mercury begins to climb up to the top of the thermometer many people cry out and rebel. They have not the resignation of the sage who remarked: "When it rains, let it rain." They are perverse, since in winter they would be delighted with the very heat they object to in summer. During the "heated term" it would, of course, be foolish to wear winter clothing. The shirt waist for men is a happy device that is contemporaneous with the peek-a-boo waist for women. Both are suggestive of coolness and comfort, whatever else they may suggest. Some people have held that a cabbage leaf worn just inside the hat makes for coolness. We recall a man who used to say with an air of authority, "If you want to keep cool, stop fanning yourself!" Possibly something might be done with the Christian Science idea and imagine coolness. Thus coolness will presently be in the midst of the practitioner. The experiment may easily be tried and if it fails the heat is not any hotter. There is something to be said in favor of the hot days in that they are often vacation days and signify the woods, the fields and the brooks that meander thru the meadows. What if it is hot since you are driving along a romantic bit of country road? What do you care for the hot sun beating down upon you if you are a motor enthusiast on land or sea? Heat, after all, is only relative. If the temperature rises to 99 degrees in the shade, you have only to see to it that your mind is properly attuned and it will seem to be several degrees cooler than it will be to another who is looking on the hot side of things.

Rural Co-operation

Co-operation on the farm is the watchword of the hour. The Southern States are full of new organizations for celery raisers, citrus growers and associations for profitable marketing. It is announced quite generally that the farmer will not be satisfied until the middleman in market is entirely got rid of. He is not closely enough identified with the producer. American production has three factors, now entirely distinct in method and separate in interest; the producer, the middleman and the retailer. There is no real co-operation between them, as there is no co-operation among themselves. In the Southern States co-operative colonies are also coming to the front. These are working out the problems of rescuing waste lands, provided action is truly co-operative. Speculators who offer marvelous advantages and low prices, in all cases securing mortgages or their equivalent, betray a good many country homeseekers. This does not hinder wisely spying out the land by a company, and co-operative settlement. The New England pioneers were really co-operators, as they moved westward over the continent, and the same methods will hold good for those who are now moving southward. They planted and they reaped and they harvested by mutual aid. They helped each other in house building, in corn husking; and in all ways the community idea was very strong. It is the enormous growth of our cities that has weakened this co-operative sentiment, and made individualism fleshless and soulless. The farmer has often been spoken of as living a peculiarly independent life, the co-operative side of agriculture being overlooked. A colony of a dozen farmers would not intrude on individual independence, by owning a good deal of common stock in the way of tools, machinery, and even considerable live stock. By working together they can secure not only larger crops, but better prices. Friction and competition may be largely smoothed away. We thoroly believe in the lend-a-hand principle, as essentially economic as well as ethical.

Shaw Versus Morley and Meredith

We have received from Mr. Sinclair too late to appear in his article published elsewhere this issue the following letter from Bernard Shaw, which as usual speaks for itself:

Everything that Upton Sinclair says in the circular is true enough, but it is not conceiv-

able that any fund such as he proposes would get into the hands of those for whom it was intended. An original writer of genius always raises hostility and inspires terror and dislike. Committees always select the second-best men. Now I do not say that the endowment of second-best men might not be better than no endowment at all, but it is not what Upton Sinclair is driving at. Great men of the type he wishes to encourage are not really helpable in their beginnings. But it too often happens that the poverty through which they have to fight in their youth either dogs them unremittingly through life, or returns in their old age, especially if in their latest utterances they get further and further estranged from contemporary taste, as in the case of Turner and Beethoven. In this phase they might have just a chance of being selected by a committee for an old age pension. But that, again, is not what Upton Sinclair wants.

There is only one serious and effective way of helping young men of the kind in view, and that is by providing everybody with enough leisure in the intervals of well-paid and not excessive work to enable them to write books in their spare time and pay for the printing of them. Nothing else seems to me to be really hopeful. I myself seem an example of a man who achieved literary eminence without assistance; but as a matter of fact certain remnants of family property made all the difference. For fully nine years I had to sponge shamelessly on my father and mother; but even at that we only squeezed thru because my mother's grandfather had been a rich man. In fact I was just the man for whom Upton wants to establish his fund. Yet for the life of me I cannot see how any committee in the world could have given me a farthing. All I had to show was five big novels which nobody would publish, and as the publishers' readers by whose advice they were rejected included Lord Morley and George Meredith, it cannot be said that I was in any worse hands than those of any committee likely to be appointed. Of course Sinclair may say to this that if Morley and Meredith, instead of having to advise a publisher as to the prospects of a business speculation, had only had to consider how to help a struggling talent without reference to commercial consideration, they might have come to my rescue. Unfortunately, I have seen both their verdicts; and I can assure Sinclair that I produced on both of them exactly the impression that is inevitably produced in every such case: that is, that I was a young man with more cleverness than was good for me and that what I needed was snubbing and not encouraging. No doubt there are talents which are not aggressive and do not smell of brimstone; but these are precisely the talents which are marketable, except, of course, in the case of the highest poetry, which, however, is out of the question anyhow as a means of livelihood. William Morris, when he was at the hight of his fame as a poet, long after the publication of his popular poem, "The Earthly Paradise," told me that his income from his poems was about a hundred a year; and I happen to know that Robert Browning threatened to leave the country, because the Income Tax Commissioners assessed him with a modest but wholly imaginary income on the strength of his reputation. Poetry is thus frankly a matter of endowment, but for the rest I think a writer's chance of being helped by the fund would be in inverse ratio to his qualifications as conceived by Upton Sinclair.

Yours truly,

LONDON, ENGLAND. BERNARD SHAW.

Dairy Trains

Special corn trains on our railroads are now followed by special dairy trains, and special trains for other purposes. The dairy special for Iowa has been most conspicuous for calling out crowds. The State has five hundred and fifty creameries and ships 110,000,000 pounds of butter every year; but it is believed that full twice this amount could be turned off, with better cows and better methods. The instruction given laid special emphasis on getting rid of poor and second-rate cows. It is believed that not one out of ten of the milch cows owned by the common farmer pay their way; whatever money is made comes from the small percentage of high grade animals. Fifty thousand people were reached by the Iowa train, and frequently over one thousand were reached at a single station. Business houses were closed in every town; schools were dismissed, and the country people for miles around gathered together with the towns people to study the lessons given by the practical experts on the train. In some cases the train was met by brass bands, and always by the cheering of the people. It was a terribly muddy time, and the roads nearly impassable; but the farmers got there all the same. In casting up our account with the railroads we have got to take into our estimate, and very cordially, what they are doing along the line of farm improvement.

Italian Seminaries

Recently bishops in various parts of Italy agreed to combine their diocesan seminaries for the training of priests into interdiocesan—that is, making several smaller into one larger. They also allotted to the latter the grants allowed by the state to the former. Here they reckoned without

their host. The Keeper of the Seals promptly notified the civil authorities of the districts affected that the bishops had run afoul of the law of guarantees, by which Italy took over the management of Church estates. He further complained that the Episcopate had passed by the civil authority and even called the seminaries useless—*"inutili."* The sole comment of the Italian press is that it is merely a question of safeguarding the state's rights; while among the Italian cardinals there is none, like Andrieu, of Bordeaux, who will stand up to resent and resist. Cardinal Del Val has a dry point to his pen. We look in vain for any letter exhorting the Italian bishops to stand up for their rights and those of Mother Church. Pius X is silent. No appeals are echoing around the world on the wickedness of the Italian Government. The fact, however, is that the Italian bishops must close some seminaries. Vocations in Italy are on the decrease. It is one of the Pope's reforms by which a few large seminaries take the place of dozens of small poor ones.

Korean Missionaries

Lately the missionaries in Korea resolved to try to add one million this year to the number of their adherents. This is made the occasion of a bitter attack on them as political disturbers of the peace. A number of leading Japanese papers have joined in this attack. They say that the hundreds of Christian schools are hotbeds of opposition to the Government, and incite rebellion against Japanese authority. The missionaries, they say, ought to be expelled from the country for the sake of peace. They declare that a Church Report by Dr. Underwood is full of unquiet words and instigates the Koreans to oppose the Residency-General. It is even declared that all the Korean assassins thus far discovered have been Christian converts and connected with the missionaries. We do not believe one word of all this. It is true that an active religious propaganda is pushed, but not a political one. Yet it may be true that the Korean malcontents, who regard opposition to Japanese authority as patriotism, may have sought to attach themselves to the Christian mission as a cover for their purposes. All this is used, we presume, to encourage the proposal that Japan should definitely annex Korea, and put an end to the fiction of a Korean Emperor. This seems likely to be done, and we can hardly expect any foreign opposition, particularly now that we hear of a formal agreement between Great Britain, Russia and Japan as to their relative rights on the Continent. The agreement is said to include Manchuria, as if China had nothing to say, and probably Korea and Mongolia. All this has a bearing on the effort of Secretary Knox to maintain an open door in Manchuria, which has much angered the Japanese. Let him first, they say, give us an open door in the Philippines, and stop Japanese immigration to the United States.

A curious development of pathological advice recommends as a cure for nervous disorders a return to the old fashioned ways of living and working. One physician tells us that light needlework comes under the category of amusement, and he would prescribe it for a woman with nerve trouble, just as he would prescribe golf for men. The object of course is to keep the mind occupied, without too much strain, and not much chance for it to rest on and exaggerate troubles. He tells us that "nerves" constitutes a disease dependent on lack of occupation, a mental emptiness that leaves room for fret and vexation. Knitting is recommended as still better than needlework, and is claimed to have a peculiarly soothing effect on those who handle the needles; as better than any medicine ever prescribed. It is believed that the health of our mothers depended largely on the fact that they had a good deal to do, from daylight until dark. The old-fashioned mother was always knitting, when she was not cooking or weaving, and when she walked the streets to visit a neighbor, she knitted along the way. Half a dozen friends knitted as they talked, and a dropped stitch was a capital break in a bit of gossip. It broke the tension, and the competitive stints or stunts, were exceedingly interesting, while harmless.

Speaker Cannon, at Kansas City, took the position that no great party can stand on a single issue. Yet in the very same sentence he is compelled to allow that the Republican party did stand, and did do its greatest work on a single issue—that between servile and free labor. We are quite sure that history does not confirm any such doctrine as Mr. Cannon asserts. The original Republican party of 1800 had one single issue with Federalism, and it fought that issue thru the administrations of Jefferson, and until the death of the Federal party. Mr. Madison had but one great problem to solve when he took up the Government, and in spite of all efforts to the contrary, he found himself involved in a struggle with Great Britain. Any fair reading of American history shows us that, altho in the development of party life many questions become involved, no period of our history has ever been without one leading and controlling political problem. A letter from George William Curtis, happens to lie before us, in which he complains of the political reform efforts made after the Civil War, that they created unworkable jungles for platforms, adding: "No party has ever succeeded in establishing itself with the people except on a single issue."

We have had numerous breach of promise suits by women against men. Suits by disappointed men against women have been rare. Young Mr. Russell Griswold, of Rowayton, Conn., is, however, suing Miss Helen Woodruff Smith, a divorcee, many years his senior, for $50,000 worth of damaged affections. Miss Smith puts in a general denial of all the allegations and defies the allegator in good style. It must be said that "Brunhilde's" letters to "Siegfried" are full of entertaining matter, in which banter and a serio-comic lovemaking go hand in hand. They make delightful midsummer reading and offer a decided and most refreshing contrast to certain masculine love letters, written on a famous club's stationery and signed by a well-known litterateur. The suit, moreover, comes at a most opportune moment, when there is a dearth of news, and the city editor can give it space and scare headings. Of course, any breach of promise suit is indefensible, but if marriage is a copartnership in which each party is equal before the law and the prophets, we don't see why a man should not sue as well as be sued.

At the recent third Hochschultag of Germany Professor Lamprecht, of Leipsic, the most famous historian in the academic world of the Fatherland, delivered an address which is causing an endless discussion by the claim that the German universities no longer occupy that pre-eminence in higher education that they have for decades, but are being outranked by other institutions, particularly those of America, on account of their great financial equipment and excellent management. Leading periodicals, among them the influential *Allgemeine Zeitung,* of Munich, agree with Lamprecht, and in its columns there have appeared contributions from leading university lights, declaring that the scholarship of Germany is not as progressive as it should be. Lamprecht finds the student body in the Fatherland more modern than the teaching corps, as is evinced particularly by the fact that the former no longer crowd the regular university lectures, but enthusiastically take part in the work of the institutes and seminars.

Altho the nine universities of Prussia, especially Berlin, were the last to admit women to the full rights of academic citizenship, the total enrollment this semester of the women contingent has reached 2,324, as compared with 1,680 six months ago, a remarkable increase of 633. In the philosophical faculties the enrollment of women is 2,004, as the majority are preparing for the position of teachers in girls' high schools; there are 266 women in the medical department, 15 in the law and 39 in the theological. The most noteworthy feature in these statistics is that no fewer than 1,250 are fully immatriculated, *i. e.*, have done the work required by the nine-year courses of the regular secondary schools, and naturally have been compelled to do this by private study. For the first time

the number of regular and full women students is greater than that of the irregular "hörerinnen," which is only 1,074.

Dr. Woods Hutchinson insists that the data for centenarians cannot be relied upon; that in fact we have none. Notwithstanding, Dr. Wu-Ting-Fang left us recently with this cheerful good bye: "I hope I will find you all here in 1959, when I intend to return to America. If not the trouble will be with you, and not with me." He added that Americans shortened their lives by too hasty eating and too little attention to the proper mode of living. "Before departing now, I would like to call attention to three things which you should observe if you would live a long and contented life. They are pure food, pure air, and pure thoughts." Dr. Wu gave us a fine combination when he added pure thoughts, for we may be sure that the agitation for pure food and pure air will not bring about the desired long life.

The resolution of the New York Department of the Grand Army of the Republic requesting the President not to allow any statue in the National Capitol wearing any badges or uniform that indicate disloyalty is directed against the supposition that Virginia will put in a statue of General Lee in a Confederate uniform. This resolution is not to be easily sneered down. For four years General Lee fought against his country; for the rest of his life, before and after, he was a loyal American. The resolution allows him to appear in citizens' clothes or in the uniform in which he served his country. To give him the Confederate uniform is meant to glorify secession and rebellion. The resolution is all right.

It is a curious fact that remarks made last year in a baccalaureate address at the university over which he presides should now tend to prevent the nomination of President Woodrow Wilson by the Democrats of New Jersey for governor of that State. As we find them quoted by the press, they were that "the usual standard of an employee in our day is to give as little as he may for his wages"; that "labor is standardized by the trade unions, and this is the standard to which it is made to conform." Naturally, they have not been relished by organized labor, which is not without influence in Dr. Wilson's party. If he should be nominated, they would not help him at the polls.

Despair broods o'er the Bourbon press of the land. Out in benighted Oregon, where the people rule, the voters are actually proposing to decide for themselves what laws they want. Under the initiative and referendum next November thirty-two measures are to come up for their decision. We tremble for the future of democracy if these dangerous political innovations are to spread over the land, as now seems likely. The old-time methods are good enough for us. Never trust the people. Besides, its unconstitutional. The legislatures are the only safe receptacles of political wisdom and purity.

In the State of Virginia, according to the official report of the Auditor of Public Accounts, the negroes own 1,517,500 acres of land and pay taxes on real estate valued at $19,488,577, and own personal property worth $7,111,703. In Richmond they pay taxes on property valued at $2,057,517. They seem to be doing well, and are too busy catching up to spend much time worrying about their grievances. At this rate there will not be many grievances when another fifty years have passed since Abraham Lincoln's election.

The famous "Essence of Christianity," by Professor Harnack, has been the surprising occasion of a conversion, that of Dr. Albert von Ruville, professor of history in the University of Halle, to the Roman Catholic faith. We learn of this from *Revista Catolica*, of Rome, which describes the volume as "an impious and rationalistic book."

Thanks to the Cuban Senate, Havana is not to be disgraced this year by a new Monte Carlo, with bull fights and cock fights added to gambling, all under official protection. In November next, the bill should be rejected emphatically by the Cuban Congress.

Insurance

The Fire Patrol and Its Responsibility

THE old-time statement that there is nothing new under the sun is frequently subjected to rude shocks in these later days. This remark is inspired by the reports published some time ago in New Orleans of a suit entered by Dreyfus & Co. against the fire patrol of that city, in which $50,000 damages were claimed. These damages arose because of a fire at which the patrol figured. The plaintiff's complaint alleged that the patrol company is

"not a charitable or benevolent enterprise, but rather a business institution chartered by individuals and operated under private control for private interests, having been founded for the benefit of insurers," its operations, however, extending to all property liable to damage by fire. The plaintiff further set forth "that on the night of the fire the insurance patrol sent one of its wagons with a crew to plaintiff's place of business, which was next door to the point of conflagration, and threatened by fire; that the crew or crews then and there, and without request, consultation with or request of petitioner, proceeded to enter petitioner's building, assume control, move goods about and place tarpaulins on them; break thru walls, sweep water out of the building and generally do such things as they thought necessary, without regard to the wishes of the petitioner, thus assuming protection of the building and its contents, assuring petitioner that it need have no concern for the safety of its property, whatever, petitioner's president, Jules S. Dreyfus, having been assured at 12 o'clock on the night of the fire by an officer in charge of the insurance patrol forces, that he could go home, the building and the property therein being in charge and care of the patrol, which direction the said Dreyfus promptly complied with, in reasonable reliance upon the assurance aforesaid."

It then appears or is at least alleged that the patrol, thru negligence, allowed the fire to connect with the stock of the plaintiff and to destroy the same.

In addition to the novelty of the suit it has hitherto been held that the insurance patrols in various cities have been very efficient means of saving stocks and furnishings covered by insurance. Thru the agency of such patrols it has frequently been possible to save stocks from water damage signifying as much loss as would fire itself, by means of tarpaulins of waterproof canvas or of rubber. The patrol companies have at times also reduced losses that would have been certain except for their aid by the removal of the fire-threatened goods. Fire patrols have done good work also in protecting the salvage after a fire. This feature of their work is more valuable to the insuring company than it is to the property owner, but the work they have done in keeping the loss as small as possible certainly merits some consideration.

When in due time the Dreyfus suit came to trial the jury rejected the plaintiff's claim based on an allegation that, thru carelessness, the fire which was supposed to have been extinguished revived and destroyed the firm's property.

The contention, aside from the novelty thereof, seemed absurd on the face of it, and the verdict was righteously in favor of the defendant. The fire insurance patrol must needs handle some difficult propositions. It is always anxious to save property, as it has otherwise no excuse for existence. It has thru its good offices saved property aggregating millions upon millions of dollars. That an organization like the fire patrol would willfully neglect to protect property, as alleged, to the fullest possible extent, no one having any familiarity with the subject at all would credit for a moment. The New Orleans verdict re-establishes the reputation of the fire patrol, which never suffered in the minds of any one, except perhaps the ignorant.

A VERY effective method of curing the automobile menace has been reported from England. Instead of proceeding against the car owner, the auto itself is tried, and if it is found guilty the machine gets a sentence of from thirty to sixty days' imprisonment, during which time it is unavailable for use on the part of its owner. An adoption of this system might be worth while considering in this country, where the inadequacy of fines has long been apparent to the most careless observer.

Financial

Currency Associations

FOLLOWING the enactment of the Aldrich-Vreeland law in 1908, only one of the proposed associations of banks, designed to promote issues of currency in emergencies, was formed. That one is in Washington. Secretary MacVeagh recently suggested that the banks in our large cities should organize associations, not because any extraordinary strain is approaching, but for the reason that the machinery for procuring the additional currency may properly be perfected at a time when no financial stress is in sight or expected. After the bill became a law, large banks found some of the provisions objectionable. Among these was one which appeared to prevent withdrawal from an association. This obstacle is said to have been removed by an opinion from the Department of Justice. The Secretary's suggestion will be considered by New York banks at a meeting to be held on the 29th. Reports received in Washington indicate a readiness to form associations in Philadelphia, Pittsburg, St. Louis and Boston. It is not probable, as the Secretary has said, that associations will find it expedient to apply for currency before the term of the law expires, in 1914, but the organization of them in large cities will do no harm and may exert a favorable influence. Sentiment has much to do with financial crises, and the mere existence of such associations may tend to prevent the strain which an exercise of their powers is designed to relieve.

Great Stamp Frauds

LAST year's receipts under the New York law imposing a tax on transfers of stock were $5,355,546. Comptroller Clark Williams (formerly the well-known Superintendent of the Banking Department) says that there should have been about $2,000,000 more. The State has been robbed of $2,000,000 a year by fraud. He caused a thoro investigation to be made, and there was evidence of such a loss. Scoundrels who deal in stamps have corrupted the office boys, and possibly some other employees, in brokerage houses. Canceled stamps have been made to look like new ones and have been used again and again. Hundreds of boys have been engaged in the traffic, collecting and selling canceled stamps, and in many ways serving the interests of the rascally dealers. There are large profits to be gained out of an annual total of $2,000,000. While dealers had the greater part of the stealings, there are boys who were able to keep from $500 to $1,500 a year, and several of them accumulated enough for investments in real estate.

It is difficult to understand why this stealing was not prevented, but the explanation of so competent an officer as Mr. Williams must be accepted. Existing law has not permitted successful prosecution upon the accessible evidence, which was that of accomplices. He sought earnestly for the enactment of a new law. The Senate passed one, but the Assembly, or House, failed to concur. It failed twice, and it is said that the failures were due to the opposition of certain persons who are not yet named. It seems to us that complete exposure of all implicated persons is now imperatively demanded. If the Comptroller has evidence against dealers, it should be given to the public. If there has been opposition in the Legislature, those who prevented the desired legislation should be required to explain. This is no ordinary case of fraud. The State has lost several millions. Hundreds of boys have been corrupted. There should be complete publicity. The guilty will then suffer some punishment, even if they keep out of jail.

....Receipts on account of the new Federal tax on the net earnings of corporations amount to $26,445,699, and the sum remaining to be paid is about $400,000.

....Our leading exports in the last fiscal year were: Cotton, $450,000,000; copper, $83,500,000; illuminating oil, $62,500,000; wheat, $47,000,000; flour, $46,500,000; lard, $43,000,000; tobacco, $38,000,000; lumber, $37,000,000.

The Independent

VOL. LXIX NEW YORK, THURSDAY, AUGUST 4, 1910 No. 3218

Survey of the World

Ohio's Republican Convention

The Republican convention in Ohio, on the 26th and 27th ult., excited much interest thruout the country. The Democrats had renominated the present Governor, Judson Harmon, and had brought him forward as a candidate for the Presidency. Among the candidates for the Republican nomination were Representative Longworth (Mr. Roosevelt's son-in-law) and James R. Garfield, Secretary of the Interior in Mr. Roosevelt's Cabinet. Another candidate had the support of George B. Cox, sometimes called the Boss of Cincinnati, and it was recalled that Mr. Taft a few years ago, in a public address, exprest an unfavorable opinion of Mr. Cox. There was no evidence that either Mr. Taft or Mr. Roosevelt was attempting to exert influence for or against any of the men for whom votes were to be cast. Mr. Garfield represented a progressive element, and he urged that the platform should approve several projects of progressive legislation. The result of the convention could not be foreseen. On the first day Mr. Garfield's candidate for the chairmanship of the platform committee was defeated by a vote of 15 to 3. At the brief session of the convention an address was made by Representative Longworth, the temporary chairman. Governor Harmon, he said, was a big, forceful man, a shrewd politician, whose ambition was unlimited. Both the President and the Governor were Ohio men and lawyers, but the President's legal talents had been employed, not in the service of railroads and corporations, but in the service of the people. In his great office the President had "made good." Few realized what fixity of purpose, what strength, sagacity, good humor and patience had been required to bring order out of chaos during the closing weeks of the recent session of Congress. The Taft smile was but a mask for dogged determination and an iron will. Mr. Longworth asserted that a great majority of the so-called insurgents were animated only by patriotic motives. He denied that the Republican party was under the domination of bosses or was subservient to special interests. The principal issue in the campaign must be the tariff, and the Republicans would be united in support of protection:

> "We have differed among ourselves somewhat as to details, but not on the underlying principles. Our differences as to details have been due mainly to the fact that none of us had definite knowledge of all costs of production. This difficulty will in the future be eliminated by the creation of the tariff commission. But upon the great basic principle of protection we stand as a unit—regulars, insurgents and independents. We believe in the maintenance of American industries; we insist upon the maintenance of the American scale of wages."

On the second day, Senator Burton was permanent chairman. Altho the country had rarely been more prosperous, he said, and human rights, equality and opportunity had never been more highly regarded, still there was "an unprecedented degree of social unrest and carping criticism." Groundless fears and discontent had created a situation which militated to the disadvantage of the Republican party. The people, owing to their absorption in the development of the country's wealth, were giving but incidental attention to public affairs, and they were misled by sensationalists. He denied that "the interests" exercised undue influence upon legislation or public men. Defending the new tariff, he asserted that it was a revision downward. The record of Congress at the recent

session had been one unequaled since the Civil War in solid achievement.—— Three ballots were required for the nomination for Governor. Mr. Cox had confidently predicted the nomination of Judge O. B. Brown, of Dayton. But on the first ballot Warren G. Harding, of Marion, was at the top of the list with 485 votes, while Judge Brown had 413, Mr. Longworth 92, and Mr. Garfield 73. On the second ballot Mr. Harding had 497, Judge Brown's number fell to 363, and 164 votes were cast for Mr. Longworth. On the third Mr. Cox gave the votes of Hamilton County to Mr. Harding. Other changes in the latter's favor were then made, and the contest came to an end, Mr. Harding having 746 votes. The nominee was formerly an active supporter of Senator Foraker, and it is said that his success has given some life to the old Foraker organization. The platform is a long one. It begins with hearty commendation of "the splendid administration" of President Taft and calls for his renomination in 1912. A list of the Administration's achievements follows. This includes the indictment of those involved in the cotton pool, the prosecution of men implicated in the sugar frauds, the recent withdrawal of public lands, and the prevention of an increase of freight rates. Concerning the tariff, the platform says:

"The tariff has been revised in accordance with the Republican doctrine of protecting home industries and American labor. It did not raise the rate of duty on a single common food product. The increases made were on luxuries and articles not of ordinary use. It affords no more than adequate protection to the industries of the nation, and is fair alike to consumers, laborers and producers. No tariff bill was more unjustly assailed. It has justified the expectations of its friends by turning a national deficit into a surplus, while at the same time reducing the average rate of all duties. Its maximum and minimum rates have operated to give us for the first time equality of opportunity with other nations in our foreign trade. The Republican party, thru Congress and the President, have given free trade with the Philippines with such limitations as to sugar and tobacco as will afford protection to domestic industries, and has established a customs court. Recognizing inequalities due to changing conditions or that otherwise may be found to exist, Congress has provided a tariff board, with an ample appropriation, for the investigation of the differences in the cost of production at home and abroad, so that if any rates are found to be higher than necessary to afford labor a high wage and capital a fair return, those rates will be reduced."

In addition, the platform favors legislation for the revival of the merchant marine, an adequate navy, arbitration for the settlement of international disputes, "such amendment of the Anti-Trust law as final judicial interpretation proves to be necessary for the proper regulation of monopolies," the supervision and regulation of public utilities by a commission, publicity for campaign funds, and ratification of the income tax amendment. Concerning conservation it says:

"We demand the enforcement of existing laws and the enactment of new laws for the protection, wise use, and conservation of the natural resources under the control of the Federal Government. These resources, such as the coal deposits of Alaska, water power and reservoir sites, should be developed under a system by which any abuses of monopoly can be avoided, extortion from the consumer prevented, and just compensation to the public obtained."

Mr. Garfield and those who stood with him would have had the tariff paragraph emphasize the need of ascertaining promptly the costs of production, and call for such an enlargement of the powers of the tariff board as would enable Congress, upon the discovery of inequity, to revise a tariff schedule immediately without revising the entire law. They also asked for the recall and for ballot reform, and they urged that "measures be taken to check, and ultimately to prevent, the sinister influence now exerted over public officers and political activities by special interests." In a published statement Mr. Garfield says that those who supported progressive principles have no reason to be discouraged:

"We should have started earlier. The fight against the domination of special interests in politics is being waged thruout the nation. The immediate failure to obtain the entire progressive platform should simply make us see more clearly the need of constant vigilance, and more firmly resolve to take all necessary steps to preserve self-government and political liberty."

Many Negroes Killed in Texas

In what was at first called a race war, at Slocum, 15 miles from Palestine, Tex., on Friday and Saturday last, at least twenty negroes were killed by a mob of white men. It was asserted

in the first reports that the negroes had planned to kill the whites and burn their houses; that they were heavily armed, having looted the stores in Palestine where guns were sold, and that in pitched battles several white men had been shot down. Later reports were to the effect that no whites had been killed and that twenty, and possibly twenty-five, negroes had been murdered. William Black, sheriff of the county, made an investigation, and on Sunday he gave the following statement to the public:

"I found the greatest excitement prevailing thruout the section. Men were going about killing negroes as fast as they could find them, and so far as I was able to ascertain, without any real cause. These negroes have done no wrong that I could discover. There was just a hot-headed gang hunting them down and killing them. I don't know how many there were in the mob, but I think there must have been 200 or 300. Some of them cut the telephone wires. They hunted the negroes down like sheep. We found eleven bodies, but from what I have heard the dead must number fifteen or twenty. We came across four bodies in one house on a marsh between Denison Springs and Slocum. One negro had been killed the night before. Three negroes were sitting up with the remains, one of them being an old, white-haired man. These three were killed where they sat. So far as I can learn the negroes were not armed. I sent two deputies out thru the vicinity to collect all the arms they could find in the houses of the negroes. They made a thoro search, but found only nine single-barreled shotguns, none of which seemed to have been fired lately, and about thirty shells, all loaded with small shot."

At last accounts the bodies of eighteen negroes had been found. It appears that the whites went from cabin to cabin on Friday night, and were engaged in the bloody work until the next morning. The only causes assigned are that a negro was insolent to a white who had endorsed his note and was obliged to pay it, and that there were rumors that the negroes had plotted against the whites at meetings held in a schoolhouse. A company of cavalry has been sent to Slocum, and several white men have been held for an inquiry to be made by a grand jury.

The Pan-American Conference

It was decided last week, at the Pan-American Conference in Buenos Ayres, that it would be unwise to make a general declaration in support of the Monroe Doctrine, and therefore the subject will not be taken up for consideration. The appropriate committee will probably report the draft of a treaty calling for the compulsory arbitration of the pecuniary claims of one nation against another. In the committee which is considering sanitary regulations for commerce there is some difference of opinion. Venezuela objected to the proposition, supported by the United States and Cuba, that the condition of ports of departure must be such as to satisfy the nation receiving shipments that in these ports there is no dangerous infectious or contagious disease. Venezuela's representative complained that such requirements would attack the sovereignty of the country from which shipments are made. Cuba's delegate, replying, reminded him of Castro's concealment of plague in Venezuela. The delegate from Santo Domingo (said to be a friend of Madriz) asked that the program of the conference be extended to permit discussion of the intervention of European, North American or South American Powers with respect to the domestic politics of any American nation. Cuba's delegate said the time for making such an extension was when the program was arranged at Washington by representatives of the republics. No action was taken. When tributes were paid to Argentina on her national holiday, Prof. Paul S. Reinsch, of the United States delegation, made an address in Spanish, speaking for his country. When the conference celebrated the anniversary of Peruvian independence, an address in Spanish was delivered by Prof. Bernard Moses, of the same delegation, who said his country extended the hand of friendship to Peru. Chile proposes that, in recognition of Argentina's centenary, a building for a permanent Pan-American Exposition be erected in Buenos Ayres, and that the cost of it be shared by all the republics.

The Islands

There has been another small uprising against the Cuban Government. On the 24th, General Miniet, a veteran of Cuba's wars, took to the woods, with thirty followers, in the vicinity of El Caney, which is not far from Santiago.

Something of the kind had been expected, for the police, in a raid upon the Veterans' Club in Santiago, had found a large quantity of arms and ammunition. It was thought that Colonel Jane, a rich Cuban, who is president of the club, had gone with Miniet, but the Government reported that he had remained quietly at his home. From Havana 1,200 soldiers and rural guards, commanded by General Monteagudo, were quickly sent to Santiago. On the 27th they found Miniet's camp, captured him and killed one of his companions. This ended the uprising. Afterward there came reports from Jamaica that Colonel Jane had arrived there in a small boat, having fled hurriedly from Santiago. Miniet was angry because the Government had recently discharged him from the Secret Service. ——Attorney-General Wickersham having decided that the acts appropriating $300,000 for raising the wreck of the "Maine" require prompt action, a board of army engineers, led by Col. William M. Black, has been appointed to make an inquiry. This board will report within three or four months as to the course to be pursued. A contractor connected heretofore with many important projects has submitted a plan for raising the wreck by pneumatic caissons. After it has been raised, he says, it can be repaired and brought to this country by its own steam power.——After much delay, Hayti's Congress has ratified the McDonald contract or concession for the construction of railways and the development of the sugar and fruit industries. ——In the Philippines, Felipe Salvador, who was called a Pope and was the leader of the fanatical insurrectionists or bandits known as Iglesiasts, has been captured. At one time he had 50,000 followers. —— The Philippine Supreme Court, in a case relating to several deported Chinese, has decided that the Governor-General has full power to deport objectionable persons, and that the local courts have no authority to restrain his exercise of this power.——A special commissioner sent to the Orient by the *Cologne Gazette* publishes in that German journal an attack upon American public officers in the Philippines, asserting that many of them seek to use their power for personal profit by becoming directly or indirectly interested in business projects.

The Revolution in Nicaragua

A few weeks ago, President Madriz, of Nicaragua, addressed a note to several European Powers, asking them to exert their influence to prevent the interference of the United States with what he called his blockade of the port of Bluefields. A part of this note was as follows:

"Our civil war would be ended were Bluefields occupied by our troops. The commander of the American cruiser Paducah landed troops and proclaimed that he would oppose our Government, altho this was the center of the revolutionary party and the troops of that party were there. We had occupied the Bluff, the key to Bluefields; had broken the armed opposition, and desired to blockade Bluefields. The American Government hindered this out of consideration for American shipping and declared that customs should be paid to the revolutionary party, which had erected a new customs house on Schooner Cay. The American Government demanded besides that American ships be allowed to pass our fortifications free of dues before our eyes, altho they were vessels carrying munitions for the revolutionists. They [the revolutionists], altho locked in Bluefields, prepared themselves, undisturbed, to attack us. President Madriz has notified President Taft of these facts and asked neutrality. I beg Your Excellency to take occasion to use your good offices with the Cabinet at Washington that my Government may have a free hand to restore peace in this country without the hindrances mentioned. Nicaragua asks only the right of exercising the full power indispensable to the principles of justice. We reckon upon the moral support of friendly nations and especially upon our sister republics."

Germany has now directed its Minister to Central America, Herr de Buch, at Guatemala City, to answer that it declines to use its good offices in the manner suggested.——Jacinto de Garcia, the Argentine Chargé d'Affaires in Mexico, remarked on the 28th that "greed, not humanitarianism, was the motive of the United States in the intervention in Cuba." "Greed," he added, "was the motive in the Philippines and in Panama, and it is the same motive which inspires the policy of the United States in Nicaragua now."——Estrada's revolutionists have retaken Prinzapulca and have won a battle in the West, defeating General Lara and capturing his son. Relying upon the attitude of our Government, the Norwegian ships are again passing

between New Orleans and Bluefields. The "Hornet," which was recently sold by our Navy Department, sailed from New Orleans last week, carrying arms and supplies to the revolutionists.——President Davila, of Honduras, asserted on the 26th that ex-President Bonilla's revolution in that country had been suppressed. Later reports say, however, that Bonilla with 3,000 men is approaching Davila's capital. There was sharp fighting at Puerto Cortes, and one of Bonilla's generals was killed there.——Peru's Cabinet has resigned, being unwilling to accept the terms proposed by the three mediating Powers, the United States, Argentine and Brazil, in the matter of the boundary dispute with Ecuador.

Great Britain

King George has signed a proclamation fixing the coronation for the month of June next year, and appointing a committee to which will be entrusted the task of drawing up suggestions in connection with the arrangements for the ceremony.——A peculiar complication has arisen in connection with the extradition to India of a seditious student named Savarkar. He was being conveyed to India, in charge of detectives, on the P. and O. steamer "Morea." When the steamer arrived at Marseilles Savarkar locked himself into a bathroom under pretense of desiring to take a bath, and then jumped thru a porthole and swam ashore. There he was apprehended by the French harbor police and handed over to the British detectives. The French Socialists now assert that the handing over of Savarkar was a breach of international law. They have induced the French Government to ask the British Government to stay proceedings until all the documents in the case have been submitted to the French authorities.——On July 25 Sir W. S. Robson, the British Attorney-General, began his concluding argument in the Newfoundland fisheries case before the arbitration tribunal at The Hague. Senator Elihu Root will close the case for the United States.——The King's accession declaration bill passed the second reading in the House of Commons by a vote of 410 to 84. It was slightly amended, so that in its present form it provides for the elimination of the pronouncement against Roman Catholicism and the substitution of the clause, "And declare that I am a faithful Protestant." The original substituting clause read, "And declare that I am a faithful member of the Protestant Church as by law established in England." Against this form of declaration the Nonconformists raised such vigorous opposition that the Premier finally accepted their amendment. On the 29th the bill passed upon a third reading by a vote of 245 to 52. ——A conference and luncheon of free traders was held at Holborn Restaurant lately. Lord Beauchamp presided and Mr. Haldane was the principal speaker. He said the fallacies of protection had a plausibility about them which it would be foolish to underrate.——The Post Office announces the completion of a submarine telephone cable of a novel type across the Channel, from Dover to Cape Grisnez. This greatly improves telephonic communication between England and France. The efficiency of the new cable is said to have been increased threefold by inserting loading coils in the cable at intervals of one nautical mile. The coils render the speech more distinct. Experiments will be made to determine the possibility of conversation between London and Amsterdam, and possibly Berlin. The French Government proposes to lay a second new cable across the Channel.——Sir Edward Gray sent a strongly worded dispatch to the British Minister at Peking, requiring the scrupulous observance of treaties and trade agreements, and the posting of troops on the Tibetan frontier. The influx of Chinese into Tibet continues unabated.——In police raids many seditious leaflets are being found and confiscated in Calcutta.——The Union Government of South Africa is preparing to carry out a plan, first suggested by Cecil Rhodes twenty years ago, for founding a central South African residential teaching university at Groote Schuur. A wealthy South African is reported to be ready to furnish an incipient fund of $1,000,000. Groote Schuur will be the official residence of General Botha, the Prime Minister, in Cape Town.

Germany and Austria-Hungary

German journals comment favorably on Premier Asquith's recent speech on the British naval program, in which he adopted a very friendly tone toward Germany. Indeed, German Socialists think that Mr. Asquith is much too optimistic when he assumes that German motives in building a navy are not necessarily aggressive. But the present state of Anglo-German relations is so much improved that the organ of the Foreign Office and other journals conjecture that Mr. Asquith is considering the possibility of an understanding with Germany. The Premier's remark that the building of the Austro-Hungarian Dreadnoughts is shrouded in mystery is answered by the *Neue Freie Presse,* of Vienna. The journal says :

"The Austro-Hungarian Government has made clear its intentions with regard to the building of Dreadnoughts on several occasions, and it is absolutely no secret that Austria-Hungary has already begun the work. It is known that the Stabilimento Tecnico at Trieste, which is responsible for the building of almost all the warships for our Navy, has already two Dreadnoughts in course of construction. . . . We in Austria-Hungary merely follow the movement for which the British Isles gave the signal. The mysterious Dreadnoughts concerning which the English Government obviously wishes to gain authentic information, as is shown by the frequent questions on the subject, would never have come into question at all were it not for England's almost inexplicable dread of being surpassed by Germany, with consequences which press more and more heavily on the English taxpayers. We consider here that our millions could be expended to greater advantage than in ploughing the waves with warships."

The failure of the Niederdeutsche Bank at Dortmund, with branches thruout Germany, has created a sensation. Depositors will lose nearly their entire savings and the directors their private fortunes. The liabilities are estimated at $12,000,000 and the assets at $3,000,000.——Dirigible balloons were being tested on the 27th of July as to their usefulness for military purposes. The Gross III ascended at Tegel and it was expected to go to Gotha to carry out experiments by wireless telegraphy with a military crew. At Metz several dirigibles were employed at the same time. They went thru a series of evolutions in squadron formation over the city and surrounding fortresses.——German Socialists are in a dispute over the support given to the Finance Bill by the Socialist party of Baden under the leadership of Herr Frank. The Socialist congress at Nuremburg in 1908 laid down the doctrine that Socialist deputies must not support financial estimates, because they are for the maintenance of the present social system. This may revive the whole question as to the extent to which Socialists may play the part of opportunists. —— Herr Dallwitz, Prussian Minister of the Interior, has signed orders for the expulsion of twenty-one Mormon missionaries, most of them Americans or Englishmen. They had come to Berlin for a meeting and were holding a service when an agent of the police, seated in the audience, rose and declared the meeting dissolved. At the same time the police entered and arrested all who were of foreign nationality. By an agreement between the Foreign Office and the American Embassy made in 1903 all Mormon missionaries of American birth were to leave Germany because their teachings were subversive of morality. Mormons have repeatedly disregarded this understanding.

Church and State in Spain

The long continued conflict between Church and State in Spain has come to a crisis. The Vatican's last note demanded that the decree permitting non-Catholic religious societies to display the insignia for public worship be withdrawn, and that the Vatican be so informed. After a conference with the King, Premier Canalejas directed the recall of the Marquis de Ojeda, Spanish Ambassador to the Vatican, so that the rupture between the Government and the Vatican is now an accomplished fact. Premier Canalejas is preparing for a supreme struggle. In addressing a liberal organization he is reported to have said:

"Poor Spain, if we succumb it will be decadence. The Government, which possesses the confidence of the King, will save Spain despite all and against all. The struggle we wage is not anti-religious, but anti-clerical. We count upon the army, a majority in Parliament and reason."

It is believed in some quarters that the Holy See counts upon the fall of the Government. A disturbing element is Don Jaime de Bourbon, the Carlist Pre-

tender to the Spanish throne. He has issued a manifesto in which he hints at the possibility of a revolution. The general situation is complicated also by unrest among the miners in the Catalonian provinces and the frequent encounters between Catholic and anti-clerical elements thruout the country. *The Tablet* prints an official note from the *Osservatore Romano,* in which it is stated that the Holy See was not unwilling to compromise:

"We are authorized to declare that the Holy See has shown itself disposed to make important concessions not less with the present Cabinet than with its predecessors. Among them we note: the limitation of the religious houses, by the suppression of all those in which less than twelve religious persons reside —saving some opportune exceptions; the obligation of obtaining Government authorization for opening new houses; the subjection of the religious congregations to the imposts of the realm which are paid by other Spanish juridical persons or subjects; the obligation for foreigners, who intend to found religious orders of congregations possessing juridical personality recognized by the state, of being first naturalized in the realm according to the civil laws."

These proposed concessions, however, hardly touch the problem at which Señor Canalejas is working. According to a recent count, there were more than 3,000 monasteries and more than 100,000 monks and nuns in Spain. In Madrid and Barcelona alone there are 169 convents. The State budget for the support of the religious bodies last year amounted to more than $8,000,000. Thousands of devout Catholics have pledged their support to the Government, declaring that the struggle is not one against religion, but for liberty and freedom from insupportable clerical burdens. It is expected that the Government will proceed at once with its measures of reform, including the restriction of religious orders and the regulation of education and the general relations of Church and State.

Miscellaneous Items

A shooting affray at Lemberg, Austria, between Ruthenian and Polish students, resulting in a number of dead and wounded, is being investigated by the judicial and academic authorities. One hundred and twenty Ruthenes have been arrested.——Sir Gerard Lowther, British Ambassador at Constantinople, will be transferred to St. Petersburg.——Telegraphic news from Abyssinia has reached Rome of an impending conflict between Ras Michael and Ras Ollie. The former has sent an urgent request for reinforcements from Addis Abeba, the Abyssinian capital, and is concentrating a large number of troops.——A Cabinet crisis, which has existed for several weeks in Persia appears to have come to a climax. The Sipahdar and Sardar of Assad have resigned. Mustaufi el Mamalik has been entrusted with the formation of a new ministry.——A promulgation of the Borromeo encyclical in the Hungarian diocese of Kalocsa is causing considerable disquiet in Hungary. The Protestants, who are strong in that region, have made an energetic protest against this affront to their religious feelings. It is felt in Government circles that some action should be taken.——A bomb outrage was perpetrated on a farmer named Graatz near Berlin. He received an anonymous letter demanding that he deposit the sum of $700 in a tin box which he was told, he would find buried at a certain place. Curiosity led him to investigate. He found the box, but when he picked it up its contents exploded, wounding him severely. The author of the plot has not been found.——Apparently because King George of Greece failed to secure permission from the Powers to annex the island of Crete he is reported to be in disfavor with his subjects. German statesmen in touch with the situation fear that he may have to abdicate. When he recently returned to Athens he was given a chilling reception. Many papers demand his abdication.——A cyclone ravaged the district northwest of Milan on the 23d inst. Sixty persons are reported dead and many hundreds injured. The property losses are estimated at many millions.——In an Alpine disaster near Grindelwald seven persons lost their lives. There were two parties numbering twelve persons in all. The first party was overwhelmed by an avalanche, and fell three hundred feet, sweeping along the second party. Among those killed are two German climbers, Jean Barthold and Alfred Kuhn, and the guides, Alexander and Adolph Burgener, and Christian Bohren.

The School Book, the Publisher and the Public

BY EDWIN GINN

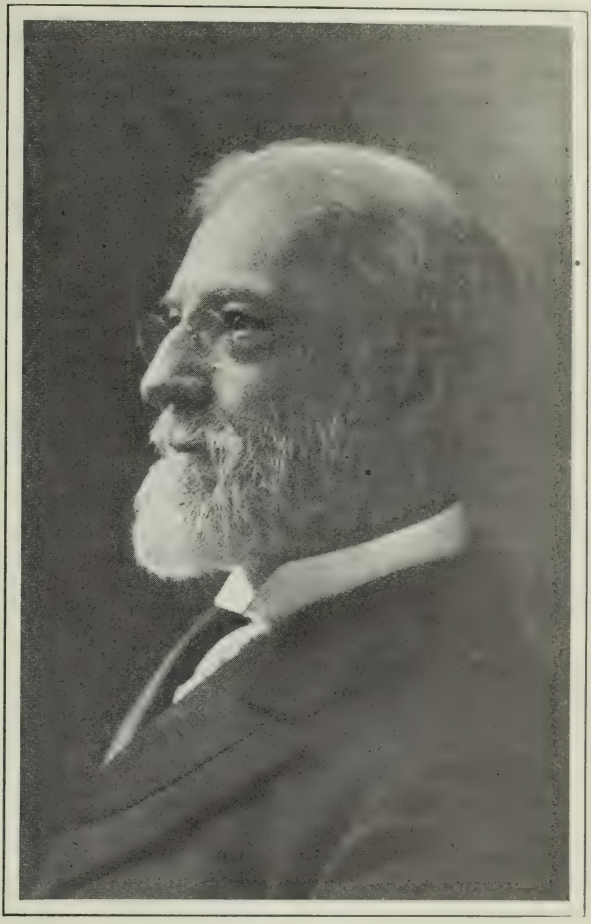
[Mr. Ginn is the head of the widely known Boston firm of Ginn & Co., publishers of school and college text books. He is also interested in all public questions, especially in housing the poor, and in promoting better relations between capital and labor. Recently he founded the International School of Peace and endowed it with $50,000 annually. The following article is an illuminating discussion of the publishing business and will be of interest to all educators.—EDITOR.]

IT seems desirable that the public should know more than they now do concerning the publishing of school books, the part they play in education, and the conditions surrounding the business, both favorable and unfavorable. The wisdom of giving out information on this subject may be questioned by some who feel that the situation is a delicate one, and that if we publish any facts in regard to the business interested parties may misuse them. I have found, however, that there is greater danger in ignorance than in knowledge, and it is my belief that the public should be taken into our confidence. The one who knows most about the school book business is the publisher himself. If the public receive information from any other source it must be second-hand and consequently less reliable. In my judgment the reason for so much unjust criticism and for such legislation as is against the public interests is that the publishers have not given to the public the facts concerning their business.

The teaching fraternity understand the value of a good book and its importance in all educational work. They know that while there may be rare instances of a teacher being comparatively independent of the book, the majority depend very largely upon it for the value of their instruction. The great majority of the general public, however, do not understand this, and, not knowing the facts, have been misled. Publishers have been silent too long, and I now propose to give out some facts in regard to the school book business, the amount done annually, the comparatively small margin of profit secured, the difficult task the publisher has to perform, and the importance of his work in the educational world.

Many suppose that the school book business is on a par, as to extent, money invested and profits derived, with the leading industries of the country. I have often seen it stated that the publishers were making enormous profits and that they were engaged in a business of very large proportions, some rating it as high as $1,000,000 in a single State. But to the best of my knowledge and belief the entire school book business in the United States is somewhere between $9,000,000 and $12,000,000 annually, and it must be remembered that this is divided among a large number of houses. Compare the extent of the publishing business with the other great industries of the country. It will be seen at a glance that there are many that exceed it from ten to twenty fold; as, for example, manufactures of various kinds, woolens and cottons, boots and shoes, iron and steel, farming implements, sugar, liquors, cigars, etc., the great milling interests, real estate interests, transportation by land and sea, oil, coal and mining industries, banking, and the various lines of mercantile enterprises. All these exceed in amount the school book business many, many times.

The character of the school book business makes it necessary that men of superior education should engage in it. Few, if any, kinds of business require a more careful training. There are few, if any, kinds of business where the attendant risks are greater, and probably none in which the public have so much at stake; and when the public come to understand all the conditions which surround this business and the difficulties that beset it on every hand, at the same time realizing the importance of the good book in education, they will readily see that the publisher needs a pretty free



hand in his work and that his reward is no greater than it should be.

To produce a good book is no easy task. Many suppose that the publisher sits in his office and authors and editors walk in with their manuscripts all in perfect form, ready for the printer; that all he is required to do is to set his presses and binding machines in operation and bring out the books. But what are the facts?

It takes years of careful search and training on the part of the publisher to create a good working staff composed of men and women of exceptional ability, who thoroly understand their business. An author may be fully equipped in knowledge, but lack in experience in the schools, or he may have both knowledge and experience and yet lack the ability to write simply and attractively enough for school children. Thus, a great many authors need supplementing, and arranging this union of talent, so that each will work harmoniously with the other, is no easy task.

The royalties paid for this talent are large, much nearer an equal division than most people suppose. In fact, by going back over our books for twenty years, we find by actual figures that we have paid to our authors from 40 to 50 per cent. of the total amount taken out of the business by authors and publishers together. I want to say, however, that we have always considered ourselves very fortunate in being able to secure these good authors and have been glad to pay them as liberally as we have for the kind of work they could do for us. There are not too many to be found of the first grade, and those whom it has been our good fortune to secure could command and deserve a large return for their services. Here is an item of expense in the making of the good book which I fear the public have not fully appreciated.

After receiving the manuscript the publisher sends it out to his critics of recognized ability for their opinion and advice as to its further perfection. Here again, in procuring these advisers, great care and expense are involved. Much depends upon the selection of the right helpers in this as in all other departments of the business. Indeed, I have sometimes thought that the great difference between success and failure the world over, in whatever the undertaking, lies largely in the judgment displayed in the choice of one's lieutenants.

EDWIN GINN.

Then it costs a great deal to illustrate the book after the manuscript is perfected. The cost of illustrating a geography, for example, varies from $20,000 to $30,000, and the illustrations in most books cost several hundred dollars.

The cost of the skilled labor necessary in the manufacture of the book is an-

other large item of expense. In any manufacturing business, especially in the higher grades, the cost of the raw materials is a very unimportant item, as, for example, in the manufacture of watches, pianos, chronometers, and many other articles which I might enumerate; and so it is in the manufacture of the good book.

The expense of advertising and putting upon the market the product of the publisher is very heavy, one cause for this being that school books are used by people scattered over a vast territory. In fact, if a careful analysis were to be made, I think it would be found that few manufactured articles return to the producer so small a margin of profit, compared with the cost of production and the expense of putting the goods upon the market.

In this connection it is only fair to state that while the price of all kinds of manufactured articles and the price of labor have materially advanced, this is not true of the school book. On the contrary, discounts have continually increased, until today the net price of the school book is really less than it was ten or fifteen years ago.

Even after the most painstaking work by author, publisher and manufacturer, when it would seem that an almost perfect book was the result, and after spending large sums in advertising and placing it upon the market, we often find that it does not meet the need of the schools, and it is dropped before it has paid back the original cost of the plates and expense of introduction. Many a book has to be made over several times before the successful edition appears. The test of a good book is the duration of time that it remains in the schools, and I think that, in general, this statement can truly be made, that unless a book continues in use over five years it is not a success and yields no profit to the publisher. There are exceptions, of course, where the cost of the plates is small and the expense of putting the book on the market is light; but the return comes more often after the end of five years than before. Here is an element of risk and expense which the public know nothing about. It is the few successful books that have to carry the many unsuccessful ones, and it is not possible, speaking from my own experience, to guard against such losses. Because of the difficulties and risks attending this business we have seen many failures. You can count upon the fingers of one hand the school-book publishing houses that have accumulated any considerable property in the last fifty years.

From the above it seems to me it can readily be seen that there is much to deter thoughtful men of ability and enterprise from entering the school-book publishing business under present conditions. Yet how does it compare in importance with other activities? Is it not as essential to have good books as good shoes, good clothes, or good houses? Is it not as necessary to train the mind properly as to care for the body? It would seem that the public should foster and protect those engaged in the making of school books as carefully at least as those engaged in any other business.

Because of the sharp competition in the school-book business, as in all other enterprises, the different houses have sent out large numbers of traveling men. This has affected the public both favorably and unfavorably. These men are for the most part college graduates, many of them have been teachers, men well qualified to conduct intelligently the work in hand. They distribute annually, free of charge, hundreds of thousands of the latest text books, thus giving teachers and school officials an opportunity to examine the newest and best in school literature. This has been a decided advantage to education, particularly in country districts far from the large cities. These agents are an elevating influence on the whole and are so recognized by thoughtful educators; but occasionally, in their zeal to secure business for their respective houses, they may lay themselves open to the charge of bringing about changes which are of less benefit to the public than to the publisher.

Largely, I believe, because the public have not understood the conditions and have felt that the profits received from the sale of school books were too large, certain States have taken into their hands the selection of textbooks for a series of years, in some instances going

so far as to limit the price of the books to be used in the schools. With what result?

In the first place, such action creates a great monopoly and there is fierce competition among the publishers to secure the contracts. No matter how honest the men on these State boards may be, they are in a hard position in trying to decide what is best under existing conditions, and there is grave danger that because of prejudice or friendships or other considerations the best interests of the community may not be served. While it frequently happens that the successful book is a good one, it often happens that the poorer one is selected, for the publisher of the poorer book has a larger margin of profit than the publisher of the good one and he can therefore promote more freely. The public should guard against all possibility of the lobbyist's getting in his work in matters pertaining to education. If ever there was a place where political influence of any kind should not be allowed to have weight it is in matters of education, whether in the selection of teachers or of the books so important in their work.

Again, limiting the price of the book is in the interests of the poorer book. All such legislation puts a premium on the cheaper product, and is consequently very short-sighted from an educational standpoint. At the most not more than fifteen or twenty cents a year can be saved, per pupil, by purchasing cheap books, and what does that amount to in the child's education? By careful computation it has been found that the average cost of school books, per year, to the pupil in the grammar school does not exceed one dollar, which, when compared with the other necessary cost, is a very small item. At a moderate estimate his clothing, food, housing, and the value of his time cannot be reckoned at less than two hundred dollars a year. Now if his school books cost at most only a dollar a year and are such an important factor in his education, is it wise economy, for the sake of a small saving of fifteen or twenty cents, to lose the advantages that good books furnish in the training which is to prepare him to take a place in the work of the world? Is there anything that yields a greater return on the amount invested than the good book, at the price paid for it, in the hands of the child? Instead of discouraging in any way the production of the good book would it not be far better for the public to put a premium upon it and see that conditions are such as to attract the best talent the country affords?

The publisher of school books is a public servant, and the public should see to it that no action on their part seriously hampers him in his work or hinders from entering this field men of intelligence and enterprise. While the publisher has, of course, a very deep interest in this subject, it is of far deeper interest to the public, for the publishers are few, the public are many. The loss that the one may sustain is of little consequence compared to the loss that would come to the millions if the books placed in the hands of children were of inferior quality. It is of the utmost importance that the public should look into all these matters in a broad way, watching with a jealous eye any attempt to interfere with the free conduct of those concerned in advancing education and seeing to it that no laws are enacted creating a monopoly or such a state of affairs as would seriously affect a product of such great import to the world.

BOSTON, MASS.

Boarding Schools Versus Public Schools

BY THOMAS STOCKHAM BAKER, Ph.D.

Director of The Tome School for Boys.

THE title of this article carries with it a suggestion of opposition between these two types of schools —between boarding schools and public schools. As a matter of fact, however, both types of schools may work effectively side by side. Both meet special needs and each is accomplishing an important task.

The more serious question is not whether the work of the boarding schools is as helpful as the work of the public schools, but rather, in what respects can either one or both be improved? The public schools are not adequate nor is the number of boarding schools which are conducted along serious educational lines sufficient to meet our requirements. We do not need a larger number of schools or a greater variety, but rather we should strive to make the schools of all sorts which are now in existence more thoro, more scholarly and more helpful.

In discussing the demands of modern business and social life, it is sometimes stated, or at least suggested, that the schools and their curricula will have to be changed. Unquestionably the next generation will see modifications in our systems of education, but as schools are improved, it will be observed that the materials of education are not likely to be modified greatly. The improvements will come in a more economical arrangement of the pupils' time, in more intensive teaching, in more serious demands on the industry of the pupils, and, finally, in a closer relationship between the homes and the schools.

In furthering any great mental or moral reform it is desirable to begin with the youth. The universities have been compelled to do more than their share to increase the sum total of culture. We must turn to the schools in seeking to promote greater enlightenment and with full confidence that important results will be gained.

It should be understood that the success of the universities, the success of the colleges, the success of all institutions for the promotion of learning and letters, depends upon giving to boys the best opportunities. If they are to realize all the benefits which the higher institutions afford, they must be started right on their educational career. The development of schools is, at the present time, the most attractive department in the whole range of education. There is a manifest loss of effort in our collegiate education. There are, so to speak, too many parallel lines competing with one another where no competition is necessary. If some of the intense energy which is now being devoted to building up colleges could be turned into the direction of the improvement and endowment of schools, we should be better off. The importance of this work of educating boys in the most plastic period of their lives is so serious that it demands the consideration of the men who are endowing colleges, universities and hospitals.

In any discussion of the comparative merits of different types of schools everything depends on the character of the schools themselves. There are in this country some very admirable boarding schools. There are also systems of public schools which reach a high degree of excellence. In this brief article reference can only be made to some of the most salient weaknesses and characteristics of both types of school.

There are boarding schools that are business enterprises. They do not accept the very great and grave responsibilities which properly belong to them. There are boarding schools which are moved by high ideals of scholarship and high ideals of life. They are, however, not able to accomplish their ends because of inadequate resources. Again, there are boarding schools with ample resources, whose efficiency is hampered by an unhealthy school spirit. In such schools there may be too great an interest in the non-scholastic questions connected with the education of boys. There may be too much talk about the development of some of the abstract qualities

which a boy has or is supposed to have. There is a suspicion of cant in much of the interest in what is called the manly boy. The quality of manliness is not increased by much speaking. Schoolmasters, in trying to cultivate this quality, are in danger of introducing a dilettante element into their schools, whereas the manliness will take care of itself if the boy gains respect for himself by an industrious manner of living and if he acquires the feeling of physical well-being which a sturdy young athlete must have. Industry and sensible athletics are important means to give to boys these abstract qualities which are so much sought after.

These are, then, some of the tests which may be applied to a boarding school in order to determine whether it is doing the kind of work which justifies its existence—is it a serious educational enterprise, with serious educational purposes or is it a commercial venture with little or no ideals of what makes for the real development of boys? Does the boarding school have resources in the way of a well trained faculty, school buildings, laboratories, athletic fields, which are sufficient to do effective work with the boys committed to its charge? Finally, is the attainment of sound scholarship the first aim of the school? Is there a sturdy democracy which removes it from the suspicion of snobbery?

It might be asked, why should there be a need of boarding schools when the public schools are maintained from one end of the country to the other?

The work of our public schools must be supplemented by schools on an independent foundation, for many reasons. One cause of the demand for independent institutions is the increasing necessity of sending boys away from home. Crowded conditions in the city, the great pressure of numbers which comes upon the public schools, the countless distractions which carry the boy away from his task of getting an education, make it necessary for him to be sent to a school where there is less restlessness and less unsettlement. Furthermore, many parents are unable or unwilling to accept the responsibility of training their own children. Fathers and mothers now rely more upon the schools for assistance than ever before. The demands upon the professional schoolmaster are becoming more and more exacting, and with this increasing dependence it is necessary that the school should assume a most serious attitude toward its duties. It may indicate an unfortunate condition of society that the schools are growing more important, but this is not a matter which can be discussed at this time.

The greatest triumph of the public schools in the past two generations consists in wiping out almost completely illiteracy. It is safe to say that in a few years, thru the influence of the public schools, there will be hardly an illiterate person in the United States.

Furthermore, what the officers of public instruction are accomplishing in the great centers of population in digesting the mixt nationalities which come into their hands demands unbounded admiration. They are fulfilling a patriotic duty while performing an educational task.

However, the effectiveness of most of the public schools systems in the United States is diminished by political influences of all sorts. The teaching is not uniformly of a high grade, because the administration of the schools is interfered with by political considerations. Many of the public school teachers, in spite of a deplorable burden of work and in spite of inadequate pay, however, show teaching ability of a very high order. Sometimes, of course, the work of the teachers, because of its unvarying routine, becomes perfunctory and listless. This is a danger which is increased by the large size of the classes.

Another weakness of the public schools consists in the lack of a stable educational policy. Many theories, many fads, are tried whose permanent value have not been fully determined. There is a good deal of educational vivisection taking place, which is not only unfortunate for the pupils, but which also produces no results except of a negative character. Some of the novelties which are introduced into the public schools are makeshifts employed to counteract the evil results of improper elementary training. Boys are carried along in the public schools until they arrive at an age when they ought to enter the high school. It is then discovered that they have lost interest in going to school. They want

to give up and go to work. In a great many cases this is because they have made a failure in their school life. The number of such failures would be reduced if the elementary training were of a higher character. If the pupils received more individual attention in these earlier stages they would be carried farther in the system without getting beyond their depth and without becoming totally discouraged. If it were possible for the public schools to furnish the best possible elementary education, the necessity for the complex vocational schools which are now attracting a great deal of attention would be diminished. Such schools are intended for the most part to prolong the courses of these discouraged boys and to keep them in school by giving them special work, which is adapted to their attainments and their limited abilities. The ostensible reason for these vocational schools is to give boys a "practical" education. In theory this idea is plausible, but in practice it meets with serious difficulties. These may in time be overcome, but at present vocational education in the secondary schools is in an experimental stage.

Concerning the practical turn which is frequently given to education at the present time it should be said that there is great danger of its being overdone.

The great improvements in every department of industry and science are generally the result not of manual dexterity, but rather the result of profound scientific study. The wonderful advances that are being made in the prevention and cure of disease, which, to be sure, is one of the most practical ends that we could wish to reach, is the result of abstract scientific methods. If we consider another department of human activity which is far removed from the study and practice of medicine, if we consider military science we find that its great advances are due to the study of higher mathematics. So it is with all engineering work. The most lasting results come to the deepest students and rarely to the so-called practical men. It would seem, therefore, that there may be danger of pursuing too far the demand for practical education. It would seem that in some cases the word "practical" is used to cover up poor thinking and indifferent study.

The German public school system has its vocational feature, but it is also permeated with a deeper spirit of learning than our schools have reached. The German schools have serious weaknesses; they are too severe in their methods and possibly too exacting in the demands which they make. Some of these faults are now fully recognized and means are being taken to obviate them. But notwithstanding the criticisms which are made of the German schools, there is no doubt that the scientific supremacy which Germany holds is based on her common schools. Before entering the university the German lad has received the kind of drill which will control his entire career. He has learned the inviolability of scientific accuracy. He has acquired that power of attention to details which has made German scientific work exhaustive and thoro. Above all, he has amassed an amount of information which would stagger the ordinary American boy.

By way of recapitulation, it may then be said, that the boarding school should have a great advantage in being able to control completely all the time of its pupils. Many schoolmasters believe that the most important part of the day is that which is passed in the preparation of tasks. It is then that the pupil acquires the power of concentration—that he learns "how to study." The boarding school has further a greater opportunity and a greater responsibility in that it is able to attempt more in forming the characters of its pupil than the public school.

The ideal boarding school is also freed from the influence of politics and is able to maintain a more conservative and generally a more scholarly course of study. Apparently the advantages of the comparison of the boarding school with the day school rest with the former, but it should be borne in mind that as the boarding school has greater opportunities, it has also greater difficulties, and the number of boarding schools that have reached this ideal condition is at present small. The future will, however, demand more of the independent foundations, just as it will require more thoro work on the part of the public schools.

Port Deposit, Md.

A Message from the United States Bureau of Education

BY ELMER ELLSWORTH BROWN

United States Commissioner of Education.

IT was an extraordinary legacy that was left to the Bureau of Education by Commissioner William Torrey Harris. The present administration of that office has no finer responsibility than that of maintaining at its best the spirit and tradition which constitute that legacy. There are undoubtedly very few today who would accept in its entirety the philosophical system which Doctor Harris represented. There are few, indeed, who would accept unmodified his plan of educational administration. But his plan and system were the outcome of an elevated and unselfish patriotism. He was an American, and his Americanism was permeated by such devotion to the loftiest thought and the widest learning, that it can never disappear from the educational organization of this country without incalculable loss.

I am asked to bring a message from the Federal Bureau of Education. The Bureau of Education is, in a sense, the child of the National Educational Association, having been brought into being at the immediate instance of the National Association of State and City School Superintendents, which was the forerunner of the present Department of Superintendence.

Within the past year the Bureau as it may be seen from without, has been greatly changed. It has left its outgrown shell by the unresting sea of Eighth and G streets and has entered upon dignified and commodious quarters under one of the Federal Government's own roofs. It has, indeed, been taken into the bosom of the national family. Its library, which had previously been reorganized, has now been re-arranged in its new quarters for practical service. A vigorous new division has been erected, that of school administration, which deals particularly with matters of interest to state and city education offices. A beginning has been made in what may be termed a field service, a service which has already engaged a good portion of the time of two specialists, those in school administration and in the work of land-grant colleges. This service is to be further extended. Provision has been made by Congress for two important additions to the staff, namely those of editor and of specialist in higher education. The new specialist will be engaged, both at the office and in the field, with work in connection with our colleges and universities. A great campaign has recently been undertaken by friends of the Bureau with a view to the wide extension of this new service in the field. It is earnestly desired and hoped that this campaign may meet with abundant success, and that we may have in the near future an instrument for more generous and far-reaching activities.

It is not generally known that this office is equipped with one of the most extensive educational experiment stations in the world. It is an experiment station embracing some 580,000 square miles of territory, with 2,500 miles of sea coast, sparsely populated with some 30,000 natives of different backward races, Indian, Aleut, and Eskimo. Such a practice school presents the white man's burden in its most concrete form, with all of the difficulties and all of the inspiring opportunities presented by the world-education movement of our time. There in Alaska the school physician and the school nurse are now going up and down, helping the people in their sicknesses, and teaching them how to live clean and wholesome lives. The girls are learning to cook and to sew and to make good homes. The boys are learning to earn an honest livelihood under their new conditions, by new in-

dustrial pursuits, by the raising of reindeer, by improved fishing, gardening, and the use of common tools. They are learning something of the white man's wisdom and the white man's better aims in life. These things are to help them in their new relations with the white man, who must inevitably be their neighbor and their fellow laborer. The end in view is the training of these people to self-reliance and ultimate self-government.

There is only one thing more to be said at this time about the strengthening of the Bureau as an instrument, and that is to refer to the strengthening of its relations with other Government offices. It is true everywhere, and notably true in Washington, that an isolated office is likely to be a weak and crippled office. Among the most important steps that have been taken of late in the building up of this Bureau have been the arrangements which have been made for close co-operation with the Library of Congress and with the Bureau of the Census. Connection with the Census Office has received especial attention during the past year. That office is now rendering invaluable assistance in the effort to secure more nearly uniform and therefore more informing statistics concerning our great State and city systems of education.

The chief accounting officers of a number of our city school systems have now formed a national association which in its turn will co-operate with these two offices at Washington. A committee was appointed at the Indianapolis meeting of our Department of Superintendence for a somewhat similar purpose. This gives us a strong combination of those interested in the improvement of school accounts and school reports. We have now more reason than ever before to hope that the reproach which has lain against our school reports, that they do not tell an intelligible tale, is soon to be a thing of the past. Everybody has a personal interest in such a change, for to have more illuminating reports will mean to have so much the better schools.

This is all that it seems necessary to say at this time regarding the tool. Now, what is the larger work which the improved tool may be expected to do?

It is the business of the Bureau to collect and diffuse such information as shall help the people of the United States to establish better systems of schools. On the face of it this business would seem to be simply that of information and not that of propaganda. In a sense this is true. The office is to be a scientific office, with scientific impartiality toward the facts which it reports. But it can not be indifferent to the facts which it reports. It must view them with reference to the improvement of our educational systems. The field in which its investigations shall be made must be selected with reference to public needs. It must call attention to the significance of the facts presented, with some positive conviction as to the directions in which there is need of improvement. It has indeed a mission. It has a propaganda. It is concerned all the time with the effort to make for this country a better education of all the people. Some of the directions which this endeavor should take in the immediate future may be mentioned here.

We are still unable in this country to give to all of our citizens anything like a fair chance at education. We still have some illiteracy. We still have great numbers of pupils leaving the schools before they have received a proper elementary education. There are portions of the country which are at great disadvantage as compared with others in these respects. This office of information must keep on setting forth the actual state of our school attendance, so far as it can be determined, and must reiterate the call of these simple facts to efforts for the improvement of school attendance.

The improvement of school attendance

OFFICE OF ELMER ELLSWORTH BROWN.

must go hand in hand with the abatement of child labor and numerous other undertakings for the general welfare of childhood. It is the business of a central office to call repeated attention to these relationships, and to help those who are at work in neighboring fields to work together for their common ends.

We need to press home such information as will lead to the improvement of our school buildings. In a country which is spending $73,000,000 a year for the construction, equipment and repair of its buildings for school purposes, such information as would lead to an improvement of only one per cent. as regards this expenditure would cause an aggregate annual saving of no mean sum; while the saving of the health of pupils, which can be accomplished through more hygienic construction, is an incomparably greater concern.

In a thousand ways the improvement of health thru education is now under way. An agency which, thru the gentle force of clear information, can bring these ways into unison and prevent the waste of misdirected efforts, will prove itself a national benefit.

Industrial education is with us, in its three main forms of trade schools, schools of housekeeping, and schools for rural life. It is every day raising more questions than any one as yet can answer. Such an office as the Bureau of Education is to overlook this whole field and keep incessant inquiries under way, all over the world, with a view to finding the best answers to the most urgent of these questions. But here again, it is not information alone that is needed. Our new effort at industrial education are pulled this way and that by inharmonious aims and conflicting interests. A national office concerned with these things must make the constant endeavor to persuade those discordant forces into unity of aim, and that effectiveness which comes from unity. At this point alone there is a patriotic service to be rendered, the value of which no man can estimate.

I shall make no attempt at any complete enumeration. It is easy to see how important are many of the other undertakings which must be passed over here from sheer lack of time: The supervision of rural schools, improvements in the training of teachers, the relation of secondary schools to colleges and universities and to the life outside of colleges and universities. And then the great work of higher and professional education—a world within itself. There never has been a time when a mediating agency was more needed in this field. Such an agency should help our institutions of higher learning to do a common work for the country at large. State institutions and those under private control; graduate schools, which are beginning to appreciate the evils of institutional isolation; and schools of medicine and law, in which the problems of isolation, affiliation, and standards generally are reaching their acute and critical stage: the time calls unmistakably for a central agency strong enough to deal with questions such as these, and wise enough to deal with them by way of effective influence without arrogating any fictitious authority.

In the near future, without doubt, a general reorganization of the Federal agencies of education must be frankly considered. Some of the questions subsidiary to such reorganization are already under discussion. Four of them may be mentioned here:

Shall we have a National Department of Education, coordinate with the nine departments now in existence?

Shall we have at Washington a National University?

Shall we have an extension of Federal aid to education in the States, particularly in the form of Federal aid to industrial education?

Shall a Federal office be erected to concern itself with the general welfare of our child citizens?

These questions are a challenge addressed to the educational thought of the nation as well as to the political thought of the nation. I have confidence that the educational leadership of our time will meet those questions squarely. Our political leaders have a right to expect courageous and competent service from the leaders of education, when questions such as these shall come up for legislative action.

I will not take time for any extended discussion of these proposals. One gen-

eral point of view, however, calls for emphasis.

Education is no longer an interest subsidiary to other interests. It has become one of the independent and dominant concerns of modern societies, and particularly of democratic societies. We may make such administrative arrangements from time to time as may be found workable and possible. But we must expect education to be eventually the organizing center which shall draw to itself and adjust to one another all of those governmental agencies which are directly concerned with purely human betterment.

But while the greater things are taking shape, the Bureau of Education is to go on doing more and more of its appointed work. That appointed work, stated in other than legal terms, is to make sporadic educational excellences contagious, and make the contagion of educational improvement an epidemic.

WASHINGTON, D. C.

Brain Food

BY THE BACHELOR MAID

"Nec timuit sibi ne vitio quis verteret, olim
Si praeco parvas, aut, ut fuit ipse, coactor
Mercedes sequerer; neque ego essem questus;
at hoc nunc
Laus illi debetur et a me gratia maior."

TWENTY centuries ago, almost, there lived in an Apulian village an ex-slave, "a poor man, with a little farm," and one son to rear upon its modest income. The local aristocracy, whose leading lights would probably have been called "Colonels" had they dwelt in the Blue Ridge region rather than near Apulian Vultur, are not recorded as having favored "social equality" with the freedman, nor does it appear that their brawny sons felt affection for his child as a schoolmate. There seems to have been a reciprocity of coolness, it is true—or, at least, there was certainly lack of enthusiasm on the part of the freedman and his boy for the retired army officers and their progeny, however the latter felt about it.

For, by one of fortune's whimsical but not uncommon capers, the "great sons of great centurions" have left us no record of their sentiments, and all we know of ancient Venusian social and educational standards has come to us from the pen of one whose father was born a slave. But of the standards of that ex-slave we do know much, and, whatever may have been the gossip of his neighbors when he "dared to take his son to Rome," to hobnob with the sons of knights and senators in the schools of the metropolis, subsequent events fully justified his educational theories, even to his crowning extravagance, when he sent abroad the boy born to be a farmer or an auctioneer to make a doctor of philosophy of him!

But it is not my purpose to continue farther the recital of what every schoolboy knows (let us hope), but rather to remind the parents of the schoolboy of one father's educational policy, which, tho tried nearly two thousand years ago, seems to have worked well in a society not so different from our own as is rather commonly supposed. For the doctrines of the elder Horace are susceptible, so it strikes me, of a wider application than may at first appear. They combat a tendency—a tendency which is rapidly becoming a *position*—so widely prevailing at the present time that it colors the discussion of many questions not recognized as primarily the property of the National Educational Association. In essence it is all one problem of education, but we are prone only to recognize it as such when we meet it as a proposition for industrial training in the public schools; when applied to the negro, for example, we are likely to call it politics; when applied to woman, sociology (or, in some circles, religion).

About two years ago the widely quoted sentiment of an educator of repu-

tation put the proposition in perhaps the distinctest form in which it has emanated from pedagogical circles. His theory was, in substance, that much time is wasted in our schools in teaching children subjects which the mass of them, as the offspring of the proletariat and future members of the same class, not only well never use in after life, but will find a cause of delay and consequent dissatisfaction in entrance upon their various forms of toil. According to those who approve this doctrine there is "no time" to teach the humanities to the freckled son of the section boss, when all he wants (naturally, not dreaming that there are other things to be wished for) is substantial practical preparation to head another gang like his father's, and perhaps draw more pay for it. Why waste valuable hours for him on the remote possibility that he is a railroad president in embryo? Which, probably, is just what the Venusians would have said if any one had ventured there the wild suggestion that the tax collector's son might "spread wings too large for his nest."

One of the features of our materialistic age, and not a bad one, is the prominence given to our daily bread—not the means by which it may be obtained, but the purity, the nourishing and strengthening qualities of all that is comprehended in the ancient phrase. Not only do "health foods" adorn the advertising space of magazine and street car, and faddists propose to elevate us morally and mentally thru the physical agency of pure food many times masticated with a pure heart, but the government takes a hand, and learned physicians think the subject worthy of long and profound discussion. Perhaps no department of the subject receives more attention than that of the feeding of young children, and it is right to consider what diet tends most to make them strong and vigorous. But it would hardly be claimed that from infancy that diet should be selected with a view to developing strength for the peculiar destiny which one's ancestry seems to foreshadow—that the prize fighter's offspring should be fed only on raw beef, the minister's son on spring chickens.

I do not wish to push a parallel to the point of absurdity, but only to urge this: That as for every normal human being certain foods are recognized as of practically universal value in producing all-round physical strength and comeliness, so for every normal human being, regardless of sex or color, there are certain brain foods which must be supplied in early life if we expect a well-rounded mental development. And these "health foods" of the mind are not to be estimated by their production of power to *make things,* including money. There is still, I think, except with those of ultra "advanced" educational ideas, a willingness to concede that point as touching the case of those destined to be professional persons and scholars, the "exceptional" young man or woman, but it is pointed out that for the masses the higher forms of mental training are, if not as pearls cast before swine, at least as *charlotte russe* set before an unreconstructed Esquimau.

But by what divining rod may we locate the exceptional young person? In any primary school, in any Southern cotton field, in any household of girls however "protected" and "feminine," there may be one as great as the tired little boy who slept under the "leaves and gathered myrtle" on the Italian mountain side. And even he, when come down from lyric flights to consort with his more prosaic muse, I fancy would have said that tho the favor of heaven may have kept him safe from vipers and bears and many a subsequent peril, that peculiar protection of recognized genius would have availed little to make him the poet and philosopher that he was without the "higher education" planned for him from babyhood by his father. It is hard for us to realize after a man has become great that as a boy he may have been as ordinary as anybody—or more so. Somehow we cannot but picture a Horace sleeping on the mountain or a Booker Washington sleeping under a sidewalk as adorned with at least a rudimentary halo to mark him as one of the elect, but I suppose that no contemporary Venusian or Southern passerby caught even the faintest gleam of one. Is it absurd to suppose that with sight

equally dull we may be educating to follow with the herd those who ought to be leaders of it?

The essential difference between the child from the masses who, given no advantages, by some miracle of ambition and energy rises out of the dead level of his surroundings, and the one who, also endowed with ability, rests content with the "advantages" which our school system provides him, is that the former, consciously starved, yearns mightily for the best food and finally gets it, while the latter has no way to know that what is allaying his hunger is not developing his strength. Horace, I take it, equipped with a father of tax-collecting ideas to match his calling, would have been in about the position of the youth of the last-named type. The very fact that Venusia possessed a school supplying the sort of mental nourishment apparently suited to the taste of those dependent upon it, might easily have satisfied all its citizens, without the one exception, just as a similar condition satisfies many citizens of these United States. And the mass of them cannot be expected to know, any more than the great centurions, that the concentration of educational effort upon what their children seem likely, according to popular interpretation, to "use," omits the essential provision of making them themselves useful. But it seems strange that professional educators should publicly advocate theories for which a heathen freedman can put them to blush.

I do not mean to attack, specifically, any one branch of study or the claims of industrial education. I believe that a recent writer, who thinks that he has discovered in the agitation for it a deep-laid plot of plutocrats and trust manipulators to keep the children of the masses forever sunk in the mediocrity of the manual laborer, has attributed probably to those gentlemen one scheme for world enslavement more subtle and far reaching than even their colossal ingenuity has yet conceived. But that the result will eventually be about what he has predicted, even tho the motives are by no means so sinister, is not at all improbable. There is nothing in purely technical education, no matter how thoro or how productive of tangible results which may adorn the "educational exhibit" of an exposition, which feeds the mind for either growth or strength, and the country is full of manually skilful, intellectually capable, proofs of it. It does not make thinkers, it does not make *dreamers*, and the truly useful citizen has in him something of each. The man who gets real inspiration out of a country landscape is the student who learned to commune with Nature thru communing with books, mayhap to the accompaniment of a smoky lamp in the back room of a boarding house; the woman who sees poetical possibilities in the keeping of a house is pretty likely to be an ex-schoolteacher. It sounds very plausible to urge the importance of the agricultural college for the rustic youth, "to hold the young people to the farm," but there are scores of farmer boys and girls who ought never to be held to the farm. And of those whose place really is there, if you have but taught them how to make two grains of corn grow where one grew before, even upon highly scientific principles, you have not done one thing to elevate rural life, tho you may have increased the farmer's income to the grade of automobile ownership.

No one, I suppose, is inclined to deny the importance and necessity of agricultural schools. At the proper stage of mental maturity they supply an acute need in the development of some young men and women, and thus in the development of the nation; the mistake is in allowing studies purely agricultural to be introduced there and in the lower schools which prepare for them at such a time and in such an amount that they not only leave no room for brain food of a higher type, but destroy all appetite for it. Technical education *built upon*, and combining with it, that which develops the reasoning power and the esthetic sense, is a valuable part of the intellectual diet. The young person fed on it to excess, no matter how good its quality, belongs among the mentally anæmic or coarse and uncouth.

It is assuredly with no peculiar malice towards schools of agriculture that I chance to have used them rather conspicuously to point a moral. But they naturally occur to the mind considering technical education generally, because

they are at present perhaps the most popular item of the menu which educational caterers offer to tempt the appetite of a public craving for some new thing. And then in the case of one particular class of citizens for whom a restricted educational diet is most generally recommended, agriculture is undoubtedly the favorite prescription of the politician-sociologist for fitting them to fill "their place." It is thought to be an indication of great breadth of mind and liberality toward the negro to concede that, if he must live in our midst, the growing agricultural possibilities of the Southern States point as with the finger of Providence to the unquestionable destiny of every mother's son and daughter of him. Booker Washington receives some slight toleration even from those who cannot forgive him for having looked upon the Presidential tableware, because he is teaching his race to be good farmers, "instead of wasting their time on Greek and Latin and such nonsense." It is no criticism upon the educational work of Booker Washington or its value to his race to call attention to the fact that he himself is neither a farmer nor a bricklayer, and that if he were, Tuskegee and its achievements would be unknown. For it is an undeniable fact that no class of human beings is so keenly conscious of a *degradation* in manual labor as those who are incapable of any other kind, and only the breadth of mind conferred by a liberal education has enabled Booker Washington to teach his people that all work is an honor if done by the head and hands together.

It seems strange that the doctrine of industrial education alone for the negro is most diligently preached by the very ones who are also most violent in their demands for his complete social segregation. "The negroes, if trained to be thrifty and industrious workers, would make an excellent peasant class," say these "friends" of the negro, who "know him best." In the first place, what business have citizens of a republic to speak of a "peasant class"—above all, those citizens who most felicitate themselves upon maintaining the Jeffersonian traditions undefiled? But omitting considerations of a visionary fraternity and equality, what, as a practical matter, must so effectually prevent the desired race separation as the retention of negroes as a peasant class? The only conceivable remedy for the "social equality" scare which can prove *permanent* is the development by the negro of a society of his own. So long as he must depend mainly upon the white race for his teachers, physicians, lawyers, bankers and all the higher sorts of professional service, so long must he, in the nature of things, feel and chafe under his inferior condition. When he learns that his own race can fully supply these needs, there will come an outlet for the ambitions of the abler members of it which will remove the thirst for "social equality" which, whether or not it exists anywhere but in Caucasian imagination, at least now causes lamentable loss of sleep and waste of printer's ink.

There is another class of American citizens who, tho more often toasted—"God bless 'em"—and more smilingly accorded street car accommodation, have much in common with their colored brethren in the matters of restricted suffrage and relegation to a "place." And their voting superiors are very eloquent in their theories of education for them also. Certain superlatively wise gentlemen have discovered that perhaps the supreme mistake of modern education has been the readiness with which it has allowed boys and girls to sit together at the same higher educational table, and they propose to save the next generation by giving the girls only the oatmeal and cream—and, to be sure, the strawberries—of the educational menu, while the boys grow strong and manly on the beefsteak. That is to say, they hold that the colleges for women, and the colleges which tolerate women, should provide for them courses which shall have in view primarily their universal destiny—wifehood and motherhood. It does not seem wholly illogical to consider how broadminded and valuable a citizen a man would be who had been educated solely for fatherhood (and *what* an interesting husband)!

Again, there are those who, sparing us somewhat on the ultra-maternal theory of feminine education, yet drop us from that frying pan into an almost hotter fire of enthusiasm for domestic science. Now domestic science for women is like agricultural science for men, except that its

possibilities for revolutionizing society and our whole mode of life are much greater. If it is taught as a great social science, destined to amend or eliminate our present clumsy, wasteful and nerve racking system of individual housekeeping, and taught to women with minds already developed by college training to the point of understanding it as such, it offers one of the broadest, most attractive fields ever opened to women. If all that comes to the lady who holds a diploma in it is the ability to serve digestible food to her husband and do something when her individual kitchen plumbing gets out of order, I cannot see that she is greatly in advance of her great-grandmother, who somehow did with no particular instruction a good many things which we now term "education," and employ "specialists" to teach. It would be interesting to have some statistical information as to whether the hours spent in beautiful manual-training school kitchens have given little girls any more definite information than their ancestresses enjoyed concerning the not unimportant habits of the decimal point and the objective case.

A popular statement in educational discussions today is, "Some young people ought never to go to college." The statement may be true, altho it seems to me to lack proof, and doubtless some never *can* go to college, but surely every young person has the right to an amount and a kind of education which may enable him and his advisers to decide *intelligently* whether he ought to go to college or not. I see no other means to this than a universal plan of study capable of leading to a liberal education. *"Neque ego essem questus."*

Only two or three in a generation will become Horaces; comparatively few, perhaps, will become professional men and women; but whether auctioneer or tax collector, farmer, mechanic or housekeeper, each commonplace one will thank the wise father or teacher who fed his mind in youth with that liberal nurture which saves even the commonplace from sordidness.

Of course, it is a matter of opinion whether a "liberal education" involves ability to read Horace and the other ancient classics, but at least we may agree that those studies are "liberal" which train men and women to see that "efficiency" does not mean alone *doing* things which can be seen, and *making* things which can be handled.

Finally, it is only when the glorification of the utilitarian in education shall cease that we can justly deny the national reputation for materialism and commercialism which I, tho a non-voting member of the pernicious class who are "feminizing our schools," am still patriotic citizen enough to resent.

The Little Wind

BY LOUISE DRISCOLL

The little wind a gossip is,
Her skirts are full of mysteries,
She lingered by my casement and she whispered to the rose.
And all the silly butterflies
Are trying to look old and wise,
And blink their goggle eyes at me like self-admiring beaux!

The little wind a wanton is,
She has no sense of decencies,
She never keeps a secret, but tells everything she knows.
She pauses to caress you,
Her little fingers press you,
And when she's learned your secret she tells it as she goes.

The little wind a traitor is,
O, yield not to her witcheries!
But keep your heart well hidden when you feel her coming near.
She is like velvet on your face,
Her kisses have a piercing grace,
And then she runs and tells the birds what you have let her hear.

The little wind a gossip is,
Her skirts are full of mysteries,
She stopped and kissed me on her way and learned what I hold dear.
And all the birds are singing it,
And all the bees are bringing it,
And in the heart of every flower it's blooming, plain and clear!

CATSKILL, N. Y.

THE EDUCATIONAL BOOKS OF THE YEAR

IN the lists which follow we have tried to extend such aid as we may to teachers and educators generally by presenting selections from the new publications of merit that may be found to stand the test of trial. The comparisons and criticisms here printed are from the pens of those best qualified by practical experience to judge of the subject matter of the books about which they write. In some cases books have been put aside for more extended notice when space permits, and in such cases their omission by no means implies a lack of worthiness.

English Literature and Language

English Composition in Theory and Practice. By H. S. Canby, F. E. Pierce, H. N. MacCracken, A. A. May and T. G. Wright. Macmillan. $1.25.
Writing and Speaking. By C. S. Baldwin. Longmans $1.20.
A College Course in Writing from Models. By Frances Campbell Berkeley. Holt. $1.25.
Theme-Book in English Composition. By A. M. Hitchcock. Holt. $1.00.
A Manual of Debate. By R. W. Thomas. American Book. 80 cents.
Composition and Narration. By J. R. Taylor. Holt. 75 cents.
English Versification. By J. W. Bright and R. D. Miller. Ginn. 80 cents.
English Literature. By W. J. Long. Ginn. $1.35.
A Student's History of American Literature. By W. E. Simonds. Houghton, Mifflin. $1.10.
Study Book in English Literature. By E. R. Hooker. Heath. $1.00.
Selections from the Works of Samuel Johnson. By C. G. Osgood. Holt. 90 cents.
Selections from the Critical Writings of Edgar Allan Poe. By F. C. Prescott. Holt. 75 cents.
Lamb's Select Essays of Elia. By J. F. Genung. American Book. 40 cents.
Representative Biographies of English Men of Letters. By C. T. Copeland and F. W. C. Hersey. Macmillan. $1.25.
Narrative and Lyric Poems for Students. By S. S. Seward, Jr. Holt. $1.00.
Selections from Byron, Wordsworth, Shelley, Keats and Browning. By C. T. Copeland and H. M. Rideout. American Book. 40 cents.

Numerous as are the textbooks for the study of English, they may be readily divided into three very distinct groups. In the first place there are the rhetorics and compositions, which have to do with the subject of self-expression in general or of some one form or manner of writing in particular. Among the former sort is a piece of multiple collaboration, *English Composition in Theory and Practice,* by the department of English composition in the Sheffield Scientific School. The feature of the volume is the peculiarity of the arrangement. Exposition is taken—and very properly so—as the practical basis or norm of expression, to which is referred immediately the discussion of words, sentences and paragraphs. Subsequently argumentation, description and narration receive proper attention, more or less independently, in the interests of the special problems involved. In this way narration becomes exemplary of construction, description of literary and artistic quality, and so on. The text is amply illustrated by "specimens," tho the printing of the entire volume, text and illustrations alike, in a single type, is confusing.

Equally interesting from the general rhetorical point of view is Professor Baldwin's *Writing and Speaking,* tho the book suffers a little, perhaps, from the disadvantage that it is not altogether simple or obvious in design. On the whole, however, the material is arranged to secure the two *desiderata* by clearness and interest in composition thru the two processes of planning and revision.

Miss Berkeley's *College Course in Writing* proceeds on a very different plan. Miss Berkeley's idea is that one learns to write, not so much by prescrip-

tion, as from reading. In this conviction she has arranged a large number of selections to illustrate the various "forms of discourse" and has appended to each a few simple suggestions and questions to indicate their character, together with a list of topics capable of similar treatment, to develop the student's original powers. The scheme is a new one, and in connection with a certain amount of classroom instruction seems worth a trial.

Mr. Hitchcock's *Theme-Book,* on the other hand, is confined to an attempt to solve the problem of composition subjects for the high school teacher. Growing out of a card catalog of topics and assignments, it has come to consist of a carefully graded set of tested exercises in wide variety, from simple reproduction and paraphrase to essay and oration.

Of the specific forms of writing, the favorite ones for individual treatment are the argument and the story. The former is simply and intelligibly handled in Professor Thomas's *Manual of Debate,* which has the merit of stripping the subject of much of the technicality with which the debating coach has encumbered it. The latter receives enthusiastic and suggestive consideration in Professor Taylor's *Narration,* tho with some neglect of the technique which is indispensable to so distinct a *genre.* In this connection, too, may be mentioned Bright and Miller's *Introduction to English Versification,* which is intended as a handbook for the understanding of verse rather than the composition of poetry. As such it includes a succinct account of the elements of metrical forms and fills a niche which has never been very successfully occupied.

As distinct in a manner from the foregoing, the histories of literature may be conveniently grouped together in a place by themselves. Among them Dr. Long's *English Literature* for schools should be referred to as an effort to vitalize the subject by relating it to the life of the author and of his age, as well as to the mind and the imagination of the pupil. To this end every literary period is preceded by a brief historical sketch and followed by a summary of influences and tendencies, with questions calculated to awaken the reader's interest and direct it to matters of principal importance.

In the field of American literature Professor Simonds has prepared a companion volume to his history of English literature, published some years ago. The new volume follows the same general plan, and is as excellent in its way, as the old.

As a new departure in literary textbooks, the *Study-Book in English Literature* deserves examination. As the writer is careful to point out, his little volume contains neither literary history, biography nor criticism. It is rather a compendium of materials comprising copious bibliographies illustrative of all sides of the authors studied, hints and directions to teachers and pupils with regard to the proper manner of going at the subjects, questions to arouse the students' interest and set the points at the right angles, topics for essays in connection with the reading, references to be memorized, and the like—all properly graded, after the compiler's modest boast, in accordance with the principles of modern pedagogy.

In a class of their own, and yet standing as a middle term between the other two classes, are the reading texts, which may serve either as models of writing or as examples of literature. Prominent among these are a volume of selections from Johnson and another from Poe. The former is representative of Johnson's entire literary activity in verse and prose alike, inclusive of correspondence; the latter is restricted to Poe's critical writings exclusively, and as such is a convenient book for the general reader as well as for the student. Each volume contains the necessary notes and an introduction of some value; that to the latter in particular forms an interesting estimate of Poe's critical phase. Professor Genung's selections from Lamb is of the same character as the preceding. The volume includes fifteen of the *Essays of Elia,* selected and arranged with reference to their bearing upon Lamb's life and personality. Biographical writing in all its varieties is comprehensively illustrated in Copeland and Hersey's *Representative Biographies.* The material is of three sorts: Extracts

from well-known autobiographies, journals, diaries and the like; selections from the best English biographies, and a choice of "lives" from the "Dictionary of National Biography," especially selected for the illustration of English authors as well as of this particular manner of writing.

What these texts do for prose Professor Seward's *Narrative and Lyric Poems* does in a rather more general way for poetry. The selections are

The Classics

Macmillan's Latin Series. Cæsar. The Gallic War. Books I-VII. Edited by Archibald Livingston Hodges, Instructor in Latin in the Wadleigh High School, New York City. 1909. $1.25.

The Teaching of Latin in Secondary Schools. By Eugene A. Hecker. The Schoenhof Book. 80 cents.

Arabic Prose Composition. By T. H. Weir, B. D., M. R. A. S. Cambridge: at the University Press. $2.00.

Pupils' Notebook and Study Outlines of Roman History. By Edna M. McKinley. *Pupils' Notebook and Study Outlines of Oriental and Greek History.* By L. B. Lewis. American Book. Each 25 cents.

Of the books presented for review in

LANDING OF THE ROMANS IN BRITON.
From Tappen's "European Hero Stories." (Houghton Mifflin Company.)

pretty much what might be expected; the topic arrangement, however, commends itself as an improvement upon the usual chronological order. The book is supplemented by notes and a series of studies, which reviews the contents from several different points of view. Within a different range Copeland and Rideout's *Selections* is controlled by much the same purpose and contains the most available work of Byron, Wordsworth, Shelley, Keats and Browning for class use.

the year 1909 we single out *Cæsar's Gallic War,* edited by Archibald Livingston Hodges. On the book a great amount of labor has been spent. The frontispiece gives a bust showing the world conqueror. A good ancient map is followed by one of more recent make. It may seem to be a waste of ink in the thousands of small marks placed over the vowels; but if this is settled by the guild it must be accepted. We most gladly take the sixty-five illustrations as a fine help in every way. We may also

especially praise the lucid description of the siege of Alesia.

The Teaching of Latin in Secondary Schools has found a champion in the master of the Roxbury Latin School. We stand with the master on the proposition that the study of Latin may yield no particular financial return. But he who knows no Latin has no grip on the humanities, be he boy or man. The little book at our hand will stand as an example of *multum in parvo*.

Now we have *Arabic Prose Composition,* "turning Arabic-English into King's English." In some places he fares badly, *e. g.*:

"It was of the goodness of the management that the passing of the stations was made on the return journey the opposite of what it was on the outward journey."

Again:

"There has been perfect to him his management in the causing to perish of a community."

The writer is distressed at the

"Poisons of intoxicants without that there seize them sample or carving, as if they were drinking the declared lawful of the drink."

A good deal of what the book contains is far from King's English.

The American Book Company's *Pupils' Notebook and Study Outlines* reviews in a nutshell the whole field of classical study. The thoroness by which the special topics and references in Roman history are crowded into page 111 is really wonderful. The Greek is treated still more fully, cf., pages 52-53, 55, 67-68, 70, 81-82, 93, 102. These so-called pupils' notebooks, which were some years ago thought comparatively little of, are grown to eminence. Large tomes have given place to the pupils' notebook and study outlines, and the American Book Company has seized an opportunity not likely to be neglected.

Modern Languages

Crowell's Shorter French Texts. 25 cents a volume. *La Belle au Bois dormant.* Par Emma Fisher. *Contes du Petit Chateau.* Par Jean Mace. *Les Petites Ignorances de la Conversation.* Par Ch. Rozan. *L'Avare.* Par Moliere. *Le Medecin malgre lui.* Par Moliere. *Le Bourgeois Gentilhomme.* Par Moliere. *Anecdotes sur Napoleon.* Par Marco De St. Hilaire. *Mon Etoile.* Par Scribe. *Contes des Mille et une Nuits.* Edited by R. de Blanchaud. *Le Chateau de la Vie.* Par E. Laboulaye. *Choix de Poesies faciles.* Edited by W. M. Daniels. *Michel Perrin.* Par Mme. de Bawr. *Les Jumeaux de l'Hotel Corneille.* Par Ed. About. *Choix des Contes Populaires de la Haute Bretagne.* Par Paul Sebillot. *Deux Comedies enfantines.* Par Mathilde Reichenback. *La Farce de Paquin Fils.* Par L. Lailavoix. *Waterloo.* Par Victor Hugo. *L'Avocat Patelin.* Par Brueys. *Le Tresor du Vieux Seigneur.* Par Erckmann-Chatrian. *Croisilles.* Par Alfred De Musset. *Contes a ma Soeur.* Par H. Moreau. *L'Evasion.* Par Alex. Dumas. *Recits tires des Impressions de Voyage d'Alexandre Dumas.* Edited by J. E. Mansion. *Poèmes Napoleoniens.* Edited by A. Auzas. *One Thousand Common French Words.* Compiled by R. de Blanchaud.

Exercises in French Conversation and Composition. By Gustav Hein. Crowell. 40 cents.

Mairet's La Petite Princesse. Edited by Edith Healy. American Book. 35 cents.

Sand's Le Meunier D'Angibault. Edited by J. W. Kuhne. American Book. 40 cents.

Claretie's Pierille. Smith and Zdanowicz. Holt. 40 cents.

Michelet's Histoire de France. By D. L. Buffum, Editor. Holt. $1.00.

The French Verb. By C. F. Martin. American Book. $1.25.

French Secondary Schools. By F. E. Farrington. Longmans, Green. $2.50.

Dumas's Le Comte de Monte-Cristo. Edited by C. Fontaine. American Book. 40 cents.

Fables de La Fontaine. Putnam. $1.00.

Gerstäcker's Germelshausen. Edited by A. Busse. American Book. 30 cents.

Arnold's Fritz auf Ferien. Edited by May Thomas. American Book. 30 cents.

Hauff's Lichtenstein. Edited by J. P. King. Holt. 80 cents.

Ein Nordischer Held. By Richard Roth. Edited by Helene H. Boll. American Book. 35 cents.

Herein. Edited by P. S. Allen. Holt. 70 cents.

Easy German Stories. By C. E. Reis. Edited by E. H. Biermann. American Book. 35 cents.

Das Rothkäppchen. Von Mathilde Reichenbach. Crowell. 25 cents.

Dornröschen. Von Emma Fisher. Crowell, 25 cents.

Advanced German Composition. By M. P. Whitney and L. L. Stroebe. Holt. 90 cents.

German Literature, Land, and People. By Franklin J. Holzwarth. American Book. $1.00.

Selections from Early German Literature. By Klara H. Collitz. American Book. $1.00.

Selgas's La Mariposa Blanca. Edited by H. A. Kenyon. Holt. 60 cents.

Tres Comedias Modernas. Edited by F. W. Morrison. Holt. 60 cents.

Pepita Jiménez. By Juan Valera. Edited by C. V. Cusachs. American Book. 90 cents.

That the French textbook world shows signs of life is due to the activity of the Crowell Company, which has published nearly thirty editions of French texts. These neat, little, inexpensive volumes are supplied with notes and vocabulary, and compare favorably with other editions so far as print, binding, etc., are concerned. The texts chosen are mostly well known, and a convenient classification of them will render selection an easy matter.

Among the other texts are Mairet's *La Petite Princesse,* for little girls; Sand's *Le Meunier d'Angibault,* Claretie's *Pierille,* one of his earliest works, a picture of peasant life in Périgord. The last two are suitable for high schools, first and second year. Michelet's famous *History of France* is for advanced students.

Martin's work is a thoro study of the

French Verb in all its inflections, conjugations, idiomatic uses—a very handy reference volume for college classes.

Of great interest to all secondary school teachers will be Farrington's study of the *French Secondary Schools.*

Nothing of significance marks this year's issue of German school books. Possibly because, as indicated in a previous year, the field has already been well gleaned.

Old favorites in new editions are Grestäcker's *Germelshausen* and Arnold's *Fritz auf Ferien.*

Hauff's *Lichtenstein,* probably his best-known work, and a historical novel of note, is for advanced students. Its length, however, is its weakness, for it is advisable that texts should be of "finishable" size.

Roth's *Ein Nordischer Held* tells the story of the first Gustavus, not to be confused with *The Lion of the North.* While the language is elementary, the matter is so full of strange and complicated historical reference that it is a question whether it will hold the interest. *Herein,* a German reader, and Ries's *Easy German Stories,* differ in no way from many of their kind.

Two playlets for children, by Reichenbach, *Little Red Riding Hood* and the *Sleeping Beauty,* give a hint of a method of teaching German by dramatic presentation that is very fruitful.

An advanced German composition, which should illustrate principles of German grammar, is not a new idea, but is well carried out in Whitney and Stroebe's work. The references to four leading grammars are of special value. This is indeed composition with a method.

Two books intended for the advanced student close our series, one, consisting of *Selections from Early German Literature,* carries out its plan well, but this is open to criticism. It is of the "shreds and patches" variety. An advanced student, able to enter into the spirit of the German past, will get it much more successfully in a typical poem, given whole, than by any number of snatches.

Holzwarth's book is a description of the German people and a history of their literature. It does not compare favorably with some in use.

Spanish texts are few, but well chosen and edited, with notes and vocabulary. An edition hardly surpassed is Cusachs's *Pepita Jimenez,* a story that is fascinating and full of national color.

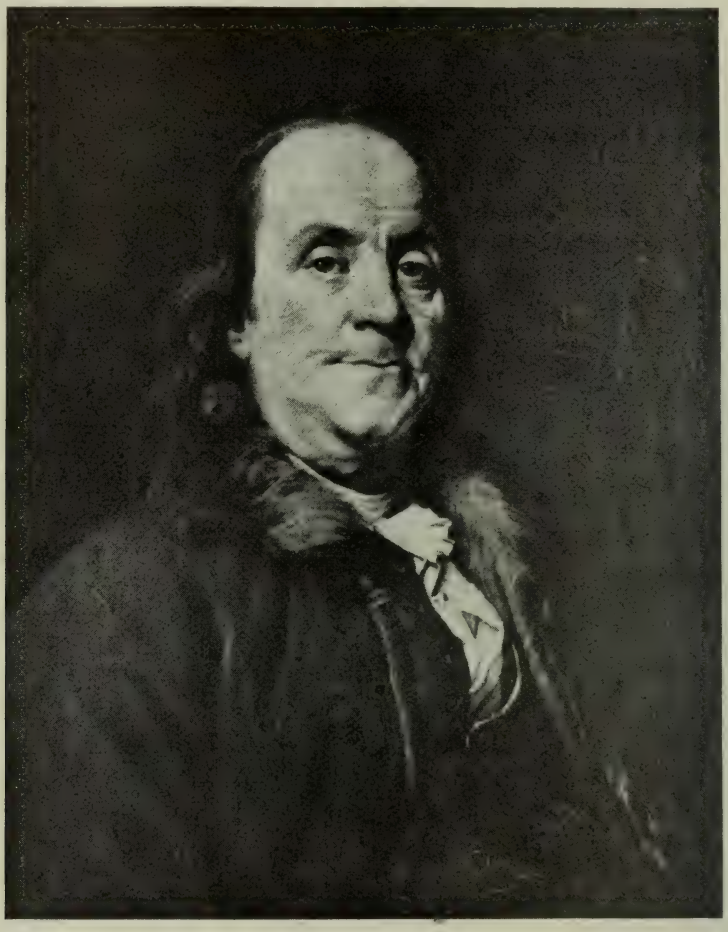
Mathematics and Science

Plane Geometry. Syllabus Method. By Eugene R. Smith. American Book. 75 cents.
Plane Trigonometry. By Edward R. Robbins. American Book. 60 cents.
Plane and Spherical Trigonometry. By Levi L. Conant. American Book. $1.20.
Elements of Physics. By Henry Crew and Franklin T. Jones. Macmillan. $1.10.
New Physical Laboratory Manual. By Charles F. Adams. American Book. 60 cents.
Conduction of Electricity Through Gases and Radio-Activity. By R. K. McClung. Blakiston. $1.50.
Elementary Modern Chemistry. By Wilhelm Ostwald and Harry W. Morse. Ginn. $1.00.
Physical Chemistry. By Arthur W. Ewell. Blakiston. $2.25.
Theoretical Principles of the Methods of Analytical Chemistry. By M. G. Chesneau. Macmillan. $1.75.
Calculations of General Chemistry. By William J. Hale. Van Nostrand. $1.00.
In Starland with a Three-inch Telescope. By William T. Olcott. Putnams. $1.00.
How to Study the Stars. By L. Rudaux. Stokes. $2.00.
Elements of Descriptive Astronomy. By Herbert A. Howe. Silver, Burdett. $1.25.
Hydraulics. By George E. Russell. Holt. $2.50.
College Geology. By Thomas C. Chamberlin and Rollin D. Salisbury. Holt. $3.50.

In Smith's *Plane Geometry* the subject is developed by the syllabus method. The proofs are to be worked out by the pupils. Altho this book fulfils all requirements of the college entrance examinations, latitude is left the teacher to adapt it to his own needs. A useful feature is the large number of general exercises and problems. In Robbins's *Plane Trigonometry,* a compact little treatise intended for beginners, principles are developed and their application to problems is made immediately. Conant's *Plane and Spherical Trigonometry,* a more advanced and elaborate work, tho retaining much of theory, gives an unusual number of concrete problems illustrating the use of trigonometry in the applied sciences.

Crew and Jones's *Elements of Physics,* a connected, comprehensive view of the subject, furnishes an admirable high school textbook. The authors start with the supposition that the youth of sixteen is in possession of a large number of physical facts that the teacher should correlate and arrange for him. Ideas, not formulæ, are emphasized. Tho admirably balanced in its material, the use of the system of absolute units in an

elementary textbook is to be regretted. It is interesting to note that Poske's "Elementary Physics," one of the latest and best German works, omits both the ments and the New York State syllabus. There is a helpful appendix of tables and formulæ. No problem of physical science has attracted more attention than



BEN AND THE AUTHOR.
Frontispiece of Wright's "The Black Bear." (Scribners.)

absolute system of units and Newton's second law of motion. The importance of laboratory methods in physics teaching renders Adams's *New Physical Laboratory Manual* timely and useful. The seventy-eight simple, direct exercises cover the college entrance require- gaseous ionization. The discovery of cathode rays, x rays and radium has profoundly modified the theories of physical science. Tho much has been written in a general way, McClung's *Conduction of Electricity Through Gases and Radio-Activity* is the first regular

college textbook on this subject. This manual of sixteen chapters is an experimental course in facts and principles. It is admirably arranged and supplies a need now recognized by teachers.

In Ostwald and Morse's *Elementary Modern Chemistry* a great amount of theory is presented, especially of the physical side of the subject, but in a way easily comprehended and fascinating to the student. Running thru the description of the elements are the general laws upon which the science of chemistry is based. As a textbook for secondary schools it is an excellent foundation for further work. It is to be regretted, however, that the facts of ordinary life are not more largely used for illustration. Few colleges as yet give definite courses in physical chemistry, yet the interest in this subject makes Ewell's *Textbook of Physical Chemistry, Theory and Practice* an important work. This single volume gives material for a general course, including thermo-dynamics, solutions, thermo-chemistry, light, chemical kinetics, chemical statics, electrolitic conduction, potential differences, gaseous ions and radio-activity. Tho the author claims that it will serve as a laboratory manual, as a textbook and a book of reference, it is probably as a handbook it will find its place. In the development of chemical science, physical chemistry has overlapped analytical chemistry, with the result that empiricism has yielded to

BENJAMIN FRANKLIN.
From the painting by Duplessis, reproduced by permission of Foster Brothers, Boston, Mass., from "Autobiography of Benjamin Franklin." (Putnam.)

more exact scientific methods. Chesneau's *Theoretical Principles of the Methods of Analytical Chemistry* is an exposition of the laws of equilibrium recently established by Ostwald and Gibbs as applied to analytical chemistry. This is the "scientific foundation" prophesied by Ostwald several years ago. As it marks this advance in scientific methods in chemistry it is a significant book. The growth of physical chemistry has further shown the need of special grounding in mathematical demonstrations in order to understand chemical phenomena in the light of modern theories. The *Calculations of General Chemistry,* by William J. Hale, an excellent little work, contains many practical examples and is intended to accompany laboratory work in general chemistry.

The man with a small telescope will find Olcott's *In Starland with a Three-Inch Telescope* a convenient handbook for the study of the moon and the constellations. The moon is carefully diagrammed. The constellations, divided into four groups, according to season, are represented with full-page maps, noting the interesting double stars. A full description appears on the opposite pages. *How to Study the Stars,* by Rudaux, addressed confessedly to the amateur "who desires more than a passing knowledge of the starry firmament," is divided into two parts—the means of observation and the methods of observation. The title might well be "How the Stars are Studied," for as a whole it deals more largely with instruments and methods than with the "starry firmament," the real object of study. Much space is devoted to the camera as an aid to astronomy. Would the "average amateur" ever attempt "astronomical photography"? Howe, in the second edition of his *Elements of Descriptive Astronomy,* a systematic treatise covering the whole field, brings together much material carefully selected and admirably arranged. It is well illustrated and the style is singularly lucid and interesting.

A textbook on *Hydraulics,* by George E. Russell, is probably the best text since Professor Merriman's. Professor Russell has succeeded in eliminating the extraneous theoretical study of hydrodynamics, brought in largely thru European influence, and in producing a textbook of the elements of hydrostatics and hydrodynamics covering the essential points. Altho it does not treat of hydraulic motions, machinery and other applications of hydraulics, it covers the more common and important problems.

A college textbook of *Geology,* by Chamberlin and Salisbury, is a condensation of a three-volume work by the same authors. The longer work marked an epoch in North American geology and is constantly used for reference. The smaller book, intended primarily for college students, leaves the older methods of dynamic, stratigraphic and physiographic geology, and treats the science as a unit, as a history of the earth. The theories regarding the origin of the earth are particularly good. Beginning with dynamic and structural geology, the materials of the earth and their arrangement, the geological work of the atmosphere, water, snow, ice and volcanoes, tracing out the history of geological epochs, the book concludes with the human or present period. The absence of technical terms and the clear, interesting style make the book valuable alike to the student and the general reader.

Philosophy, Psychology and Education

The Psychology of Reasoning. By W. B. Pillsbury. Appleton. $1.50.

Lectures on the Experimental Psychology of the Thought-Processes. By Edward Bradford Titchener. Macmillan. $1.25.

How We Think. By John Dewey. Heath. $1.00.

Teaching Children to Study. By Lida B. Earhart. Houghton Mifflin. 70 cents.

Changing Conceptions of Education. By Ellwood P. Cubberley. Houghton Mifflin. 35 cents.

The Principles of Education. By William Carl Ruediger. Houghton Mifflin. $1.25.

Mental Discipline and Educational Values. By W. H. Heck. Lane. 90 cents.

The Beginnings of the Teaching of Modern Subjects in England. By Foster Watson. Sir Isaac Pitman & Sons. $1.40.

Vocational Education. By John M. Gillette. American Book. $1.00.

The American Rural School. By Harold Waldstein Foght. Macmillan. $1.25.

Life of Horace Mann. By George Allen Hubbell. William F. Fell. $1.50.

On the Future of our Educational Institutions. By J. M. Kennedy. T. N. Foulis. $1.25.

The Mystery of Education. By Barrett Wendell. Scribner's. $1.25.

American Education. By Andrew S. Draper. Houghton Mifflin. $2.00.

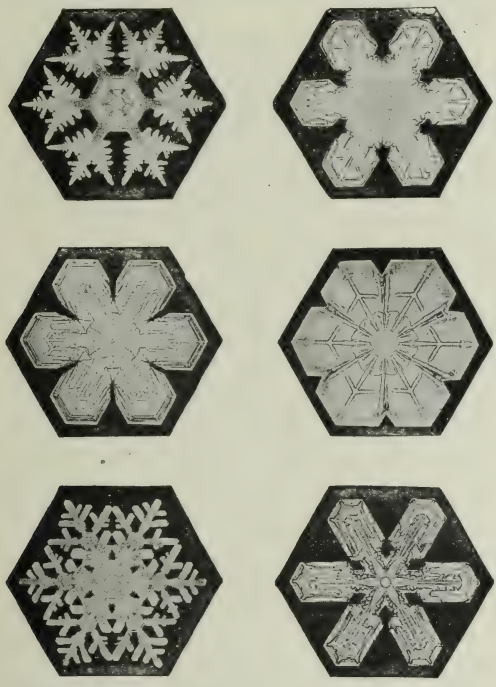
Government by Influence. By Elmer Ellsworth Brown. Longmans. $1.35.

The Education of the Child. By Ellen Key. Putnam's. 75 cents.

An Outline of Logic. By Boyd Henry Bode. Holt. $1.00.
Logic. Induction and Deduction. By Adam Leroy Jones. Holt. $1.00.
Esthetics. By Kate Gordon. Holt. $1.50.
Education Through Music. By Charles Hubert Farnsworth. American Book. $1.00.
Broad Lines in Science Teaching. By F. Hodson, (editor). Macmillan. $1.25.
Exposition and Illustration in Teaching. By John Adams. Macmillan. $1.25.
Habit-Formation and the Science of Teaching. By Stuart H. Rowe. Longmans. $1.50.
Attention and Interest. By Felix Arnold. Macmillan. $1.00.
An Outline of Individual Study. By G. E. Partridge. Sturgis & Walton. $1.25.
Stories and Story-Telling. By Edward Porter St. John. The Pilgrim Press. 60 cents.
Home Life in All Lands. By Charles Morris. Lippincott. $1.00.
Fifty Fables for Teachers. By C. W. Bardeen. Bardeen. $1.00.
A Manual of Common School Law. By C. W. Bardeen. Bardeen. $1.50.

There are various roads over which the human mind may find its way to truth. When Professor Pillsbury seeks the truth about the *Psychology of Reasoning* he follows the method of reflection. Starting from the data furnished by the logicians and by the psychologists who have more recently attacked the problem, he carefully elaborates a coherent account of the nature of judgment and reasoning. Professor Titchener, on the other hand, pursues the path of experiment. The thought processes must be brought under the artificially controlled conditions of the laboratory that their secret may be revealed. Professor Dewey's views as to *How We Think* are also the outgrowth of experiment, but not of the type familiar to the psychological laboratory. It was in his well-known experimental school, founded in Chicago in 1896, that the doctrines here set forth were first put to the test of practice.

The utter dissimilarity of these two books is, however, traceable to other sources than differences of experimental method. For Titchener the question of how we think is first of all a question of introspective analysis. Is our judging consciousness analyzable into sensational elements, or do non-sensational, relational elements also occur? Do we ever have an "imageless" thought? Such analytical, structural problems, important for a systematic descriptive psychology, interest Dewey not one whit. What is the thought doing? he asks. Under what conditions does it arise, and how does it most efficiently accomplish its purpose of appropriately modifying behavior? Dewey sees not merely the thought itself, but the whole thinker and his relation to the problem the thought attacks. One wonders at the close why the book was not named "How We Learn."



A huge psychological experiment is now being carried on in the educational world. It consists of the injection into educational theory of this doctrine of the instrumental, experimental, problem-solving nature of thought. If a measurable bettering of the quality of instruction actually results, as seems likely to be the issue, the doctrine will be verified—at least for the pragmatist. One significant result of this movement comes to light in Miss Earhart's *Teaching Children to Study,* a volume that reports the results not merely of theoretical analysis and practical observation, but also of actual experiments in teaching school children how to think.

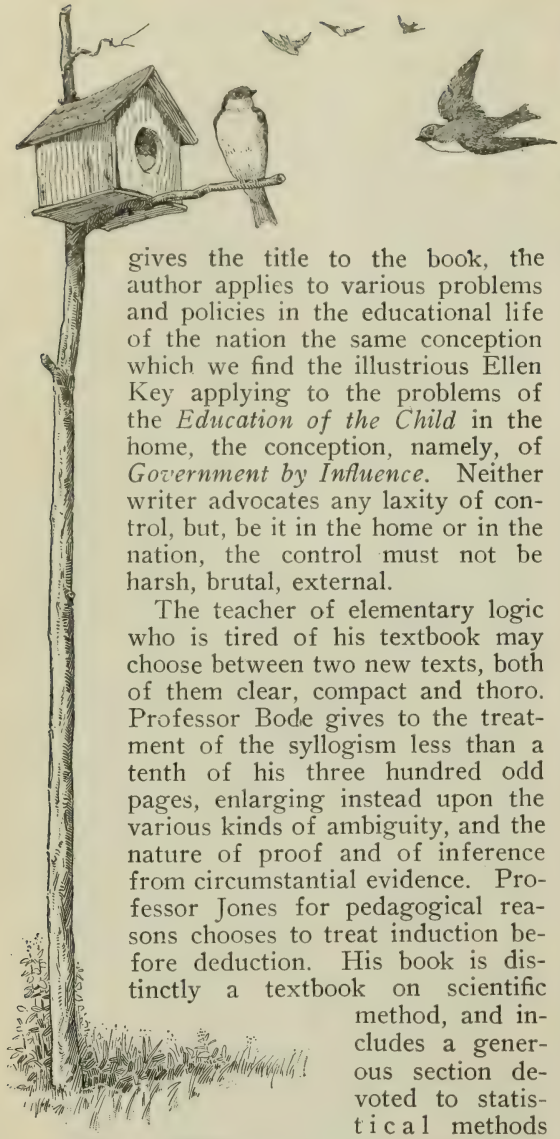
Readers who desire to orientate themselves with reference to the changing conceptions of education will find in Professor Cubberley's little volume not merely a statement of present tendencies, but also an attempt to place the new conceptions in their historical perspective. In this, as in each of the eight numbers of the Riverside Educational Monographs which have thus far been issued, Professor Suzzallo's thoughtful introduction challenges attention.

A fuller statement of the best and latest in educational theory will be found in Professor Ruediger's excellent textbook. One of the problems which appropriately receives large attention relates to the standards and criteria of educational values which are replacing the conception of formal discipline. Professor Heck has done a good service in summarizing the results of recent studies in this field. In the light of such evidence as he brings together, few thoughtful men will dare longer to advocate the teaching of grammar or Greek or geometry or any other subject on the ground that it "trains the mind." In this connection it is interesting to read in Professor Watson's comprehensive and scholarly volume on *The Beginnings of the Teaching of Modern Subjects in England* how less than three centuries ago the claim was first put forward that

the Latin language has a superior disciplinary value, this being the time when the publication of history, literature and science in English first made available all the "solid knowledge" previously accessible only to those who knew Latin.

The wholesale nature of the reconstruction of curricula necessitated by the overthrow of this pernicious myth of formal discipline presents a problem with which the schools must wrestle for many years. One wishes that Professor Heck had undertaken to state in greater concreteness what the special topics are which do have a high educational value,

PHOTOGRAPHS OF SNOW FLAKES (ENLARGED) AFTER BENTLEY.
From Chamberlin and Salisbury's "Geology." (Holt.)



either because of their close interconnection with actual life situations or because of their unusual availability for purposes of developing ideals and "concepts of method."

When the curriculum is purged of those of its heritages from the past which are valueless, more room can be found for the vocational education which Professor Gillette so vigorously advocates. This student of sociology brings to his task a wide acquaintance with the actual social conditions which seem to him to demand the "vocationalizing" of the schools.

Regarding *The American Rural School* Professor Foght has no lack of definite practical proposals. Such themes as the school garden, the building and the furnishings, as well as the centrally important problems of consolidation, supervision, and the teaching of elementary agriculture, are all treated with richness of detail and fertility of well-considered suggestion. Such able endeavor on behalf of the rural schools would surely have rejoiced the heart of Horace Mann, the story of whose life Dr. Hubbell eulogistically records.

Of the four collections of addresses on educational themes, one is a new translation of the lectures delivered by Nietzsche in 1872 before the University of Basle. The youthful professor ruggedly protested against the trend toward a broad extension of the privileges of education while provision was still lacking for the select minds of the unusually gifted to pursue a profound and genuine culture. So, too, in more graceful and facetious phrase, does Professor Wendell deplore the profanation of the "mystery of education" wrought by easy elective courses, numerous free universities, coeducation and the like. The cult is to be rejuvenated when its priests, no longer concentrating all their energies upon the search for new bits of knowledge, strike once more a balance between intellectual acquisition and organized effective expression.

Commissioner Draper and Commissioner Brown have each given generously the fruits of a ripe experience. In *American Education* are gathered together some twenty-five papers which express the author's convictions regarding the general problems of school organization and administration as well as some of the more special problems that have confronted elementary and secondary schools and universities during the past quarter century. Commissioner Brown, too, has treated a wide variety of topics, but they are all of live current interest. Each address gives indication of what the National Bureau of Education can accomplish as a coordinating influence among the educational agencies of the country. In the address which

APRIL ARRIVALS.
From Gilmore's "Birds Through the Year." (American Book Co.)

gives the title to the book, the author applies to various problems and policies in the educational life of the nation the same conception which we find the illustrious Ellen Key applying to the problems of the *Education of the Child* in the home, the conception, namely, of *Government by Influence*. Neither writer advocates any laxity of control, but, be it in the home or in the nation, the control must not be harsh, brutal, external.

The teacher of elementary logic who is tired of his textbook may choose between two new texts, both of them clear, compact and thoro. Professor Bode gives to the treatment of the syllogism less than a tenth of his three hundred odd pages, enlarging instead upon the various kinds of ambiguity, and the nature of proof and of inference from circumstantial evidence. Professor Jones for pedagogical reasons chooses to treat induction before deduction. His book is distinctly a textbook on scientific method, and includes a generous section devoted to statistical methods and another on the construction of systems. Both writers magnify the function of logic as an aid in actual reasoning.

Is it our barbarian American practicality that has continued for decades to multiply logics wherewith to teach our college students to know the true, while we have had not a single suitable textbook with which to teach them the science of the beautiful? This egregious lack has now been adequately met, and college courses in esthetics will probably begin to be more uniform, more systematic and more numerous. Dr. Gordon takes explicitly the psychological point of view and the bulk of her volume consists in the study of the psychology of imagination and feeling as manifested concretely in each of the various art forms. The artist and the general reader, as well as the college student, are under a debt of gratitude to Dr. Gordon.

In Professor Farnsworth's *Education Through Music*, teachers in the elementary schools will find a practical guide to methods in music teaching for each of the eight grades, together with sound expositions of the principles, psychological as well as musical, which underlie the teaching.

Under the caption *Broad Lines in Science Teaching* have been brought together more than a score of papers by as many authors, mostly English, interested in the teaching of science in secondary schools. From England also comes the volume entitled *Exposition and Illustration in Teaching*, a topic which Professor Adams has illuminated in his usual fertile, facile manner. The books of Dr. Rowe and Dr. Arnold may also be helpful to teachers, the former because in the midst of its repetitious pages it contains many sound suggestions about the formation and breaking of habits; while the latter, in spite of an irritatingly dogmatic style that dampens interest, and in spite of a needless typographical prominence of classificatory subdivisions and headings that continually distract the attention, nevertheless succeeds better than any previous volume in bringing together the laboratory investigations and the educational implications regarding *Attention and Interest*.

Dr. Partridge's manual of methods for the study of the individual is broad in its scope, but makes no pretensions to intensity or thoroness. The idea of introducing normal school students to pedagogy, not thru a course in general psychology, but thru the actual study of

individuals, their health, bodily characteristics, mental traits, and so on, is decidedly novel and deserves to be given a thoro trial.

The characteristic of literary crudity is not so serious a flaw in Mr. Bardeen's shrewd *Fables for Teachers* as it is in Mr. Morris's *Home Life in All Lands* for children. Professor St. John's *Stories and Story-Telling,* simple and faultless in style, will prove a genuine help to many a Sunday school teacher.

History

Outlines of General History. By V. A. Renouf. Macmillan. $1.30.
An Outline History of the Roman Empire. By William Stearns Davis. Macmillan. 65 cents.
A History of the United States for Schools. By S. E. Forman. Century. $1.00.
The Leading Facts of American History. By D. H. Montgomery. Ginn. $1.00.
School History of the United States. By Charles Morris. Lippincott. 90 cents.
Stories of American Discoverers for Little Americans. By Rose Lucia. American Book. 40 cents.
Select Orations Illustrating American History. By S. B. Harding. Macmillan. $1.25.

This has not been a prolific year in the making of textbooks in history and politics, but even in the leanest of seasons we are certain to have a general history of mankind from the paleolithic age to the fall of Port Arthur. This year our manual comes from the pen of Professor Renouf, of Pei Yang University, of Tientsin, China, and is issued under the editorial supervision of Professor William Starr Myers, of Princeton. It is evidently written primarily for young Orientals getting their first glimpse of the rise and growth of Western civilization and its connections with their own. The volume has the obvious advantage of transparent simplicity, but there is little or nothing new or striking in the perspective and arrangement, except that the Far and Near East receive more than the scant notice given them in most other manuals of the same type.

A volume of this sort should be pretty carefully pruned by four or five specialists in several fields before being committed to press.

Far more useful to the teacher at the present time are books of the type of Professor Davis's *An Outline History of the Roman Empire*—a small and readable volume on a great theme by a competent authority. From the first page to the last the author shows a fine grip on his theme and everywhere there is that swing which only accompanies fulness of knowledge. Every college teacher who offers a general course in the history of the Middle Ages should be enjoined to preface the work with a careful study of this little book.

It is likewise a lean year that does not give us two or more elementary school histories of the United States. The three books before us now have much to commend them to the conventional teacher of conventional American history. They are accurate, generously illustrated, typographically satisfactory, and replete with "teacher's helps," and they are just as commonplace as any superintendent of Buttonwood district could desire.

In the midst of a dreary waste of texts it is refreshing to find a little book of historical tales like Rose Lucia's *Stories of American Discoverers for Little Americans.* Of course the exploits of the great pathfinders are in themselves lively themes, but our author has made the most of the opportunity to be graphic and entertaining. Here Columbus, Ponce de Leon, Balboa, Cortez, Cabot, Hudson and all that wonderful band of adventurers are made to live again as in fables. Children will revel in these stories of world "uncoverings" as the Germans would say, and they will get a deal of sound history and historical interest from them.

College students of American history will find much that is enlivening in Professor Harding's collection of orations illustrating the great themes of our national development: The Revolution, the adoption of the Constitution, the contest over slavery and the Civil War and Reconstruction. As the editor says in his preface, a great part of a people's history, where self-government prevails, may be found in the speeches of its public men; and he has managed to tell many a great story of our politics in the language of Otis, Patrick Henry, Madison, Hamilton, Washington, Jefferson, Webster, Clay, Calhoun, Lincoln, Seward, Schurz, Beecher and a dozen other orators of first rank. The speeches are selected with sound judgment, the editorial work is done in such a way as to give each extract its proper setting, and the many omissions necessary to much condensation are wisely made.

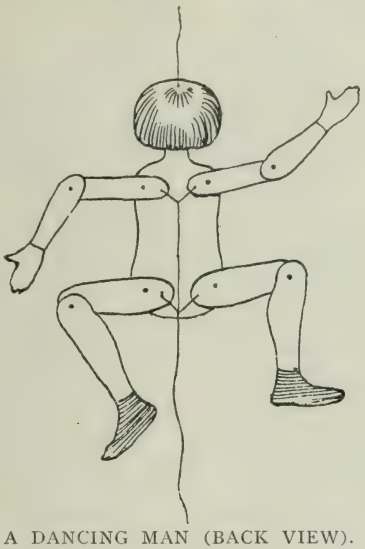
Nature Books

A Holiday with the Birds. By Jeanette Marks and Julia Moody. Harper. 75 cents.
Birds of the World. By Charles R. Wright and Ella Hardcastle. Stokes. $2.00.
Birds Through the Year. By Albert Field Gilman. American Book. 50 cents.
The Black Bear. By William H. Wright. Scribner's. $1.00.
The Nature-Study Idea. By L. H. Bailey. Macmillan. $1.25.
Nature Study. By Horace H. Cummings. American Book. 60 cents.
Practical Agriculture. By John W. Wilkinson. American Book. $1.00.
Nature Myths of Many Lands. By Florence V. Farmer. American Book. 45 cents.
Text Book of Elementary Zoology. By Thomas W. Galloway. Blakiston's. $1.25.
Shell-Fish Industries. By James L. Kellogg. Holt. $1.75.
Cone-Bearing Trees. By Edith R. Mosher. Bardeen. $2.00.
Field Zoology. By Lottie E. Crary. Blakiston. $1.25.

Once upon a time the approach of summer was marked by the appearance of asparagus, the straw hat and the college commencement, but now the dominion of season reaches into the publisher's very heart. Each spring he vies with the record of the past year in the variety and excellence of his offering of nature books. Among the year's books *A Holiday with the Birds* will be welcomed by children who have read and enjoyed "Little Busybodies." This is the second book in a series, and in it Miss Marks and Miss Moody take up, with the old-fashioned airships, the same sort of story which was so delightfully told in the earlier volume about ants, beetles and their kin. A group of children of a congenial summer colony go on all sorts of pleasant excursions, by land and water, with Mr. Beach, a young college man, living as tutor in one of the homes. He skilfully combines business and pleasure and administers information, not only about birds, but on a surprising number of other topics. The good times are genuine and the information so well combined with the story as to lose much of its terrors. Miss Marks and Miss Moody are instructors at Mount Holyoke College, and have in preparation other books carrying on the adventures of the same group of children thru many realms of nature.

A more technical book is *Birds of the World,* tho, as its sub-title, "For Young People," shows, it is intended for the novice. It is fully illustrated with color plates, which, tho crude for the present day, assist greatly in the identification of individuals.

For a volume of detail for any one living in the Eastern States *Birds Through the Year* might be chosen. Comprehensive, and not too bulky for field use, it might well claim a place in the vacationer's pack. Mr. Gilman quotes on the title page:



> "In summer when the shawes be shene,
> And leaves be large and long,
> It is full merry in fair forest
> To hear the fowles' song."

Surely no education is complete without the ability to name some of these "fowles" and feel acquainted with their manner of life. Mr. Gilman's book would tempt the most indolent observer to the identification of the common species, and, who knows what thirst for more knowledge would be aroused. This book would be valuable as a supplementary reader in schools.

Mr. William H. Wright opens his book on the black bear with a sketch of an individual, "Ben." The author, with two companions, sets out to hunt grizzlies and prospect for gold in the Bitter Root Mountains of Idaho. One morning they meet a black bear, out for a walk with her three cubs. The mother bear they shoot for food, and, after a most exciting chase, catch the three babies. The middle-sized bear falls to Mr. Wright's portion of the spoils, and the story of the cub's bringing up, with all its amusing incidents, is told with a dash and spirit that hold the reader's interest. When Ben was fully grown, Mr. Wright was obliged to part with him, but found a circus man who was delighted with the gift. Following Ben's history, Mr. Wright goes on with a general account of the characteristics, habits and distribution of the bear family, particularly the black variety, all most readable. The book is excellently illustrated from photographs by the author and a friend. The reproductions which show "Ben" riding on top of a pack-horse load are amusing.

Especially addressed to teachers is *The Nature-Study Idea,* in which Mr. L. H. Bailey reviews the history of the increasing adoption of nature study into the regular courses in the schools, the reasons why it is valuable, and some of the best methods by which a teacher can make this work a success. He calls the older system "merely naming objects," a

"pedagogical sin," and urges methods of vitalizing the facts taught by interpreting nature in human terms. The latter third of the book is devoted to "Inquiries and Answers," where the teacher, as interlocutor, gets much information and good advice from Mr. Bailey in answer to such questions as "How much apparatus do I need?" "Shall we teach the child to collect and thereby to kill?" "How can I do any nature study work in the ordinary schoolroom?"

A DANCING MAN (BACK VIEW).
From "300 Games and Pastimes." (Macmillan.)

Two books published by the American Book Company and intended for use as textbooks are *Nature Study,* Cummings, and *Practical Agriculture,* Wilkinson. Both books are suitable for use in the grades. The former covers some ground formerly treated in primary physics. The latter is particularly adapted for use in city schools; for the boy so fortunate as to be brought up in the country has daily demonstration of most of the points which it covers. Also from the American Book Company comes *Nature Myths of Many Lands.* It is designed by Miss Farmer as a supplementary reader for children from ten to twelve years of age. It is well illustrated and includes folklore from many sources.

Galloway's *Elementary Zoology* is a textbook which, in its preface, promises to bring to pass in the student that greatly desired consummation, "mental activity rather than information." Following, as it does, quite conventional lines, it falls under the praise or condemnation of the teacher rather than the reviewer.

Strictly practical is Mr. Kellogg's book on our shell-fish industries. Whether the mere eater of oysters and clams cares to read of the danger to himself which lies in the eating rests with his individual preference. The oyster also is in danger of extermination were it not for the vigorous work of that sea farmer, the oysterman, who sows and cares for the young oyster in order to reap his final harvest of fat Blue Points. In this book the oyster grower can find a history of bivalves from the egg to the market, reports on methods of culture, descriptions of oyster fields all over the world and conditions of culture.

The author of *Cone-Bearing Trees* has waxed sentimental and made a large, thin book, in which information about our native evergreens is curiously mixt up with what might be fitly termed "selections from the poets."

Lottie E. Crary's *Field Zoology,* a textbook for studying the animals most familiar to the experience of the student, such as insects and birds, is well conceived and planned, but fails somewhat in the execution. For a work to be used in the field it contains too many technical terms and throws too much emphasis on classification rather than on the life of the animal. The book, however, contains many valuable suggestions for study and much interesting data.

Music and Art

The Singing Voice and Its Training. By M. Sterling MacKinlay. Dutton. $1.25.
Elementary Course in Perspective. By Sherman M. Turrill. Van Nostrand. $1.25.
Practical Hints for Art Students. By Charles A. Lasar. Duffield. $1.00.

The pupil biographer of Manuel Garcia, who was the greatest singing teacher of the nineteenth century, has based his treatise on *The Singing Voice* directly on the precepts of that master, whose "tripod of voice emission"—perfection of intonation, steadiness of sound and beauty of timbre—he sets down as the great desiderata for the singer. The sum of the matter is that the voice is the gift of nature, the rest may be acquired by study. While there is comparatively little that is new or original in the book,

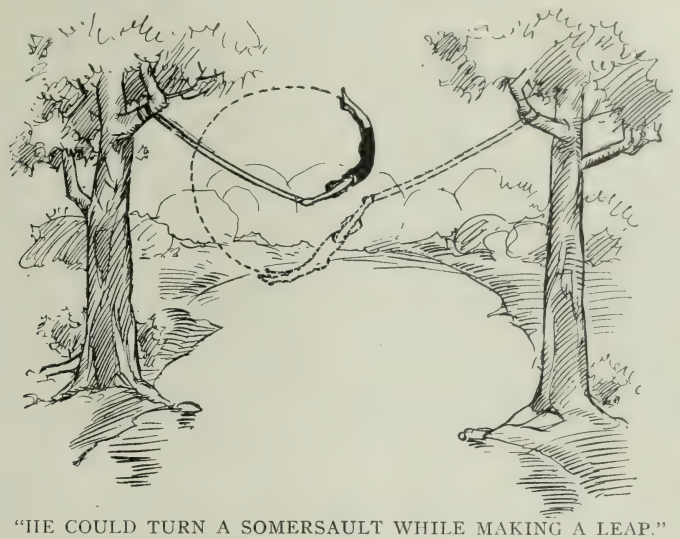
the fundamental principles are set forth in decidedly readable and illuminating fashion, and there are many helpful suggestions.

In his *Elementary Course in Perspective* Mr. Turrill discusses the mechanical application of the principles of descriptive geometry to the making of a perspective drawing by two methods: first by the use of the plan, where the orthographic projections of rays are used and all details should be drawn with instruments, discussed mainly for the aid of the mechanical draftsman; and, second, the method by scale, intended for the artist and freehand draftsman. He has taken for exposition such subjects as lend themselves readily to the illustration of important principles and at the same time possess some general interest, and has subjoined many problems for the student to work out covering those principles as applied to the illustrated subject, in various positions. The text in a treatise of this kind is necessarily dependent on a set of diagrams or drawings, and these are provided in the shape of serviceable folding plates.

Mr. Lasar's old pupils, of whom there are said to be many in this country, will be glad to have the handy little volume of *Practical Hints* which has been compiled from the notes he has long used in his classes. Other art students, too, may find many a helpful nugget among these epigrammatic and sometimes axiomatic sayings of this successful Parisian teacher.

Health and the Human Body

Questions in School Hygiene. By Guy Montrose Whipple, Ph.D. Bardeen. 75 cents.
History of the Human Body. By Harris Hawthorne Wilder. Holt. $3.00.
Advanced Physiology and Hygiene. By Herbert W. Conn and Robert A. Budington. Silver, Burdett. $1.10.
Human Body and Health—Elementary. By Alvin Davison. American Book. 40 cents.
Physiology of Man and Other Animals. By Anne Moore. Holt. 80 cents.
Experimental Dairy Bacteriology. By H. L. Russell and E. G. Hastings. Ginn. $1.00.



Any one who wants to know how much improvement has come in the teaching of health matters in public schools and the training of teachers in school hygiene should look over the questions in school hygiene which are to be found in Cornell Study Bulletin No. 4, by Assistant Professor Whipple. Then the books that are here reviewed with it will be better understood.

Professor Harris Hawthorne Wilder's *History of the Human Body* is not written for specialists in human anatomy, and yet it is a very scholarly presentation of the biological problems that concern man. So many people now are interested in these biological problems and yet find it difficult to read with facility the books written on this subject, because they are so technical or to listen intelligently to discussions of them, because they are not familiar with the terms employed and the problems and questions at issue will find all that they need in this volume. To take it up at any portion is a little discouraging to the mind lacking in biological training, but to read it from the beginning is surely to come away well informed. Popular scientific books of this kind that are really scientific are eminently welcome. They are not easy reading, but they represent serious purpose and results worth while for author and reader.

Less technical and yet not less scholarly and scarcely less thoro in its own way is *The Advanced Physiology and Hygiene* of Conn and Budington. Conn's biological works have always been scientific, yet also popular. Almost no one in America can strip a scientific subject of technical difficulties so well, yet present it without either caricaturing or sensationalizing it. It is particularly interesting to find that in this work, as in the others which space compels us to mention with it, Miss Moore's *Physiology of Man* and Professor Davison's *Human Body and Health,* both of which are excellent presentations for young folks, the danger of patent medicines is especially emphasized. Fortunately in recent years the exaggerated pathology of alcohol and tobacco has been reduced to something like normal in these physiologies for schools, and patent medicines are beginning to be given something like their proper places as causes of ill health.

In *Experimental Dairy Bacteriology* members of the staff of the College of Agriculture of the University of Wisconsin have given, as might be expected, a very practical little manual that will be of help to boards of health thruout the country, if not to the new dairy farmer

himself, of whom we have heard so much and who seems to be taking advantage of every science and invention that will help him in making his farm more productive and his farm conditions more hygienic.

"HE COULD TURN A SOMERSAULT WHILE MAKING A LEAP."
From "The Scientific American Boy at School." (Munn & Company.)

Miscellaneous

The Rescue of Cuba. By Andrew S. Draper. Silver, Burdett. $1.00.
The British Isles. By Everett T. Tomlinson. Houghton. 60 cents.
All Around Asia. By Jacques W. Redway. Scribner's. 60 cents.
Home Life in All Lands. (Book II.) By Charles Morris. Lippincott. 60 cents.
The Boys' Book of Airships. By Harry Delacombe. Stokes. $2.00.
Manual Training for Common Schools. By Eldreth G. Allen. Scribner's. $1.00.
Scientific American Boy at School. By A. Russell Bond. Munn. $2.00.
Harper's Handy Book for Girls. By Anna Parmly Paret. Harper. 1.75.
Play. By Emmett D. Angell. Little, Brown. $1.50.
Three Hundred Games and Pastimes. By E. V. Lucas. Macmillan. $2.00.

Many a reader, both young and old, will welcome Andrew S. Draper's *The Rescue of Cuba,* which, written in 1899, when the Spanish-American War was scarcely over, has now been made up to date in the light of recent data. The narrative is clear and complete, and its very directness adds to its picturesqueness.

A trip to *The British Isles* with Everett T. Tomlinson as a guide, is better for young travelers than a Baedeker. As a supplementary reading book, combining geography, history and literature, it has a less stilted tone than other books of its kind, and it is most happily illustrated with photographs. *All Around Asia* is much the same character, and tho it is one of a series of geographical readers, travelers would find it of service, tho the tourist likes better tabulated instructions. Mr. Morris in *Home Life in All Lands* considers the manners and customs of uncivilized peoples, told in the style of a personally conducted tour. One is carried safely thru queer tribes, where the customs, laws and social and economic conditions are conscientiously described.

The youthful aviator will welcome Harry Delacombe's *The Boys' Book of Airships.* It not only gives a history of the science of aviation, but it describes the balloons and aeroplanes of every style. What boy will not welcome close-hand accounts of Farman, Bleriot and the Wright brothers. But it's hard to keep an airship book up to date. Since this volume was issued Curtiss has flown from Albany to New York, Hamilton has gone from New York to Philadelphia and back again, Zeppelin has carried twenty passengers over three hundred miles. Express trains are finding it difficult to keep up with these railway birds.

Manual training, tho usually part of a studied and organized course, partakes very much of the element of play. Eld-

reth G. Allen's treatise on *Wood Working,* tho primarily intended for school use, will afford the youthful carpenter technical pleasure. It is not a trick book, but something practical.

The "handy book" is not quite so special in its appeal; it attempts a variety of subjects suitable to girls or boys under special conditions. For example, the *Scientific American Boy at School,* as planned by A. Russell Bond, combines narrative with detailed accounts of construction within the capacity of the average boy who pays attention. *Harper's Handy Book for Girls,* edited by Anna Parmly Paret, deals with art craft and the more feminine occupation of dressmaking and fancy wook. These suggestions are taken in part from *Harper's Bazar.*

In these days of crowded cities one has developed systematically the science of "Play," and a new book with that title has been written by Emmett D. Angell, who in official positions has had ample opportunity of studying its efficient application. There are many excellent suggestions for the director of a playground. But more solid enjoyment may be had from the very excellent reprint of E. V. Lucas's *Three Hundred Games and Pastimes.* During 1907, Dorothy Canfield and others compiled a volume which was not Mr. Lucas's, but which took his sub-title, "What Shall We Do Now," and deceived many of us. This new edition of the real thing is all the more welcome. It is an excellent book for odd moments and rainy days in the country.

A Vision of Judgment

BY FREDERICK E. PIERCE

I saw a realm at midnight still,
(Who knows if this be dream or true?)
Where earth's discarded souls of ill
The scorn of God together blew.
There floats unceasing to and fro
The chaff from Heaven's threshing floor,
Thru endless ages waning slow;
For evil fades forevermore.

They waste like leaves on winter's tree;
(Who knows if this be dream or true?)
The newly come are fair to see,
As when they walked with me and you.
But souls of eld are faint and thin,
Like vapors blown on ocean shore;
And life is moldering deep within;
For evil fades forevermore.

There moves Napoleon, splendid still,
(Who knows if this be dream or true?)
With flashing eyes and kingly will,
As when he rode to Waterloo.
But Timur scarce has form of man,
And pride and memory all are o'er;
The stars gleam thru his phantom wan;
For evil fades forevermore.

The queen Antonius loved and kissed
(Who knows if this be dream or true?)
Is thinner now than parting mist;
And mind and will have withered too.
And nought is left of Priam's boy,
Who drew the ships to Ilion's shore;
For, sinful wrath or selfish joy,
All evil fades forevermore.

And round them moves, a ghostly blur,
(God grant that this indeed be true!)
The soul of evil, Lucifer,
As he has done the ages thru.
He thinks no more of thrones and wars;
No trace is his of glory o'er;
He floats like fog across the stars;
For evil fades forevermore.

West Haven, Conn.

School Economics

BY E. P. POWELL

Author of "The Country Home," etc.

OF our eighty millions population, over fifteen millions are within the limits of school age, and the legal demand is essentially very nearly the same in all our States, that during these years the young folk shall attend a public school during from five to eight hours per day. It used to be said that the mother owned the child until seven years of age, the father until fourteen, and the State until twenty-one. The State now claims the child at or about seven years of age, and establishes a right to his presence and attention over and above the right of the parents. The parent who protests is looked upon as opposed to education, and as denying to the child his most inherent rights. He must give over the use of his boy at the time when he most needs him on the farm or in the shop.

This would not count for so much if the boy were sent back at the close of his schooling, better equipped for taking up home responsibilities. This was the original idea and intent of school, but it is now entirely lost sight of. Education is a system of mental training, in securing which there is accumulated a mass of facts, quite apart from their bearing upon the home life of the pupil. He is educated away from the farm at least, and to about an equal extent from the shop. He never handles tools in the school; nor is it provided that he shall graduate with a usable knowledge of animals and plants. His study of botany finds its results in pressed plants, while his entomological information is pinned upon the wall in the form of insects and butterflies and his geology rarely touches the soil or the water courses of his homestead. However, you see how easy it is to slip into a criticism of the school curriculum; but that is not my intent, farther than to show that it is poor economy to give up our boys and girls to be permanently unfitted for our home building. This is exactly what we did not bargain for, and when we find our young folk growing brainwise but handfoolish the economic side of the question cannot be overlooked. A high school teacher of Boston recently said that he found the graduates of his school "strangely ashamed of work."

So there is to be considered (1) a withdrawal of forces from our homes; (2) no purposing to send back better forces as compensation, and (3) worst of all, no glorification of labor, nor any honor bestowed upon any achievement except that of the memory, that is storage of facts, and not at all ability to use them. Let us understand that we need and must have an average of about three-man power successfully to run a homestead of ten acres; that is an intensive farm. Bring in all your tools and all your labor saving methods, accumulate all the station bulletins, and other aids, it requires two besides the father to handle prosperously a small country home. To carry on the old fashioned farms of meadows and pastures, the farmer required at least one stalwart assistant during the summer months. This left the struggle close; but he could allow his boy or boys schooling during the winter, and he did it. In the house a mother must have at least one willing heart and trained pair of hands for housekeeping—girls rarely went beyond the district school, but their home education was thoro. You see that intensive farming, not only quadruples results, but demands double power. If you take away the boys and girls you must supply their places. If you do not interest them in hand work and to glorify labor they will leave us—as they have been doing.

As a rule boys and girls may be called Nature's supply of help. The family together can thrive; divided, the parents must wear out rapidly, and the young must go away to repeat the same story. Does not social economy require some

provision whereby the school shall not intrude disastrously on Nature's arrangement for carrying production to its maximum and preventing poverty. As things are we are being driven rapidly toward tenant farming, while the foreigner buys up our homes and runs them on a more economic principle. If your boy does return to his home as a helper, he is useful almost wholly from that part of education which he has incidentally picked up at home, out of his school hours; plowing, planting, harvesting, the power to discern and to create—all of this is of home origin.

When we take in higher education we are confronted with the same problem in a worse form; for here we find that we have not only to lose our helpers, but must pay more than the ordinary home can afford to support them while being "educated." Our colleges not only take half a million of our young folk out of the producing field, between the years of fourteen and twenty-one, but they much more than double the annual expenses of their homes. These boys, facing outward from home life and home building, losing all sense of responsibility for the success of family affairs, require an annual supply of funds that not unfrequently puts a mortgage on the homestead.

If the object of education be to create a class of brain workers above the necessity of hand work, there is need of a sober second thought to determine when our supply is adequate. While we empty the producing class, we are filling the professions over full. Our wheat fields are crying for labor to gather in the gift of God and the food of the people, while a petty competition wears out the lives of those who have been educated out of and away from the producing class. Co-operation is despised. Each one alone desires to master; the result is a waste of human power that is telling terribly on individual ideals as well as social.

I wish it were possible to look upon the introduction of athletics into our school system as compensative; but after watching the tendency of this sort of education I am convinced that it is not, at present, creating workers, nor those that honor labor, and can be happy as producers with the hands. Athletics finds its end in races and in sports that are attended with a large waste of money and time and energy. I never hear it spoken of as educative or as really belonging to the school system. What it accomplishes does not constitute a part of the school curriculum. Its whole spirit must change before it can come to be in full unison with any organic school force. Its influence is uneconomic not only upon the participants, but upon the crowds that are drawn from industrial pursuits to watch the games.

I find lads who are school athletes of high standing, but are utterly worthless on a straight job. They want a uniform on and spectators, and then they want to beat somebody rather than to whip the weeds. They are spoiled for the fine and quiet hoeing of a field of corn or the all-day gathering of berries for market. They can toss hay for a little while, because they can make a muscular display thereby, but straight work soon palls on them. I am not just now interested as to the effect of athletics on school work; it is only with athletics from the economic standpoint. I do not believe, however, that our young people need these side issues to make themselves of practical use. With wise school training they can learn to become enthusiastic helpers.

What is then ahead for the schools is a new co-operation with the family. The young people will not be withdrawn from the rank of helpers or alienated from home work. They will be trained to assist rather than to spend, and when they are thru with the school they will naturally turn back to the home. Looked at from the mental standpoint you will have power cultivated to investigate, to compare, to distinguish and to select. In the second place, you will have developed power to choose the best things and to do the right thing; to do it with all the might and to get a lot of pleasure out of it. In the third place, you will have power of application; not to books alone, but to doing; to work out problems not only on the blackboard, but in the soil; problems between brain and hands, and bring the whole being into line with duty. Here, then, we get what may be called a complete education; for the moral purposing is as clearly defined

as the intellectual appreciation, and we have the body trained as well as the brain.

To illustrate what seems to me to be coming I quote the substance of the curriculum of one of our agricultural high schools. You will see that agriculture does not mean simply scratching the earth with the hoe or turning straight furrows; it is a very broad and comprehensive intercourse with Nature. This high school proposes (1) The study of wild flowers, birds, animals and their habits, with their relations to ourselves. (2) The rocks, their chemical composition and the process by which the earth has been made a home for man; in other words, the history of the home. (3) The kinds of soil, how to improve and cultivate each, and the best crops to undertake. (4) Taking the standard crops of the farm, each one is studied, and the best method for reaching maximum returns. (5) How to raise, care for and market orchard and garden fruit. (6) How to conduct a market garden or trucking business. (7) A study of the common insects and the fungi that must be contended with. (8) Home forestry, and how to create the beautiful. (9) The care of domestic animals, poultry and bees. (10) The management of the cooking department of home. (11) How to use the chisel, plane and other tools. (12) A study of farm machinery and farm economics. This curriculum seems to me to speak for itself, and to commend itself to the common sense of a nation of home builders. It does not alienate the children from the family. It faces education toward the home, and it fits the children to go back into the family with increased power to help. It is school economy.

But I do not see why we need stop at this point. I cannot understand why the school, when properly organized, cannot use the boys and girls for productive purposes during the school years. Suppose industrialism to so regulate school life that young folks spend the afternoon with books, but the following forenoon apply the lessons they have secured and the facts they have learned, in gardens, orchards and fields. At work? Yes; but at work under trained teachers and as a part of the system. To train them for future work is only a part of the problem; to secure from them at the same time a rational equivalent for the cost of education seems rational. Nor is there any reason why these lads and girls should be entirely withdrawn from productive utility. The State needs every pound of power used for all it is worth. I have already suggested that the family cannot afford to lose its helpers during school years. The State also is in the same predicament. It must learn to earn as well as appropriate Every town in America should have its investments, and among its best investments should be its young people. Now consider what a school may do. Here are four hundred pupils, representing a township of three thousand people, each and every one studying indoors one-half of every day and working out of doors the other half. Of these four hundred at least two hundred stand for half man power—that is, these two hundred boys and girls can do the work of one hundred men thru the four hours that they are engaged in garden study—let us now call it garden *work*. We have, then, added one hundred men at work for four hours a day directly creating food products. The cash value would be at least $50 per day. This estimate is very low, and I am sure that nearly every one will correct me by placing it much higher. At all events, we have, for the twenty school days of each month, at least $1,000, and for eight school months we have $8,000. That is what an industrialized school stands for; not only a nation of educated and trained workers, but a productive organization at the same time.

What we have to show for this, as things are, is a lot of children without muscle or endurance, nerve worked to the point of degeneration, and many of them on the death road before beginning to shoulder life's responsibility. This is not educating for the individual, any more than it is for the family or the State. It is uneconomical of the forces that Nature supplies to create comfort and happy homes. It is shockingly wasteful, and from every point of view is the working of an unthought-thru system. A healthy system will produce healthy pupils and healthy results. Half

a day, of three or four hours with books, is all that any child should endure. Trained out of doors half the day, with all the muscles at play, allowed to whistle and sing all they please, to ask questions and be real children, and there would be a steady gain on disease and on depravity of both muscle and mind.

What I suggest is, therefore, such an industrializing of our schools as shall take in the whole system, not only for future good, but for the immediate advantage of the pupil, and of the family, and of the community. In our estimate for a single township, the yearly value of each pupil, put down on a money basis, would be on the average of $20. Multiply this by the seven or eight millions of children who represent the working asset among the schools of the whole country, and you have not less than $140,000,000 created each year by your schools. This is to be added to the intellectual and moral training and to the physical wholesomeness of the pupils. Industrialism means all of this and more. Remember that we are now looking at the economy of the question, the reflex action on our families and homes. The children of America can become not only a body of healthy and happy folk, but aid largely in the sustenance of the families.

My own children were educated at home with tutors. They were not overbooked, altho the curriculum was inclusive of history and mathematics. They were most of the time in the field, and it was persistently impressed upon them that this field work was a part of their education. Whatever was done must be done as a truth, and ultimately as entering into ability and character. Their laboratory had in one corner a chemistry closet, adjusted to the analysis of soils; in another a botanical table, where our home plants could be studied as well as classified; in a third geology discussed our rocks and the making of our hillside; while in the fourth corner entomology had its captivating but all important home. Collections grew, but not idle collections. A new butterfly was one of the day's assets, and the very first thing was to determine its economic relation to our gardening and fruit growing. So the home grew up as a school room, and I am sure that I could never have created it had my children been taken from me and taught in the usual manner. That they are educated I believe no one denies. So it was that work and education naturally fell together and did not deny each other.

I fully believe that you can so educate children that they shall love work, so that work will become their play. We have talked too long about play being work, let us reverse the maxim. It is a mistake to suppose that playing that ends in a mere contest or struggle will create a taste for work or for productive effort. Cleveland emphasizes that the economic result of the change that is going on is not to be measured by the material produced, but by the intellectual and moral results as well. The way to reform a boy that is bad or to save a boy that is good is mainly thru his hands. Get him to do something worth the while, and he will despise wasting time or letting it go to waste. It is impossible for the mind to settle on the vice level if you get the hands to working out a truth on honor. Medals and honorary degrees fade into insignificance with such a system.

If you will carry this schedule of education far enough your children will learn to create, and so they enter the realm of religious experience. Teach them to graft and to cross breed; in this way to create new and better things and ennoble the world about them, and you have awakened sentiments of an order ethical as well as intellectual. No game ever devised by human ingenuity ever equaled for interest or power to awaken enthusiasm the simple art of cleft grafting, and so growing a King apple in place of a worthless crab. The creation of a new potato or plum is more exciting and satisfactory to the common mind than winning at the Marathon races. But this sort of work also puts the pupil into alignment with him, of whom Jesus said: "My father is a worker and so am I." The whole nature thus comes under the influence and inspiration of a right sort of education. The residuum of human waste and worthless characters will steadily be reduced.

CLINTON, N. Y.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Ohio Republicans

THERE are Republican insurgents in Ohio. It is admitted that at the coming election there the party will need the support of all who have voted for its candidates in the past. Altho the President carried his State two years ago by about 70,000, a Democrat was at the same time elected Governor. This Democrat, Judson Harmon, has been nominated for another term, and this time the Republicans will not be assisted by the candidacy of an Ohio man for the Presidency, as they were in 1908. The Governor has served the people well in the office which he holds. Those who elected him have made him their candidate for the Presidency. The Republican regulars should have sought to conciliate the insurgents. There is no evidence that they did so. The work of the convention does not promise success at the polls. Mr. Harding is a forcible public speaker. But he will find his former association with Mr. Foraker a disadvantage, and the fact that his nomination was due, in a measure, to the support of Boss Cox will not help him at the polls. From the first, the prominence of Cox in the convention was unfortunate. The candidate who was his first choice had nearly half the delegates on the first ballot.

It should have been the aim of the controlling majority to gain the cooperation of the insurgents or progressives. In Ohio there are not so many of these as there are in Iowa and Kansas, but even in that State they are by no means a negligible quantity. They were ready and willing to commend the President and to stand for the policies to the support of which he is committed. They did not desire to denounce the new tariff, but they would have had the platform's praise of that tariff modified. They would have had the platform emphasize above all the project (which is the President's own) of ascertaining costs of production by means of the tariff board.

In the platform there is very little about this board and the work laid out for it by Mr. Taft. But the revision, which so many Republicans do not like, is praised without stint.

"It affords no more than adequate protection to the industries of the nation, and is fair alike to consumers, laborers, and producers."

The convention's temporary chairman, who received 195 votes for the highest office on the ticket, admitted that Congress did not know whether the protection was merely adequate or grossly excessive. Adequate protection, according to the national platform (the tariff plank of which originated in Ohio), is protection that covers the difference in costs of production, plus a reasonable profit. What did Chairman Longworth say?

"The great trouble with the present system [of making tariffs] is that it is altogether too haphazard. It offers too large opportunities for divergent interests to form combinations and by the time-honored method of 'you tickle me and I'll tickle you' to succeed in securing or maintaining excessive rates of duty; duties which serve no good public purpose. . . . These gentlemen know a great deal more about the cost of production of the articles they are interested in than Congress knows or has had an opportunity to find out. Congress is not in a position to combat their statements, *because it has no definite knowledge of how much it costs to produce these articles*, either at home or abroad."

And so Congress did not know whether it was giving the protection which the platform required and which

should be measured by the difference in costs of production. But the convention over which Mr. Longworth was presiding knew, and it did not hesitate to say that the protection granted by the new law was fair and "no more than adequate."

In the long platform there is much that is good, but its tariff paragraph is the head and front of it. The tariff, as Mr. Longworth said, "is and must inevitably be the principal issue upon which the party in this campaign will appeal to the people." The party could appeal more effectively to a majority of Ohio's voters, insurgents included, if its tariff platform were in accord with certain parts of his address, and if the writers of the platform had emphasized the value of the tariff board's search for facts by which the errors of the recent revision may be corrected.

An Experimental People

When Mr. James Muirhead had completed that study of the United States which was his necessary preparation for writing a standard guide book, he found that he had a stock of miscellaneous impressions of us which he could not well incorporate in a purely matter-of-fact and utilitarian volume. So he worked them over with a journalistic touch and gave us the interesting description of our civilization which he called "The Land of Contrasts."

The phrase comes naturally to mind as we turn from certain phases of American character upon which we have freely commented of late in these columns to other phases that are equally essential to a true and balanced picture. If, for example, we are "acceleration mad" and care for no achievement after it is assured, or if in three hundred years we have begotten more new religious "isms," "ologies" and "fads" than Europe had produced in two millenniums, it may be that these distinctions are incidental to some trait of character serviceable in the struggle for existence and worthy of respectful consideration.

Plainly enough we are, above all else, an experimental people. Whatever "ism" comes along, whatever plan is suggested, we do not merely talk about it, as people in England or Germany might; *we try it.* We get busy at once, to see whether it will "work."

Now, when one stops to think about this pragmatic habit of America, one is obliged to admit that it is remarkable in more ways than one.

Nothing quite like it has ever before been seen in the world. Social experimenting has gone on ever since Pithecanthropus started out to "trek' westward from Java, but at no time nor anywhere has an entire people really so loved to experiment, unrestrained by tradition, authority, reverence, law or political power, or to all seeming, with so reckless a disregard of possible disaster.

And not less remarkable than the extent and intensity of our experimental fervor is the certainty that results will be worked out by means of it which future generations will recognize as momentous. For it is impossible that so enormous a number of schemes of salvation, reform, prosperity, regeneration, universal gladness and sanctification should be taken out of the realm of mere talk and put to the working test without, in the long run, clearing away a well-nigh immeasurable mass of folly and waste, and leaving an enduring product of "that which is good."

If we ask why the American people have thus taken up the experimental life with unprecedented abandon, we again fall upon interesting reflections.

Before us no people had quite dared, none had been quite free, so to cut loose from the traditional, the inculcated, the vouched for, the revered. Despots with armies to enforce their will, ecclesiastical councils with governments to back up their dogmas, orders of nobility with the entire machinery of parliaments and courts to maintain their privileges, had made social experimenting costly and painful for insurgent spirits among the "higher orders," and had kept the masses in the vast and dependable inertia of ignorance and subjection. Philosophers might proclaim and revolutionists might attempt the "Baconian method," but new conditions and forces stronger than preaching and insurgency were necessary before experiment could throw

down the idols and treat dogma with contempt.

The new conditions and forces were a lawless land and a population of adventurers. We use the words in their descriptive meaning only. America was a continent open to the rover and the rover came. He had to live as he could, to put every idea to the proof, often to be a law unto himself, and slowly and painfully with his fellows to create a social order in their own way.

It is not within the mental possibilities to calculate the waste and the pain that the unregulated, fantastic, exuberant social experimenting of an entire people can produce. Nevertheless, there is something about it that, we must acknowledge, is inspiring and assuring. It is a display of abounding life, of unbridled hope, of all-conquering courage. It is positive and practical. It is sure in the long run to find out the "what" and the "how" as the world never hitherto has found them out.

Vacation

"To one who has been long in city pent," vacation comes as a great jar upon the nerves. We are suddenly called upon to renew our sense of growing things, to hearken to the finer undertones of Nature, which have been denied us well-nigh a twelvemonth. Our spiritual vision is hastily brought into the high light of an intense quiet, which has been lost in the dull roar of daily traffic. In many ways, it is painful thus to be thrust out into God's world, and told to "energize"—to draw from our surroundings all that which will suffice us for another twelve month to come. We are making a business of this vacation; it has become a handmaiden to trade. Our modern outings are simply a momentary release from strain!

Yet, as our train takes us away from the city, we begin to awaken to our normal need. Every man has a poet in him; no one ever wholly loses his kinship with nature. But it is painful for the eye, and a strain for the ear to be given no preparation. The hum of many voices dies out, and all signs in the country betoken a life far different from our own.

In city pent, our personality is keyed to the moment; in the sunlight of the open field, it tastes of the quiet of eternity. In city pent, we are given to estimating men; by the roadside, we wonder when the first sheaf of golden rod will hint the approach of fall. Country people stand in the vast quiet of time; the tick of a clock does not throb with the subway, but travels slowly with the sun. There are vast stretches of space for the soul to live in; the mind is allowed to amble and to pause. The eye sweeps the ether, unhindered by brick and mortar. These walls we call cities hold us within our economic spheres; we strive between rows of unyielding roofs.

But, once on the road, and away from the grind, land flows extravagantly by, no longer parcelled out by the square foot as property! We are in the country, where the sun does not forget a single tree or blade of grass. Our train passes a reaper in the field; we are making for the distant hills; he, windswept in his furrow, is gazing toward the forest out of which we came, and beyond which lies the city. Thus are we both at times trying to escape our daily environment!

There is majesty in your huddled, threatening skyline, the countryman tells us; there is poetry in the civic communion of your seething humanity. And we ask, what of your expanse of heaven for our smoke, your fields of green for our tenements, your sweep of sea for our narrow streets! After all, man was not made to live by bread alone. He "who has been long in city pent" may be told to "energize" for another year's work. but he and his soul understand something more about this vacation habit.

Alone in the midst of fields pregnant with the coming harvest, gazing toward trees crimson with the flush of autumn fruit, we realize the strength of the soil which asphalt and cobbles hinder in the city. We might have Broadway shaded, and a field of daisies in the twinkling of an eye, were we not forbidden to block traffic. We frown if a weed defies us between the stones of the pavement. Yet Nature has her sense of humor. We sleep within the noise of rumbling cars and blasting dynamite, but the slightest twitter of a bird at break of day, the

faintest echo of isolated life, disturb us in the country. We are curiously diseased, we city people!

The time will come when we shall be schooled in the wisdom of vacation. "To one who has been long in city pent," it is well-nigh useless to prove that the reaper, with his sceptre-scythe, is king, and the wanderer in the forest a priest. How shall we meet this unaccustomed life? The whole tension of our being is turned into sudden freedom. What shall we do with it? The sun tells us by tanning our skin; the fresh air tells us every breath we draw. We expand, and all that which is in us, lost for a twelvemonth, comes into its own again. Yes, we "energize" for the year's work, no doubt, but better still, we awaken the spirit of our forgotten selves.

Educational Obscurantism

THAT no small part of the work of the wise in this world must be to counteract the efforts of the good is unfortunate, but true. Blundering goodness, tho well meaning, would often unconsciously succeed in defeating the progress for which it is working were it not for the timely interference of those who combine wisdom with goodness. If any one doubts this, let him examine the content and quality of the biblical instruction imparted in the average Sunday school. In spite of much improvement in recent years, even chautauquas and semi-religious summer schools, now in session everywhere, furnish the desired proof, for their Bible courses often are in charge of men who know so little of real Bible scholars and their work that they are ever ready to accept the advice of Balak to Balaam: "Come with me unto a place whence . . . thou shalt not see them at all, and curse me them from thence."

It is with the Sunday schools, however, that we have to do chiefly. In this country they are the principal agency devoted to the formation of religious beliefs in the young. This service is of incalculable importance to the state and to the individual—if well done. Were it less important or more efficiently done, we should not undertake the ungrateful task of criticism. But one is forced to witness at this time the extraordinary anomaly of one view of the Old Testament being taught in the seminaries, colleges and universities, and quite another being presented in the Sunday school and from the majority of pulpits.

In secular education the accepted results of scientific investigators soon find their way into the textbooks of the common school. This is not the case in religious education. There is a vast body of well-attested facts, gathered and verified by the researches of biblical scholars during the past generation that is receiving scarcely any recognition in the teaching of the young. We are not now referring to facts that have only scientific value, but such as vitally affect our knowledge of the history, content and purpose of religion.

During the past decade several small Bible dictionaries have appeared, confessedly for Sunday school workers, that might as well have been written a hundred years ago, so innocent are they of the established results of Old Testament scholarship. In natural science such obscurantism could be equalled only by an attempt to teach the botany of Linnæus in the days of Schimper and De Vries. The average "lesson helps" of the Sunday school afford another illustration of the fact that religious education, in the main, still pursues its way, unconscious of the standards demanded by the common enlightenment of our time. Even those which exhibit a forced accommodation to the results of biblical criticism speak so guardedly that only a trained Bible scholar could distinguish the fact. The needed change from an instructional to an educational view of revelation, from a static to a developmental conception of the Bible, together with a frank recognition of the obvious ethical and philosophical deficiencies of many parts of the Old Testament, can not be effected by such pigeon-hearted methods.

As matters now stand, it is not surprising that a large part of the intellectual *élite* of this generation is lost to Christianity. No one will underrate the gravity of the situation who has sat far into the night with manly, sincere young college men in the endeavor to substitute a reasonable basis of genuine knowledge

for the specious, outworn props that could no longer support their faith, but threatened to plunge them into hopeless scepticism. Biblical instruction so crude that it does not co-ordinate itself with the instruction of the high school and the college is a dangerous thing.

Most young people have an ineradicable conviction, fostered by modern educational methods, that distinctions of fact underlie distinctions of worth. Hence the discovery that the factual basis of their beliefs is weak usually leads to the discardment of both. Therefore it is difficult to overrate the importance of teaching *right reasons for right beliefs*. It is in this very respect, however, that most popular religious education fails most grievously, for it continues to deal out traditional crudities about God and the Bible which violate the facts of reason and experience. When other sciences were equally crude, the disparity between religious and secular education was not felt. But now it is an ever-present and deadly fact. The average youth, especially if he is inclined to do his own thinking, must approach his career of Christian experience thru the gateway of reasonable knowledge. It is a narrow gate, and unless he follows his feelings rather than his head, he will not get thru it loaded down with the intellectual lumber of past generations of Bible teaching.

Certainly as regards the Old Testament we may as well frankly recognize the fact that Bible teaching no longer is the simple matter which the current method of Sunday school instruction assumes it to be. The teacher now needs special training for his task. Biblical scholarship has provided him with the means to co-ordinate moral or religious with general education. If he neglects these means; if he is an obscurantist or medievalist, unaware of the change which has taken place in our appreciation of the essential facts in the growth of Hebrew history and institutions, he is only hastening the decadence of the cause he is trying to serve. The recent outburst of Bishop McFaul against what he calls irreligious tendencies in our colleges and universities only shows that he finds our higher education determined to place a sound factual basis under the moral convictions of our young people. The trouble is with him and like-minded religious educationists whose obscurantism needlessly forces upon our youth the necessity of reconstructing the biblical rationale of their beliefs when they begin to think independently.

No, religious and general education are not independent of each other, altho the necessity for a separation between Church and State has made it appear so. They are different aspects of the same activity—education. On the factual and historical side Bible study has become a science, and has taken its place among the brotherhood of sciences. For tho on the surface they differ as the waves, in the depths they are one as the sea.

In the face of this insistent demand for co-ordination, shall we go on teaching our Bible in the old patchwork way of four square inches here and four square inches there, without recognition of the gradual growth of ethical standards? Without recognition of Hebrew methods of historiography, by which documents dating centuries apart were interwoven or placed side by side in contiguous chapters? Without historical criticism of conflicting sets of facts? Without the slightest attempt to interpret folk lore as folk lore, and each form of literature in accordance with the demands of its type? Shall we, like amiable tourists in religion, continue to carry home bottles from the Jordan, when American rivers, eager to shape new channels and refresh a virgin soil, are rolling for the baptism of American youth? We hope not! The better, larger day must come. Tho prejudice and inertia still are strong, we feel

> "As one who rowing hard upstream
> Sees distant gates of Eden gleam,
> And does not deem it all a dream."

Saving the Seals

"The Committee on Game Protective Legislation and Preserves of the Camp Fire Club of America" are a disinterested and distinguished body of gentlemen. But we fear their appeal to the American people against the decision of Secretary Nagel to kill the superfluous male seals in the Pribylov Islands shows mistaken zeal. The situation, as we understand it, is as follows:

The seal herd which comes to the Pribyloy Islands every summer to breed has been diminishing to such an extent that, whereas years ago there were several millions of female seals at the rookeries, now there are only about 50,000. This depletion is due entirely to the depredations of the Japanese and Canadian pelagic sealers. Acording to the Treaty of Paris the Canadians cannot come within 60 miles of the islands, but the Japanese, not being bound by this convention, have a cordon of thirty or forty fast schooners, with innumerable small boats, converging on the islands outside the 3-mile limit, and when the females swim out for food—sometimes over 100 miles—great numbers of them are killed. For every female thus taken a pup on shore starves to death and an unborn one is killed. The male seals stick to the shore during the entire breeding season and eat nothing. They cannot, of course, be caught by the pelagic sealers, but only by the shore hunters, who drive the young ones inland a mile from the rookeries and there slaughter them. The seal is a highly polygamous animal, and the young males can seldom fight their way into the rookeries before they are seven years old. The killing of these young males, therefore, in no wise injures the increase of the herd, but positively helps it, because the reducing of the number of females without a corresponding reduction of males means such a competition among the males that the females themselves are killed in the battles. The problem therefore is how to get Japan to stop pelagic sealing. This is now in the hands of the State Department. If we can prevail upon Japan to acquiesce in our requests there is no reason why in ten years the seal herd should not increase rapidly, and eventually, under a wise conservation policy enforced by international agreement, be restored to its former size, the superfluous males in the meantime furnishing an enormous number of furs every year to the markets of the world. If the Camp Fire Club of America by its agitation puts the American people behind the Administration in its efforts to get Japan to stop slaughtering the female seals its efforts will have not been in vain. Its lurid attack on Secretary Nagel, however, seems untimed, and its demand that no male seals be killed is certainly contrary to all expert opinion. However, there is this to be said in favor of its contention to stop killing all the male seals: Our State Department could then go to Japan with a greater probability of gaining its end if the United States had already agreed to stop killing on land. Disinterested organizations like the Camp Fire Club deserve to be encouraged in keeping a watchful eye on public questions.

The Banks and Automobiles

That conservative bankers, in convention, should reach the conclusion that "the whole country has gone automobile crazy" is not surprising. The facts would seem abundantly to warrant that conclusion. But a good deal of significance attaches to the decision to scrutinize very carefully the applications of those offering relatively small notes for discount, and to use extreme caution in accepting them if upon inquiry it appears that the money is wanted to purchase motor vehicles. This caution is not misplaced. One who has money to spend has as good a right to spend it for an automobile as for any other kind of personal property; whether one who has to borrow the money for this purpose stands upon the same plane of independent action is a question which the banker to whom he applies for accommodation has a perfect right to decide in his own way. Undoubtedly there are a great many people who can afford to buy any kind of automobile manufactured, who would be embarrassed, and possibly ruined, by its maintenance and by the expenses which owning a motor car entail. These incidental expenses of maintenance and operation, entertainment and perhaps fines for violations of the speed laws, are rarely estimated, and seem negligible to the inexperienced person who hopes to do it all very economically; but it is a matter of universal experience that the interest on the investment, plus as liberal an allowance for deterioration as prudence suggests, is a very small fraction of the cost of owning and operating a motor car. Hence, the banker asked to lend money on notes floated for the purchase of such machines is fully justified in ask-

ing if the person who wants it can afford to use it in the way proposed. It may seem like rank paternalism to go behind the face value of the purchase note, but it is not good banking to encourage bankruptcy, even on a small scale. Tradesmen and others who are customers of banks suffer when debts are uncollectable, and may, in turn, be ruined by them. Every failure hurts the banks, directly or indirectly, and even one which seems relatively unimportant from the amount involved may do inestimable injury to legitimate business ventures in a state of unstable equilibrium. Everything considered, we think the decision to look with suspicion upon notes to cover motor vehicle purchases is good banking. Everything points to the fact that in the agricultural districts, as well as in the cities, a great many people buy automobiles who cannot afford to own them, and makers have gladly accepted notes in payment for them even in instances in which the money might better have been employed in reducing the mortgage on farm or home. It requires a lively imagination to rate a second-hand automobile as an asset of great value to one whose credit invites scrutiny.

As to Prosperity

Is this country as prosperous as the professional optimists represent? It has doubtless occurred to many that tangible prosperity requires less proclamation than is now deemed necessary to make us quite sure that times were never so good as now and the outlook never so roseate. Of course we all want to feel that way, but somehow we cannot succeed in fully convincing ourselves that everything is just as it should be. We are told, for example, that the West and South are scintillating with enthusiasm and are growing rich by leaps and bounds, and the obvious contrast between such a state of mind and that which obtains in the East is pointed out as evidence that the East no longer feels the strong heart throbs of our national life and cannot recognize prosperity when it is "in our midst." All this may be true, but it would seem only natural that if the West and South are as buoyantly prosperous as represented the East must feel the effects more distinctly than it does. As a people have we become temperamentally pessimistic, or is it that the prosperity we so much desire does not make itself apparent to us in the daily concerns of life? Since the first of January there has been a startling shrinkage of values of securities. This may be explained in various ways, but not by the hypothesis of prosperity. Exactly 128 of the principal railroads and industrials of the United States are worth to those who own them less now than on January 1 by more than $1,000,000,000. A careful calculation based upon the quotations of the New York Stock Exchange makes the amount of this shrinkage $1,200,078,179. Examining the 63 leading industrials, we find they have suffered a value shrinkage of about $738,890,000. The largest of them shows a shrinkage of nearly $152,000,000 since the present year began. But this same industrial reports earnings for the three months ended with June nearly $3,000,000 in excess of those for the immediately preceding quarter, when they were regarded as phenomenal and confirmatory of the most sanguine predictions. After meeting all charges of interest and dividends, it added about $14,000,000 to surplus, which means net earnings at the rate of about 15 per cent. on a volume of common stock so large as to stagger the imagination. This looks like prosperity, certainly, but in spite of it we find that the market value of this common stock declined from 91 on January 1 to 61⅛ on July 27. The crops on which so much depends are not in a condition to warrant present anxiety. Everything points to normal harvests, at least. We have no disturbing diplomatic complications of consequence and no entangling foreign alliances. The fear of an imminent war with Japan seems to have subsided, and no other thunderhead is in sight. Even Halley's comet went romping off into space without doing us any harm we were able to recognize. The fact remains, however, that a large majority of the people of the United States are apprehensive without being able to agree as to what the real trouble is, and so long as this state of mind exists we shall not feel prosperous, even tho statistics establish the fact that we

are. This suggests the delightful cut in *Punch* representing a group of children standing at the top of the stairs and calling down: "Mamma, we're crying. Come up and see what's the matter with us."

The Atchison Rebate Case

In his address at the Ohio convention, Representative Nicholas Longworth, remarking that Governor Harmon was a lawyer, continued as follows:

"An Ohio man, a lawyer, too, is President of the United States. How different has been the use of his legal talents! They have not been employed in the service of the railroads and the corporations, but in the service of the people. Like his great predecessor, he sees the people's side first. In his Administration, corporations get a square deal, but they get no more than that."

This will probably remind the friends of Governor Harmon of an incident which brought him before the public a few years ago, and which, we presume, Mr. Longworth has not forgotten. There was once an Atchison rebate case, and Mr. Harmon, who had been Attorney-General, was appointed by President Taft's predecessor to inquire about it. He recommended that the company and its officers should be prosecuted. President Taft's predecessor rejected the report and Mr. Harmon withdrew from the case. The incident was the subject of much comment, which, on the whole, was favorable to Mr. Harmon. There was a widespread impression that in this case President Taft's predecessor did not "see the people's side first," and that the officers of the railroad company were treated with great consideration. Mr. Longworth's allusion does not seem to have been entirely a happy one.

A State Disgraced

Texas is disgraced by the murder of more than twenty negroes in a small town near Palestine by a mob of bloodthirsty whites. We have the testimony of the Sheriff of the county that the blacks had given no cause for an attack upon them, that they were not armed and that they made no resistance. Merely because one of them had been insolent to a white man, and because of a rumor that they had held meetings in a school house, a mob of 300 hunted them and shot them down. Three were murdered while they were mourning by the side of the corpse of one of the mob's earlier victims. In all this there is no evidence of civilization. It is said that Governor Campbell is shocked. Will he see that the murderers are brought to justice?

Over-Legislation

Herbert Spencer's warning against over-legislation should be heeded. Our legislatures have been led to pile up a lot of restrictive statutes that if enforced would actually make life and work almost an impossibility. In a recent number the *Rural New Yorker* gives us an apt and powerful illustration as a supposed extract from a farmer's diary. The innocent farmer, in a single day, involves himself in lawsuits that altogether sum up fines of $400. Among his other struggles he is fined $15 for building a fire under a boiler that exceeded eight horse power without a fireman's license, and $25 for using a boiler that was not provided with a fusible plug. He was fined $25 for dressing a calf without a butcher's license, and another $25 for doing this work in his barn, no room of which had been licensed as a private slaughter house. He was fined $20 again for weighing the calf on scales that had not been sealed for twelve months. Another $25 was charged by the law for baiting his horse on the street without a permit from the chief of police, and another $10 for turning his team to the left at the curb. He was fined $10 for shooting at a fox without a hunter's license, and $25 for building a fire in the open air without a permit from the fire warden. These are only a small portion of the troubles which came upon him for doing exactly as he had been doing every day for thirty previous years. An auto frightened his horse while he happened to be charging an account in his note book, and he was fined for not having the reins in his hand, and then again for exceeding the speed limit down the street. Of course, this is an imaginary case, but it covers a possible condition of affairs. Most of these laws had better be left to the good judgment of the justice or pos-

sibly to the common sense of the policeman. Other illustrations of fines that are occasionally enforced are $20 for selling milk a little short in butter fat; $10 for selling cranberries from a tin measure; $25 for selling vinegar in which the acetic acid did not quite touch a desirable quotation. In other words, the thoroly honest farmer is tangled up in law breaking at every turn.

Bird Conservation

Fourteen governments are to be asked to take up the work of preserving from destruction those birds that are most needed by agriculture. Laws are desired to prevent the sale and use of bird plumage in connection with millinery. Appeals to the humanity of dealers and wearers has heretofore totally failed. It was agreed at the Ornithological Congress, recently held in Berlin, to make the movement international. William Dutcher, president of the Audubon Society, and one of the delegates from this country, reports that there are six recommendations which he proposes to lay before the American Congress. The two most important are legislation against the use of plumage for military decoration, and a law to prevent export and import of bird plumage. It was the sense of the congress that governments should unite in this important effort of bird protection, and make the punishment severe for the destruction of the farmer's friends. In another paper Mr. Dutcher urges the teaching of ornithology in the regular school courses of our country. He would have each school organize a bird club, the objects of which shall be to study the life history of birds and to protect them from harm. He thinks that one hour each week would be ample time to devote to the indoor study, but that out of the school the members of the club should observe birds in their homes, and take notes to be presented at the club meeting. Boys and girls brought up after this fashion, with intimate association with the singers and workers, will soon grow into such a sympathy with birds that they will love to protect them, and in this way the young people, all over the land, will become a self-appointed body of bird protectors. Both these recommendations, of the congress and Mr. Dutcher, seem to us very rational and practical. We must teach the value of our feathered allies before we can secure, to a certainty, their protection in our fields and woods.

Privileged Citizens

The French Government is trying to solve the problem of strikes in relation to civil service. It was the postmen's strike a year ago that has forced the issue to the front. A bill was introduced into the Chamber which denies to French civil officials the right to strike, on the ground that they are privileged citizens. The privileges consist in fixed salary, steady work, and the right to a pension, thus exceeding the advantages accorded to other workmen by the Law of April, 1910. The Civil Servants Bill, in view of this privileged position of state employees, denies to them the right of combination with unions of men who are not employed in the same branch of the public service. The framers of the new bill do not regard this as a hardship, for they do not see why civil service employees should claim the right of combination for any other purpose than the advancement of their professional interests. The professional associations are at liberty to appeal directly to their official chiefs, or even to the Ministers, with regard to all matters that concern the professional interests of their members. This distinction between privileged and ordinary citizens is likely to receive attention in this country if we are often confronted with strikes that paralyze the public services of the nation. The bill was tabled by the French Government, but it has been published, in view of new claims put forward by French civil servants, over the signatures of Prime Minister Briand and the Minister of Justice, M. Barthou.

An Ancient Roman Boat

A remarkable archeological discovery has been made in London. While excavating for the site of the new County Hall, workmen exposed what turns out to be a large Roman boat. It

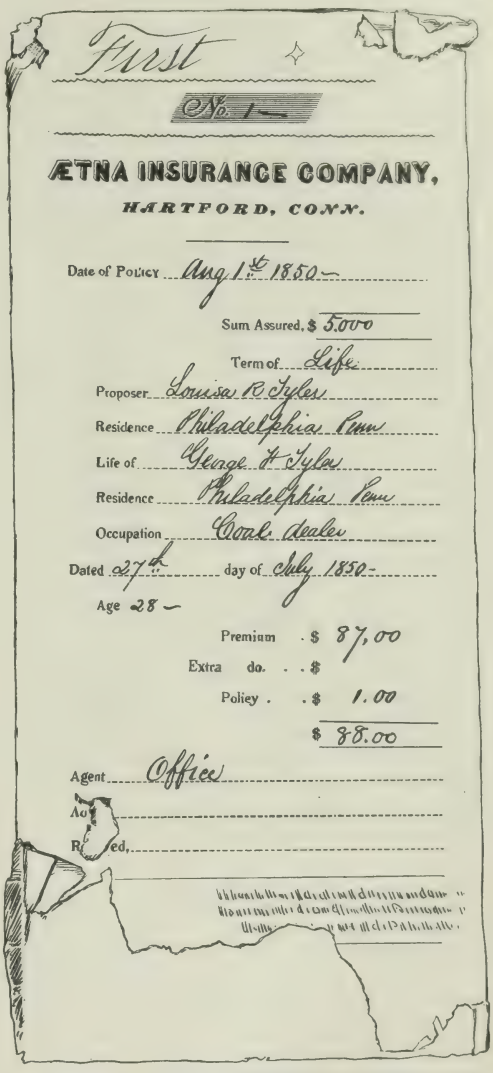
is built of oak and is about 50 feet long, with 16 feet beam. A variety of articles were found in it, among them a number of Roman coins belonging to the end of the third century A. D., the age to which the boat must be assigned. Dr. C. H. Read, Keeper of Medieval Antiquities at the British Museum, points out that the site of the find must have been the bank of the river in Roman times. The boat is to be preserved and housed in a suitable building for exhibition.

Merry del Val

The Vatican at present is steering its boat thru troubled waters. An evil genius has been at its helm for some time in the person of Cardinal Merry del Val, the Papal Secretary. If it is true that the Pope refused to accept his proffered resignation a few days ago, the Holy See has made a great mistake. He is a medievalist and marplot, with an extraordinary ability for getting the Vatican into trouble. In consequence, the Vatican now finds itself in open or latent disagreement with most of the so-called Roman Catholic countries. The Portuguese Government has found it necessary recently to rebuke publicly the Archbishop of Braga for suppressing a Franciscan review, *The Voice of St. Anthony,* at the command of the Papal Secretary. In Austria disturbance over the last encyclical has not yet subsided. The Vatican's attitude toward the Ferrer case last summer, determined primarily by the Papal Secretary, threw all Italy into a ferment of anti-clericalism. Now comes the complete rupture of diplomatic relations with Spain. There can be little doubt that the Papal Secretary is chiefly responsible for these troubles. Roman Catholicism is bound to be a drag on social progress and intellectual enlightenment as long as it follows the lead of an ill-starred personality like that of Merry del Val.

Dearth of Priests in France

Perhaps the most noteworthy result of the rupture between State and Church in France is the phenomenal dearth being experienced in the ranks of the Catholic priesthood. The Paris *Eclair* has made detailed investigations into this matter with surprising results. In response to its inquiries, directed to both the so called "larger" or full seminaries and the smaller or episcopal preparatory schools, it is found that, as compared with the attendance of ten years ago, there has been a marked decrease all along the line. Of the larger institutions only Paris, Cambrai, Arras, Amiens and Mende report a small decrease, but none an increase. But from other schools discouraging reports come. In Bourges and Besançon the retrogression in enrollment has reached 25 per cent. and more; in Dijon, Rheims, Orleans, Beauvais, Airè and several other schools it has been 33 per cent. and more; in Limoges, Angoulême, Rouen, Bordeaux, Tarbes and other schools, as high as 50 per cent. Albi has lost two-thirds of its students; Montauban has decreased from 100 to 30 seminarians; St. Dié from 130 to 49; Agen from 120 to 38; Rodez from 430 to 210; Autun from 120 to 53; Frejus from 80 to 20. These are all "large" seminaries; but the "smaller" report a similar condition. It is generally conceded by Catholic churchmen that the Church in France is in this way entering upon a most serious crisis.



Last week Wesleyan University announced that Miss Elizabeth Zerlitz had been chosen the Squire scholar at the university during the coming year. This is the most important scholarship within the gift of the institution and is awarded by a competitive examination in Greek. It is the first time that a woman has been so honored. And yet Wesleyan is the institution that does not want around any "quails," as the women "co-eds" are called. No wonder the men "co-eds" feel as they do.

It is not easy to understand why 1,200 soldiers must be sent from Havana to Santiago for the suppression of thirty revolutionists, led by a general who has been dismissed from the police force. Fluctuations in the narrow stock market at Havana could be caused without disturbing so large a part of Cuba's army.

Insurance

Aetna Life Insurance Company, of Hartford, Conn.

We congratulate the Aetna Life Insurance Company on its sixtieth birthday and reproduce herewith a facsimile of the application for the first policy written by this company. The year after the incorporation of the Aetna Life in 1819, the Aetna (Fire) Insurance Company obtained an amendment to its charter authorizing it to grant annuities upon an additional capital not exceeding $150,000, to be held as a separate guaranty for the liabilities arising under the business. The privilege was never exercised. In 1850 by a second amendment the ancillary company was empowered to grant insurance upon lives, and thirty years after the inception of the original plan it organized as the Aetna Insurance Company and Annuity Fund. After a brief experience under another amendment to its charter, secured in July, 1853, the company became known as the Aetna Life Insurance Company. E. A. Bulkeley was chosen first president and John Seymour secretary. It began business upstairs in a small room on State street in Hartford. Mr. Bulkeley continued president until his death on February 13, 1872, at which time the company had assets of over $17,000,000 and insurance in force of $100,000,000. Thomas O. Enders was elected president in 1872 and continued until his resignation in 1879, when Morgan G. Bulkeley, the son of the first president, and now United States Senator from Connecticut, was elected as his successor, which office he now continues to hold. The vice-president is J. L. English, who has been in the company's service for forty-three years. In 1891 the company opened an accident department which has been successful from its beginning. President Bulkeley devotes a considerable portion of his personal attention to the investments of the company. The Aetna was a pioneer in Western loans, and no company in the United States has been so favored, not only in the rate of interest obtained, but in the small amount of foreclosures. In the company's sixtieth annual report, as of January 1, 1910, it showed total assets of $97,227,608 and a surplus to policyholders of $9,672,458. The company had total life insurance in force of $293,523,233 and has paid to policyholders since organization in 1850, $194,440,420.

Financial

New Currency Associations

FOLLOWING the recent suggestion of the Secretary of the Treasury, a national currency association was formed on the 29th ult. at a meeting attended by the representatives of twenty-seven of the national banks of New York City. The officers are as follows:

President, A. Barton Hepburn, president of the Chase National Bank; vice-president, Frank A. Vanderlip, president of the National City Bank; treasurer, Alexander Gilbert, president of the Market and Fulton National Bank; secretary, Edward Townsend, president of the Importers' and Traders' National Bank.

Executive Committee: William H. Porter, president of the Chemical National Bank; Valentine P. Snyder, president of the National Bank of Commerce; Francis L. Hine, president of the First National Bank; Richard A. Delafield, president of the National Park Bank; William Woodward, president of the Hanover National Bank.

On the same day a similar association was formed by twenty-seven national banks in Philadelphia. There is no expectation that these associations, or others which will be formed elsewhere, will apply for emergency issues of currency during the life of the Aldrich-Vreeland act, about four years, but the Secretary thinks the proposed organizations should be in existence. Nothing in the present financial or industrial situation calls for them, but it is better that they should be formed now than at a time of stress, when movements for defense sometimes cause alarm and precipitate panic conditions.

Steel Corporation's Quarter

THE quarterly report of the United States Steel Corporation, published on the 26th ult., was unexpectedly favorable, as it showed that the quarter's net earnings had been $40,170,960, against $37,616,876 for the quarter immediately preceding. There was very little difference in the monthly net receipts, but those for June were slightly in excess of those for either April or May. Owing to restriction of output at the iron furnaces, with some decline in the price of pig iron, predictions at Pittsburg and elsewhere had pointed to a quarterly net ranging between $36,000,000 and $39,000,000. Earnings for recent quarters are shown below:

June 30, 1910	$40,170,960
March 31, 1910	37,616,876
December 31, 1909	40,971,309
September 30, 1909	38,246,907
June 30, 1909	29,340,581
March 31, 1909	22,921,268
December 31, 1908	26,225,485
September 30, 1908	27,106,274
June 30, 1908	20,265,756
March 31, 1908	18,229,005
December 31, 1907	32,553,995
September 30, 1907	43,804,285

These figures show the effect of panic conditions, the slow upward movement, and the prosperity of the last twelve months. Unfilled orders at the end of the recent quarter were somewhat disappointing, the total having been 4,257,794 tons, against 5,402,514 three months earlier. At the directors' meeting, upon J. Pierpont Morgan's motion, a resolution was adopted providing that hereafter the company's officers shall publish on the 10th of each month the tonnage of unfilled orders on hand at the close of the month immediately preceding. Up to the present time, the public has had such information only once in three months, and then it has been nearly a month old.

....The iron furnaces of the United States made a new high record in the first half of 1910, producing 15,012,392 tons.

....During the last fiscal year 1,041,570 immigrants were admitted into this country. From Italy 223,453 came, and from Poland 128,348. These countries are at the top of the list.

....A special meeting of the stockholders of the General Chemical Company will be held on August 12, at 25 Broad street, to vote upon a proposed increase of the company's authorized capital stock from $25,000,000 to $27,500,000, the additional $2,500,000 to be classified as 6 per cent. cumulative preferred stock. The company has declared a dividend of 1¼ per cent. on its common stock, payable September 1.

VOL. LXIX NEW YORK, THURSDAY, AUGUST 11, 1910 No. 3219

Survey of the World

Senator Gore's Bribery Charges

Testimony was taken at Muskogee, Okla., last week, by a special committee of the House, concerning the charges of attempted bribery made in June last by Senator Thomas P. Gore. The Senator then prevented legislation which, he asserted, would have compelled the approval of contracts made with about 10,000 Indians of the Choctaw and Chickasaw tribes by J. F. McMurray, an attorney, for the sale of 450,000 acres of coal and asphalt land, valued at from $30,000,000 to $160,000,000. The attorney was to have 10 per cent., and it was said that capitalists were ready to pay $30,000,000 for the land. Mr. Gore said in the Senate that an attempt had been made to prevent his opposition by offering him a bribe of $25,000, or even $50,000. At Muskogee, he was the first witness. In 1905, he said, he had directed the attention of Senator La Follette and others to the great value of the lands. Afterward, McMurray obtained tribal contracts for a sale, his commission to be 10 per cent., but these were disapproved by President Roosevelt. Then the attorney procured contracts with the Indians as individuals. To McMurray, who came to his office, the Senator said that 10 per cent. was too much and that the Indians ought not to pay any commission. In letters to the President and others he denounced the contracts. He was told in Secretary Ballinger's office that ex-Senator Long, of Kansas, had an interest in them. He introduced a resolution providing that all such contracts should be void unless approved by Congress. A favorable report was ordered. The next day Jacob L. Hamon, a lawyer from Oklahoma, and formerly chairman of Oklahoma's Republican committee, came to see him, said he was interested in the contracts, and asked that the Senator's opposition should cease. He also said that $25,000 or even $50,000, would be paid—in cash, not in checks—if opposition should be withdrawn. Hamon added that Senator Curtis, of Kansas; Congressman McGuire, of Oklahoma, and a man higher up were interested in the contracts. "When the name of the man higher up was given," continued the witness, "I held up my hands in astonishment." He preferred not to repeat the name, but the committee insisted, and he said Hamon had said the man higher up was Vice-President Sherman. The witness added that he had been told by an employee of the Department of Justice that another employee of that Department had an interest. He was convinced that President Taft opposed the contracts. He had heard that the Vice-President and Senator Curtis called upon the President in April last to talk about the lands. His relations with Hamon had been friendly and he had been interested with him in business projects. Following Senator Gore, Congressman C. E. Creager, of Oklahoma, testified that Hamon, meeting him in a Washington hotel by appointment, had urged him to withdraw his opposition and had said that in return he might have an interest in the profits. This excited his indignation, the witness said, and he permitted Hamon to go no further. D. F. Gore, the Senator's brother and secretary, testified as to Hamon's interview with the Senator. He heard no part of the conversation, being in the next room. When Hamon came out he complained that the Senator "was hard on his friends." McMurray had afterward in-

vited him to dinner, saying he wanted the Senator to understand clearly what the contracts were. Hamon's testimony was a series of denials. He had called upon the Senator to talk about his campaign (having been in the habit of helping him, altho belonging to another political party), and had never said anything about the contracts, or Vice President Sherman, or Senator Curtis, or Congressman McGuire. Nor had he spoken of the contracts to Creager. He had never had any interest in them. He had frequently loaned money to the Senator, who, just before the adjournment of Congress, had asked him for $5,000 to pay a debt he owed to Senator Owen. Probably he was angry because he did not get the $5,000. Witness had been in Washington attending to the interests of Governor Haskell, then under indictment, and had not seen McMurray for a year. While under cross-examination Hamon attacked the character of Senator Gore, saying he had been indicted, that he could safely be approached with an improper offer, and that he believed the Senator had taken bribes. Speaking of business relations, he remarked that when the Government was selling Indian lands at Lawton, the Senator entered a combination with himself and others, binding themselves not to bid against each other, in order that the land might be bought at low prices. All in the combination obtained some of the land:

"Chairman Burke—Don't you know that there is a Federal statute against a combination to prevent competitive bidding?

"Hamon—I did not know of that law then, but I have since thought of it. It was just a desire on the part of all of us to get the land as cheaply as possible. It was understood among us that we would not bid against each other.

"Congressman Miller—You know that the proceeds from that sale were to go to the Indians; do you think that was honorable toward the Indians?

"Hamon—We did not look at it that way. In fact, we don't do things out West just in the same way you do in the East."

Chief Green McCurtain, a Choctaw Indian, testified that he had protested against the individual contracts, and that George W. Scott urged him to withdraw his opposition, offering him one-quarter of the 10 per cent. commission if he would do so. The Indians signed the contracts, he said, because they had lost faith in the Government officers, who had not kept their promises. His son, D. C. McCurtain, testified that when he was the Choctaw delegate at Washington, McMurray, at an interview in a hotel, had offered him $25,000 if he would not oppose the contracts. To draw him on and get information he had at first said he would take the money. Later, he declined it.——Vice-President Sherman, being at a camp in the Adirondacks, promptly telegraphed that there was no shadow of foundation for the alleged reference to him by Hamon. A day later he added the following:

"If anybody says that I have any interest in these or any other contracts relating to the Indians, or ever did have any such interest, or any interest in any contract having anything to do with the Government in any way, or that I have profited by my public service, he says that which is absolutely false."

Mr. Sherman was for some years chairman of the House Committee on Indian Affairs. Senator Curtis says that the Vice-President and himself called upon Mr. Taft by invitation to discuss questions relating to the Indians, and that both of them opposed the 10 per cent. contracts, holding that the Indians needed no attorneys and should not pay any commission. He thought at the time that the President had been convinced by their arguments, and he told Senator Gore so. Congressman McGuire says he has never been interested in the contracts and has received no financial aid from any one who is interested in them. Mr. McMurray denies that any one has offered a bribe in his interest. On the 6th, Senator Gore published a statement. He had never, he said, made any charge against Vice-President Sherman. He was required by the committee to repeat what Hamon had said, and he named Mr. Sherman with extreme reluctance. He hopes "that the fact that Hamon mentioned the Vice-President will be relegated to perpetual oblivion."

Insurgent Victories in the West

In Kansas and Iowa, last week, the insurgent or progressive Republicans won victories over their regular or stand-pat opponents. Congressmen Murdock and Madison, of Kansas, had no opposition at the nomi-

nating primaries in their districts, but there were lively contests in the remaining six districts, and four of the present members of the House—Calderhead, Miller, Reeder and Scott—all regulars, were defeated. The insurgents nominated to take their places are R. R. Rees, by a majority of 2,000; Frederick S. Jackson, by 3,500; I. D. Young, 1,500; A. C. Mitchell, 1,000; D. R. Anthony and Philip P. Campbell, regulars, were renominated by small majorities. Governor Stubbs, insurgent candidate for Governor, received 20,000 more votes than were cast for his regular opponent, Thomas Wagstaff. Mr. Anthony remarked that Kansas had been "engulfed by another wave of Populism," and that demagogs had won a temporary victory. Mr. Murdock, on the other hand, said that both Cannon and the system by which he had robbed the people of free government in the House had been repudiated, and that the party had shown that it stood for immediate legislation to drive special and selfish interests out of control in American politics.——At the Republican convention in Iowa, the insurgents, led by Senators Cummins and Dolliver, had a majority of nearly 300. Senator Cummins, as temporary chairman, made a long address. Speaking of the party of Lincoln, Grant, Garfield, McKinley and Roosevelt, his intentional omission of Mr. Taft's name caused much disturbance. The regulars cheered for Taft and were answered with cheers for Roosevelt. Later in the day the regulars hoisted a portrait of Taft, and this was confronted with one of Roosevelt, raised by the insurgents. The Senator attacked the new tariff, saying the leaders in the House and Senate had refused to recognize the party pledge:

"If there had been an honest attempt to fix duties according to the cost of production I might have yielded my view on the question of fact; but there was no such attempt, and I, for one, refused to follow, and would refuse again to follow, Aldrich, Hale, Lodge, Cannon, Payne and Dalzell into a sneering, contemptuous, open repudiation of my party platform. It is not a Republican measure, altho passed by Republican votes, for the men who are chiefly responsible for it thought more of swelling the overgrown fortunes of their intimate friends than they thought of the party principles, the party pledges, or the welfare of a long-suffering people."

If the Railroad bill sent to Congress by the Attorney-General had been passed, he added, it would have consigned the party to eternal disgrace and defeat. Senator Dolliver was elected permanent chairman by a vote of 834 to 549. From the platform committee came two reports. That of the regular minority, warmly commending the President and the tariff revision, was rejected, 568 to 815. The majority report of the insurgents supports protection. It also says:

"They [the Republicans of Iowa] do not recognize the tariff revision of 1909 as a satisfactory fulfillment of the party promises. In order to bring the tariff law into a complete compliance with the rule of the platform it is necessary that the difference between the cost of producing dutiable commodities at home and abroad should be correctly known. Therefore, they favor the creation of an independent, non-partisan tariff commission, which shall be the instrumentality of Congress to ascertain the difference between the cost of production here and in other countries, and publish the facts, so that not only Congress, but the people, shall be advised of the results of its investigations. Until such a commission is authorized they approve the effort of the President to secure the desired information thru a board of experts employed for that purpose.

"They profoundly believe that when the tariff is again revised its schedules should be considered separately, so that each subject can be dealt with upon its own merits, and thus secure fair and impartial action upon the part of Congress.

"They indorse such efforts as President Taft and his advisers have made to fulfill the promises of the national platform, and which have been in harmony with the declarations of this convention."

——If the Republicans retain control of the House at the coming election, Mr. Cannon will not be re-elected Speaker. A considerable insurgent gain is already foreshadowed, and the insurgents will hold the balance of power. Kansas insurgents sent telegrams to him expressing regret that he had not made speeches for Anthony and Campbell, regulars, and thus prevented their renomination. ——In Tennessee, the judiciary elections resulted to the disadvantge of Governor Patterson. Those nominated for the Court of Appeals and Supreme Court on the regular Democratic ticket were defeated, while those named at an independent Democratic convention were elected, with the help of Republicans. The Governor (a candidate for re-election) had sought, it is alleged, to influence the decision of the higher court

in the case of Colonel Cooper, found guilty of killing ex-Senator Carmack, and had prevented the renomination of judges whose attitude was offensive to him. Two of them were placed on the successful independent ticket.

The Islands

At a convention of the Liberal party in Havana, on the 1st, there was a violent controversy, which led to an interchange of blows between General Asbert, Governor of Havana Province, and Diaz Villegas, Secretary of the Treasury and chairman of the meeting. A few days later, President Gomez issued a decree forbidding members of the Cabinet to attend political meetings. Whereupon Secretary Villegas resigned. A duel between him and Governor Asbert is expected.——The population of Porto Rico, according to the recent census, is 1,118,012. These figures show a gain of 17.3 per cent. since 1899. San Juan, the largest city, has 48,716 people. The increase there since 1899 has been 52 per cent. In Ponce 38,027 were counted.——In Mindanao the Philippine constabulary pursued a band of raiding Moros last week and killed the leader of the outlaws, the noted Datto Appa. The recent decision of the Supreme Court, giving the Governor-General full power to deport undesirable aliens, will, it is thought, put an end to the blackmailing of Chinese merchants by members of Chinese "tongs."——In Hawaii there is a great demand for the public lands by settlers, and it is expected that every acre that can be cultivated will be taken. The movement is at variance with the predictions of the sugar planters.—— The concession granted in Hayti to James P. McDonald, of the United States, authorizes his company to issue bonds (which are to be guaranteed by the republic) and to construct a railroad which will connect the interior with four seaports. All the unoccupied land for twelve miles on each side of the railroad is granted to the company, which will set up a central sugar factory, procuring power for it from the Artibonite River. There will be a new steamship line. This concession was opposed by local German interest.

Countries South of Us

Estrada's revolutionists have won additional victories in the western part of Nicaragua. After the defeat of General Lara, Acoyapa was given up by General Vasquez, and it was reported that all the gateways leading to the capital were held by the advancing enemy. Estrada himself hopes to lead his forces in their final attack upon Managua. Dr. Salinas, one of the envoys sent to Washington by Madriz, published a statement last week, asserting that ex-President Zelaya was assisting Estrada with money supplied by his son-in-law, and that Madriz was Zelaya's foe. This was promptly denied by Señor Castrillo, Estrada's representative in Washington, who said that about four months ago a contract was made in Managua before a notary named Dr. Pedro Gonzales, in which Zelaya's attorney and son-in-law agreed to help Madriz with securities worth $1,000,000, and that Madriz and his Minister-General agreed to pay the money back, with heavy interest, if they should suppress the revolution.——Extensive preparations to repel Bonilla and his revolutionists have been made in Honduras, notably at Ceiba, where the Government has 2,000 soldiers. Bonilla has seized two islands not far from that port, and is said to be in Guatemala, accompanied by General Lee Christmas and fifty other Americans, who have a considerable number of machine guns. At Ceiba the American consulate is crowded with refugees. The Government has demanded one of them, General Matuke, but the consul refuses to surrender him.——An official canvass of the electoral votes in Mexico shows that 18,829 were cast for President Diaz, and 221 for Francisco Madero, his opponent. For Vice-President, Ramon Corral received 17,373 and T. Depesan 1,427.—— The discovery of a plot against President Gomez, in Venezuela, has been followed by arrests and by the flight of several prominent men. It is said that there was a conspiracy to kill the President and also the Governor of Caracas.

Great Britain

There is a continued influx of Chinese into Tibet, and an encounter is feared between them and the Tibetans. Such an

occurrence might easily precipitate an attack upon the two British trade agencies in Tibetan territory. As a precautionary measure, several battalions of troops at Simla have received orders to be ready at a moment's notice. Tibetans feel bitterly against the Chinese, but it is doubtful whether they could defend themselves successfully in the event of hostilities. The Chinese have not yet succeeded in choosing another Dalai Lama. ——The annual meeting of the British Medical Association, held at London, came to a close on July 29. Many able papers were presented before the various sections, among them one on "The Racial Factor in Disease," and one on "The Falling Birth-Rate."——Lord Lytton has sent to *The Times* his correspondence with Prime Minister Asquith in his endeavor to obtain further facilities for the remaining stages of the Women's Suffrage Bill. Mr. Asquith has replied that the Government "can not afford any further facilities to the bill this session." Lord Lytton, writing on behalf of the Conciliation Committee, composed of members of Parliament who are promoting the bill, replied that he "could conceive no course more surely calculated to increase a discontent for which already there was much justification." He goes on to say:

"The significant vote by which our proposals were adopted entitles us to claim the rights of a majority. We propose before Parliament reassembles to lay before you further evidence of the extent and urgency of the demand for the passage into law of Mr. Shackleton's bill this year."

Mr. Asquith's refusal of further facilities was the occasion of a meeting of the Women's Social and Political Union. Two of the leaders advocated a return to militant methods. The announcement from Miss Pankhurst that such a militant campaign would commence a few days after Parliament has reassembled was greeted with cheers. Recently several prominent men and women made a public appeal for funds to inaugurate a national agitation against the Women's Suffrage movement. Large sums have been subscribed. —— Edward Linley Sambourne, chief cartoonist of *Punch*, died August 3 after a protracted illness. He succeeded Sir John Tenniel in 1901. ——On August 3 Parliament adjourned until November 15. During the recess conferences will be held between the leaders who are trying to settle the constitutional differences between the House of Lords and the House of Commons. The hope is entertained that it may be possible to announce an agreement when Parliament reassembles. Regarding the outcome of the twelve conferences that have been held so far Mr. Asquith made the following statement:

"The result is that our discussions made such progress—although we have not so far reached an agreement—as to render it in the opinion of all of us not only desirable but necessary that they should continue. In fact, I may go further. We would think it wrong at this stage to break them off."

——On the 6th inst. King Alfonso of Spain was the guest of Sir Thomas Lipton on his schooner yacht "Shamrock." During a stiff breeze her topmast was carried away, but no one was injured. The papers recall the fact that this is the second time that ill luck has attended Sir Thomas Lipton's entertainment of royal guests. In 1901, when the late King Edward was aboard "Shamrock II," the yacht was dismasted and wrecked by a sudden squall on the Solent.——Great Britain, as usual, is leading in the race for naval supremacy. On the 6th inst., the immense new warship "Lion" was launched at Devonport. She is 700 feet long, has 26,000 tons displacement, is capable of developing 70,000 horse power, with a speed of 30 knots an hour, and has, in her main battery, eight 13.5-inch guns, which throw 1,250-pound projectiles.

Germany

The Imperial Statistical Office has published the results of an inquiry into the cost of living with special reference to the families of wage-earners and salaried persons. The data were gathered during the years 1907 and 1908. The average annual income of 852 families was $521.72, and the average expenditure was $531.70. This leaves a deficit of $9.98 per family. The highest average family income reported was for families of teachers, $784.05; families of officials of secondary rank, $681.90; salaried persons in private employ, $581.12; families of unskilled workmen, $410.91, and families of workmen

not classified, $378.14. The average annual expenditure for alcoholic beverages of 155 wage earners' families reported was $20.54, of which $18.84 was for beer, $0.51 for wine, and $1.19 for brandy. The same item of average expenditures for sixty families of salaried persons was found to be $17.——Consequent upon the rejection of their demands by the shipbuilding companies 8,000 shipyard mechanics have decided to go on a strike. On July 14, 35,000 shipyard workers united in demanding a 10 per cent. increase in wages and other concessions. The companies at the time refused the demands of the men, but proposed a conference to discuss the points at issue. At present the movement is confined to Hamburg, but the strike is likely to extend to other ports.——From Berlin comes the news that Germany expects to sell two of her old battleships, the "Brandenburg" and the "Kurfürst Friedrich Wilhelm," to Turkey. Djavid Bey, the Turkish Minister of Finance, will come to Berlin to arrange for the purchase. The vessels in question are sister ships of somewhat less than 10,000 tons displacement, carry six 11-inch guns and were laid down in 1889.——In Berlin the Chief of Police has forbidden, under pain of severe penalties, the admission of children under fourteen, whether accompanied or not, to moving pictures after 9 o'clock in the evening. This action is said to be due to the discovery that pictures of immorality and crime are increasingly exhibited.

France

After a long and sensational trial Henri Rochette, the French banker, was found guilty of swindling thru a violation of the corporation laws, and was condemned to two years' imprisonment and to pay a fine of $600. A parliamentary committee under the direction of M. Jaurès is now investigating the charge that his arrest was a stock jobbing trick on the part of a group of speculators, who had sold great blocks of the Rochette shares under agreement to deliver them at a given time. Rochette's shareholders have declared that his companies were on a sound financial basis. Former Premier Clemenceau has been brought into the matter thru the allegation that he was primarily responsible for Rochette's arrest. This he has denied.——It is proposed to name a new street in Paris after the late King Edward. The plans include a square laid out as an ornamental garden, and containing an equestrian statue of the King. The square will be open to view from the boulevards and adorn one of the most characteristic parts of Paris.——The French cantonal elections have brought additional support to Prime Minister Briand, for the Radical-Socialists, who are siding with M. Briand against the old Republican "bloc," have gained ground. The Radical-Republicans and Radical-Socialists together gained 90 seats. Since both represent the opinions of M. Briand it is evident that the people support the Prime Minister's platform. The cantonal elections determine the make-up of the Senate. M. Briand will therefore soon have as overwhelming a majority in the Senate as he already has in the Chamber of Deputies. The practical interests of the country are represented more accurately by the Senate than by the Chamber of Deputies. M. Briand asserts his determination to free himself from the dictates of party leaders and factions, to accord rights to minorities and to carry on affairs in the interests of all.——The conflict between Church and State in Spain is being watched with great interest thruout France. The radical and Socialist papers of Paris are publishing violent denunciations of the Pope and his advisers, especially the Papal Secretary of State, Merry del Val. The public impression is that the Vatican has made a tactical mistake. There is a general feeling also that the Spanish Government has made a mistake in forbidding the clerical demonstration at San Sebastian; that Clericals have as much right to make a demonstration as anti-Clericals, and that the Government should merely have kept sufficient troops on hand to prevent riotous disturbances.

Church and State in Spain

The state of high tension between the Spanish Government and the Vatican continues. On August 1

King Alfonso and Queen Victoria left San Sebastian to pay a visit to the royal family in England. His decision to leave the country at this time is interpreted as an intention to give his Cabinet a free hand in the present crisis. On his way thru France the King had a long conference with M. Briand, the French Premier, presumably in regard to the religious situation in both countries. Meanwhile, Roman Catholic priests were preaching violent sermons against the policy of the Government in its conflict with the Curia, especially in the Basque provinces of Northern Spain. Preparations were begun for a great Catholic demonstration at San Sebastian on the 7th of August. Since this is the region where the clerical forces are strongest and most violent, the Minister of the Interior issued a strict prohibition of the demonstration, and ordered the railroad companies not to furnish special trains. In spite of this, the clerical element for some time continued its preparations. In the absence of trains some started on foot in order to reach San Sebastian before the 7th inst. Instances are reported of priests distributing arms. In the meantime the Government sent several regiments of troops to the city and appointed General Weyler to take charge of affairs in case of disorder. Count Sagasta, Minister of the Interior, also prepared to be on the ground personally. The firmness of the Government caused the organizers of the demonstration to abandon their purpose. On the 5th inst. Premier Canalejas gave out the following statement:

"I would have allowed the manifestation if it had been announced to be held elsewhere than at Bilbao, where a strike of coal miners is in progress; or at San Sebastian, which is crowded with visitors on Sundays.

"I know that priests are distributing arms, and also that the manifestants intended to bring women and children with them in order to prevent military intervention, but I am determined to enforce respect for the law. Troops will be distributed at strategic points, and the railroad will be held for reinforcements.

"If my adversaries want a lesson, they shall have it. They will be responsible for whatever happens.

"The manifestation has only been adjourned. I desire that it shall occur in order that its strength may be shown; but it must occur elsewhere, and without constraint or threats."

Members of the Government charge that the demonstration at San Sebastian was secretly arranged in Rome at a meeting of five Cardinals, among whom were Rampolla and Merry del Val. They maintain that the object was to force King Alfonso to dismiss Premier Canalejas and appoint a more friendly ministry, with which the Vatican could resume negotiations. Under this interpretation of the plans of the clericals, Monsignor Vico, the Papal Nuncio, was to await the fall of the Premier. The latter says he knew of the alleged intrigue and that he has informed the King. The newspaper *El Liberal* demands the expulsion of the Papal Nuncio on the ground that he is inciting Roman Catholics to revolt. The *Universo,* a Catholic organ, is defiant. It says:

"The Pope is not a foreign sovereign in Spain. He is as national and Spanish in the temporal sphere as the King or the Cortes."

The Liberal and Republican papers strongly support the Premier's policy. Even a paper like *El Imparcial* is taking sides against the Vatican. According to advices from Rome the Carlist party in Spain is appealing to the Vatican to declare whether, in the event of a revolution pledged to restore the traditional political and religious institutions of their country, it can depend upon the support of the Holy See and the Roman Catholic clergy. The Roman Catholic junta, on its part, is very indignant over the repressive measures of the Government. Señor Urguijo, the chief organizer of the movement, said on Sunday that the purpose of the demonstration was peaceful; that the participants were to be unarmed, and that there were to be no speeches. But, he added, when the Government treated the matter as if it were civil war, he called off the demonstration in order to avoid bloodshed. He says it is the intention of Catholics later to take part in peaceful manifestations at Pamplona and at Vittoria to prove that the anti-clerical policy of the Government is opposed by the entire Spanish people. The feeling at the Vatican is more optimistic today, August 7. Cardinal Merry del Val instructed the Catholic bishops and leaders thruout Spain to prevent demonstrations and disorders. The Pope is understood to have written an autograph letter to King Alfonso on the subject of the pending conflict.

Unpunished Crime in the United States

BY GEORGE C. HOLT, LL.D.

[The following article was originally read as a paper before the State Bar Association of Wisconsin on June 29, 1910, at Milwaukee. The author is a United States District Judge of New York. We comment on it in our editorial pages.—EDITOR.]

IT is an axiom in history that the greatest danger in democratic forms of government is the tendency to mob violence and public disorder. This republic has now been in existence nearly a century and a quarter. Its founders were men of exceptional political wisdom. The Constitution which they framed has been justly praised as one of the greatest productions of the human intellect. The republic, under this Constitution, during its existence, has grown from a little to a great nation. It may justly claim to have produced great results in most of the arts of civilization, but it has not yet succeeded in establishing a steady and uniform maintenance of public order. The tendency to mob violence and the extent of unpunished crime which exist in this country is today the greatest menace to American society. I purpose to consider briefly the extent of the evil, and to suggest what seem to me the best remedies for it.

The habit of reading a modern daily newspaper, which is now substantially universal in this country, but which has never before this age existed in any community, and the full effect of which upon the mind of the people, for good and for evil, is not yet certainly known, has one result which is apparent. That is that it concentrates the attention of the public almost wholly upon the events of today, and withdraws its attention speedily from the events of yesterday. The result is that most great crimes, which attract widespread attention when they are first discovered and described in the press, are substantially forgotten within a short time after the newspapers cease to discuss them. The public attention being concentrated on the events of the day, the enormous aggregate of the amount of modern crime passes unnoticed.

It is impossible to obtain accurate statistics of unpunished crime in this country. But rough computations may be made which will serve to illustrate the extent of it.

The Chicago *Tribune,* for some years past, has published statistics of the lynchings which have occurred annually in this country. For many years, according to these statistics, there occurred between 200 and 300 lynchings in each year. During the five or six years past, the annual number has steadily diminished. Last year it was stated to be 67. It will be a conservative estimate to put the average number of lynchings which have occurred in this country in the last forty years at 150 annually. This would make 6,000 lynchings occurring in that time. The number of persons who engage in lynchings differs very greatly in different cases, varying from as low as ten or fifteen to hundreds and thousands of persons. It may be roughly estimated that the average number of persons concerned in each case is not less than 50. It would thus appear that about 300,000 persons have taken part in lynchings in this country for the last forty years. If two-thirds of this number is deducted for persons who are dead or who have been engaged in more than one lynching, we have 100,000 lynchers still living. Every person wilfully taking an active part in a lynching is guilty of murder. No person has ever been convicted of murder for taking part in a lynching. It may therefore be roughly estimated that there are approximately 100,000 unhung murderers, of that particular type, living at present in this country, mostly in the Southern States.

The reports of the Commissioner of Labor contain statistics of strikes and lockouts. According to a late report, in the period of 25 years between 1881 and 1905, there occurred 36,757 strikes and 1,564 lockouts, making 38,321 labor disturbance in all, or an average of a little more than 1,500 a year. This would make about 60,000 strikes occurring in the last 40 years. A number of such

strikes are brief and without violence. It would be a conservative estimate to assume that at least one-sixth of such strikes have been accompanied with violence, resulting in serious wounds, maiming or murder. Every person wilfully taking an active part in an assault in a strike riot which results in a felony or murder is guilty of the crime committed. The number of men who take part in such strike riots differs very greatly, as in lynchings; but the average number of men engaging in such strike riots is at least equal to those engaged in lynchings, and may be safely estimated at 50 in each case. This would make 500,000 men guilty of felony or murder in strike riots in this country in the last 40 years. Deducting two-thirds for deaths and other causes leaves approximately 165,000 men guilty of such crimes now living. There is hardly any instance in this country of a conviction for a murder, and very few instances of convictions for felonies of any kind, committed in strike riots. It would be a highly exaggerated estimate to put the number of such convictions at 15,000. It may therefore be roughly estimated that there are at least 150,000 unhung murderers and unpunished felons, of that particular type, living at present in this country, mostly in the Northern States.

For several years past, in a large part of Kentucky, and in southern Indiana and Ohio, persons called nightriders have organized in bands and ridden about the country, principally at night, destroying property and assaulting, and, in many cases, murdering people. These bands are usually not ordinary brigands, but are made up, for the most part, of persons who consider themselves and who would usually be ranked as citizens of ordinary decent reputation. Their object is to keep up the price of tobacco or cotton by restricting the output. To accomplish this result they destroy tobacco or cotton, when more has been planted or raised than the nightriders consider desirable, and assault and kill those who have planted or raised it. So far as I am aware, no nightrider has ever been convicted of any crime. The Governor of Indiana last year, in a message summoning the Legislature in special session, announced that a condition of anarchy existed in Southern Indiana, thru the terrorism caused by the nightriders, with which the State Government was powerless to cope without special legislation to meet the emergency. The present high price of cotton and tobacco has apparently caused a temporary abandonment of nightriding this season; but it seems not unlikely that this system of maintaining prices may become hereafter generally adopted in some parts of the country, whenever the price of agricultural products is low.

For some years past a great many assassinations have taken place in this country, which so far have been committed almost exclusively by criminal Italians upon respectable Italians, and which are commonly known as Black Hand murders. The assassins first write to their victims demanding money, and sign themselves as members of the Black Hand. If the money is not paid, the victim is killed, or his residence or place of business blown up with dynamite. In many cases also persons have been murdered for attempting to detect the criminals or because they have some knowledge which might lead to their detection. A few persons have been convicted in such cases for attempts to extort money; but so far as I am aware, no person has ever been convicted in this country of any murder of that kind. The entire Italian population is completely terrorized, the attempts at extortion constantly grow more bold, and there are various signs that it will not be long before the same system of extortion and assassination will be adopted by our native criminals and applied to all classes of citizens as well as to Italians.

A special form of unpunished crime which has arisen in recent years results from the reckless driving of automobiles. Many hundreds of persons have been killed and many thousands seriously injured in this way. No punishment, except a trifling fine, or, in very rare cases, a short imprisonment, has been imposed in such cases. The usual fine has been five or ten dollars, imposed on the owner of a machine costing perhaps $5,000, and on which a new tire costs about $75. Lowell said, in the "Bigelow Papers," that "Ninepence a

day fer killin' folks comes kind o' low fer murder"; the fines which automobilists are usually required by American courts to pay for that form of sport are about as trifling.

There has been no time in many years past in which crimes of violence have been more rife than they have been in recent years in the oldest and most thickly populated parts of this country. Take, for instance, the community in and about the city of New York. Murders, maimings, assaults with deadly weapons, dynamite bomb explosions, burglaries, highway robberies, cases of arson, particularly in crowded tenement houses, the shooting of wives by drunken husbands and of girls by degenerates whom they have refused to marry; in short, every kind of violent crime has occurred in and about the city to an unprecedented extent. Some of these criminals, of course, have been convicted. But in the great majority of cases the perpetrators of these crimes have not been arrested. Many of those that have been arrested have been discharged by police magistrates, notwithstanding clear proof of guilt, and this condition of unpunished crime is believed to have generally prevailed in and about most of the large cities of this country.

The question naturally arises, What should be done to put a stop to such a condition of crime and disorder in American society? In the first place, the use of the instrumentalities by which most of these crimes are committed should be restricted by law. The repeating pistol is the greatest nuisance in modern life. Every criminal, every madman, every crank, every bad boy, carries one. Nineteen-twentieths of all the crimes of violence that are committed are effected by its use. All firearms are weapons whose use involves such terrible injury that no one should be permitted to use them except strictly in self-defense. Before the invention and adoption in common use of the pistol, no one thought of habitually carrying about with him so terrible and dangerous an instrument as any kind of firearm. It was the invention of the revolver which enabled men to carry concealed about their person a weapon of such a deadly character. No one should be permitted to carry abroad such a dangerous weapon, in view of the constant possibility of its being used for trivial causes. Wherever men meet, there is always the liability of quarrels arising, and always, in the world, until the invention of the modern revolver, when a quarrel arose serious enough to lead to personal assaults, the attack was made by blows with the fist, or with a stick, or, at the worst, with a knife or a sword. Even when the latter formidable instrument was used, there was an opportunity for the man attacked to escape, and in most cases of fights and assaults, there was little danger of serious permanent injuries or death. But as soon as a pistol is drawn there is always that danger, and therefore the right to have or to use a revolver should be under rigid public control. Cases frequently arise of the accidental shooting of persons, including women and children, by revolvers lying about the house. An ordinary breechloading shotgun is a far safer weapon, and if it is actually necessary, for purposes of home defense, to use any such weapon, it is far more efficient and desirable. A pistol shot, except at very close range, is very apt to miss the object fired at. A shotgun at close range is more deadly, and if fired at a burglar anywhere from 100 to 300 feet away, he will probably be so peppered with shot that his escape from subsequent detection is extremely difficult, while at the same time the person who has fired at him is free from the regret which any one would naturally feel at the actual killing of any person, however criminal. There are in some States statutes and in most cities ordinances prohibiting the carrying of concealed weapons, and requiring licenses for the carrying of pistols. But these statutes and ordinances are not by any means universal. They are usually not made effective by serious penalties, and they are to a very large extent disregarded thruout the country. It would be, in my opinion, entirely justifiable for the Government to prohibit the manufacture or sale of any pistols in this country except in national armories, for the use of the military and police. Such a law is probably impracticable; but it ought to be possible to have laws passed

which shall provide that all persons manufacturing or selling or purchasing and using revolvers should be licensed by a responsible board, established for that purpose. At the present time anybody can engage in the business of manufacturing pistols who sees fit to do so. They can be sold to anybody who wishes to purchase them. Shops exist in every city where anybody can buy a pistol at any time, many of them at so cheap a price that the poorest persons can get them. Every person engaging in the business of selling revolvers should be licensed, and every person who wishes to obtain a revolver should be required to first obtain a license. It should be a serious offense for a dealer in firearms to sell a revolver to a person who has not a license authorizing him to have it. It is a monstrous thing that every insane man, every criminal, every passionate, quarrelsome, irritable man, every boy with a tendency toward a criminal life, every drunken brute who abuses his wife and family, should be able, without any legal restriction, to buy for a dollar or two, at every street corner, such a deadly weapon. It is pitiful to think how many thousands of women and children in this country live in constant apprehension of murder from drunken husbands or fathers or half crazy brothers or relatives. And how many men there are who, having a quarrel with another man, such as may happen to anybody in the community, without fault on his part, live in constant apprehension of being shot down and murdered while sitting at their desks or walking thru the streets. Not a day passes but the newspapers contain flagrant cases of persons assaulted and killed with revolvers—men shot down in trivial quarrels, wives killed by their husbands for some silly jealousy, young women shot by miscreants because they have refused to marry them, children playing in the streets shot by insane men apparently simply for the delight of the murder, policemen shot while attempting to prevent burglaries or other crimes, honest Italians shot who have refused to pay Black Hand extortions; in short, the entire honest and decent portion of the community is constantly subject to, and many of them live in, constant terror of the use of the revolver by the most abandoned and criminal section of the community. There is no sense in the decent, honest and respectable citizens of this country, who compose the great majority of its people, submitting any longer to such a monstrous evil.

The same restrictions should be applied to the use of other deadly instrumentalities, particularly to high explosives like dynamite or nitro-glycerine. At the present time anybody can engage in the business of making dynamite or of selling dynamite, and any person who wants it can buy it at any time. There is a large class of work, such as blasting and the removing of obstructions, in which its use is necessary and legitimate, but there never would be any difficulty in any responsible contractor or builder obtaining a license permitting him to obtain and use dynamite for such a purpose. For any other purpose its use should not be permitted. Any man who applies to purchase such a dangerous explosive should be required to explain what he proposes to do with it, and to obtain a license for its use, and severe penalties should be imposed upon any person who sells such an explosive to a person without a license, or who has in his possession such an explosive without a license. Having such an explosive in a man's possession without a license might properly be made *prima facie* evidence of an intention to use it for a criminal purpose, as the finding of a bomb in a man's possession should be *prima facie* evidence of such an intention. No man ever makes a bomb for any legitimate purpose. It is always made with a criminal object. The man in whose possession it is found should be treated presumptively as a criminal unless he can produce evidence in exculpation. The same principle should be applied to any other obviously dangerous weapon. Stilettos, bowie knives, slingshots and brass knuckles are never made for any legitimate purpose. Men should be prohibited by law from obtaining them, or from having them, and the possession of them should be made by law *prima facie* evidence of a guilty intention to use them for a criminal purpose.

Passing from the consideration of

remedies for the possession and use of dangerous implements, I wish to call attention to the question of the proper method of action for the repression of that particular form of crime in this country which consists in organized mob violence. It is a strange and appalling fact that there never has been any man criminally punished for a lynching in this country, and it is a fact almost equally strange and appalling that there have been very few instances of punishing any man for crimes committeed by mobs in strikes. In the communities where lynchings usually occur most of the white citizens have generally sympathized with and approved the lynching. In most of the communities in which mobs of strikers assault and injure others the popular sympathy has generally been with the strikers. This sympathy is usually based on the fact that the strikers are poor, that their wages are low, that their hours of labor are long, and that their life is hard. These facts often lead many well-meaning but thoughtless persons to sympathize with the strikers when, upon the real question in controversy between them and their employers, the strikers are frequently not entitled to support. The result is that, if men are arrested who have been guilty of acts of violence in strikes, the district attorney hesitates to bring the case on for trial while the strike is going on, anticipating that the public excitement on the subject may interfere with the orderly trial of the case, and have a tendency to prevent any conviction. Nothing is usually attempted to be done, therefore, in the way of punishing crimes committed in strikes until the strike is over and the controversy settled, and then a feeling seems to take possession of the community and the prosecuting officers and the courts that the old subjects in controversy should not be aroused, and that a sort of general amnesty and oblivion should be extended to all the offenses committed in the strike. In addition to these explanations of the leniency with which crimes of violence committed in strikes in this country are regarded is the additional obvious one that the police and police magistrates and district attorneys and judges are elected officers, and that many of them are affected in their action by the hope of further political preferment.

Now, in looking for a remedy for this vast evil of the lawlessness accompanying lynchings and strikes and all forms of mob violence, I think we should start by admitting, as a practical fact, that the attempt to punish serious crimes committed by mobs has been a failure. Why should not the policy be adopted of inflicting a comparatively light punishment at the outset upon those who enter into these lawless proceedings, before they have actually committed any serious crime? Rioting is a crime at common law, and is made a crime by the statutes of most of the States. Criminal punishments, in order to be effective, need not be severe, except in the case of habitual criminals. Most participants in mobs are not habitual criminals. They are usually excitable men, suddenly swept away by indignation. In the case of such persons, a reasonable degree of criminal punishment, promptly inflicted, is more effective than extreme severity in occasional cases. If, at the outset of an attempt at lynching or of a strikers' mob, half a dozen or a dozen men were arrested for rioting, were tried the next day, and were sent to the penitentiary for a month, or a fortnight, or even for a week, rioting would stop. Most men would hesitate to have anything to do with these excited crowds, in which usually the participants find themselves involved without having originally intended any serious violence, but who are hurried on by the contagion of the enthusiasm of the others to crimes which they never would have thought of committing by themselves. The folly of the police and other officers charged with the maintenance of peace and order in permitting mobs to collect and grow is incomprehensible. In almost every case of a lynching, or of a strikers' mob, sheriffs and police and everybody in the community are aware of the danger for hours before the mob acts, yet no policeman or sheriff ever seems to imagine that he is under any obligation to step in in season and nip the disorder in the bud. This strange apparent want of appreciation of what ought to be the first duty of a police officer is exhibited in many

ways. Take, for illustration, a very common case which gives rise to a mob in cities. An automobile injures a child. The police arrest the driver. A crowd collects. They surround the policeman and his prisoner. Indignation and anger develop. The mob spirit arises. There is an attempt to take the prisoner from the policeman, and the policeman frequently has to call for assistance, and he, with the other officers who have come to his aid, if they have come at all, struggle and fight their way with their prisoner to the station-house. They seem to think, if they get him there in safety, that they have accomplished their full duty, and are to be commended for their action. They never seem to think that there is any obligation upon them to arrest and bring to trial the persons who have resisted them in the discharge of their duty, and yet it ought to be an extremely serious offense for any person to resist a police officer in making an arrest, or in performing any public duty. The evil of the whole system is that when men find that they can engage in one mob in safety and without punishment, they will be all the more ready to enter upon another at the first opportunity. Such a system is educating the American people in the idea of resistance to law. I think, therefore, that there should be a special effort made by those charged with the preservation of the public peace to establish the principle of arresting and bringing to punishment men guilty of rioting, or of taking any part in mobs, whether any serious crimes are committed by the mob or not. Even when such crimes are committed, in my opinion more is likely to be accomplished, in the way of deterring men from engaging in one again, by the prosecution of the ringleaders for rioting and the imposition upon them of reasonably light criminal punishment, than by confining all efforts to bringing about the punishment of those who have committed grave crimes, the prosecution of which is necessarily much more dilatory, and the probability of obtaining convictions in which is much less.

The real responsibility, however, for the suppression of crime should not be put upon the inferior officers actually charged with the making of arrests, but upon those at the head of the police force. The action of the ordinary policeman is governed by the attitude of his superiors. If properly instructed, policemen will be prompt to arrest rioters and turbulent strikers at the outset of any manifestation of lawless action. The chiefs of police should give such instructions. If instead of doing so they assume a general attitude of timid acquiescence, and neglect to interfere in rioting, simply pursuing the policy of trying to protect persons threatened by rioters, instead of punishing the rioters themselves, they should be held accountable by their superiors. Under most systems of the organization of municipal police in this country, the chief of police is appointed by the mayor and may be removed by him. The mayor, in some instances, may be removed by the governor, and in substantially all instances is subject either to such removal or to indictment for neglect of duty. The governor, as the supreme representative of the executive authority in the State, has an active responsibility in all such cases, and should be held to such responsibility by public opinion. He should make it known that police officers, sheriffs or mayors who permit lynchers to gather and mobs to collect and grow, without interference, will be removed and prosecuted for violation of their duty. A few instances of such removals and prosecutions would put an end to the present toleration of the police for mob disorder.

But no action by the police will amount to anything without the efficient co-operation of police magistrates. Many judges of the police courts in American cities are excellent magistrates, but in many cities there are some who are low politicians, whose appointment is a disgrace, and whose administration of their office is a direct encouragement to the criminal class. Such police magistrates are particularly apt to sympathize with every form of mob violence, and to refrain from taking any action to restrain it or to punish it. The truth is that, in a certain sense, the most important judicial officers in this country are the police magistrates, and one of the worst acts that the mayor of a city can commit is to appoint to such a position a person who

is known to him to be grossly unfit to fill it. Instances are not uncommon, in our great cities, of the appointment of ward politicians of the lowest character, saloonkeepers, gaming-house proprietors, men whose sympathies are with that great class in every city which has business interests connected with vicious institutions. Police magistrates, more than any other judges, represent to the ordinary people of our cities the administration of justice. They can do more, by firm and upright conduct, to preserve public order and to instill into the mind of the community respect for law than any other class of magistrates, and they can do more to degrade the administration of justice and to foster tendencies to public disorder and lawlessness than any other class of magistrates. A mayor who selects to be a magistrate in a police court a man whom he knows to be grossly unfit for the position ought to be removed from office by the governor, and when such a magistrate is put in office by any means he should be proceeded against, removed from office and punished, if possible, as soon as he has committed any of the illegal and corrupt acts which it is probable that he will commit as soon as he has an opportunity.

Much depends, too, upon the cooperation of the prosecuting officers. The district attorneys in this country exercise a tremendous power for good or for evil. They should be held to a rigid accountability, especially in the matter of mob violence. The neglect of the district attorneys promptly and rigorously to prosecute crimes committed by mobs should lead to their removal by the governor. Public opinion should hold the district attorneys strictly responsible for neglect of their duty, and governors equally responsible for neglect to exercise the supervisory power over prosecuting officers with which they are usually invested.

The method of conducting the actual trials of criminals is also a very important matter. There is no legitimate ground for complaint in this country that there are not sufficient criminal laws in force, or that there are not adequate courts provided having jurisdiction to punish crimes. In some of the State courts, the terms of the judges are so short, their pay is so small, and their dependence upon the favor of political leaders for continuance in office is so absolute, that it is strange that there are not more instances, in such courts, of judicial subserviency and misconduct. But in almost all cases American judges, upheld by the great traditions of the English and American judiciary, and by the high standard of professional honor of the bench and bar, are conscientious, able, laborious and upright. But there is a universal conviction that criminal courts in this country, in the actual administration of their jurisdiction, do not conduct the trial of criminal cases satisfactorily. In important cases, and particularly in those in which public interest is excited, there is frequently great delay in bringing the case to trial. There is often inexcusable delay in the conduct of such trials. In some cases days and weeks, and in extreme cases months, have been occupied in obtaining a jury. In other cases, trials have been protracted by the admission of irrelevant testimony, or of testimony which, if not strictly irrelevant, has so little bearing upon the case as to justify the court in excluding it. Experts are permitted, not only to state their opinion and the facts upon which they base it, but to expound long, elaborate and preposterous theories in explanation of their opinion. In certain classes of crimes, in which two or more persons have participated, a common form of indictment, particularly in the Federal courts, is an indictment for a conspiracy, even after the crime for the perpetration of which the alleged conspiracy was formed has been committed. On the trial of such indictments frequently everything that any of the parties has done having any connection with the alleged conspiracy, no matter how long before the commission of the actual crime, is admitted in evidence. Many indictments, particularly in the Federal courts, contain an excessive number of counts, charging substantially the same thing in many different ways. Such an indictment usually suggests that the man who drew it either is unable to discover what the crime is, or is conscious of his own incapacity to state anything clearly, and hopes, by putting the

charge in many varied ways, to draw some count that will stand. Indictments containing twenty or thirty counts are common. Those containing fifty or sixty are not unusual. The famous indictment of the Standard Oil Company is said to have contained over fourteen hundred. Such an indictment not only suggests more incapacity in the man who drew it than crime in the defendant, but it is a grave injustice against the man indicted to require him and his counsel to answer such a charge. The trial of such an indictment inevitably tends to be protracted. If a man has committed a crime it is usually a specific act, which can be clearly and briefly stated in an indictment. If he has committed several similar crimes, which it is desirable to include in one indictment, the indictment need not necessarily be long. When such an indictment is drawn, and the issue is simple, the evidence can be concise and the trial short, and it is the duty of courts charged with the trial of criminal cases to bring about, whenever possible, such a result.

Our system of appeals in criminal cases might also be much improved. I think it would be well to grant no stays except in capital cases. There should be some presumption of justice in the judgment. Certainly no stay should be granted except on a judge's certificate that there were reasonable grounds for an appeal. Every effort should be made to have appeals quickly heard. No judgment should be reversed on appeal if, upon the whole record, the judgment appears to have been just, no matter what technical errors were made on the trial.

I have thus referred briefly to what seem to me to be some of the principal faults in the administration of our criminal law. The importance of the subject cannot be exaggerated. Under our present system the punishment of crime is a sort of lottery. Great numbers of criminals escape. A few are punished, usually after long delay, with extreme severity. Severity, as a general rule, does more harm than good in criminal punishment. What is needed is prompt punishment and certain punishment. It need not be severe. When criminal punishment is so administered by the courts that the community at large reaches the conclusion that crime, if committed, will probably be promptly punished, it will largely cease.

But the punishment of crime, after all, is merely a temporary palliative. So long as human nature is as it is, there must be machinery for the punishment of crime, but the thing of ultimate importance is to eliminate, as far as possible, the criminal from the community. No real progress will be made in the great problem of penology until some rational system is adopted for the reformation of the criminal or his eradication from society. Many efforts have been made to this end. Reform schools, reformatories, children's courts, indeterminate sentences, discharges upon probation, and various reformatory systems have been tried, and in some cases they work well. But most serious crimes which are punished are punished by imprisonment in the State prison, and every man who knows anything about their actual working in this country knows that, instead of a State prison tending to reform or improve the convict who is sent there, it serves as a school in which he becomes more skilled in crime, and where his criminal propensities are developed and hardened into the condition of the habitual criminal. Now, a prison ought to perform several functions. It should be a place of punishment for the crime committed; it should be a place which serves to protect society from an enemy to it; but it should also be a place life in which would tend to reform a criminal, if it is possible to reform him. He should be made to work there. Work, next to health and love, is the greatest blessing in the lives of men. Work which is steady, which involves some ingenuity and exercise of mind, which is not too burdensome, is an unmixed blessing to everybody. Every prison should subject its convicts to a system of living by which the habit of work should be developed. Work should be provided of an interesting kind. There should be adequate instruction for the beginner. He should not be forced to do too much at first, but should be gradually led on in the new art. But, above all, after he had become habituated to it, the work, while made as interesting as possible,

should be steady and constant, so that the criminal would become habituated to steady work. Moreover, work in prison should receive the reward which like work would receive out of prison. There is no reason why a prisoner should not be paid for his work in prison at the current rates paid to workmen outside of the prison doing a similar class of work. Such a course would awaken hope in a prisoner. He would look forward to having some money when he left the prison, and it would do more to develop in him an interest in the work than any other single thing. The labor unions persistently oppose permitting goods to be made in prisons and sold outside in competition with goods made outside. I think that they carry their objection to an unreasonable extent, but there is something in their objection. So long as the kind of goods which are manufactured in prison are of a restricted small class, prison goods may affect the market for them. But if the work done in prison were confined to those great staple subjects of manufacture, the price of which could not be affected by the sale of prison-made goods of that class, there could be no reasonable objection to carrying on such manufactures in prisons. If there were, the State could better afford to pay prisoners a fair price for work done, even if the goods were not sold, than to lock them up for a few years in absolute idleness and then turn them out, finished graduates in the school of crime, to renew their war upon society.

There are other reforming influences which might be introduced in prison life. But, in my opinion, nothing can be compared in prison life, as in any life, in its beneficial influence, with steady, interesting work, properly remunerated. With such a system in force, a large number of men who are sent to prison, and who leave it habitual criminals, would instead leave it reformed men, having learned a trade, and having laid by a sufficient fund of money to start with some hope in the world. But it may be said that there are some convicts who cannot be reformed. That is true. There are men who appear to be born brigands and pirates, enemies of the human race; men who develop early in life marked criminal propensities, who never engage in any honest employment, and who pass their entire life either in planning or committing crime, or in undergoing punishment for crimes committed. I sentenced a man not long ago, upon conviction of having used the mails in the prosecution of a green goods swindle. He was about fifty years old. He was sent to a reform school at the age of fourteen. He had been, after that, twice in a reformatory and four times in a State prison. He had passed much more time in prison than out of it, and, when discharged after any term of confinement, he immediately entered again upon a new life of crime. Why should the honest and decent members of society labor under the burden of supporting such miscreants? So long as there is hope of reforming a man who has fallen into criminal practices, I would try to reform him. I would establish prisons of such a kind that they would have a tendency to reform a man who had any capacity for reformation in him; then, if he committed a crime, I would send him to it, and if after he came out he committed a crime again, I would send him back, and I would repeat the experiment so long as there was any hope that he ever would reform. But when, by a long life of crime, he has demonstrated that he is a hardened and incorrigible criminal, when at last there is no reason to hope that in the future, for the rest of his life, he will be anything but a curse and a menace to society, I think that society would be justified in assuming that the time to attempt to reform him had passed. Upon his commission of another crime I would have him brought to trial and tried for what I think is the greatest crime that a man can be charged with, that of having become an habitual and incorrigible enemy of society. I would give him a fair trial. I would require proof that he had been a habitual criminal for a long term of years. I would give him an opportunity to make a full defense, and if, finally, it were established by clear proof that the man on trial was one of those, numbers of whom exist in modern society, whose nature has been degraded by a life of undeviating wickedness into that of a

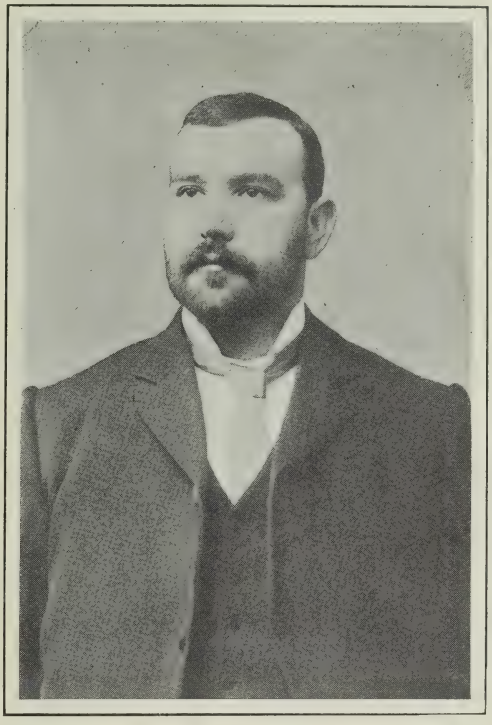
wild beast, incapable of any substantial improvement or alteration, such a man, in my opinion, should be solemnly adjudged to be put to death. But if, in view of the squeamish sentimentality of this age, such a course be deemed impracticable, I should shut him up for life where he could do no more evil to society.

When I had the honor to receive the invitation of your president to attend this meeting of the Wisconsin Bar Association and read a paper before it, various subjects for such a paper suggested themselves to me which might have proved more interesting. Crime is a commonplace and disagreeable subject. The criminal, like the pauper, we have always with us, and there is nothing novel in the facts which I have stated as to the extent of the evil, or in the remedies which I have suggested for its diminution. But it seems to me that the legal profession and the public generally do not adequately estimate the magnitude of the danger which threatens the republic from this evil. The tendencies to public disorder and to mob violence in this country seem to me to be steadily increasing. Almost every strike now is accompanied by violence. Such violence is almost always of a dangerous nature, and brings about very frequently fatal results. There is a slow and steady growth of feelings of hostility between the capitalists on the one side and the workingmen and working women on the other side in this country. It seems to me that, instead of any steady development of the spirit of sympathy and good will between the employers and the employed, there is a slow growth of mistrust and suspicion on both sides, and a steady increase in the tendency on both sides to accomplish results by violence and force. The great employers of labor resist any legal control. They have opposed all laws for the regulation of transportation, the restriction of monopoly, or the prohibition of contracts in restraint of trade. They go on, with fatuous folly, reorganizing and combining their insolvent companies, watering their stock, enlarging their trusts, and denouncing, on all occasions in private conversation, the wickedness of Roosevelt, of the trade unions and of the socialists. The workmen, on the other hand, equally demand to be exempt from the control of law. They go on, with the same incredible unwisdom, striking, boycotting, maiming, murdering, and denouncing the courts, the capitalists and the trusts. They, like the capitalists, resist any legislation which interferes with their schemes of violence; and both sides express the most unbounded astonishment at the idea that they are amenable to law. The incredulity with which the managers of the trusts received the decision of the Supreme Court that the Sherman Act prohibited contracts in restraint of trade, whether they were reasonable or not, and the astonishment of the labor leaders at the decision of the Supreme Court that a labor union and its members could be held civilly and criminally liable for a boycott under the same act, would be ludicrous if it were not so alarming that such great and powerful sections of the American people should believe themselves exempt from the rule of law, and should stand confronting each other with constantly growing hatred and detestation. We lawyers, who are in neither of these classes of employers or employees, have a grave duty in such a situation. We see, as in Burke's description of the revolt of Hyder Ali, all the materials of fury, havoc and desolation compounded into one black cloud, hanging on the declivities of the mountains. Are we to stand stupidly gazing on this menacing meteor until it bursts and brings upon our country such devastation as the barbaric hordes of Hyder Ali brought upon the Carnatic?

The great object, in the settlement of labor controversies, should be to substitute reason for force. That is the function of law. The members of the legal profession are, in this respect, under a special obligation to their countrymen. It is the duty of every profession to take the lead in the formation of public opinion on questions peculiar to itself. The medical profession should take the lead in public sanitary questions; the engineering profession should take the lead in questions of municipal construction; and all professions should bring their expert knowledge to bear upon the decision of that class of public questions

to which such knowledge especially pertains. The members of the legal profession are the men in the community who can do most to bring about the adoption of measures which will result in the maintenance of law and order, and the suppression of the spirit of mob violence in the country. None of us, in my opinion, can be engaged in a better public service than in doing what is in our power to diminish the extent of unpunished crime in this country, and to develop a public opinion which shall stand for the maintenance of law and order.

New York City.



Women's Suffrage and Other Topics in Westminster

BY JUSTIN McCARTHY

THE week has opened in Westminster Palace at least with a great debate on the question of women's suffrage. A measure has been brought in by Mr. Shackleton, a capable and conspicuous member of the Labor party in the House of Commons, who proposes to confer the franchise upon every grown woman in these countries who has the qualifications for a vote which are considered necessary in the case of an adult who belongs to the masculine order of citizenship. Mr. Asquith's Government has been prevailed upon to give up at least two days of the time of the House to the discussion of this measure, which its supporters and indeed the general public believe to be well entitled to have a full and fair discussion before the present session comes to a close and is succeeded, as it is to be in all probability, by a winter session and after that by a general election. The debate on the measure for women's suffrage occupied, as might well have been expected, the whole of last night, and is certain to outlast this night as well, and there were many very animated and eloquent speeches made during yesterday's discussion, altho I cannot say that there were many original propositions advanced on the one side of the question or the other. Indeed, I do not see how there could by any possibility have been discovered any quite original arguments or even illustrations for or against a claim which has been the subject of incessant discussion and disputation during the whole of at least the present generation. But there were certainly some very brilliant speeches made on one side of the question and the other, and many illustrations offered on behalf of the claim to show that the Kingdom of Great Britain could only be saved from utter wrack and ruin by the granting of votes to women and on the other side to convince us that if the votes were given to the women of these islands the utter ruin of the country would be invited, and indeed provoked, and that in rather less time than it would take an ordinary German flying machine to cross over into our regions the Mede will be at our gates and the Persian on our throne.

Now, I may say at once that I am myself and have almost always been since I took to politics at all an advocate of the suffrage for women. I was finally and fully convinced of that doctrine in my early acquaintanceship with John Stuart Mill, than whom the cause of women's suffrage never had a more intellectual and a more devoted advocate. I feel perfectly satisfied that the right to vote at political elections cannot be long absolutely denied to women as it is now, and that its full concession to her must now be an early event in the history of these countries, and indeed of civilization. I do not therefore feel any absorbing interest in considering the nature of the arguments which were advanced on one side or the other of the first night's debate, or were advanced with remarkable animation during the discussion which occupied the greater part of the following evening and night.

Mr. Asquith, the Prime Minister, delivered an exceedingly clever and vigorous speech on the second night, and he spoke uncompromisingly against the whole principle and theory of women's suffrage. He has always been recognized as one of the most vigorous debaters in the House of Commons during recent years, but except for the brilliancy of his style and his manner, there was nothing in the speech to distinguish it from any other of the orations delivered against the women's suffrage measure since the opening of the great campaign in advocacy of woman's claim to the political vote. Mr. Balfour, on the other hand, the leader of the Conservative party in the House of Commons, delivered a very brilliant, argumentative and even original speech in favor of the franchise for woman, a claim which would not in ordinary conditions be expected to win the favor and advocacy of a Conservative statesman.

O. J. SHACKLETON, M. P.
One of the Leaders of the New Labor Party in Parliament.

Mr. Shackleton's motion was carried by a majority of 109, there being 299 votes for women's suffrage and 190 against. Nothing further of any practical nature can be accomplished during the present session. As had been announced long in advance, the time of the Government is so fully occupied during the remainder of this session with business which cannot be postponed—such, for instance, as the struggle with the House of Lords—there is no probability, indeed I might say no possibility, of any further opportunity being given during the present year to any fresh and genuine experiment in the cause of woman's rights. But I venture to think that the final issue of the conflict may be taken as certain.

The death of the Hon. C. S. Rolls, who had already won world-wide fame as an aviator, to use the word which seems to have established itself in our newspaper writing and our general speech, has been one of the most tragic events of our recent days. Mr. Rolls was the son of Lord and Lady Llangattock, and had devoted himself, as my American readers already know well, to the work and improvement of ballooning and all the mechanisms by which men may accomplish flight thru the air. He had quite recently made himself famous by his daring and successful feat of soaring across the Channel into France and back within what seems a marvelously short space of time, and he fell a victim altogether unexpectedly to one of his own daring and brilliant experiments. The readers of THE INDEPENDENT probably know already what I read in *The Daily News* of this day, that "Mr. Rolls recently completed arrangements to visit the United States, to compete in the international balloon race from St. Louis in October, and to take part in the international aviation meeting during the same month at Garden City." "Out of the air—into my grave" is a melancholy and an only too appropriate quotation from "Hamlet" which may be allowed to have a grim bearing on this recent tragic event.

London this day has been much aroused, and I hope and believe much

delighted, by the announcement with many details of a great projected invasion and expected capture of the great capital, but not by troops brought over for the work of invasion by a fleet of German Dreadnoughts. The invaders this time are to come from the United States and are to land on our shores a new opera company, which is to be brought over in order to find its field of performance in an entirely new opera house, which is to be built for the purpose from floor to ceiling within the coming year, and is then to thrill the West End of London with the voices and the dramatic genius of an army of artists whose like we are assured has never before been heard in Europe. Such at least is the substance of the announcement made in this morning's papers by Mr. Oscar Hammerstein, the famous American impresario, who may be supposed to know what he is talking about if the time-honored adage that practice makes perfect can be at all depended on, and he seems to be very confident of the success of his proclaimed invasion. The opera house, he informs the public, which he is about to build in London will be the largest opera house in the great metropolis and even in the world, and Mr. Hammerstein seems filled with the conviction that his invasion and conquest will be thoroly appreciated and welcomed by the people of England and by all the friends of England who come to visit her capital season after season.

HON. C. S. ROLLS.
The aviator who fell a victim of one of his own flights.

The news of this projected musical invasion was entirely new to me, and my first impression was undoubtedly a feeling of gratification that at last we were promised an invasion which was not to be accomplished by Teutonic Dreadnoughts, but only by newly discovered singers, men and women, who had apparently been waiting under Mr. Hammerstein's control to find the happiest opportunity for the occupation of London in a new opera house specially built for their reception and larger than any other opera house ever yet constructed in the civilized or the uncivilized world. I do not, however, expect to find that there will not be some voices of opposition raised even against this pacific invasion and settlement of music and musical drama from across the Atlantic. At the worst, however, it is a cheerful variety after the seasons and the parliamentary sessions we have had of continuous alarms about the foreign invader who is believed to be preparing his navies to invade our harbors and his flying machines to occupy our skies until the time comes for a warlike descent upon our capital. I should not at all wonder if some patriotic Briton who has a seat in the House of Commons were to rise and put a question to the Prime Minister on the subject. He might invite Mr. Asquith to tell the House whether he does not see good reason to proclaim to the authorities of the United States that they ought to ask for the full approval and authority of the British

Government for this absolute subjection of the British metropolis to an invading army of foreign opera singers without having previously obtained or even asked the consent of the Lords, the Commons, the municipal councils, or the metropolitan bench of magistrates.

Journalism and indeed literature generally have lately suffered a severe loss by the death of my dear old friend and newspaper colleague for many years, Frank Harrison Hill. Frank Hill was one of the greatest masters of pure English style, highly cultured criticism, and keen, bright, sarcastic touch, known to the higher class journalism of our day. He began his London career as a writer of leading articles for *The Daily News,* and he then became editor-in-chief of *The Daily News,* which position he maintained for many years, until a change in the ownership of the paper led to a disagreement between the editor and the new proprietors and ended in the removal of Hill and some of his literary colleagues from the staff of the journal. I think I may fairly quote here a passage from a small volume published in 1896, and entitled "The Daily News Jubilee," and written by "Justin McCarthy, M. P.," as he then was, "and Sir John R. Robinson," then manager of the paper. I quote the following:

"Mr. Frank Harrison Hill became editor of *The Daily News* in succession to Mr. Edward Dicey. He had been a writer of the editorial staff before, and had contributed much to the *Saturday Review* when that journal was in the zenith of its fame. Mr. Hill was a man of many and varied gifts. He was what would have been called in the days of Queen Anne 'an elegant scholar.' He did not go in for the profounder or the mere technical scholarship, but he was a man very well read in classical literature; he had studied almost all of English literature that there was to study; he had a refined and, in the true sense of the word, an 'exquisite' taste; he was a perfect master of the whole history, movement and groupings of English politics. He wrote with a remarkably incisive pen, and he had a keen, sarcastic humor which gave a cutting force to his articles. He was the author, more lately, of 'Political Portraits'—a book which, published anonymously as a serial in *The Daily News,* attracted universal and immediate attention and admiration. The political portraits were the pictures of English public men of the time. They were not unfriendly portraits—they had nothing whatever of the caricature in them; but they were not imbued with any extravagant spirit of hero-worship, and they painted men as they are rather than as they ought to be. One critic said of them that they were like a series of medallions cut in steel."

I may quote yet another passage about Frank Hill from this volume:

"Mr. Hill wrote in *The Fortnightly Review* a series of papers called 'The Political Adventures of Lord Beaconsfield'—a keen, sardonic and almost avowedly hostile criticism of the career of him who had been Mr. Disraeli. Mr. Hill, while admiring to the full Mr. Disraeli's gifts as debater, orator and political novelist, could not be induced to regard him as a statesman, or a serious person at all, and treated his whole Parliamentary career as a series of political adventures. The articles had a great success. People read them, and were much angered by them; people read them, and entirely agreed with them; people read them, and, neither troubling themselves to agree nor to disagree, were delighted with the cold brightness of their satire and the pure English of their style. . . . Mr. Hill also wrote a short life of George Canning, and was a contributor to many weekly papers and quarterly and monthly reviews."

Frank Hill suffered a most heavy loss some years before his own death, the loss of his most gifted, most intellectual, most loved and loving wife, the true companion of all the years that followed their marriage, that marriage which her companionship made so thoroly happy. They had no children, but they had a large circle of brilliant and appreciative friends, and yet I have always felt that their love for each other was the brightening companionship and affection of their lives. His sincere friends could hardly have wished him to have a prolonged life on this earth after that thoro companionship had come to its earthly close. He had done his work well, and his name will have an abiding place in the records of English literature.

London, England.

The Unity of Humanity

BY COUNT LEO TOLSTOY

THE unity of the human race is not only the most important problem which now confronts us, but in its resolution seems to me is the meaning, the purpose and the happiness of mankind. But in order that this revolution should produce all the good fruit which it is capable of producing, its whole character should be grasped; there should be no lessening of its import; there should be no restrictions, no deformations. In fact, this same statement may be made concerning all important things on this earth, and it is especially so where religion comes to the fore, where we have to do with love, labor for humanity, science, art. In a word, in these matters the argument must be carried to its legitimate conclusions, however strange or disagreeable those conclusions may be found to be. Everything or nothing should be our device at such times. I say nothing, not something; for the moment these grand manifestations of the human soul are not carried to their proper conclusion, they become not only useless, they not only bring no profit, as so many have thought and said, but they are really pernicious and even check the attainment of the aim toward which they seem to tend.

It is the same with religion which accepts faith blindly; with love which comes only with a struggle and where there is resistance; with serving humanity where it is permitted to have recourse to violence. In fact, this is true of everything and especially of that activity whose aim is the unity of humanity.

It is indisputable that men are stronger united than disunited; the family is stronger than the single man; a band of robbers is stronger than if each one worked alone; the township is stronger than the individuals who compose it taken separately; a state united by patriotism is stronger than a divided population.

But the important fact to keep in mind is that the superiority of united men over isolated individuals and the fatal consequences of this superiority, such as slavery and the exploiting of the isolated, naturally awakens among the latter the desire for unity, at first, so as to be able to oppose violence with force, and finally, so as to be able also to employ violence.

Thus, the Slavonic peoples, the victims of the union of the Austrian states, the Russians, the Germans, the Turks, *et al.*, in order to escape from the evils from which they are suffering, naturally wish to unite. But if these new unions take place, this will inevitably be attended by similar evils—there will be not only a struggle against other unions, but there will also be an effort to oppress and exploit feebler unions or isolated individuals.

While it is quite true, as already stated, that unity is the meaning, purpose and happiness of human life, this aim and blessing can be properly attained only thru the unity of *all* humanity in the name of a principle common to all humanity, and not by the unity of large or small portions of humanity, with narrow and selfish purposes in view.

Quite the contrary. The unity of a family, a band of robbers, a town, a state, a nation or a "holy alliance" of kingdoms—such partial unions do not help on true progress. Unity of this sort even impedes progress. My own opinion is, therefore, that, if we would honestly serve real human advancement, we should discourage these partial and imperfect unions; we should even do all we can to prevent them.

Unity is the key which will deliver man from evil. But in order that this key perform its part it should be pushed home into the keyhole, up to the point where it can turn, and not stop short at a point where, if turned, it is sure to be broken and destroy the whole lock.

So, in order that unity should produce all the good which springs therefrom, its purpose should be the union of all men

in accordance with a general principle also accepted by all men.

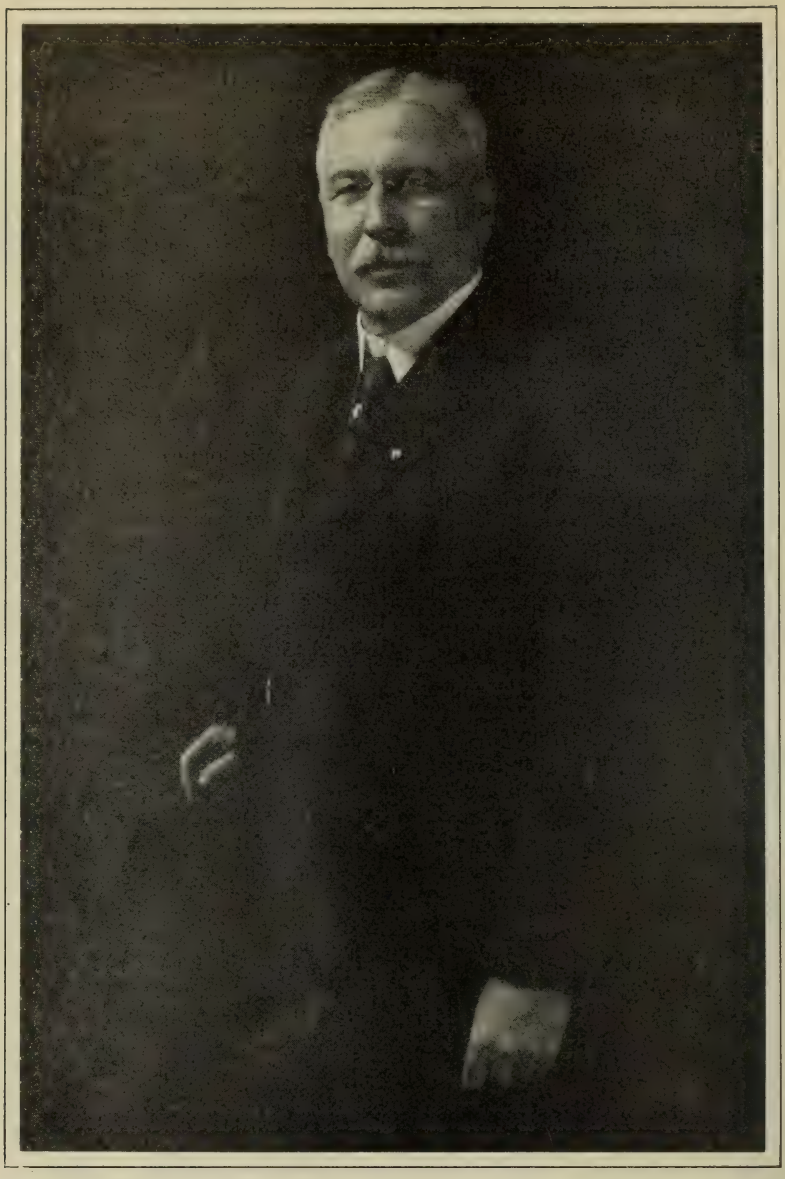
Now, a union of this sort can be based only on religious life, which is the only sort of union which really unites men. But, unfortunately, at the present time religious life is looked upon as something that is useless, superannuated, by the majority of men who direct the destinies of peoples.

It will be said to me in reply: We also recognize this religious basis; but we accept the idea of unions being based on races, peoples, states. Then I answer: The one excludes the other. If you consider the aim of human life to be a universal union founded on religion, by this very act you repudiate any other ground of unity. But if, on the contrary, you accept as a foundation for union the principle of race or the patriotic state, then you must deny a religious base as the veritable groundwork of life.

I am pretty certain that the ideas which I have just exprest will appear false and inapplicable to many of my readers. But I felt it my duty to lay them frankly before the Slavonic Congress recently held at Sofia, composed of delegates who are nearer to me than the men of any other people, tho I do turn my back on the principles of racehood and patriotic nationalism. Tho I may be charged with being inconsequent and in contradiction with myself, I advance in my defense that if I have written as above, I have been influenced to do so by the belief that, as this conception of universal religious unity is the only one which can draw men nearer and nearer together and lead them on to their true destiny, this will be the principle which will be approved, first among the nations of the Christian world, by the Slavonic peoples.

OTRADNOIÉ, June, 1910.

If Joy Were Not Divine



BY EDNA DEAN PROCTOR

IF Joy were not divine, immortal,
No lark would sing—
Thrilling the air at heaven's portal
On fearless wing.

If bliss, some day, were but a vision,
No rose would blow—
Biding its time with sweet precision
Beyond the snow.

Ah lark and rose! in Nature's bosom,
Since life begun,
Immortal Joy and song and blossom
Are one, are one!

PEORIA, ILL.

The New President of the University of Michigan

HARRY BURNS HUTCHINS, the successor of President James Burrill Angell, formerly occupied a chair in the Law Department of the University. He has at times temporarily exercised the office of President and has been known as a potential factor in educational matters. He is qualified for his present position by means of a varied experience in administrative capacities. His tendencies are progressive. He is ambitious and has an attractive personality. President Hutchins is of New England birth, his parents having lived in Lisbon, N. H. He was born on April 8, 1847, and received his early training in the public school of his native town. Subsequently he attended the New Hampshire and Vermont seminaries and still later was a student at Wesleyan University, Middletown, Conn. His family having removed to Southern Michigan he matriculated at the University of Michigan and was a graduate from thence in 1871 with the degree of Ph.D. He taught in Michigan for about a year following his graduation when he was appointed assistant professor of history and rhetoric at his Alma Mater. Afterward he studied law and was successful in practice. Being offered the Jay professorship of law in the Michigan Law School he also attained much success in that field as a lecturer. From the Michigan Law School he went to Cornell University when that institution founded a law department. He it was that formulated the plans for the school and ultimately became its Dean. In 1895 he left Cornell and was recalled to Ann Arbor as Dean of the University law department there. During Dr. Angell's absence at Constantinople he was acting President, a position which he subsequently filled when Dr. Angell's resignation was tendered to the Board of Regents. His management of college affairs has been characterized by the highest efficiency, which circumstance led to his recent selection as Dr. Angell's successor. The new President is prominent as a member of the New York Bar Association, the American Historical Association and the Michigan Political Science Association. He has been a frequent contributor to the leading periodicals of the day on literary, historical and political themes. As a public speaker, his services are frequently in demand. His work in both these fields is characterized by force and grace.

How to Develop Alaska

BY SIMON GUGGENHEIM

[The following article by the Senator from Colorado was given to a representative of THE INDEPENDENT in the form of an interview.—EDITOR.]

STRIPPED of all heat of partisan discussion, the one aim of many interests today is to see the Territory of Alaska on its way to safe, sound and permanent development. The real problem before this country today in relation to Alaska is to develop its natural resources in such a way as to give the greatest benefit first to the people of that Territory, not ignoring the fact that it is a part of the whole nation.

The resources that are to be dealt with are, briefly, minerals, fish, furs, timber and farming lands, and of these the most immediate addition of potential wealth may be expected from the minerals, gold, copper, coal and tin.

The largest item in Alaska's production to date is placer gold, mined from rich deposits by individuals with the simplest equipment. A very large part of this production was direct profit and most of this profit was distributed in the United States and not in Alaska. Men made their cleanups and forthwith "went outside" to spend it, in which endeavor most of them were speedily and completely successful. In other words, Alaska's enormous gold production has done exceedingly little to give that territory permanent population or industries or wealth. Its value locally has been little more than that of a stupendous and uniquely sensational advertising campaign.

The next largest item in Alaska's early production was its seal skins. This contributed nothing to Alaska whatever, being operated wholly from San Francisco, and was therefore quite valueless except for the several millions of royalty collected by the Federal Government and since tardily returned to the Territory in expenditures for its administration. Even this is now stopped in a belated effort to rehabilitate the remnant of the seal herd.

The fisheries of Alaska have grown to enormous proportions and will continue to grow, for the northern waters are amazingly prolific of aquatic life. At the opening of summer great fleets of vessels leave the Pacific Coast ports for the fishing grounds. Formerly they carried all supplies to be used, even wood for the cases, and a full complement of cannery operatives. Six weeks later they sail south again with all hands and full holds. At the present time, with improved steamer service, large stores on the coast carrying all sorts of supplies are selling to a greater or less extent many of the supplies required by the canneries, tho this remains largely a foreign industry, so far as Alaska is concerned.

The one important source of wealth production in Alaska is lode mining. Of large productive mines of gold and copper there is but a single example, the famous Treadwell group. Operating on a profit of but a few cents per ton of ore this mine has yielded enormous profits. But it has done more than that. It has sustained two large communities —the towns of Douglas and Juneau—in prosperity for many years and will continue to do so for another generation. Its cost of operation is large and continuous. Therefore a large share of the produced wealth is distributed locally, and the Treadwell has thus stood for permanent development in Alaska more than all other sources of wealth combined. The copper deposits being largely in the interior remain undeveloped awaiting transportation.

Other sources of wealth still undeveloped in the Northland offer further bases of permanent industry. There are vast areas of timber along the southerly coast line. Nearly all of this is, however, included in the Federal Government's forest reserve and a stumpage fee of fifty cents is charged. Even without this, however, Alaska could with difficulty compete in the world's markets against the vast supplies of magnificent timber in British Columbia, Washington, Oregon and California.

Farming and grazing conditions are unquestionably favorable in the Territory, tho with the latter there has been little experiment. The Government maintains a small herd of thorobred Galloways on Kadiak Island with success, but in most of the interior there would be need of winter protection and feeding. In coastal valleys like the Susitna Basin there are hundreds of thousands of acres of land covered each season by a splendid growth of native red top, which is excellent forage and silage, and here the winters are not severe.

Practical farming is carried on both in the coastal and interior valleys, and some fat profits have been made from it. An amazing variety of vegetables and grains is successfully matured, and the demand for staples like oats, hay, potatoes and cabbage still exceeds the supply.

This demand is and must be for a long time entirely local, the markets being the mining camps and transportation towns. Farming in Alaska, therefore, tho destined to rapid development and a very large and important future, is still a tributary industry. That is, it will bring little wealth into the Territory from outside by exportation of its products. It will, however, stop the heavy flow of money that now goes outside in return for farm products.

We return, perforce, to mining, and may first look at the future of placer mining. "Poor man's diggings" will continue to be found, for the unexplored area obviously within the auriferous belt is enormous. And the poor man will go on sluicing out the pay streaks and leaving probably sixty per cent. of the gold in the ground. The dredging companies will follow and then the big hydraulic companies investing millions in ditches and plant and slowly washing over the tailings, the low-grade gravels and the benches (that were too high for the poor man's water) and reaping more millions, but taking a smaller *percentage* of profit and therefore benefiting the territory in like degree. This is what has been done across the Canadian border in the Klondike producing and distributing vast wealth on a low-grade proposition that without an enormous initial outlay would have been worthless.

In Alaska opportunities of this kind are numerous, but few capitalists will take the very heavy risk, and to many of the low-grade districts it is not yet possible to take the heavy machinery required. But even in these enterprises the percentage of local expenditure is not high, and we return inevitably to lode mining as the backbone of development in a country like Alaska, as indeed it is.

Without the prospect of opening many large lode mines in the northern empire, its hope of a great future must be faint indeed. One might add coal mines, but there is a difference in their value to the Territory. Gold and copper mines, whose developments cost enormous sums, will sell their full output in the markets of the world, so that the entire return—less the profits to non-resident owners—comes as a direct gain to the Territory. Much of Alaska's coal will be sold for consumption in Alaska, thousands of miners will be employed and make permanent homes for their families. The Alaskan no longer would pay double price for foreign and inferior coal, and, in addition, outside markets would be quickly developed that would bring direct profits to Alaska.

To the development of gold quartz, copper and coal mines, then, Alaska must look for any creditable degree of permanent prosperity. Fortunately it need not look in vain. Comparatively little is still known of the extent of metalliferous deposits in the Territory, but there is enough to bear eloquent testimony to the presence of a vast storehouse.

Excepting the Treadwell in southeastern Alaska no great gold quartz mine has been developed, tho the hope for "another Treadwell" has spurred Alaskan prospectors for years. There are, however, many remarkably good prospects, generally of high grade. Notable are those on Kenai peninsula; in the Willow Creek section of the Susitna Basin; north of Nome on Seward peninsula, and in the Tanana Valley.

There is one supremely great copper mine, the famous Bonanza in the Chitina Basin. This is a unique case of mining development by Nature. From the remarkable exposure of high-grade ore at the mountain top, she has broken off

thousands of tons and piled it at the base of the slope ready for the concentrator and smelter.

The Bonanza is on a contact of limestone and greenstone that has been traced for one hundred and twenty miles and seems to be mineralized practically thruout. It would be a fact more strange than the marvel of the Bonanza if this should prove to be the only great mine in all that large area of favorable geologic formation. There are already, as a matter of fact, many partly developed prospects favorably reported upon by the Geological Survey.

The Chitina Basin is about one hundred and forty miles from tidewater and has been until very recently almost inaccessible even to prospectors. About the middle of July the tracks of the Copper River & Northwestern Railroad are expected to reach the mouth of the Chitina River from Cordova on their way to the Bonanza mine, the track parallelling a mountain chain, where prospectors have shown copper ore of good grade. This leads us to a consideration of the vexed question of transportation in its relation to the development of Alaska's resources.

In view of the fact that the Territory's only really permanent and producing resource—Treadwell mine—is on tidewater, there has never been anything in Alaska to build a railroad to except placer camps, or, at best, a placer region, the life tenure of which is proverbially short. It is logical to decide, therefore, that the reason railroads have not been built is because there was nothing definite or of known value to build them to. You may forge a short link in a long chain of transportation and make it pay, as in the case of the White Pass & Yukon, and you may even link up a neighborly group of placer camps with comparatively inexpensive construction and pluck a quick profit, as Falcon Joslin did with his Tanana Valley road. But you cannot fight your way thru those awful coast mountains for hundreds of miles to tap twenty placer camps with any assurance of reward.

The Bonanza was different. It spelled permanence and ore trains, and so the road is going in. Thus Alaska gets its first important railroad because of a lode mine. It is quite possible that within a few years there will be half a dozen Bonanzas in the Chitina district and all because of the railroad.

The point is that the mine had to come first. No individual, corporation or government in the world would or could afford to build a railroad to prospect unknown territory. It would be the limit of absurdity.

So the Bonanza mine and the Matanuska and Bering River coal fields are the only three certain objective points for railroads from the Alaskan coast today. Others will come in time and in time will pay. The Tanana Valley will and should be linked with the southern coast.

Again the importance of lode mining to Alaska is seen and with it the need of developing more mines in order to justify more transportation and other secondary industries and to make possible an increased and self-sustaining permanent population.

The most important man to Alaska's future is thus the prospector and his backer, the man willing to spend money in "prospecting prospects." Large capital will follow and play its part in large development and permanent production, but first encouragement must be given to the discoveries, for large capital requires a smaller element of chance, and takes, therefore, a smaller percentage of profit.

Preliminary development of lode prospects does not require railroad transportation, but it does require means of getting in supplies in relatively small quantities. This means roads and good trails, in which Alaska is wofully deficient.

As the United States has no department of public works, all Federal road and trail building falls to the army, which must in each case show military necessity. Thus Alaska has only military roads. Chief of these is the overland trail from the southern coast at Valdez to Fairbanks in the Tanana Valley, a distance of three hundred and ninety miles. On this the Government has spent only about $1,000,000 in five years, tho it goes thru a wild and difficult mountain country gridironed by swift-flowing rivers and icy glacier streams. In

consequence the trail is often almost impassable even to the hardened "musher," who is a very difficult person to stop indeed.

That is Alaska's chief highway and there are few others. Congress this year refused $50,000 for the cutting of a trail from the southern coast to the new Iditarod placer region, for which not less than 5,000 men are bound this season. Wherever he goes the Alaskan prospector must count on traveling off the trail, and when he makes a find his first work is to cut out a trail for himself.

Farmers near Seward had for two season to pack their produce in to town on their backs over the railroad right of way, because the Government road was not kept up. There was no military necessity for it.

There is, of course, military necessity for only the simplest system of transportation in the Northland, but there is industrial necessity for ten times the present equipment in good trails into unprospected mineral areas. With half the money that was spent on the few miles of the famous Benguet road to nowhere in particular from Manila in the Philippines, Alaska would begin almost a new era.

There are still rich camps in Alaska to which the transportation of supplies costs a dollar a pound. The whole Susitna Basin, for example, is known to contain rich placer ground and quartz diggings, but most of it must be reached by lining boats up the rivers and streams unless one uses dog teams over the snow in winter. Neither operation is cheap, safe or easy. And this is the country whose resources we are growing timid of permitting men to develop!

It has been repeated *ad nauseam* this winter that these riches belong to "the people," by which is generally meant the people who sit comfortably at home and not those who risk all they have, including their lives, and suffer hardships incredible to the ease-loving Easterner in finding them. They do. They are Federal possessions, quite valueless till found, developed, linked with the world and made producing and profitable. Men and capital must do this work, and it is risky work for both. Both are entitled to rewards commensurate with the risk, and if Alaska is to be developed at all the interests of these pioneers must be guarded as jealously as the interests of the man at home.

Kipling did tardy justice to the pioneer in vigorous verse, and we have come to reverence our pioneering forefathers for the work they did in the favored land that is now ours. Because the same rare type of man has gone beyond the edge of our every-day vision to do the same splendid work in a still more difficult field we call him names, especially if it is his money that he is risking in a gamble that we ourselves would not touch.

So the development of Alaska rests upon equitable encouragement of pioneering enterprise, whether large or small. The homestead regulations for Alaska are exceedingly liberal, the mining laws as applied to placer claims are equally generous. The laws relating to lode claims are substantially those under which our own West was developed and seem generally wise and fair.

No one deprecates the building of the Copper River & Northwestern Railroad into the Chitina copper region. It is recognized as a daring and risky enterprise of the utmost importance to Alaska. It is further admitted that this road can never hope to pay for its operation, even with the Bonanza mine contributing, until it can get local fuel for its use. Further than that, the Bering River field will not have transportation to tidewater at all until capital can be induced to build one, and with so limited a market as there still is for the coal these inducements must necessarily be reasonably strong.

Thus we come around the circle again and back as before to lode mining as the basic source of wealth in this new Territory.

The lode mine needs railroads, which need the coal for their operation and maintenance. The country needs the coal which is dependent on a railroad, which in turn is dependent on lode mines. It is quite true that sufficient coal will eventually be marketed outside Alaska to make this industry self-sustaining, but this merely adds strength to our argument, which is that a form of

production in which the percentage of profit is small and the markets are foreign is the basis of successful development.

Alaska's future rests fundamentally upon her lode mines and her coal, and so long as these are not given the greatest possible availability consistent with fair dealing just so long will her development be retarded, and the pioneers, the nations and the race be the losers thereby.

DENVER, COLO.

The Price of Brains

BY TUDOR JENKS

IF your boy shows symptoms of possessing brains, teach him to suppress all evidence of their existence, or at least to apply them to some harmless avocation only. Otherwise you expose him to risk of almost certain failure in life. In the case of a girl the matter is less serious, because she will probably be snubbed into conformity with the less intellectual of her sex.

I have heard a prosperous man pretend to minimize the gulf between himself and a bright young fellow by the time-honored saying, "You carry your capital under your hat!" But only the very green can take these fine words as butter for their parsnips. The unsophisticated may yet have to learn that of all wares fetched to the world's market places there is none cheaper than brains, all things considered; none so difficult of manufacture and maintenance that is nearly so abundant. Brains are a drug in the market.

Yet brains are of the utmost value to every community, and common sentiment admits this to the extent of awarding them nearly every recognition but money.

The matter is worth looking into. It will be well if we may find out why money—why what money buys—is not commanded by men of brains. The ablest men of a community, those who create the ideas that develop into purposes, plans, accomplishment—why are not these the men who secure the fruits of their brain work?

It is true that we must define our terms. We must fairly establish the fact we are trying to explain.

Admitting that some men of wealth, of power, of position owe their success to brains, it is enough to prove our case that the two classes—the wealthy and the brainy—do not at all coincide. The men of money are not the men of brains, and *vice versa*. The world's brains are in the heads of the men who do the work: the engineers, lawyers, divines, doctors, editors, writers, teachers, artists, inventors, advertisers. These our common speech recognizes as the "brain-workers." They make our civilization and maintain it. They direct the laboring ranks. Men of business, of affairs, succeed rather by employing the brain-workers than by their own head work, as will be appreciated by all who will consider the relative worth of capital, of brains and of labor in the business world.

"Give me the cash and I can hire the brains" is so common a saying that it is never disputed, and always accepted as a general principle of business success.

Brain-workers do not control the acquisition of money; they do not form the large majority among millionaires; they do not occur frequently among those who own the great properties—real estate, franchises, trade combinations. Even where credit for superior brain-work is given to the millionaire, it is often well known among insiders that some relatively obscure brain-worker is the power behind the throne—the hired tool of the money-maker.

Brainy men neither control the material resources of the globe nor command the highest wages in the markets. The wealthy are those who play the part of middlemen. They are merely a tax on industry and leviers of tribute. As common carriers they increase the costs of transportation and absorb the surplus;

as traders they intervene between producer and consumer; as owners of monopolies they are parasites upon industry; as brokers they thrive only because industrial methods are crude or clumsy. As for speculators, they are mere gamblers; and in politics the man who grows rich must have used his position rather for his own benefit than for that of the public.

Let us glance at a few great industries.

Agriculture has until within a generation been an almost brainless industry. It owes its emancipation to Justus Liebig, and the brains now developing it into a true science and art are those of a few poorly paid experts. Fisheries bring wealth only to capitalists or monopolists; the workers at the art and the science are alike earning little but a livelihood. The same thing is true of mining and of manufactures, while discovery and invention are notably profitable only to the exploiters.

So much for the material side of life; and in the intellectual pursuits the fortune of the mental worker is poverty, either actual or relative. Historian, poet, teacher, theologian, composer, chemist, all are put to it to support their families exactly in proportion to their devotion and single-mindedness in their chosen work.

Everywhere, if we are guided by the price they command from men of affairs, we find that brains are cheap forms of power, for they are mainly either motive power or lubricants.

Mankind's work in the world consists chiefly in making, unmaking or transporting combinations of matter. In all forms of these activities, the vast majority of operations have long been stereotyped and need no unusual expenditure of thought or activity of brain. Consequently, the lives of most of us are virtually automatic, our actions being fixed by tradition. Only rarely is a new problem presented for solution—as may be realized on analyzing Barrie's play wherein an accomplished butler becomes the overman and master when a shipwreck has taken his employer's family out of their daily round and placed them on a desert island.

For most of us there is little opportunity to think; we live amid the usual, and only the unusual requires the exercise of the brain power, whereby the social philosopher may know the reason for the popularity of brain games, puzzles, detective stories and other forms of artificial brain exercise.

The demand for brain power is, therefore, limited directly by the scarcity of the unusual, the emergency, in civilized life. When the novel situation arises, and brain power is essential, capable men can command a monopoly price; but these occasions are rare in proportion to the perfection of civilization. This explains the rise of able men during times of convulsion, as in revolutions or social catastrophes.

To put the matter in another way, those who supply regular wants—for food, clothing, shelter, transport, amusement—are sure of a market at all times and seasons. Those who meet irregular needs, who supply what most can and do live without, have no dependable market for their wares, and must adjust their price to a special and limited demand. Even when their services are required, there is a public and customary rate of reward which tends to reduce their rates.

Montaigne characterizes as one of the most ingenious devices of rulers the rewarding of deeds valuable to the state by means of titles, ribbons or crosses, which cost nothing; and another writer whose cynicism marks him as of later date says that the virtue of women is man's greatest invention. And with these two dicta may be classed another, declaring the fictions of gentility to be the best friends of the avaricious. For there are crises in which the doctor, lawyer or clergyman might name their own price for their services were it not for the *noblesse oblige* doctrines by which their callings are (or used to be) guided.

Considering the intrinsic value of their service, what classes are more poorly paid than authors, who are the critics and creators of our ideals; editors, who sift from the crude material the ore that is valuable; the teachers of morals, whose work outweighs in preservative power that of all the armies, navies and police of the globe; the statesmen, who keep the nation's honor

and insure its permanence; the physicians, who make living possible under artificial conditions imposed by civilization; the poets, musicians, artists—the whole artistic corps—who make life bearable by feeding the imagination, cultivating romance, rewarding taste and cultivation.

More and more the world is coming to recognize the value of thoughts and ideals in maintaining even the spirit that leads to material advancement; and these thoughts and ideas are the manufactured product of the brain-workers. Even the veriest Gradgrind nowadays knows that the army of Japan owed its successes to the motive power of the sentiment of patriotism. No multi-millionaire can buy what is freely given to the Emperor of Japan.

Contemporary mists having passed away as time elapses, the history of a nation will disclose where the most valuable services have been rendered. Let us take England as the land whose story is best known to us, beginning on the hitherside of the legendary period when all things were ascribed to kings, or warriors, or nobles, since these were the only personages recognized by monkish chronicles. Let us see what England owes to its men of brains, and what was paid them.

William Langland was merely a poet, yet he was the first to turn to the people, and in his "Vision of Piers Plowman" he awakened in Englishmen a sense of justice and an ideal of true religion. The historian Gardiner (an underpaid brain-worker himself) writes of Langland: "It was the glory of England to have produced such a thought far more than to have produced the men who, heavy with the plunder of unhappy peasants, stood boldly to their arms at Crécy and Poictiers." And the work of Langland, the poor priest, fructified into the ideals that gave England a world empire, while the campaigns in France resulted in nothing permanent.

Wycliffe and his "poor priests," Wat Tyler and his sturdy rebels, and especially John Ball, carried on the lighted torch to later generations; and the historian Green declares John Ball to be the first to preach the natural equality of man—which makes him the spiritual father of every American. Every one of these was without reward for his priceless labors; all were poor or became poor by the consequences of their right thinking—their brain-work for England.

After them, civilization found its chief friends in Chaucer, almost a beggar at times, yet the father of English poetry; Peter of Colechurch, builder of London Bridge; Caxton, the printer; Coverdale, Tyndale, Knox, Bacon, Shakespeare, Spenser, Drake, Gilbert of Colchester (beginner of the study of magnetism), Hampden, Milton, the Wesleys, Clive, Cook, Arkwright (barber and inventor of cotton spinning), Watt, Burke, Nelson, Stephenson, Fielding, Johnson, Wordsworth, Adam Smith, Scott, Byron, Lyell, Faraday, Carlyle, Turner, Thackeray, Darwin, Ruskin.

Such are the brain-workers who have done the creative thinking for the tight little island and its people. Few of them had any share of its wealth, and fewer still earned any as the price of his brain-work. Some helped others to wealth and received some share of the abundant proceeds. Brains are now and then rewarded for assisting, seldom for directing; thus Lord Clive received a fortune, but he won an empire.

The genius must differ with the majority, and the moneyed demand for brains is for brains of the second class—those of the colonel, not those of the commander. As Paul Kruger said to an office-seeking nephew: "My boy, you are not clever enough to fill a subordinate position, and all the higher offices are filled." In other words, the high salaries go to the figureheads, and subordinates furnish the intellect. Thus, big incomes are secured by "presidents," "secretaries," "treasurers," and the actual executives, who devise, initiate, contrive and carry out, are paid not according to the ability their work requires, but *according to the competition of those whose work will pass muster with the public*. The road to success in a corporation is by investment of capital, not clever management of its affairs.

The careers attractive to men of brains are those admitting of initiative and originality; and these are usually individual—philosophy, science, art, drama,

journalism and the learned professions. Even second-rate success in any of these demands a most unusual mental equipment, but even first-rate success seldom means adequate reward in money.

Recent examples are Professor Shaler, of Harvard, and Professor Simon Newcomb. Neither of these deservedly eminent and practical brain-workers could earn as much as—shall we say a prize-fighter, a horse jockey, a yellow journal publisher or a really hustling drummer?

Some reader may object that the term "brains" should be widened to include the shrewd, if ignorant, practical ability that wrings dollars from the close-fisted rivals of trade.

But isn't such success something like that of the boy who wins a pocketful of coins by pitching or matching pennies? In modern trade money must go somewhere. At a table of poker players, or in a stock exchange, every stake must go somewhere. The doctrine of probabilities would pile up winnings in a few hands, even if the players were all of equal and mediocre abilities. And once money is gained, if guarded with very commonplace prudence, it breeds more.

Surely no one will contend that the men of most brains are the money-makers of a modern community! We have too many object lessons to the contrary.

No. Brains may be cheaply hired, or we should see the rich competing for the services of brain-workers as a rule; and life shows us the exact opposite—men of brains peddling their abilities among those who have the money to hire their assistance.

Considering their true value, brains are the cheapest commodity in the market.

BRONXVILLE, N. Y.

How Artificial Teeth May Shorten Life

BY J. C. BAYLES, M.E., Ph.D.

THERE is a growing conviction among thoughtful students of the apparent paradoxes of vital statistics that what hygiene, medicine and surgery together have accomplished to increase normal longevity is effectually neutralized by the expedients of modern dentistry. This may sound like a startling proposition, but its plausibility is indicated by the fact that committees of some of the important medical societies are now investigating it in the light of clinical observation and experience. When the results of these observations are collated and published, a battle royal between the physicians and the dentists may be expected; whether any good will come of it is as doubtful as in the case of the "famous victory" of Blenheim.

The question under investigation is the influence of artificial teeth upon health and longevity. This demands a wide range of observation. Even with good care and conservative dentistry, it is unusual to keep natural teeth comfortable and useful much beyond the age of fifty. From one cause or another many persons lose them between twenty-five and forty. One by one the molars become loose and drop out or have to be removed. The incisors follow sooner or later, and the victim is deemed fortunate if the canines remain to serve as anchors for the temporary expedients of "bridge work." These, in turn, are soon loosened by the tension of the clamps, and some time before sixty the average person has to choose between no teeth and a full set on plates. Whether teeth could be saved beyond their present average duration by skillful treatment is beside the fact. The habit of going regularly and frequently to the dentist is not easily acquired. Most people consult him only when they must, and forget him as long as they are not uncomfortable. Usually they neglect going to

him long after they know it is necessary, dreading the discomfort and expense of treatment. Dealing with the facts of average human experience, not many sets of natural teeth are serviceable after fifty.

The re-equipment of the mouth with porcelain substitutes is, for most people who are thus repaired, a practical rejuvenation. Primarily, they are greatly improved in appearance. The hollows in the cheeks are filled out, the mouth closes only as far as it should, and ugly gaps are made sightly. Nine in ten of those he meets are frank enough to say, "Why, you look ten years younger." Probably this is true, and when it is true one is likely to feel twenty years younger. Not only does the mirror tell a flattering tale, but the feeling of relative youth regained permeates the system. Among other agreeable sensations, the possessor of a new set of artificial teeth that fit fairly well rejoices in the conviction that he "can eat anything"—which may ordinarily be interpreted to mean that, as opportunity offers, he will eat everything. Then the trouble begins. The appetites of youth assert themselves and may again be indulged. Strong meats which, without teeth, could be eaten only when stewed soft or minced, once more appeal as substantial steaks and generous roasts, and are relished the more because of the long deprivation, recalled with impatience. People thus rejuvenated are very apt to eat a great deal too much and to include in their dietary many things they had better avoid. As a rule, the evil effects of such excesses are not immediately observed. The first symptom of overfeeding is likely to be stimulation. The victim of self-indulgence thinks he is building up his body and brain by a generous diet; as a matter of fact, he is raising his steam pressure with the safety valve locked, congesting his firepot with obstructive clinkers, and banking ashes up to the grate bars. That he "never felt better in his life" is possibly true; but he probably does not know that every competent physician would recognize in the steady gain in his waist measure a danger signal of the most alarming kind.

Soon an unexpected trouble begins, so insidiously that it is not clearly recognized. The plate which holds the upper teeth gradually loses its original fit. This is not because it changes shape, but because the mouth does. All living tissue resents pressure and recedes from it. The better a plate fits when made the sooner is it likely to become a misfit. The absorption of the alviolar walls, the shrinkage of the gums and other usual causes of mouth deformation soon deprive a plate of necessary support at its edges; it begins to rock on the hard palate, and to maintain under it the vacuum necessary to hold it in place by atmospheric pressure is increasingly difficult and finally impossible. To have a new plate made as often as this happens is costly, and for most people quite out of the question. So they tolerate the discomfort as long as it can be borne, and during this period it is much easier to neglect adequate mastication than to practise self-denial. The results are soon seen in acute indigestion, inflammations of the intestinal tract, constipation, malnutrition, perhaps appendicitis, and other serious and possibly fatal consequences. That a great multitude is killed every year by the excesses rendered possible by artificial dentition cannot be doubted.

That up to a certain point dentistry and dental surgery are of great benefit to the human race may be conceded without discussion. It is not the possession, but the abuse, of teeth, natural or false, which menaces health and life. Natural teeth are impaired from a variety of causes, chiefly neglect, often before senile decay begins; when they are lost from that cause those who have them replaced with porcelain substitutes on gold or rubber plates should be warned that, beyond the age of fifty, prudence and extreme moderation in eating is no less necessary after one can bite hard or tough substances than before. What is designated as old age begins much sooner with some persons than with others. Sometimes it is seen in children; frequently in relatively young persons. Whenever it occurs it is invariably accompanied and characterized by a gradual and progressive impairment of the structure and functions of the body, more or less rapid accord-

ing to circumstances. The lessened capacity of the stomach and its decreased muscular and nervous energy impose not only moderation in eating and drinking, but dependence upon foods easily digested and quickly assimilated, with abstinence from those which are found to be attended with evil results. The gastric juices and intestinal fluids are present in smaller quantity than earlier in life and are less energetic in action, and in the adequate and suitable nutrition of the elderly and old the usefulness of the teeth steadily diminishes. This is shown by the fact that a vast majority of those who attain very old age do without them. Even for one in as vigorous health as is possible after fifty or fifty-five, very little meat is needed and it should be in the form imposing least effort in mastication and assimilation. Milk and eggs are the best of the animal foods, and most vegetables require thoro cooking. With the decline of physical and mental activity which characterizes declining years, there is a decreasing demand for what are deemed "hearty" foods. It does not follow, however, that the desire for improper and too abundant foods ceases when they become dangerous, or that years always bring wisdom in matters of diet. As Dr. J. West Roosevelt has pointed out, "The will power in old age often assumes the vacillating character of youth, and if food is particularly inviting, the aged may give way to overindulgence, and even to gluttony." This generalization is borne out by observation. That artificial teeth favor such imprudences is undoubtedly true, and the conclusion is indicated that new teeth in old mouths are like the new wine in old bottles of the parable. It is to be regretted that artificial dentition so often tempts to imprudence, growing out of forgetfulness of the fact that one may look ten years and feel twenty years younger without having set back the hands of the dial one point.

In this fatuous trifling with chronology lies the danger of false teeth, especially in the case of those who have so far advanced in senile decay that they have no other use for a double equipment of teeth than to deceive others and, still worse, deceive themselves. It is not the fault of the dentist that artificial teeth are abused, unless a dereliction of duty on his part is found in his failure to warn his patients that, after sixty, teeth are chiefly useful as ornaments, and will so remain until surgery has found a way to substitute new artificial viscera for organs worn out or incapacitated.

New York City.

But Where Thy Port?

BY IVAN SWIFT

The bay is white with sail,
Uncertain bound—
Vain ships that seek no grail,
Proud ships that bear no bale,
And ships aground.

Like moths they dot the bay,
Nor heed the chart;
At dusk they pale away,
Unlit in the evening gray,
And so depart.

Oh, ships of shifting hue
And aimless sport,
Ye swing across the blue
And wing the season thru—
But where the port?

I wait here on the shore
To sail, afar,
The wider sea that bore
And bears for evermore
The steadfast star.

And soon, I pray, shall come,
As comes the dawn,
With muffled oar and drum,
Unfaltering and by some
Sea mystery drawn—

A ship that sails from where
The autumn moon
Hath sailed; and I shall fare
With her—my heart's corsair—
To ports of Noon.

Harbor Springs, Mich.

Literature

Tick

To the Editor of The Independent:

SIR:—It is not my habit to reply to reviewers. In the twenty-five years of my young life so many vials of ink have been poured upon my innocent head that I am somewhat impervious to either praise or blame. But I frankly admit that I am sorry that *your* magazine should have been the one to print so stupidly inadequate and imbecile a notice of my "Confessions of a Barbarian," as it did in its issue of July 28. I have now published four books in two languages in three countries. I have a certain standing as a writer, as an editor and as a playwright; and it seems to me that I am entitled to criticism, not to the badinage of a schoolboy. I would not object to an unfavorable review; but I think that you, as the editor, should have protected me from drivel so inane, futile and hackneyed, written presumably by some preposterous nobody.

Good God! Literature in this country must be chiefly its own reward. Those who are not ambitious to rank among the novelistic "best-sellers" must be satisfied with the esteem and the serious consideration of their fellow-craftsmen. But they have a right to expect at least the same consideration that is given by reviewers to the veriest nonentities among amateur fiction-writers!

This book of mine happens to be the best-selling non-fiction book in New York City. It happens to have been published in two languages. This fall John Lane will bring out an edition in England. The Ambassador of the United States, Dr. David Jayne Hill, has presented a copy of the book to the Kaiser. I have touched on many serious problems. I admit that I have written brilliantly; and it has always been characteristic of dull minds to suspect brilliancy of shallowness. Most people, especially amateur critics, seem to find it impossible to understand that a man may be clever without being insincere. I have been in Germany, where I have spoken to some of the most important men in the Empire, Ministers of State and Ambassadors; and I have come in touch with the genius of the land. Between the lines of my book you will find hints of diplomatic secrets and traces of intimate knowledge of things German-American. Prof. Hugo Muensterberg has said, for publication, that this book of mine "contains some of the most brilliant things that have been said about the two countries." Gertrude Atherton, who knows Germany as well as this country, calls it "really a memorable work." And finally James Huneker, perhaps our greatest living critic, has expressed himself as follows:

"The spectacle of young Viereck spanking two nations in his 'Confessions' is enough to arouse the marble bust of his once famous grandmother, Edwina Viereck, at the Royal Theater, Berlin; or to stir the envy of the first and only Shavian, G. B. S. . . . George Sylvester Viereck is the head of a long line of American Super-Boys . . . His book is flown with the frank insolence and effervescing wine of brilliant youth . . . He knows, like most poets, absolutely nothing of men and women, of art or of life, and that is his chief charm . . . The fires of inexperience are more creative than the slag and cinders of wisdom . . . Truth has been known to pop forth from the mouths of babes."

Mr. Huneker, you will notice, is also a trifle facetious; but he recognizes the serious literary quality of my book. In fact, most reviewers have treated my "Confessions of a Barbarian" extremely well. I have had much of real illuminating criticism. The *Call* printed what would vulgarly have been called a "roast" of this book; and its author, Courtenay Lemon, was very much surprised when in return I wrote him a flattering letter and asked him to lunch with me. But I was pleased with his review because he went into the essence of my work. While I cannot agree with him, at least he developed a point of view. Your reviewer touches not even the fringes of the book. He merely picks out one little mannerism for his dubious witticism, and then has the impudence to call his abortion an honest review! I do not know whether he has read the book or not. If he has, then so much the worse for him, because then I must despair of his powers of discrimination. He seems to me like a person standing before some colossal structure of granite and stone, and who will say: "Very good; but there is a scratch on the door-knob."

I wish that in justice to yourself and in justice to me you would print this letter.

GEORGE SYLVESTER VIERECK.

NEW YORK CITY.

Tock

To the Editor of The Independent:

SIR:—I second Mr. Viereck's request. "I wish that in justice to yourself and in justice to me you would print" his letter. It will, I think, be a sufficient justification for any kind of a review of Mr. Viereck's book—except a favorable one. Moreover, a waiting world ought not to have withheld from it the important information that Mr. Viereck invited Mr. Courtenay Lemon to lunch with him after Mr. Lemon had criticised Mr. Viereck's book; or that Mr. Viereck himself admits that he has "written brilliantly"; or that he has "now published four books in two languages in three countries." The world can ill spare these momentous revelations regarding Mr. Viereck. There is perhaps less reason for printing the excerpt from Mr. Huneker, wherein it is declared that Mr. Viereck "knows absolutely nothing of men and women, of art or of life." First, because, as Mr. Viereck naively avers, Mr. Huneker is facetious: and second, because Mr. Huneker's opinion of Mr. Viereck is of

relatively small importance compared with Mr. Viereck's opinion of Mr. Viereck. But then nothing should be omitted from this marvelous epistle. It is a gem which will not stand reducing.

In the same spirit of facetiousness which possessed Mr. Huneker, I might add some further items to the list of things not contained within Mr. Viereck's mental horizon. But the list would be long, and space is not available. Moreover, there is probably, on the part of nine hundred and ninety-nine out of a thousand readers, a total lack of interest in the matter. Mr. Viereck should remember Johnson's apothem that no one can be written down except by himself. If there is anything in his egotistic and effervescent loquacity that is worth the serious consideration of rational beings, it will make its way and survive in spite of the criticism so graciously characterized as "inane, futile and hackneyed drivel, written presumably by some preposterous nobody." The critic's meticulous observation of the "scratch on the door-knob" will not affect the world's estimate of Mr. Viereck's "colossal structure of granite and stone." YOUR REVIEWER.

NEW YORK CITY.

Life of Garret Augustus Hobart, Twenty-fourth Vice-President of the United States. By David Magie, D. D. New York. G. P. Putnam's Sons. Price, $2.50, net.

Garret A. Hobart was a diligent and successful corporation lawyer whose prominence in local politics and orthodoxy on the gold standard made him an available candidate for the Vice-Presidency in 1896. His pastor, in Paterson, New Jersey, has written this book as a token of the esteem in which Mr. Hobart was held by his neighbors. It is not a piece of serious history, but reads as tho it had been compiled from a personal scrapbook supplemented by a few extracts from the subject's correspondence. Mr. Hobart had no large public life and was connected with few public measures. In the Senate he was a competent presiding officer whose liberal hospitalities were a great aid in the performance of his work. We should have been glad to know the inner biography which Dr. Magie has not touched upon. We need to know in detail how successful men grow rich and how party leaders attain their headship. But the little piece of national life has crowded the honorable local career out of the book, just as the Washington officials crowded old friends and neighbors out of the Paterson church when Mr. Hobart died. Yet the book is a graceful work of friendship and is not without value in the light it throws upon the social side of President McKinley's administration.

Biographical Story of the Constitution, A Study of the Growth of the American Union. By Edward Elliott. New York: G. P. Putnam's Sons. $2.

Like the Monroe Doctrine, the Constitution is a fetish in the United States to which men refer, and which they accept, without more than the haziest notion of its real intent. Most of our political scientists realize this, and labor to correct it with varying degrees of success. The public is no lawyer, however. It will not sit down with a casebook and study the theory of the Constitution; the legal profession is too greatly interested in the winning of cases to care much for theories; most of our colleges make little effort to teach elementary law to the lay student. How to overcome this inertia of the popular mind toward the fundamentals of our existence is the proper work of the teacher of politics. Professor Elliott has tried to do it in a series of brief sketches of the men who have had most to do with the development of constitutional law, from Hamilton, whom he associates with "Growth Thru Administrative Organization," to Roosevelt and "Growth Thru Expansion." Wilson, Jefferson, Madison, Marshall, Jackson, Webster, Calhoun, Lincoln and Stevens all appear in the list between the extremes of a most interesting experiment. The method is entirely new, but that is no drawback if it works. Any form thru which laymen are led to study law is to be encouraged. The difficulties of the method, however, are great. The biographical sketches are so brief that space is not given for a differentiation of the characters. The writer deals with so many subjects that he has had to rely upon the ordinary secondary books relating to them, thus basing his narrative upon many works which experts today would refuse to accept as authoritative. He appears to miss the point when he says that secession was regarded as revolutionary; the great insistence of the Southern leaders was that secession was a remedy within the Constitution. Yet the work will have a useful influence wherever read.

Quaker Idyls. By Sarah M. H. Gardner. New York: Henry Holt & Co. Pp. 284. $1.

Two new sketches have been added by Mrs. Gardner in this new and enlarged edition of her *Quaker Idyls,* which is published in a dress well befitting, in its quiet neatness, the worthy people who form its heroes and heroines. Neither of the new sketches can be said to equal the older series in delicate and sympathetic insight, and in the sense they give of truth and actuality. One of them—the story of a pet cat—is almost a burlesque in its exaggeration of the foibles of two maiden ladies and their infatuation for their feline pet. From the newer idyls the reader turns back with satisfaction and refreshment to the older sketches, and renews with real pleasure the acquaintance of the wise and gentle, yet wholly human, Friends who fill the scene in these pictures of more than fifty years ago. One of the most attractive of these figures is the Quaker girl who found herself among people of a more worldly character in Boston in the later fifties, and who wrote such candid and picturesque letters to her mother. The letters criticise very frankly Puritan Boston in the degenerate days when trade and wealth had stifled conscience, and when the Abolitionists were in a pitiful minority; and the glimpses of Emerson, Sumner and Lloyd Garrison are pleasant, though slight, additions to our knowledge of these heroes of the anti-slavery cause. These little Quaker stories are especially acceptable at the present time, when the services of the Society of Friends are beginning to be more generally acknowledged, and when the lead of the Quakers, which has long ago been followed in regard to slavery and temperance, is beginning to be effective as regards peace and the equality of the sexes.

The Historie Exodus. By Olaf A. Toffteen, Ph. D. Published for the Oriental Society of the Western Theological Seminary. Chicago: The University of Chicago Press. $2.50.

Professor Toffteen's monograph may be placed beside Dr. Orr's "Problem of the Old Testament" as an endeavor to substantiate conservative claims for the Old Testament as against the leading contentions of the Wellhausen school. Like Dr. Orr, he maintains that the dates commonly assigned by higher critics to the component parts of the Pentateuch are much too late, and that the historical constructions based upon them are in error. Unlike the Scotch apologist, he exhibits little dogmatic bias, and his chapters betoken much pains and perseverance in seeking the truth. His difficulty is in a certain lack of literary appreciation, and a want of that historic sense which feels the growth of movements and ideas. He establishes dates by proof-texts, but is unable to discern that texts which are themselves hundreds of years later in origin than the events which they describe are by no means an infallible guide, particularly in their incidental turns of expression, in the determination of chronology. For example, he proves that the priestly document of the Pentateuch was in existence in the time of David by the expression "Law of Yahweh," which occurs in David's prayer for Solomon, this expression being characteristic of the priestly document. His authority for thinking that David employed this technical phrase of the document in question is the narrative of the Chronicles, which can be demonstrated beyond all reasonable question to have been composed over five hundred years after David. We do not know at all that David used the phrase; we know only that the author of Chronicles, many years later, made use of that language in describing David's prayer. Of course, that is not the only text Professor Toffteen employs in supporting his contention, but even if he could record a hundred others of like quality—and none of his proof-texts have much more weight than the one above cited—his argument would have no force. A thousand straws do not make a steel wire. In the heaping up of citations there is a show of scholarship and of cogent reasoning, but sound historical conclusions are not thus established. The inference should not be drawn that Professor Toffteen seeks to exhibit learning or to substantiate erroneous conclusions, but only that his inability to discern the historical and literary character of his sources renders unreliable the views he supports by a

large number of citations. Professor Hoffteen holds that J and E (the Judean and Ephraimitic documents) date from the time of Moses; that D (Deuteronomy) was in existence in the age of Joshua; and that P (the priestly document) was composed during the reign of Saul. He maintains that the exodus of the Hebrews from Egypt was not a single movement, but that there were two exodi, that described in JE, in 1447 B. C., and that narrated in P, in 1144 B. C. We shall be greatly surprised if the eventual finding of historical criticism is that this is "the historical exodus."

The Relations of the United States and Spain; Diplomacy. By French Ensor Chadwick. New York: Charles Scribner's Sons. $4.

There is an ominous note in the rapidly increasing series of works on the Spanish War. Here we are, but twelve years removed from the explosion of the *Maine,* and American historians in considerable number have already begun to question the documents as to the wisdom and good faith of the United States in the years just preceding the war. Not many of the intimate Spanish documents are as yet available, but from the archives of the United States alone it is possible to draw inferences that are hard to explain away. When Americans, writing almost exclusively from American sources, can find errors in the conduct of their own Government, there is something rotten in the State of Denmark. Admiral Chadwick is the latest historian of the period prior to the war with Spain. He tells us in a frank preface that he started to write a small introduction, which grew under his hands into an imposing volume. The reason for the expansion, in which he allowed the documents to take control of his form and arrangement, is apparently that he believes the Cuban problem to have been in a state of dangerous aggravation for three-quarters of a century, and that it might have broken out into war on several previous occasions if our Government had given way to popular appeal. In the four hundred pages devoted to the period before 1895 he gives a detailed review of Cuban affairs. Always the insular condition had been menacing. The eagerness of the natives for independence was equaled only by the insistence of Spain upon retaining the last of her America. And as United States interests in the island increased the explosion was with greater difficulty avoided. At the close of Mr. Cleveland's administration in 1897, the outcome had become hopeless, with reconciliation between the contestants out of the question and the United States thoroly aroused. It is not creditable to the intelligence of America that the clack of the yellow journals was listened to. There were ample facts at the disposal of the State Department, at least, to prove it improbable that the patriots were long-suffering martyrs and the Spanish intolerable fiends. All who care to learn today may know that the desolation of Cuba was a deliberate insurgent policy. But at the minute when the United States most needed a policy of firm control, lest misdirected public sentiment should do a wrong, the administration changed. There came in a Secretary of State famed for intemperate and ill-informed denunciation of Spain, under a President whose ideal of statesmanship compelled him to ascertain correctly the popular will, that he might the more effectively execute it. With great honesty of purpose, Mr. McKinley lacked the notion that both Cleveland and Grant had possessed—that the business of the statesman is to control and direct the public, and that there is no sanctity in public opinion when it is wrong. Admiral Chadwick shows admirable fairness and detachment in the last third of his book, where he is dealing with the immediate causes of the war. He has been helped to his conclusions by the remarkable publicity which the United States has given to the documents of the period, and his book makes a distinct advance in our understanding of the diplomatic setting of the war.

The Classical Moralists. Selections illustrating ethics from Socrates to Martineau. Compiled by Benjamin Rand. Boston: Houghton Mifflin Company. $3.

Professor Rand is doing a service to the general reader as well as to the col-

lege student in his series of selections from the standard authors in philosophy, psychology and ethics. The smaller public libraries, too, can by these volumes make sure that they have upon their shelves some pages at least of the great thinkers of all ages, while they might hesitate to expend the money necessary for complete works which would be but rarely read. These selections are not to be sneered at as mere "samples" or "tabloids." They are long enough to give one not merely an insight into the style of the author, but also a knowledge of the gist of his thought. Not all those who allude learnedly to Aquinas or Hobbes or Spinoza or Bentham or Hegel have read even so much as the ten or twenty pages of their works here given. This single volume, not too heavy to hold in the hand and not too fine in print for the eyes, contains representative quotations from forty-five of the great ethical teachers of ancient, medieval and modern times.

Ireland Yesterday and Today. By Hugh Sutherland. With an Introduction by John E. Redmond, M. P. Philadelphia: The North American. Pp. xvi, 264. $1.

In the last thirty years there has never been any lack of books concerned with the agrarian and social conditions of Ireland, for the world has been hearing of these conditions since the Ulster Tenant Right Act was passed in 1870. There was a fairly constant flow of these books from the press for the first ten years after Gladstone declared for home rule in 1886; and most of them, as was inevitable, were full of the injustice and the failure and the misery of the agrarian system peculiar to Ireland. About three-fifths of Mr. Sutherland's *Ireland Yesterday and Today* is on this well-worn theme. The other two-fifths, however, treat of Ireland of today—that is, of the wonderful change for the better that has resulted from the Land Purchase acts passed by the British Parliament since 1903, under which the great landlords are disappearing and the cultivators of the soil are gradually becoming owners of the farms they till. The facts as Mr. Sutherland states them are in themselves a sufficient justification of the Nationalist movement in Ireland and at Westminster since that movement was begun by Isaac Butt in 1870. From the union until 1867 the Irish people had little control over their representatives in the House of Commons, for there, as in England, parliamentary representation was largely dominated by the landed and governing classes. It was not until after 1885 that the dominance of the governing classes in Ireland was broken by the extension of the parliamentary franchise. The Irish leaders then realized that if anything was to be achieved at Westminster for Ireland there must be an independent Nationalist party, that could demand reform from either Tory or Liberal governments, and that the Irish representatives must cease to be at the beck and call of both the two historic parties in English politics, as they had been from the union until Butt and Parnell appeared on the scene. All the land legislation since 1881 has been obtained directly or indirectly thru this independent Irish party in the House of Commons, and gradually, as the result of this legislation, one of the most cruel and unjust land systems that ever cursed a civilized country will soon be of the past.

Romanticism and the Romantic School in Germany. By Robert M. Wernaer. 373 pp. New York: D. Appleton and Company. $2.

This book, made up in part of lectures delivered at Harvard University, is a curious attempt at divorcing absolutely literature from the social environment in which it grows. The virtue of this theory, romanticism and classicism are no longer the unavoidable products of different periods; they are merely attitudes to life which certain individuals seem to assume arbitrarily. To each corresponds a given set of virtues or vices: moral sternness, ethical righteousness, devotion to duty, are synonymous with classicism. Romanticism, on the other hand, is linked with a yearning for beauty, love and freedom, and with loose views concerning matrimony. Forgetting the political nightmare thru which Europe writhed between the years 1793 and 1815, the author is convinced that

the romantic conception of love; to which he constantly recurs, deploringly, "has led us by leaps and bounds to revolutionary ways of looking upon the world." This academic treatment of the subject which obliterates with a stroke of the pen, Hegel, Taine, Brandes and Brunetière, makes certain chapters, *e. g.*, the ones relative to Fichte and Schelling, especially superficial. Fichte is particularly sacrificed, being dismissed with a mere anecdote. The author finds it also necessary to disagree with the majority of the critics on the definition of the romantic school. Without giving any reasons besides his own pleasure and convenience, he excludes Brentano, Arnim, Uhland, Heine and others from the ranks of the romanticists. So many gratuitous assumptions and unsubstantiated statements detract much from the interest of a book which does not lack originality but is in the main devoid of stylistic merits.

Francia's Masterpiece: An Essay on the Beginnings of the Immaculate Conception in Art. By Montgomery Carmichael. New York: E. P. Dutton & Co. $2.

A curiously delightful little book—very likely, as its author believes, the first bound volume devoted wholly to a single picture—is this in which Mr. Carmichael has solved the riddle of the famed altar-piece painted by Francesco Raibolini, detto il Francia, hanging in the old Lombard Basilica of San Frediano in Lucca. Most writers on art have called the picture, by guess-work, a coronation or an assumption, and have supposed the four little chiaroscuros of its predella to represent legends of the Augustinian order. This author shows that it represents the Immaculate Conception as formulated by the Franciscans. In the picture God the Father extends symbolically to Mary the rod of Ahasuerus, King David and King Solomon; Saint Augustine and Saint Anselm bear witness to the stainless origin of the Virgin, while a kneeling Franciscan, identified by our author as John Duns Scotus, the subtle doctor, sees the vision in the sky. The predella panels recount legendary miracles worked by invoking Mary Immaculate. The picture was painted for Maddalena Stiatta to adorn a chapel of the Conception some time between 1512 and 1517, and is a type of the earliest form of the Immaculate Conception in art which is far more mystical and admirable than the operatic and empty form stereotyped by Murillo and the Spanish ecclesiastics of the seventeenth century. Mr. Carmichael's account of his researches and discoveries is almost as interesting as a good novel. His ingratiating style and religious fervor carry the reader with him, in spite of all wonder at his simplicity of conviction and disapproval of such thorogoing orthodoxy.

Life and Letters of Josiah Dwight Whitney. By Edwin Tenney Brewster. With Illustrations. Boston: Houghton Mifflin Company. $2 net.

Prof. Josiah Dwight Whitney was a man of various attainment. He could play on eight sorts of musical instruments in his odd hours, and in the other and better hours he held a high level among scientific men. Being the eldest of thirteen children, all supported out of the profits of a small country bank, it would seem that he should have been quick to settle down to remunerative work, but if one may judge from his early and somewhat prosy letters as published, he was not in a hurry to do so. He was twenty-six before the "wander years" after the "absolute" were fairly over, and concrete results became the main object. Of these he found sufficient to put him high among the builders of the new edifice of material progress and the carefully trained educators of the new science. He was still at heart a wanderer, but among the rocks, the ores, the geologic ages, the ice drift. He was defining the new terms, and laying out the ground for a broader survey of American mineral wealth. Of this large and admirable work we get, in the book before us, only a dry account—hardly more than a log-book summary of what must have been a life of adventure, discovery and productive association with the pioneers in the mining fields of the great West. His letters of travel lack descriptive power, the overflow of an eager observer, imagination associated with fact. He could not make a family

letter a thing to lift, to rejoice in. As his biographer puts it, he "never had a genius for epistolary correspondence." Moreover, he was not socially come-at-able, or, in the phrase of the book, he was "deficient in the gregarious instincts." His letters show a certain kind of epistolary wit of the minor sort—droll punning, and tricks with words, but no evidence of a broad humor, such as belonged to Asa Gray, his associate in the later Cambridge life. Yet he began life with a yearning for the graces, such graces as those in which Darwin sorrowfully admits a deficiency. Of fastidiousness of all kinds he had more than his share. Fastidious "in his clothes, his book-binding, his concerts . . . If he had them at all, they must be of the best." In a large way he planned for the best, and then stood too much aside waiting for the tools.

Commodore John Rodgers, Captain, Commodore, and Senior Officer of the American Navy, 1773-1838. By Charles Oscar Paullin. Cleveland: The Arthur H. Clark Co., 1910. Price, $4.

Among specialists in American naval history, Dr. Paullin is perhaps the best known today, after Captain Mahan. He has worked in the materials of his subject for many years, coming to the task fortified by his experience as a nautical expert in the Navy Department. In the book before us he has for the first time presented his subject in biographic form. But the career of Commodore Rodgers was such that no history of the navy in the half century after the Revolution could fail to have close resemblance to his personal biography. He lived and died before the day of the first steam navy, illustrating in his experience that expertness reached by the self-taught captains who brought the sailing warship to its highest and final place. The author has had access to the departmental and family manuscripts to such a degree that the book is a valuable contribution to the history of naval administration. It is interesting as well. The sturdy personality of the Commodore stands out from every page. At twenty-three he, single-handed, charged and routed an election procession in Liverpool because its candidate, General Tarleton, flew a banner insulting to Americans. At fifty-nine, he went to the bedside of a friend dying with Asiatic cholera, and stood there till the end. His was the day of small fleets and inexpensive establishments, but in it the spirit of the professionalized navy was begun. His family has stood by the department with which he was so long connected until it has become the rule that their sons go naturally to West Point or to sea.

Literary Notes

....Mr. Bryan's St. Paul address on *How to Win Men* is published in attractive booklet form by the United Society of Christian Endeavor (Boston and Chicago), and sold at 25 cents a copy.

....Among the books written and published by negroes especially to illustrate their literary genius or ambition is *As You See It*, by Robert Lewis Waring (C. F. Sudwarth, Washington). It is a lively story of love, lynching and more than one wedding. The other is a reprint by R. R. and C. C. Wright, Philadelphia, of the poems of Phillis Wheatley, the negro poetess of Boston who received an encomium from George Washington. The poems have a real literary style, and show familiarity with classic literature as well as the Bible.

....Of more than usual interest for the study of Greek and Roman industrial art is Publication 130 of the Field Museum of Natural History, Chicago, by Prof. F. B. Tarbell, of the University of Chicago. It gives in 81 plates three hundred bronze objects of which the Field Museum has casts from Naples Museum. They include tables, stools and other furniture, lamps, braziers, pitchers, dishes, kitchen utensils, balances, musical and industrial objects, surgical instruments and the like. It is an admirable and instructive collection.

....In *Orders and Unity* (Dutton, $1.35) Bishop Gore discusses, from the "liberal catholic" position in the Anglican Church, the essentials for union among Protestants. Much the larger part of the book is taken up with proofs of the "divine authority of the Episcopate." The Bishop naturally regards the recognition of "Orders" as a necessary preliminary to "Unity." Altho he feels the tendencies toward federation and the desirability of eliminating the present wasteful and unchristian rivalries of divided Protestantism, his addresses will be of little service in bringing about the consummation devoutly to be wished.

....At the Schaus Art Galleries, No. 415 Fifth avenue, New York, for a month in the spring of 1910 were exhibited several paintings by Alexis Jean Fournier, an American

artist, of the homes of the French painters of the Barbizon school, which were interesting both artistically and historically. That Mr. Fournier can write as well as paint is shown by the publication of his memoranda on the great French landscapists, *The Homes of the Men of 1830* (New York: William Schaus), which the art dealer turned publisher has had printed tastefully on fine paper and illustrated with reproductions of half a dozen of the author's paintings. These brief and succinct characterizations of the work of Millet, Corot, Diaz, Daubigny, Dupré, Rousseau, Baryé, Troyon, Jacque and Cazin make up a dainty and attractive little book.

....A multitude of people have made translations of the *Dies Irae,* of which the best known is that by Sir Walter Scott, beginning "Day of wrath, that dreadful day." President Stryker, of Hamilton College, has attempted, with surprising success, the unusual task of making five separate translations, in as many meters, of the eighteen Latin verses. Of these the first is in the meter of the original, eight syllables to the line in trochaic measure. Then comes one in seven syllables, Iambic; then in six syllables, both trochaic and Iambic, and finally one in five syllables, trochaic. The last is a marvel of condensation. The first verse reads:

"Psalm and Sibyl quire
Of that day whose ire
Sinks this age in fire."

The first verse, after the meter of Thomas de Celano's original, is as follows:

"Day, that day, whose indignation
Shall in coals engulf creation,
David's, Sibyl's attestation."

....We are informed that Mr. Albert Cook Myers has undertaken to collect and edit a definitive edition of the works of William Penn in at least ten volumes. In spite of his prominence as a colonist and a theorist in religion and government, the writings of William Penn have never been made accessible. Well known as one of the greatest Englishmen of the seventeenth century, with a range of interest that touched nearly every aspect of the life of his day, he is entitled to the treatment that is now in preparation for him. Mr. Myers, the general editor, has been given permission to make full use of the valuable Penn manuscripts in the Historical Society of Pennsylvania, and he has raised by private subscription most of the funds needed to make his project possible. He is already well known as an expert in Pennsylvania history and the history of the middle-state religious migrations. His great success as director of the historical collections at the Jamestown Exposition is further evidence of his suitability for this task. During the coming summer, it is his intention to work among the private archives of England and Ireland in search of further materials for his undertaking. It will be a service to him, and to historical scholarship, if persons having in their possession manuscript letters from or to William Penn will communicate with Mr. Myers, at his home address, "Kentmere Lodge," Moylan, Pa.

Pebbles

"Has plenty of poise, has she?"

"Well, she looked at Niagara Falls thru a lorgnette."—*Washington Herald.*

Stoode.—You take the armchair, Pearline.

Maid.—No; you take it, Chester.

Stoode.—Well, suppose we both take it.—*Cornell Widow.*

Lady Customer.—Do you keep coffee in the bean?

New Clerk.—Upstairs, madam; this is the ground floor.—*Princeton Tiger.*

Extract from a young lady's letter from Venice: "Last night I lay in a gondola in the Grand Canal, drinking it all in, and life never seemed so full before."—*Lippincott's.*

Here is a funny thing: Geo. W. Pennell lately built a cow shed. When it was completed, it was so fine that he didn't like to use it as a cow shed, so he built another and cheaper shed for the use of his cow.—*Atchison Globe.*

THE DOCTOR'S STORY.

Mrs. Rogers lay in her bed,
Bandaged and blistered from foot to head.
Bandaged and blistered from head to toe,
Mrs. Rogers was very low.
Bottle and saucer, spoon and cup
On the table stood bravely up;
Physic of high and low degree;
Calomel, catnip, boneset tea—
Everything a body could bear,
Excepting light and water and air.

I opened the blinds; the day was bright;
And God gave Mrs. Rogers some light.
I opened the window; the day was fair,
And God gave Mrs. Rogers some air.
Bottles and blisters, powders and pills,
Catnip, boneset, syrup and squills.
Drugs and medicines, high and low,
I threw them as far as I could throw.
"What are you doing?" my patient cried;
"Frightening Death," I coolly replied.
"You are crazy!" a visitor said.
I flung a bottle at her head.

Deacon Rogers he came to me;
"Wife is comin' round," said he,
"I re'lly think she'll worry thru;
She scolds me just as she used to do.
All the people have poohed and slurred—
And the neighbors have had their word;
'Twas better to perish, some of 'em say,
Than be cured in such an irregular way."
"Your wife," said I, "had God's good care
And His remedies—light and water and air.
All the doctors, beyond a doubt,
Couldn't have cured Mrs. Rogers without."

The deacon smiled and bowed his head;
"Then your bill is nothing," he said.
"God's be the glory, as you say;
God bless you, doctor, good day! good day!"

If ever I doctor that woman again,
I'll give her medicines made by men.
—*Medical World.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Spain and the Vatican

A DECREE issued by the Spanish Government on the 10th of June gave to Protestant congregations and schools the right to display signs or notices that services were being held within. Against this the Holy See immediately made protest, contending that the decree violated the first article of the Concordat and article 11 of the Spanish Constitution. The latter reads as follows:

"The Catholic Apostolic Roman religion is that of the State. The nation undertakes to maintain its worship and its ministers. No person shall be molested in the territory of Spain for his religious opinions, nor for the exercise of his particular worship. Nevertheless no other ceremonies in public will be permitted than those of the religion of the State."

Disagreement has centered chiefly about the last sentence. It has long been a matter of common knowledge that Protestant churches and schools exist in Spain. Public entrances and public insignia only were prohibited. Those who came to services usually had to enter by a side door. The Premier's decree therefore simply gives a legal status and the right of publicity to what had been a recognized fact all along. It is surprising that the Vatican should have sent an ultimatum to the Spanish Government on a matter of such small importance and so clearly within the administrative power of the State. Nothing shows more clearly the extreme ultramontanism of Merry del Val, the Papal Secretary of State. We cannot but think that liberal-minded Roman Catholics all over the world must regret such a reactionary policy at Rome. What is more, it is thoroly inconsistent.

In England recently, where Roman Catholics enjoy full rights under a Protestant Government, they objected to the language of the coronation oath because it condemned certain doctrines of Roman Catholicism. The justice of their objection was recognized and the matter was remedied. In Spain, however, where the Government tries to remove a vastly greater injustice to Protestants, the Vatican not only tries to stay its hands, but provokes a rupture of diplomatic relations in order to avoid the practice of the Golden Rule.

This inconsistent and reactionary policy is in keeping with previous acts of the Papal Secretary. If it is correct that he has even gone the length of sending telegrams of encouragement to Carlist revolutionaries, he certainly does not deserve any further consideration from the Spanish Government. Such acts descend to the level of political intrigues that darken the pages of some of the Popes of the Middle Ages. It can only have the effect of rallying enlightened Spanish sentiment to the support of Canalejas.

The correctness of the Premier's contention that he is not engaged in a struggle against religion, but against an ultramontane clericalism, is shown by the loyal support which he is receiving from Spanish Roman Catholics. Most significant is the fact that the influential paper *El Imparcial,* of Madrid, tho professing itself devoutly Catholic, sides with the Prime Minister against the Vatican. The negotiations of the Government have been conducted with frank publicity, a fact which has created much sentiment in favor of the proposed reforms among the city populations.

The principal object which Canalejas has in view is the revision of the Concordat of 1851, under which Spain

granted to the societies of St. Vincent de Paul, St. Philip Neri and one other to be approved by the Holy See, but unnamed, protection and the privilege of carrying on certain kinds of business without taxation. Under cover of this privilege large numbers of monks of other orders have flocked into Spain from Europe and the Philippines. They have engaged in the conduct of schools, in manufactures and various industries. Freedom from taxation enabled them to do this on a scale which gradually forced native Spaniards out of business. According to a recent count, there were more than 3,000 monasteries and more than 100,000 monks and nuns in Spain. Besides being allowed to carry on untaxed industries, the religious bodies last year received support from the state to the extent of more than $8,000,000.

The movement against the religious orders, therefore, is a step in the solution of an economic problem with which Spain has been struggling for many a year. In this country many States do not even exempt church buildings from taxation if they are ever used for paid lectures or entertainments. We feel sensitive in regard to anything that gives one man, or group of men, an unfair advantage over another in the industrial struggle. To us, therefore, it seems a matter of simple civic justice that industrialized religious orders, many of whose members are not even naturalized citizens of Spain, should either pay taxes or go out of business. In a case of that kind it is not only the right, but the duty of the state to limit, regulate or withdraw privileges which subvert the industrial prosperity of the state.

But whether it be slavery, an overprotected industry or some other fat nestling of one-time respectable injustice, it usually defends itself by obscuring the issue and charging unjust treatment. When Canalejas desired to proceed with the revision of the Concordat the Vatican made the condition that the decree of religious liberty to Protestants and other religious bodies must first be withdrawn. It said in effect:

"We will not consider the modification of unjust privileges which we are enjoying until you repeal this act of justice which is a breach of the Concordat."

The moral aspect of such a policy calls for no comment. We prefer to let the reader's moral sense suggest the appropriate judgment. It is not surprising to find the Paris *Temps* remarking that some "Catholic papers do not defend the Vatican with much ardor." We venture to think that open-minded Roman Catholics thruout the world find the present ultramontane and obscurantist attitude of the Holy See a severe test of their loyalty. The statesmanship of Leo XIII has departed from the Vatican, and a medievalist, in the person of the Papal Secretary of State, is determining its present policy.

Meanwhile the Government is proceeding to limit and regulate the religious orders. The King has taken occasion to visit England, apparently to give his Cabinet a free hand. The religious orders are doing their utmost to retain a grip on their privileges. In country districts and especially in the Basque provinces, where clerical influence is strongest, there are signs of a serious uprising. The clerical element has often won similar battles and feels confident of success. The affected orders are raising the cry that they are being subjected to religious persecution. But those who are conversant with the facts know that the issue is civil rather than religious, and involves the right of the state to regulate its own internal affairs. Premier Canalejas stated the issue squarely when he said:

"Poor Spain, if we succumb it will be decadence. The Government, which possesses the confidence of the King, will save Spain despite all and against all. The struggle we wage is not anti-religious, but anti-clerical. We count upon the army, a majority in Parliament and reason."

The Menace of Unpunished Crime

A PUBLIC journal rarely puts before its readers an unsensational account of a danger threatening society so calculated to move serious-minded men as is the address on "Unpunished Crime," by Judge Holt, of the United States District Court of New York, which is printed in full in this issue of THE INDEPENDENT. Those who heard this address and those who already have read

it in manuscript or in proof feel that a clear case has been made out of a state of affairs calling for immediate and courageous action by public-spirited citizens, and that measures have been proposed which call, by their moderation, sanity and wisdom, for patient and extended trial.

Murder, in the United States, is an almost unpunished crime. In this generalization, Judge Holt comes to the same conclusion which, twice in recent years, the Hon. Andrew D. White has, in most solemn warning, brought to the attention of the American people. Judge Holt does not take up for review the extent or the increase of other crimes, but there is every reason to fear that an exhaustive survey would show an astounding indifference by American society as a whole to the ineffectiveness of our entire machinery of criminal justice.

Whether it be the mob of lynchers or of strikers, the Black Hand assassin or the automobile thug; whether it be the group of "gentlemen" meeting as boards of directors to combine insolvent companies, water their stocks, and defy the laws prohibiting contracts in restraint of trade; or whether it be the gangs of hoodlums whose rowdyism on cars and in other public places has become the terror of women and children, these insolent criminals, high-born or low-born, with strangely few exceptions, are permitted not merely to escape punishment, but even, without so much as wholesome fear of punishment, to go on indefinitely perpetrating crime.

Judge Holt places upon the police, the courts, the administrative officers of government and the law-making bodies, their full respective shares of responsibility for these intolerable conditions. We call particular attention to the suggestion, important not only because of its obvious good sense, but also as coming from a judicial officer of the United States, that it is the sworn duty of all guardians of the peace to stop lawlessness in its beginnings, to break up the mob at the instant when mob-minded men first resist authority; and, in like manner, that it is the duty of the men higher up, namely, mayors and governors, promptly to discipline or remove policemen, police magistrates and sheriffs the moment that they show sympathy with violence or indifference to it. We believe that there is great wisdom, too, in the suggestion that slight punishments promptly and surely inflicted, for relatively small offenses, will be immeasurably more effective than the threat of severe punishment for serious offenses seldom or never inflicted in fact.

Our practice almost reverses these wise maxims. The sheriff and the policeman do nothing until some relatively serious violence has been perpetrated. The police magistrates too often are "men whose sympathies are with that great class in every city which has business interests connected with vicious institutions." Indictments "contain an excessive number of counts, charging substantially the same things in many different ways." The trial of such an indictment tends to be protracted. And so, for one reason or another, "the punishment of crime is a sort of lottery." We think that few high-minded men of bench or bar will take exception to Judge Holt's contention that indictments should be brief and clear, that no stay should be granted except on a judge's certificate that there were reasonable grounds for an appeal, that every effort should be made to have appeals quickly heard, and, above all, that "no judgment should be reversed on appeal if, upon the whole record, the judgment appears to have been just, no matter what technical errors were made on the trial."

Upon Judge Holt's suggestions in the realm of penology, or the treatment of the offender after conviction, there will perhaps be differences of opinion, because here is one of the intellectual and moral rioting grounds of faddists, amateur reformers, sentimentalists and social saviors of every known stripe. It will, however, at least be acknowledged that Judge Holt keeps to practical issues, recommends only measures that have been well tried, and avoids radical programs. Whether many prisoners of adult years could be in some degree reformed thru systematic work, neither lax on the one hand nor severe to the point of cruelty on the other hand, is a fact that should long since have been established by experiment; but the truth

is that it never has been, notwithstanding all the talk in "Prison Congresses" and all the money spent on "reformatories" since the days of Elizabeth Fry and John Howard. Judge Holt gives optimism the benefit of the doubt, but not to the extent of denying that there is such a creature as the habitual and incorrigible criminal. No graver and weightier words have ever been spoken on this subject than in Judge Holt's conclusion that such a man, after full and fair trial on the specific charge of being an habitual criminal and found guilty, should be put to death, or, if the "squeamish sentimentality of this age" must spare his worthless life, incarcerated until it naturally ends.

Surely it is time for strong and able men in America to get together and find a way to protect our civilization against one of the most darkening dangers that now overshadows it.

Let Us Suppose

THERE must be some shadows cast of coming events that lead the New York *Tribune* to warn the nation that it would be at the peril of our national existence that the outlying possessions—Alaska, Hawaii and Porto Rico, or even the Philippines—may any or all of them seek to become equal States in the Union. It sees very grave dangers. They are "detached"; the fathers of our Constitution never thought of such a thing. Besides, the differences of race—that is always the bogy. It adds:

> "Lincoln exprest the conviction that this Government could not permanently endure half slave and half free. We gravely doubt if it could endure half civilized and half savage, half white and half polychrome, half continental and compact and half insular and dispersed. Seeing the strength of the opposition to the immigration of thousands of Chinese and Japanese, and the endurance of the prohibition of citizenship for them, we cannot believe that this nation will ever be so fatuous as to pitchfork into the Union and into full citizenship millions of Chinese, Malays, Tagalogs, Moros, Kanakas and so on."

So they talked about Texas and all the Pacific States in the old days. Seward said no representative from Oregon could reach Washington till after Congress had adjourned. He did not foresee the railroad. Let us suppose the case that Alaska should seek to be a State. It would have not less than a quarter of a million white, English-talking men. "Half savage" Indians do not seek Statehood. In a few hours by aeroplane the Senators and Congressman could be in Seattle, for Alaska is but a little over 300 miles north of the border line of the State of Washington. Alaska will be a State in all probability within twenty-five years; and who knows how soon, by some miracle of common sense, British America and the United States may join their forces?

Then as to Hawaii. Hawaii is not in Polynesia, as our contemporary seems to imply when it deprecates the "United States of America, Asia and Polynesia." It is our nearest island to the west, American settled, American ruled, by all arguments American. If it should ever have population enough it ought to be a State, or, otherwise, an integral part of the State of California. To be sure, it has Chinese and Japanese; but they will either return to their own land or their children will become English-speaking, American-civilized citizens, with the same rights and the same cultivated ideas and genius as the rest of us. There is no reason why they should not have all our privileges; and among them is the chance of Statehood.

Then there is Porto Rico. It is our near neighbor, rapidly being Americanized by public schools and the English language. There, as in all the West India Islands, the Spanish language will fade out, and it is not robbery, but destiny, that will draw them all, and Cuba first, perhaps, under our flag. But they have a multitude of people of mixt blood. Well, what of it? So have we. Their children can salute the flag. We have just made the Porto Ricans citizens; the next step will be to make them a self-governing Territory, and by and by a State. Justice and the logic of history require it, and who could be hurt by it?

But then there are the "Malays, Tagalogs, Moros," etc. What of them? Nobody talks of making citizens out of pirates and head-hunters. But let us look forward half a century or a century, if you please. What shall we see then? We don't know and cannot guess

what we shall see in the way of locomotion that will bring the most distant lands as near as Seattle now is to Washington, D. C., but we do know what a few generations of education and culture can do for any people or tribe that lives. What has already been done to unify and educate the people of the Philippines is the marvel of the world, and the process will not cease. It may be well, one of these years, to make of the Philippines a little independent nation, but that would be unfortunate. This is the day for uniting, not separating, peoples. When the Philippine people shall have learned English, as they will; shall have acquired our civilization, as they will; shall be able to govern themselves intelligently, as they will; and shall then choose to be constituted as one or two States of our great Union, rather than to be thrust out into the cold, how can we imagine that such a gift to them of equal Statehood can endanger our stability? The idea is absurd.

The day of universal peace is coming, of universal civilization, and with it we may expect great consolidations. We shall learn the unity of humanity, as closer intercommunication brings peoples into brotherhood. Separation is burdensome and costly. Union is the world's kindly destiny, and it is our part to expect and help it.

Should Not Wait Two Years

In a published statement authorized by the President as an expression of his views, it is asserted that the Republican party deserves to be successful at the coming elections because it has "fulfilled loyally its campaign pledges" and has enacted wise legislation in accordance with its platform. Proof was shown last week that these are not the views of a large majority of the Republicans in Iowa and Kansas. "We do not recognize the tariff revision of 1909 as a satisfactory fulfilment of the party promises," said the Republicans of Iowa in their convention, by a vote of 834 to 549.

In the same authorized statement of Mr. Taft's views it is said:

"The tariff experts will submit to the President within two years recommendations for the revision of certain schedules of the tariff law."

If the pledge of the platform concerning the tariff was fulfilled, why is further revision needed? If the tariff was revised in accordance with the platform's doctrine that a protective duty should not exceed the difference between cost of production here and cost of production abroad, plus a reasonable profit, why should experts recommend a further revision in order that duties shall fit the platform? It is known, of course, that the platform's rule was not followed, that Congress knew little or nothing about the costs of production, and that it made scarcely any attempt to find out what these costs were.

"Within two years"? The President should urge his tariff experts to make a report, at least with respect to certain parts of the tariff, within one year. He should require a part of their work to be done within six months, and he should let the public know that he has asked them to do it within that time. The tariff errors that were made have split his party. Steps should be taken to correct them with the least possible delay.

It is the tariff blunder that has beaten four stand-pat Republican Congressmen at the Kansas primaries and given to the Iowa Senators who opposed the revision bill the support of 60 per cent. of the Republicans in their State. Insurgency means something more, it is true, than protest against an unjust revision and a broken promise. It means also protest against control of legislation by a dominating group for the personal profit of legislators themselves, or of their friends, or for the benefit of powerful combinations of manufacturers. But the insurgent movement, now so menacing to the party, was due at the beginning to the tariff blunder, the plans of ruling groups in House and Senate to make a sham revision, and the carrying out of those plans in the face of persistent and emphatic warning. Therefore it should be the aim of leaders who desire party union and harmony to deal with the original and continuing cause of disturbance, and to use promptly such remedies as may be available. It would be folly to wait two years.

Step Lively

THAT we are fairly entered upon what has been aptly designated as the era of speed mania is a fact attested by general experience. With the substitution of the mechanical motor of one type or another for the draft horse there has been an acceleration in vehicular speeds all along the line. The chief drawback to still higher averages in passenger transportation is the failure of passengers to obey the monotonous injunction to "step lively." They leave and enter vehicles about as they always did, and as they are likely to do for a long time to come. No feverish haste is manifested in leaving or entering subway or elevated trains, however fast they run between stations. The fact that the passengers have to move in lines, practically single file, irrespective of age, sex or previous condition of servitude, and that the most impetuous cannot go over or under or thru the more leisurely who chance to precede them, may explain this in part; but a more satisfactory and convincing explanation is found in the warranted assumption that there is an average speed of movement for human beings, probably a mathematical function of the average age and physical energy, which can be exceeded only momentarily and as the result of panic. If a vehicle traveled between stations at a higher rate than that established in the German speed tests at Zossen, passengers would get on and off no more quickly than if it moved ten miles an hour. Probably they could not. Theaters, churches and all places of public assembly can safely be emptied only about as fast as they now are on the average. If this is true, the reiterated injunction to "step lively" accomplishes nothing except to irritate those addressed.

The thought which this suggests has much greater significance in relation to public thorofares than to public vehicles. Is it possible for the average pedestrian safely to adapt himself to the tremendously accelerated speed of vehicular traffic since the advent of electric cars, automobiles and motor trucks? If thus far the survivors have managed to do so, is it reasonable to assume that they can keep pace with the mechanician and the motive forces at his command? The natural effect of increasing the danger at street crossings is to quicken the vigilance of pedestrians and stimulate the action of their brains, which, in turn, exact a more prompt response in muscular effort from the organs of locomotion. This explains why all kinds of people cross the highways of cities more quickly and with greater attention to traffic than is ever done in the country. But even for the dwellers in cities there is a maximum average of agility, which can be increased only by the slow process of evolution. If we assume that a given generation—the present, for example—by enforced conformity to a changing environment, is able to increase its average agility 5 per cent. (which would bear to natural evolution about the relation which a day bears to a century), we are confronted by the disquieting fact that mechanical progress is enormously more rapid, and that within five years, or a sixth of a generation, the average speed of vehicular traffic has been accelerated more than 100 per cent. If this ratio is maintained another five years will put the human race hopelessly out of the competition.

In fixing speed regulations for public highways, it would seem that the consideration entitled to most weight is, What is the maximum average agility of the general public? The pedestrian should at least have a fair chance for his life. To deprive him of this is unsportsmanlike, even for one obsessed with the speed mania. It might not be consistent with the public interest to retard all traffic for the accommodation of the aged and infirm, but they do not establish the average nor are they numerous enough materially to lower it. Not less unreasonable would it be to permit a vehicle movement which the young athlete, skillful in dodging and trained in long jumps, may be expected safely to negotiate while going about his business. He neither establishes nor materially affects the average. The city man does "step lively"—he has to; but he cannot accomplish the impossible, and it would seem as if this fact might be recognized in its full significance without waiting for its

demonstration in the casualties column of our vital statistics.

Reviving the Irish Language.

THE new University of Ireland has made knowledge of Irish a requirement for entrance. This policy was adopted only after considerable opposition, some of which came from the Roman Catholic clergy. About a sixth of the population knows Irish, and it seems likely that many students who would have entered the University of Ireland, in whose affairs the Catholics have a voice, will enter the University of Dublin, which is controlled by the Anglicans.

This action for the first time places Irish upon an official footing. Heretofore the movement to restore the language, where it has not been politically anti-English, has been desultory, pushed by enthusiastic ladies at four o'clock teas. The restoration of Irish was something of a society fad. Plays were given in Irish and society turned out. Plays were given in English, with the bracketed words on the playbill, "The characters are supposed to be speaking in Irish." For William Butler Yeats, so charming of pen and even more poetic and charming of appearance, can't write in Irish; at least, not well enough to write a play, and he is the author of many of the dainty plays that have characterized the Celtic revival in Ireland.

If Irish once more becomes the vernacular of the people, to know Ireland the world must come into the narrow bounds of Irish speech, which the world will not do. There is no sufficient incentive to spur it to the task. Native Irish literature does not differ from the early literature of contemporary Europe; it is primitive. The great writers and orators of Ireland, the remarkable array of great barristers, wrote and talked in English. To argue that it were well to go back to Irish to unlock the treasures of Irish literature is as sensible as to urge that we resume the English of Chaucer to enable us to appreciate his beauties. The treasures of the literature of Ireland and of England alike are English. Ireland has gone out of Ireland to be great. This has been her peculiar fate and peculiar glory. The great Irish generals have fought under the flags of England, France, Spain, Austria and the United States. The Irish statesmen of whom we hear most have been great in the affairs of the British Empire as a whole, not of Ireland in particular. Suppose the Irish had remained at home, had locked themselves up inside the Irish tongue, could they have had a tithe of the influence and renown they have had? Even in the days when Ireland was accounted the "isle of learning," that learning was in an international tongue, Latin, the language of medieval scholarship. The Irish missionaries who took Christianity to Germany and Scandinavia wrote Latin, probably spoke it, as did the learned generally then. Thru English the Irish do not merely reach the people to whom that tongue is native, but reach those who have learned it in other lands. Thru English they can reach Germany and France. They could not thru Irish.

The Roman Catholic clergy have not favored the revival of Irish. They have not distinctly opposed it, but their attitude has not been distinctly friendly. Douglass Hyde, one of the chief movers, is a Protestant, and Yeats, the other greatest leader, is an agnostic. The revival of interest in the old speech has revived a host of old legends, old superstitions and customs. Some Frenchman has called old national superstitions "fossils" of the former pagan religions. In the elves, gnomes and fairies he sees the old pagan gods and spirits, occupying a position inferior to that which once was theirs, but still feared and in a measure reverenced. To a certain degree the old pagan religion exists alongside of and in rivalry with Christianity. The peasant woman in Brittany, Wales and Ireland who puts out a pan of milk at night for the elves, and leaves nuts, apples and bread for the fairies, has made an offering to the old divinities whom her ancestors once worshipped. The attempts of Hyde, ardent folk-loreist, and of Yeats, mystic poet steeped in legend, to revive old Irish national customs, their resurrecting of old myths, beliefs, superstitions, is in a certain way inimical to Christianity. One cannot

say this is why the clergy have held aloof from the movement to revive Irish, but one can well believe that it may be a consideration.

The restoration of Irish would have an important effect upon American life. It would close the door between Ireland and the American descendants of Ireland. The Irish is an old immigration. Yet the second and third generations are more Irish than the second and third generations of German blood are German. The man of German blood who has English for his mother tongue is far separated from the ancestral race. The man of native American stock is his brother, the man of Germany is not. But the Irish spoke English in the old land and speak it here. There has not been the disintegrating shock of a new tongue to break the bonds of their race unity. Men of third and fourth generations describe themselves as Irish. Outside of Pennsylvania, no man of third generation from Germany calls himself German. When Irish becomes the language of Ireland, Irish-Americanism will end. Irish immigration is small and must continue so. The number of those of recent Irish extraction here is too few to make a rallying point for the race, and with a difference of language relations of Irish-Americans with Ireland will be difficult and Irish-Americanism will cease.

But there is not much likelihood that Irish will be revived. The Irish have made English their own. Dublin is reputed to speak the best English known. Irish is the old language of the Irish, as Anglo-Saxon is the old language of the English, and both are unintelligible to them now. English is the common speech and property of both.

Automobile Owners, Attention!

THE INDEPENDENT has printed many articles on automobiles, some by professional enthusiasts who describe the joys of speeding, others by optimists who claim that it costs no more to keep a machine than a pair of horses. The average automobile owner, however, like the average everybody else, seldom finds his way into print, tho he pays the bills and is therefore the one to throw the most light on the subject. Now that everybody is asking himself if the time has not come when he can afford to buy and many are even mortgaging their homes to raise the necessary money, some fountain-head testimony ought to be of considerable value. We accordingly invite any of our readers who are so fortunate or unfortunate as to possess an automobile to make confession, especially as to the following points:

1. The cost of maintenance of an automobile after it is bought.
2. The amount of time and care required to keep it in good running order if no chauffer is employed.
3. The average length of life of an automobile. How soon it goes to the scrap heap, etc.
4. The wear and tear on nerves from risks in breaking down, speeding, etc.
5. The time spent in the automobile contrasted with time hitherto taken from productive effort.

The letters must be short, sharp and statistical. And please, above all, stick to the facts of your own experience.

Senator Gore's Charges

Denials are in order, but denials are of no use. The Indians have been of old fair prey for smart scoundrels, for stealing from Indians has been thought no theft. It was grab and get. Thanks to a few meddlesome philanthropists who have made a noise, the Government has been trying these thirty years and more—indeed, ever since General Grant's administration—to save the Indians from the sharks, and no easy task it has proved to the Indian Bureau. What Senator Gore's motives were we cannot know, but he did a good deed when he stopped a fraud by declaring that the effort had been made to bribe him. He may not be impeccable, as the man charged cries *"Tu quoque,"* but the charge he makes is very strongly supported, and it is on the face of it not unlikely. There is absolutely no evidence and no likelihood that Vice-President Sherman was in the plot, for, as Chairman of the House Committee on Indian affairs, he has been a good friend of the Indians. The investigating committee is doing good work and has gone to the right place to get the facts; and they are getting them.

Japan and America

"Fighting Bob" Evans, who seems to be a privileged character with the Secretary of the Navy in that he is never court-martialed for his swashbuckling utterances, has just made this prophecy over his signature in the New York *American:*

"A glance at conditions in the Pacific, where a bitter commercial war will sooner or later be waged, does not encourage the belief that we can win in such a struggle."

It is a disgrace to this nation that all the war talk with Japan comes entirely from our own people. There is nothing more certain in contemporaneous world politics than that Japan has neither the inclination nor means to fight us. The evidence is overwhelming. Only last week Premier Katsura, in an interview, said:

"What causes the revival of these war rumors in America? You objected to our immigrants; we kept them away. Why this talk of war with us in America now? What is the basis of the complaint against us?"

It is time that some peace society or other organization took it upon itself to make an exhaustive study of our relations with Japan, so as to refute forever the fallacies of the Hobsons, Evanses, Myerses, Lodges and their allies, the Armament Trust and Navy League. Those who are sincere in their fear of an American-Japanese war can be converted by the facts. Those who prophesy war for what they can personally gain from it, or for the benefit of the Steel Trust, the Powder Trust and the shipbuilding yards, should be branded as enemies of mankind and forever after visited with the wrath of an indignant people.

Administration Measures

It is reported that President Taft's coming message will cover these fourteen principal points: (1) Conservation; (2) economy; (3) railroad stocks and bonds; (4) report of Monetary Commission; (5) reform court practices; (6) ship subsidy; (7) employers' liability; (8) bureau of health; (9) new government for Alaska; (10) injunctions; (11) appropriation for postal savings banks; (12) two battleships; (13) fortification of Panama Canal; (14) report of Tariff Board. We favor the Administration's stand on all these questions except 6, 12 and 13. Ship subsidy is paternalistic favoritism, and can be defended only as a protection against other nations who adopt it to our disadvantage; two battleships a year is militaristic madness; the Panama Canal should be neutralized, not fortified.

The Galveston Plan

The *Engineering News* has taken the pains to collect the names of all the cities in the country that now enjoy the so-called commission plan of city government which originated in Galveston, Tex., as an emergency measure after the great flood of 1900. The plan worked so well then that it soon spread to other cities of the State and finally thruout the country, until now seventy cities in seventeen States have adopted the plan and others are joining every day. The commission plan is in essence nothing but the substitution of five men, including the mayor, for the old council or board of aldermen of one or two chambers, together with a number of administrative boards or departments. To prevent danger of an autocratic control of the city by the commission, the recall and the initiative and referendum have become essential adjuncts to the plan. Here is the whole list of cities that have so far adopted the innovation:

Chelsea, Gloucester, Haverhill, Mass.; Bluefield, Huntington, W. Va.; Charlotte, N. C.; Bristol, Clarksville, Memphis, Richard City, Tenn.; Eau Claire, Wis.; Burlington, Cedar Rapids, Des Moines, Keokuk, Sioux City, Ia.; Abilene, Anthony, Coffeyville, Emporia, Hutchinson, Independence, Iola, Kansas City, Leavenworth, Marion, Newton, Parsons, Pillsbury, Topeka, Wellington, Wichita, Kan.; Del Rapids, Pierre, Sioux Falls, S. Dak.; Bismarck, Mandan, Minot, N. Dak.; St. Joseph, Mo.; Austin, Beaumont, Corpus Christi, Dallas, Denison, El Paso, Fort Worth, Galveston, Greenville, Houston, Kenedy, Marshall, Orange, San Antonio, Sherman, Waco, Tex.; Ardmore, Enid, Tulsa, Okla.; Colorado Springs, Grand Junction, Colo.; Roswell, N. Mex.; Tacoma, Wash.; Berkeley, Riverside, San Diego, Calif.; Boise, Lewiston, Idaho.

Woman's suffrage, the initiative and referendum, the recall, direct primaries, conservation, revision of the tariff, proportional representation, insurgency, physical valuation of railways, etc.—all these political reforms started in the West. The effete East and the Bourbon South had better wake up.

Cancer Research

Vital statistics show an alarming increase in the number of deaths from cancer. The origin of this disease is still wrapped in mystery, altho many individuals and societies are working at the problem. Recently the supporters of the Imperial Cancer Research Fund held their annual meeting in London, and Mr. A. J. Balfour on this occasion delivered a very interesting address. The results of systematic observation gathered in the eighth annual report of the fund mark substantial progress, tho much of it consists in disproving earlier theories and assumptions. It has been found that cancer afflicts all races of men in all climates, hence no particular set of habits can be made responsible for its origin. The fact that widely different genera of animals, including fish, are subject to its ravages disposes of other hasty generalizations that had been made. The belief that heredity plays a part in the spread of the disease has become quite general. But careful and extensive breeding experiments with mice have shown that heredity plays no great part in causing the disease. Cancer of the breast appeared spontaneously in seventy-five cases out of seven hundred females. This is not a large percentage. Besides, liability to the disease was found to be greater in those that were born before the appearance of the disease in the mother than those that were born after. Since in the latter case one has to reckon with the added element of contagion, the results show no relation between cancer and recognized infectious diseases. It is such careful investigations as these that make it possible rigidly to test every conclusion before it is employed as a foundation for further research.

Peat

Professor Davis, of the Geological Survey, believes that the time has come for a more thoro study of the peat bogs in the United States, with the idea of utilizing them for power and light and heat. In Florida the work is under way of establishing a plant for generating electric power by engines using air-dried peat as a fuel. Besides the New England States, those States that are best supplied with peat beds are Virginia and the Carolinas, with Georgia and Florida, and the mid West up into the Dakotas. Some of these States have also coal beds, but most of them have not. Peat is nothing more nor less than coal in the process of making, and it is fortunate that most of it lies where coal is not easily obtainable. Experiments of the Geological Survey show that peat is even superior to some of the bituminous coals for operating gas engines. Besides this, the peat contains in many cases over 1 or 2 per cent. of nitrogen, and the value of the ammonia obtained as a by-product pays for extracting the gas, and more. Peat can be burned in the old-fashioned way, after being thoroly dried, but in the modern gas producers it can be used even where there is 40 per cent. of water. It is worth $3 a ton when converted into bricks, and the estimate is made by Professor Davis that the peat resources in sight are worth at least $39,000,000,000. It makes the very best of coke, being the equivalent of hard wood charcoal. The by-products being added to the direct value of the peat as a fuel add to the value nearly $100,000,000,000 more. This is an enormous sum to consider, for it is more than the value of all the property, live stock, implements and buildings of the farmers of the United States. It is all the more a pleasant topic to think over, just now when the people have been compelled to consider the approaching dearth of coal, and other results of national waste. We have a fuel in sight, after all, that can hardly be exhausted. Peat is also being used in the United States as a filler and absorbent in connection with fertilizers. In Michigan paper is being manufactured from peat, and in Sweden it is made to produce ethyl or alcohol. The estimate of our Geological Survey does not include the vast deposits of Alaska, which are almost incomprehensible.

More About Heads

Apropos of our recent editorial note on the formation of an American type, Dr. Emma T. Miller, of San Antonio, Tex., communicates some interesting facts. She believes that the manner of cradling has a determining effect upon the head of the child, and cites an illus-

tration from her experience in Persia, where a considerable group of Syrians live amid the Mohammedan population:

"These Syrians admire the round head and deliberately keep their babies lying on their backs with a well-filled hen-feather pillow under the head. Now, there are few things harder than a well-filled hen-feather pillow. They do this so that their babies' heads may not be like those of the Mohammedans, which are more likely to be long. This reason I have heard repeatedly. But I have seen in the case of some of these Syrians who have been in close touch with missionaries and have adopted a softer pillow for their babies, a long-headed baby belonging to a short-headed father and mother, and short-head grandparents probably to the remotest generations."

Our correspondent, therefore, is inclined to conclude that the approximation in type observed in New York between the children of round-headed Hebrews and long-headed Sicilians is due to the adoption, by their respective parents, of the American cradle and the American way of handling babies. If this is correct it furnishes additional evidence against the traditional anthropological distinction between the round head and the long head as a more or less permanent hereditary feature.

Recasting the British Constitution

Under the Liberal Asquith Ministry the British Constitution is not being amended but recast, and the amazing thing is that this is being worked out not by the Liberal Cabinet, but by a constitutional convention so small that it consists of only eight men—Mr. Asquith and three Liberals, and Mr. Balfour with three Conservatives. What they will present to Parliament in November Parliament will accept. When Mr. Lloyd-George presented his budget it was roundly abused as a violation of the sacred constitution; and when it was rejected by the Lords and then the indignant Cabinet threatened to reduce the power of the Lords, the cry against attacking the constitution burst into a passionate roar. Now, by patience and wisdom Mr. Asquith has, in a new Parliament carried the budget without opposition; his Ministry is unshaken, and the by-elections favor the continuance of Liberal rule. But, most amazing of all, is this conference to recast the constitution; and it will not be satisfied with reforming the House of Lords, but it will attempt to settle the Irish question and to correlate more definitely the colonial dependencies with the central heart of the mighty empire. That is, it is a radical, statesmanlike reorganization of the empire which these eight men are devising about a council table. It is a task of the utmost delicacy and the highest importance. It belongs to the era of constructive, potential idealism; and when accomplished, Asquith and Balfour will stand with the greatest statesmen Great Britain has produced. It is well that the death of King Edward and now the Parliamentary recess give pause and time for its achievement.

"Partners of a Glorious Hope"

This was the hymn sung to open the session of the British Wesleyan Conference which was given to the discussion of the question whether women should be admitted as members. It was prophetic, for by a vote of 179 against 153 the women were admitted, and will henceforth be eligible by the synods to the Conference. But the opposition was strong and emphatic in its language. The Rev. Dinsdale T. Young declared that if all the women in the Church demanded it, it should still be refused, for the proposal was unscriptural, unecclesiastical, unseemly and untimely, and was a part of a larger movement to thrust women into spheres for which they were essentially unfitted. Sir George Smith said the innovation was unnecessary. If they want anything let them ask their husbands at home—*and they did*. But these arguments did not secure favor with those who could not see but that women are quite as religious as men and quite competent to have and express their minds. We commend this action to Methodist and other bodies in this country which are slow to do justice to three-fifths of their membership. Why should a Church be ruled by a minority of its members?

A notable event has occurred in India. The chief of Sangli, a considerable town in southern India, aged twenty-one, has married Miss Joshi, aged eighteen, daughter of a lawyer.

The almost unparalleled thing in this event in Hindu society is that he is so old, a man grown, and she a woman grown. To wait so long to be wedded is thought a disgrace. But they have advanced ideas. Miss Joshi's father and mother have been seen to walk the streets together, and Miss Joshi has studied a year in Elphinstone College. Thus reform progresses and some have intelligence enough to know that a wife should be her husband's companion and adviser.

It probably does not often fall to the lot of Baptist clergymen to be held responsible for an earthquake. Such, however, was the case recently in the Italian province of Avellino. One night an earthquake visited the town in which a party of American Baptist clergymen were staying. There had been some ill feeling between Roman Catholics and Baptists in the town, and the populace at once reached the conclusion that the Baptists were responsible for the earthquake. A mob gathered with the intention of hanging them, but they finally got out of town under a guard of two hundred soldiers. What will happen to the Methodists at Rome if they ever stir up a real earthquake there?

The First Church of the American Marathi Mission in Ahmednagar has gone back to primitive and apostolic precedent in ordaining as the chief pastor of that large native church a man who makes his living mainly as a lawyer. The Rev. Shahurao R. Modak will have an assistant pastor. This is part of a plan to make the Indian Church independent of foreign support and yet secure educated pastors. Mr. Modak is joint secretary of the Committee of the Federation of the Churches of India. Some writers try to make us believe that there are no native Christians except those purchased and supported.

A year ago there was the naval scare in Great Britain, aimed against Germany. Mr. Balfour put the number of Dreadnoughts that would be ready by April, 1911, at from twenty-one to twenty-five; the actual number is thirteen. Mr. Asquith did not quite so preposterously exaggerate the number, but he bowed to the storm. Now the Empire is pledged to huge unnecessary increases, which means still larger expenditure for maintenance, to the impoverishment of the poor people.

The Church of England has 39 Articles of Faith; the American Methodist Church reduced them to 25; and now three Methodist missions in Japan have united and reduced them again to 18. Inasmuch as almost nobody ever reads them, whatever their number, they are not as important as people think to retain them. Some of our best and soundest denominations get along without any, and they have little force in holding belief to that of the fathers. In the case of Japanese Methodism the changes do only a very modest limbering up.

It is nearly what is called "The record" for curiosities in religion that the Esperanto Congress to meet in Washington next week has provided for two religious services on Sunday, to be conducted in the artificial language which amuses people who imagine they can displace the languages which have grown under Darwinian natural selection. One of these services is in St. Paul's Episcopal Church and the other in St. Patrick's Cathedral.

The English town of Newcastle-under-Lyme has found and recovered its long lost charter. It was granted by Edward III in 1328. Between 1342 and 1372, so British Museum experts say, it was borrowed by the town of Preston and the authorities forgot to restore it. The Corporation of Preston is now going to return the charter and apologize for the thoughtlessness of its predecessors in keeping the precious document about 600 years. The Prestonites had actually come to think that it was their own!

Why should the Papal Nuncio at the Spanish Court protest against the decree authorizing the free exercise of religion in public worship? In this day, at this date, does Rome publicly and authoritatively oppose the doctrine of religious freedom? Here Catholics admire and defend it. Why not in Spain?

Insurance

Do You Want to Be Sick or Well?

The Provident Savings Life Assurance Society, in one of its recent bulletins, alludes to the statement, that has obtained currency, that there are constantly three million people seriously ill in this country. Of this entire number, how many took the precaution to undergo regular periodical medical examination while in apparent health, with a view to the early detection or prevention of disease? Probably not one-tenth of one per cent. Judging from personal experience, how many of these three million invalids, think you, sought medical advice during the earlier stages of their maladies, before the pain became unbearable, or health so impaired as to cause serious alarm? Probably not 10 per cent. If, as the Provident Savings Life Assurance Society's bulletin No. 4 suggests, these three million people had exercised, in the care of their bodies, that ordinary common sense which governs them in their business transactions, how much of this illness could have been prevented? Probably 50 per cent. There is a present day tendency on the part of the average man to dose himself with patent nostrums and to take any remedy suggested by friends, the drug clerk, or indeed, any one other than a physician in practice. We are all prone to thrust our hands into a medical grab bag, and then we wonder why it is that our fingers do not always clutch the proper remedy. It has been estimated that from 2 to 4 per cent. of the population in this country are slaves to some drug habit. The amount of opium consumed in the United States per capita, without taking into account smoking opium, has been doubled during the past forty years. Cocaine, which has only been in use about twenty-five years, is now consumed to the extent of 150,000 ounces per annum. The hookworm disease or typhoid fever, alarming as they both are, must take a subsidiary place in comparison with the narcotic drug habits that are fastening themselves upon us. We are neglecting the hygiene of the mouth. We are becoming a careless as well as a thriftless nation, and it is high time to call a halt. If you wish to keep off the sick list, get back to normality. Avoid breathing thru the mouth, which is not normally an organ of respiration. Do not subject yourself to the attacks of mosquitos. Malaria and yellow fever come thru such an agency. Other pests, such as rats, mice, fleas, bedbugs, cattle ticks, "tsetse flies," gnats, gadflies, jiggers—all are known or suspected to be carriers of disease, and every effort should be made to exterminate such pests, or at least to protect food supplies and products and the body from contact with them. Life is, after all, a very serious business, and we must all realize this and act accordingly.

The People's Anthracite Insurance Company, of Scranton, Pa., is now in the process of organization. Over four hundred subscriptions to the proposed capital stock of $1,000,000 and a surplus of the same amount have been secured. The organizing company plans to secure 2,500 subscriptions before making any attempt at permanent organization. When the stated number of subscribers is secured, a stockholders' meeting will be held and organization effected. The company proposes to insure against fire and mine caves. The mine cave feature is comparatively a new idea in insurance, and will be figured out by experts who understand the conditions which exist in the anthracite coal region. The rates will be figured by them. The conditions existing at the present time in the anthracite coal region make the field for mine cave insurance a necessity for property-owners, and it will be the only protection against damages caused by caves. John R. Wilson is acting president, H. E. Kimball secretary, and A. E. Rogers treasurer of the organization committee.

Financial

Cashier Wider's Speculations

Erwin Johann Wider, thirty years old, but looking much younger, was cashier of the Russo-Chinese Bank Agency in New York. His salary was $25 a week. In his custody was the bank's strong box, containing nearly $700,000 worth of securities. He was tempted to increase his income by speculation, and he stole these bonds and stocks, expecting that he would be able to replace them. As package after package was emptied, he substituted for the securities slips of newspaper. At last there was nothing but newspaper slips in the box. Then there was a call from the bank's Berlin correspondent for 3,200 shares of Pennsylvania Railroad stock which should have been in one of the packages. Whereupon Wider, in the following letter to the bank's officers, confessed his guilt:

"Gentlemen: I might as well tell you that in a few days 3,200 shares of Pennsylvania Railroad stock have to be shipped to the National Bank of Berlin, Germany. You won't find them. I took them. You will also find a large number of shares of other stocks missing, which I also took. I meant to put them back, but the market went against me, and it was the blamed cotton situation that broke my neck. It was all your own fault, anyhow. You should not have put one man in charge of everything from A to Z."

In jail, where he lies under indictment, he has told this story:

"My pay at the bank was so small I could not keep my family as my friends kept theirs. I thought about the way in which money was made in the stock market. I heard how easy it was, and that any one could get in there and speculate. The risk, I was told, was nothing. I talked the situation over carefully with men who said they knew all about stocks and speculation; men who read the market. Then I decided to 'take a chance.' It looked so easy. But I never had a chance. It was always, always, messages from the brokers for 'more margin,' 'more margin.' They seemed insatiable."

He stole and lost in speculation bonds and stocks worth $680,000. We shall not point out the most obvious lessons of this incident, those which relate to honesty and duty, but there are others which may not be so clearly seen. There is a lesson for the bank. No such institution in New York can reasonably expect to obtain a competent and trustworthy cashier for $25 a week, nor should it give to a young man receiving that salary the power which Wider had. There is also a lesson for the authorities of the Stock Exchange. How are they to treat the brokerage firms that carried Wider's accounts and probably, accepted from him $80,000 in bonds and $600,000 in the shares of twenty great corporations? Morally, if not technically, these firms' dealings with Wider were forbidden by the rule concerning clerks of banks. Is it possible that his supply of securities and the character of his operations did not excite the suspicions of firms that executed his orders? Did they not know that he was a bank cashier, having securities in his custody? Would it not have been very easy to ascertain that his salary was only $25 a week and that he lived in an apartment renting for $35 a month? Clearly it is the duty of the Stock Exchange authorities to make a searching investigation concerning the conduct of the brokerage firms by whose assistance or negligence this boyish cashier was enabled to lose $680,000 of his bank's money.

....H. K. McHarg, who recently sold his holdings in the Texas Central Railroad, has informed the present managers of the road that he will give a year's salary to each employee who has been in the company's service for twenty years and a month's salary to every conductor, brakeman, agent and porter on the line.

....By the death of J. Edward Simmons New York loses an eminent financier and a most useful citizen. He had been president of the Chamber of Commerce, the Stock Exchange, the Clearing House Association, and the Board of Education, and for twenty-two years president of the Fourth National Bank. Others in his field of activity instinctively turned to him for counsel and leadership in times of stress and peril, and his services in three panics were of much value to the public.

The Independent

VOL. LXIX NEW YORK, THURSDAY, AUGUST 18, 1910 No. 3220.

Survey of the World

Mayor Gaynor Shot by an Assassin

William J. Gaynor, the Mayor of New York, started on the 9th to take a four weeks' vacation on the ocean and in Europe. At a little before 10 o'clock in the morning, while he was standing on the forward promenade deck of the steamship "Kaiser Wilhelm der Grosse," in Hoboken, N. J., talking with friends who had come to bid him good-by, he was shot in the head by James J. Gallagher, a discharged employee of the New York Department of Docks. He has since been lying in St. Mary's Hospital, Hoboken, and it is generally expected that he will be restored to health. The Mayor had just been talking with President Montt, of Chile, also a passenger. Then he had turned to Health Commissioner Lederle, and it was a curious coincidence that the subject of their conversation was an employee in danger of dismissal. This employee had violently abused a citizen, and the latter, after ascertaining that the man had a family depending upon his work, had withdrawn his complaint and asked that he be retained in the service. The man was still in danger, however, and the Mayor was saying a word in his interest. In the group were several department officers, and all were posing for a photograph when Gallagher, a short, thickset man of fifty-eight years, came within two or three feet of the Mayor and shot him, the bullet entering behind the right ear and a little below it. Instantly, William H. Edwards, Commissioner of Street Cleaning, who was once a famous football player at Princeton and whose weight exceeds 300 pounds, struck the man a staggering blow in the face, and then by a most successful "tackle" threw him to the floor. A second bullet made a slight wound in one of Edwards's arms and another buried itself in the deck timbers before Gallagher was wholly subdued. Even the sturdy Edwards needed help, and it was given by the Mayor's secretary, Corporation Counsel Watson and Ralph Bloomer, once a Yale football player of some renown. The Mayor did not lose consciousness, and he even desired to make the ocean voyage, but he was removed to the hospital, while Gallagher, handcuffed, went to jail. "It is strange, it is strange," said the Mayor; "I wonder why he did it." In the hospital his condition gradually improved, and at the end of the week it was reported by the surgeons attending to be satisfactory. Examination by X rays showed that the bullet had lodged in the vault of the pharynx and was easily accessible. But the surgeons decided that no attempt to remove it should be made at present. In an almost miraculous way it had avoided the carotid artery, the jugular vein and various vital spots. At the end of the week the Mayor was annoyed by a cough which caused a little anxiety, but his complete recovery seemed assured. Messages of regret and sympathy were received from all parts of the country. Among the first to send telegrams were President Taft and ex-President Roosevelt. The press thruout the land commended his work in the Mayor's office. While the character of this work had been known in New York and the Northeast, Gallagher's bullet directed attention to it thruout the entire country, and it began to be said that here was a man whom the Democratic party must take into account when making its nomination for the Presidency.——Gallagher was originally a plumber, but participation in ward politics led him into places

in the public service. Twelve years ago inefficiency and misconduct caused his dismissal from a laborer's place in the customs service, and thereupon he wrote letters threatening the lives of President McKinley and Secretary Gage. Appointed a night watchman in the city's Dock Department seven years ago, he was discharged on July 19 last for neglect of duty, misconduct and insolence to a superior officer. Thereafter he wrote repeatedly to the Mayor and others, complaining that he had been wronged and persecuted. While in the service he was a persistent complainant and critic, but his many letters to superior officers did not prevent them from treating him patiently and with undeserved consideration. In a signed statement given to the police after he shot the Mayor he said:

"Knowing that the Mayor was going to Europe this morning after depriving me of my bread and butter—not porterhouse steak—I was irritated to the point of committing this act."

He afterward remarked that he felt no remorse, altho he hoped the Mayor would get well. He had compared his "hard station in life" with the station of the Mayor, who had wronged him. While he was half starved, the Mayor, "laying aside the easy duties of his luxurious office, was going abroad for a month's rest and pleasure." The contrast was more than he could bear, and he determined to "seek revenge." Also, he "had to shoot Gaynor as a lesson to the country." He "wanted to teach high officials to regard the rights of subordinates."

Senator Gore's Bribery Charges

Several Indians, prominent members of the Choctaw or the Chickasaw tribe, testifying last week before the committee which is inquiring about Senator Gore's charges of bribery, said the Indians had lost patience because of the Government's delays, and were willing to pay a ten per cent. fee for a prompt settlement. They needed the money, and they believed they could get it only by paying such a fee to attorneys who appeared to exert much influence at Washington. They would even have given 25 per cent. It was shown that McMurray (who has the 10,000 contracts for the sale of land worth at least $30,000,000) employed agents to procure the signatures of Indians, paying $1 apiece. Douglas F. Johnson, chief of the Chickasaws, 85 per cent. of whom gave the required authority, testified that his people signed willingly, seeing no other way to get their money. Parents wrote the names of their children. One Indian signed the names of all of his nine papooses. The attorney also employed agents to procure letters and telegrams, which were sent to President Taft and members of Congress, in favor of the 10 per cent. agreement. Fifty of these letters were sent just before the date, May 6, when, Senator Gore says, Jacob L. Hamon offered him the bribe. They were forwarded to Richard C. Adams, an attorney in Washington. Congressman Carter, of Oklahoma, one of those testifying, said Adams told him he was to get 5 per cent. of McMurray's profits and that they had plenty of support. Among those who were helping them, he continued, were Congressman McGuire and Dr. Wright, the Choctaw delegate. [Dr. Wright said, in Washington, last week, that he had steadily and consistently opposed the McMurray contracts.] Mr. Carter also testified that Hamon had urged him to ask Senator Gore to withdraw his hostile resolution. He had declined to do this, saying people would think he was to get part of the fees. The next day, Gore told him of Hamon's corrupt offer. Mr. Carter said Adams also urged him to ask Gore to withdraw his opposition. Hamon, testifying again, insisted that in May he was in Washington as an employed representative of Governor Haskell. [This is denied by the Governor and by the Governor's attorney.] He also asserted that Congressman Creager, while a bill in McMurray's interest was pending, had demanded large sums from McMurray. Mr. Creager explains that he did ask McMurray where he could get $4,000, on good security, for use in a land transaction, and that McMurray declined to lend the money because it might appear that he was seeking to purchase legislative favor. One Indian testified that an agent, arguing in favor of the contracts, said McMurray could

easily succeed because, out of $3,000,000 in fees he could afford to pay 1 per cent. of this to one Senator, 1 per cent. to another, 2 per cent. to two or three Congressmen, and so on, spending $1,000,000 in this way, and still have a great fortune left. According to the testimony of George W. Scott, one of McMurray's agents, McMurray holds other contracts which involve $1,500,000 in fees. Some years ago he received a fee or commission of $750,000. D. C. McCurtain, formerly an Indian delegate, testified that McMurray agreed to give him one-fourth of that fee, but afterward repudiated the agreement. Dispatches from Beverly say the President could testify that Vice-President Sherman and Senator Curtis in conversation with him opposed the McMurray contracts. Cecil Lyon, chairman of the Texas Republican committee, admitted to the committee that he was associated with McMurray's firm with respect to the original tribal contracts, which were disapproved by President Roosevelt in 1908. He added that he had no interest in the individual contracts now under consideration.——The President, it is asserted, has undertaken to end the employment of claim agents by the Indians by providing that the work shall be done for them by competent salaried men in the Government service. It now appears that a clause, alleged to have been inserted for the benefit of speculators, was found by him, or by the Department of Justice, in the Indian Appropriation bill recently enacted. His signature was not withheld, because it was seen that the purpose of the speculators could be thwarted. In a case involving land covered by contracts with 20,000 Indians, a decision in favor of the Government was made by the Circuit Court of Appeals, under conditions permitting no appeal to the Supreme Court by the defendant speculators. The clause in question permits them to appeal. They have been taking coal and oil from the land, and it is said that an appeal would give them a year or a year and a half more for the withdrawal of the rich deposits. It is asserted that the Government will defeat their purpose by placing the lands in the hands of a receiver, to be appointed, in response to its application, by the Federal Court in Oklahoma.

Central America's Revolutionists

The "Hornet," carrying machine guns and ammunition to the revolutionists in Nicaragua, arrived at Bluefields on the 10th, not having been molested by the Madriz Government's ship "Venus." A gunboat of the United States was at hand, and the safe arrival of Estrada's supplies was probably due to her presence. Estrada then set out with 500 men to join his forces in the West, saying that the capital would soon fall into his hands. His army in the West had been quite successful, and at last accounts it was within a short distance of Managua. Madriz's forces were defending the capital in the neck of land between the two lakes. It was there that Estrada's army was beaten and dispersed in the original westward movement of the revolutionists. Madriz's soldiers have recently invaded the estates of Americans in that part of Nicaragua and forced the laborers to enter the army. Our State Department warned Madriz last week that Americans must not be annoyed in this way. His two envoys, Dr. Barrios and General Salinas, have had a hearing at the State Department in Washington. No authoritative statement about the propositions made by them has been published. It is reported that Madriz suggests that a general election be held, conditioned upon the retirement of both Estrada and himself. In Managua, the price of one dollar in gold or in bills of the United States is $15.20 in local currency. —— Conflicting reports about the revolutionists in Honduras are published. Ex-President Bonilla, their leader, and General Lee Christmas, the Louisiana locomotive engineer commanding his forces, with seventy followers, were arrested in Guatemala City on the 10th, but not placed in confinement. Their base of operations had been on the Guatemalan coast, near the Honduran boundary. Their arrest was reported by President Cabrera and the American Minister. Three days later their friends asserted that they were still free and engaged in revolutionary work. Cabrera was formerly the friend and ally of

Bonilla. The President of Honduras says that the only band of revolutionists in his country was whipped and broken up by his forces ten days ago.

Cuba and Porto Rico

At the coming elections in Cuba, half the seats in the Senate and half of those in the House are to be filled. There are two factions in the ruling party, and several new minor parties have been formed. One of these, which is called Young Cuba, advocates many novel and radical propositions. The leaders of the independent negro party recently issued a manifesto saying that their organization had been dissolved. The Government's profits from the national lottery have fallen below the original estimates, mainly for the reason, the press despatches say, that a year's steady drain upon the resources of the poor has deprived them of the means of buying more tickets. There is said to be evidence that many families have been impoverished by lottery purchases. To stimulate the sale of tickets, they have been so subdivided that a fractional part can be bought for 25 cents.——In Porto Rico, large crops of sugar, tobacco, coffee and fruit have made a full treasury. But interest rates on loans to agriculturists are very high, while the Government's accumulated surplus draws less than 3 per cent. The Governor has called a special session of the Legislature to correct defects in the act which cedes land on the waterfront at San Juan for a new hotel. A project for transferring the telegraph and telephone service to a corporation will also be considered. Plans for the hotel have been completed. It will be erected by a New York company, at a cost of $1,000,000, and will be called the San Cristobal. Governor Colton will be one of the directors. The company will also erect and maintain in various parts of the island several small hotels, situated upon roads used by automobile parties and other tourists.

British Affairs

Literary taste has never been the earmark of the Hanoverians, and King Edward was reported—rightly or wrongly—to be an ardent reader of Marie Corelli. This circumstance lends piquancy to the news that the new reign is opened by the founding of "the academic committee of English letters," under the auspices of the Royal Society of Literature, egged on by the Society of Authors. One of the objects avowed is to maintain the purity of the language; another is to make "awards of merit." The new academy is to consist of as many members as the French—but only twenty-seven of the forty have been thus far named. Shall women be admitted? is the present question; and the London *Spectator* seems to favor the motion. For some reason, Rudyard Kipling's name has not yet been mentioned. In comparing this twenty-seven, this group of Chestertons and Shaws and Hewletts, with the roll of Victorian England, one wonders if England has not waited for the death of her last Immortals—Swinburne, Meredith—before endowing her academy.—— Since the visit of an ex-President to Egypt, Sir Edward Grey has declared that no extension of the system of governing through Egyptian functionaries would occur during the continuance of the agitation against British occupation. Complete tranquillity now reigns—as it did even upon the execution of Wardani. This is regarded by the Unionist press as only one more symptom of Egyptian fatalism; and, "if the present quiet has been the result of telling the Egyptians that there is no immediate prospect of the occupation ending, we think that there is a great deal to be said for declaring once and for all that the occupation is permanent."——Mr. Asquith recently addressed to the Lord Mayor of London a letter considering the question of a memorial to the late King. The ministry favors local rather than national commemoration, and suggests that his lordship "take the initiative in carrying out the project of a London memorial."——Florence Nightingale, the heroine of the Crimean war, who founded the modern system of field hospitals, died August 14, at London, in her ninety-first year. ——Rumor has it that the new King has succeeded where Edward VII failed and will, with the co-operation of Emperor Francis Joseph, bring about a reconciliation between Emperor William II and the Duke of Cumberland: kins-

men, but enemies of long standing. This it is hoped to effect when the German Emperor and the rest visit Vienna in honor of the Austrian ruler's eightieth birthday.——So much pressure has been brought to bear from Irish and other sources that the Cunard line has decided to revert to Queenstown as a port of call for eastbound steamers after September 1. The only exceptions will be the Lusitania and Mauretania.—— J. Armstrong Drexel, the American amateur, broke Brookins's record for altitude in an aeroplane flight on August 11, when he soared to a height of 6,750 feet. His machine was lost to view among the clouds during two hours.——A young Welshman named Willows has made a night-flight in a dirigible airship of his own invention, from Cardiff to a point near Lee (Kent), a suburb of London; a distance of 160 miles, establishing a record for Great Britain.

The Clerical Conflict in Spain

Various explanations are offered of the young King's departure from his country at a time of crisis, and it has been suggested that he was seeking advice from his royal kinsmen, and to cement the ties of friendship with the various European governments. According to an "ex-attaché," writing in the New York *Tribune*, Alfonso left home less for state reasons than on account of his health. This anonymous writer describes him as threatened by tuberculosis, and as unstrung nervously from the series of surgical operations to which he has been subjected.——Last week we mentioned the conference of the young King with M. Briand, at Rambouillet. The Madrid *Epocha* ascribes to the French Premier a statement—since denied by the *Nouvelles*, of Paris—warning Alfonso against breaking with Rome, and saying: "We slid down hill farther than we intended. But for the clumsiness of the Vatican, the papal nuncio would still be in Paris, and the French Ambassador at the Vatican." The Spanish Minister of Foreign Affairs is said to have replied to the question, "Was the separation of Church and State the Government's ultimate aim?" "We have not reached that point as yet. Catholic Spain does not desire separation and Rome knows it." The ministry's position has been steadily strengthening, and is supported by the constitutional opposition. Meanwhile, tho the Spanish clericals have declared themselves ready to offer their lives in defense of the sovereign Pontiff, the Holy See appears to realize the gravity of the situation, and to hesitate to involve Spain in a civil war which could not, ultimately, benefit Rome. It is a happy omen that the Spanish Cardinal, Merry del Val, has, temporarily at least, yielded the direction of the papal foreign policy to Cardinal Rampolla, his predecessor, who is understood to have advised the Pope to make concessions all along the line. The Austrian Emperor is believed to have played a conciliatory part in the matter, at the behest of the Queen Dowager of Spain. According to the *Neue Freie Presse*, of Vienna, government opinion in Austria favors the Canalejas policy in Spain as moderate, and believes in the ability of that minister to bring about its success. Another Austrian journal, the *Fremdenblatt*, in absolving Señor Canalejas from the charge of revolutionarism, declares that "the quarrel between Spain and the Vatican is directly correllated with what has passed in France. The immigration of the French congregations into Spain and the establishment of new convents has been the first motive of the anti-clerical outbreak." Señor Garcia Prieto, Minister of State, has declared to a reporter of the *Voz de Guipuzcoa*, of San Sebastian:

> "We simply ask of the Holy See: (1) That by the strict application of the principle of ecclesiastical discipline, the bishops order the suppression of convents and religious houses created in Spain contrary to the canonical precepts themselves; (2) That the bishops be authorized by the Pope to reform and suppress in their respective dioceses religious houses or convents, which, while operating under ecclesiastical discipline, are not indispensable in aiding the prelates in the exercise of their ministry or to satisfy other religious necessities. Religious establishments doomed to suppression should have the benefit of a reasonable delay before their dispersal: a year, for example."

In 1909, there were no less than 597 religious houses in Spain, containing 12,142 male members, besides 2,656 communities of women, with 42,595 members. Of the religious houses for males, 294 were

devoted to education, 92 to the training of missionaries, 97 to the education of priests, 62 to manual training for the young and to manufactures, 52 to "the contemplative life." More than 700 of the women's communities were devoted to this last pursuit. "If I cannot reduce the number of orders by an agreement with the Vatican, I shall do it by law," Señor Canalejas is quoted as saying, in the *Temps*. Don Jaime, the Carlist pretender, issued on August 12 a letter advising his followers to resist the rising tide of radicalism, but without recourse to violence. Violence has thus far failed: by the seizure at Bilboa, of 6,000 rifles consigned to San Sebastian, the Government nipped in the bud a Carlist plot of deep ramifications. Notwithstanding this fact, however, and the calmness prevalent thruout the north—where trouble is chiefly to be looked for—an understanding apparently exists between the militant Roman Catholics of the Basque Provinces, and the Carlists. Under the pretence of "defending Catholicism," propogandist juntas are, it is said, being created in each of these northern provinces, village priests acting as the local agents. The Government will tolerate these as long as they keep within the bounds of legality.——The church problem in Portugal is less grave than was lately suggested in the press. The immediate difficulty arose from the suppression of a Franciscan review, *St. Anthony's Voice*, by order of the Papal Secretary of State. This act was regarded by the Portuguese Government as a violation of the royal prerogative, and a violation of the Concordat.

France

The divorce problem exists, in France, as an evil among members of the working class. In twenty years' time the number of divorces sought in the lower ranks of society has more than doubled. In Paris, the annual number of "pauper" divorces demanded now approaches 10,000. Less than half of these are admitted. Sometimes the motive for divorce is purely commercial: to enable the wife, whose money is tied up by the marriage agreement, to use it in her husband's business. The intention is, in such cases, to continue living together, in "free union." But more frequently divorce is sought by young husbands, perhaps after only two or three months of wedded life. "Egoism" is the psychological explanation, say students of the subject; "and energy of character is reduced, in vulgar circles as elsewhere"; in other words, divorce follows the first quarrel, or a succession of quarrels, or pecuniary difficulties. At the same time, if there are more divorces, that is partly because there are more marriages. *L'union libre* is decreasing among the workingmen and their women. ——The French P. L. M. Railway and the Swiss State Railway Company have agreed to tunnel Mont d'Or, a mountain on the frontier near Vallorbe, on the direct line between Lausanne and Paris. When completed this line will shorten the route from England to Switzerland by several hours.—— The outlook for harvests and vintage in France is very unfavorable. It is estimated that the wheat crop will not exceed 312 million bushels against 370 million last year, which was also a poor year. In consequence, the price of flour has increased $2 a sack since last January, and, according to present estimates, France will have to purchase many million bushels of wheat for home consumption. The situation is aggravated still more by the failure of the vintage in Champagne and Burgundy, where mildew has set in. The damage caused to French crops by continued cold and damp weather is unofficially estimated at $400,000,000. Traditionally, a "comet year" in France has been equivalent to a promise of good wine; but the Halley Comet seems to be an exception to the rule.——The announcement that last year some 17,000 young Frenchmen failed to present themselves for their term of legal service produces a painful impression at Paris. The increasing number of deserters is another problem shared by our own military authorities. On the other hand, the Longchamps review of July 14 evoked an enthusiasm commented upon even in Germany, where the Berlin *Kreuzzeitung* states that the French army is much more popular with the general public than is the German army in Germany.——Thirty deaths and a large number of injuries resulted from the collision of an excursion train and a freight train at Saujon, France, August 14.

Germany The official Socialist newspaper of Berlin, *Vorwärts,* publishes striking statistics culled from a report to be presented at the coming annual convention of Social Democrats, at Magdeburg. The membership of the party organization is shown to have increased in the last year to 723,000, a gain of almost 100,000. There are also great numbers of unorganized sympathizers. Twenty-three million publications were distributed at meetings held during the past year.——The Austrian and German health authorities are co-operating in measures to guard against an invasion of Russian cholera, telegrams from the Austrian frontier reporting that the pestilence is most alarming in the province of the Don Cossacks, Tekaterinoslav, Kherson and Kuban. Unofficial estimates place the number of deaths as high as 40,000.

The Orient Disorder continues in the Persian capital. Government troops and Nationalists, the latter under Satar Khan, have battled in the streets of Teheran.——The Seoul appeal court has rejected the appeals of Yi Chaimyong and his eight accomplices, who attempted, some time since, to assassinate the Prime Minister of Korea. The news from this quarter is generally reassuring, altho, in spite of the prevalent calm, the population of the peninsula is seemingly alive to the imminence of important political changes. One of the newspapers published at Seoul, in the Japanese interest, sums up the policy thus far pursued by Japan in that country as "Iron in the right hand, glove on the left." Continuing, this newspaper asserts that "an intense dissatisfaction against the new state of things is fermenting among a certain section of Koreans," such as, unchecked, "may culminate in some shocking crime." Trouble is expected from "a small group of young Koreans of shallow education, as well as from some impoverished *yangpan.*" For these latter, as for Catiline's fellow conspirators, any change of regime could scarcely fail to prove advantageous; the students are dismissed by their unsympathetic critic as "dreamers who, infatuated with empty names, such as independence and liberty, want to run before they have learned to walk."——A deplorable loss in life and property has followed the torrential downpour and devastating floods of last week in the Shizouka province of Japan. Hundreds of houses were washed away, as also the railways. In consequence of the flooding of the Sumida River, 385 are known to have lost their lives, and 500 are reported missing. In the lower sections of Tokio 30,000 houses have been submerged.——In the course of the last month many destitute Chinese emigrated from the provinces of Hupeh and Hunan, with no visible means of support. In a few days only, four thousand of these unfortunates reached Yingkow alone. Some of them have been sent eastward to Amur, under the Viceroy's orders; but it remains impossible to supply all with employment, or even with nourishment. The distress which is responsible for the disquieting emigration follows a recent order of the Governor of Shantung vetoing any further exports of cattle—which have in the past been bred on a large scale for the Manchurian and Siberian trade.——Both the Japanese secretary of the navy and the assistant secretary have expressed disapproval of Lieutenant Shirase's project for journeying to the South Pole. They say that the preparations are not adequate for the purpose contemplated.——Japan has introduced commercial attachés into her foreign service. Their rank will be the same as that of consuls-general, and their special function will be to investigate and report upon the condition of commerce and industry in the countries and localities to which they are assigned.——According to the *Japan Weekly Mail,* the efforts of the Peking Government to centralize the administration of the Empire's affairs continue to cause surprise and uneasiness. The general opinion seems to be that the movement is premature. Railways and telegraphs must first become much more general before the centralization of administrative power can be made effective in practice.

MAYOR GAYNOR.
This picture was taken on shipboard a few minutes before the Mayor was shot. He is talking to President Montt, of Chile, and Señora Montt.

"Tell It to Gaynor!"

BY SIDNEY REID

[The following article was received only a few days before the attempted assassination of Mayor Gaynor. It gives a picturesque view of the personality of the man whose fight for life has the sympathy of the entire country.—EDITOR.]

IF a wrong is found anywhere in the city of New York in these days the finder knows exactly what to do—or else his neighbors inform him: "Tell it to Gaynor!" They have perfect confidence that the Mayor will know and do the right thing. And this feeling is not confined to Democrats who voted for Gaynor; Republicans have it also, so have Labor men, Socialists, Independents.

The city thought so well of Gaynor last November that he was elected by a plurality of 73,074 votes when all his running mates on the Tammany ticket were defeated. And since then he has been steadily turning enemies into friends. These watched his course in office at first with cynicism, then astonishment, then hope, and, lastly, affection and admiration.

The great newspapers and magazines that opposed his candidacy are among his best friends now, and it is very gratifying and amusing to those who have known and loved him for thirty years to find themselves pushed aside by newcomers, who want to monopolize him. An eminent veteran Republican of international reputation said enthusiastically the other day:

"Gaynor is the best Mayor that New York ever had."

A well-known Democrat went further, declaring:

"Gaynor has done more good for the city in six months than all the mayors who preceded him during their entire terms."

He is known to be everybody's Mayor

now. The humblest and most ignorant feels that he has a friend in the Mayor's office who is interested in him and will protect his rights and do him justice. So if there is any wrong anywhere in New York now citizens "tell it to Gaynor!" and then rest easy in the confidence that the remedy will be prompt and adequate.

For the first time in the history of the city the Mayor overlooks all complaints. There are about 100 of these each morning, and his Honor's first task after reaching his desk is to examine them. They are entered in a book with dates and then sent to department heads for investigation and action. Department heads must promptly report their action to the Mayor. If they fail they are poked up more or less gently. The system works easily and automatically, and nothing really wrong is too trivial for attention. If a White Wings spills ashes on a street he knows that the Mayor of New York will be fully informed of the circumstance next morning and will lose some part of the good opinion which he has for White Wings generally.

Here are some of the good things that Mayor Gaynor has done for the city since January 1, 1910:

1.—Set an example of conscientious diligence in city employment by working strenuously nine or ten hours a day—often till seven o'clock in the evenings—with only fifteen minutes for lunch.

2.—Established an eight-hour day for city employees and officials and insisted that these earn their salaries by hard and useful work.

3.—Bundled hundreds of incompetents and sinecurists out of the public offices, decreeing that such places must be filled by men of merit and ability.

4.—By means of his new Bureau of Weights and Measures disclosed and put an end to what seems to have been a universal system of cheating employed by grocers, butchers, bakers, fishmen, etc., under the title of "Custom of Trade."

5.—Broke the influence of politicians over police, stopped police clubbings, illegal arrests, illegal breaking into citizens' houses. Put an end to "mugging" (photographing) of unconvicted prisoners for the Rogues' Gallery. Broke up the old vicious "System" and sent wardmen and favored policemen back to patrol duty.

6.—Broke connection between police and liquor dealers, ending colossal graft that police collected for allowing violations of the Excise law. Enforced the State Excise law as it is written.

7.—Dismissed old *City Record* board and appointed a new one, uncovering and ending graft and waste of over $300,000 a year. Cut number of newspapers receiving city advertising down from eighty to five.

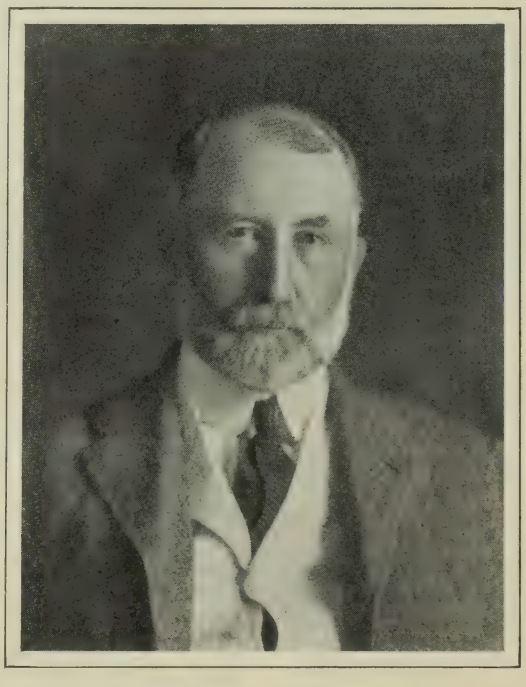
8.—Dismissed the old Aqueduct Board that for years had been wasting time and money in land condemnation proceedings. Put in another board pledged to wind up work by June 1 and go out of existence. It did wind up the work in time, saving the city about $3,000,000. Incidentally the Mayor lectured Supreme Court judges for making improper appointments in these condemnation proceedings.

9.—Decreed and enforced a safe and sane Fourth of July in New York City with patriotic and athletic celebrations in every park. This action decreased fatalities for the day from 20 (average per year) to 1; woundings and maimings from 200 to 5; fires from 50 to 4.

10.—Started the baseball season in New York, presiding over the first game and giving the local players such an abundance of luck that they are now close to the lead in their respective leagues.

11.—Visited and complimented the child gardeners of De Witt Clinton Park, admired their gardens and tasted some of their products, spoke words of cheer and told them that "back to the farm" is a good slogan.

12.—Cordially welcomed Weston the walker at the end of his transcontinental trip, hailing him as "old friend" and eulogizing his display of vigor and grit.



13.—Sold all superfluous automobiles owned by city, stopping city officials' joy riding, saving $500,000 annually in auto repairs. Set the good example of walking to and fro (six miles) between his home and the City Hall.

14.—Saved the life of Mr. Shepard, an editor, during a blizzard on Long Island last winter. In the darkness and

storm Mr. Shepard fell from a railroad trestle and broke his legs. The Mayor climbed down to him at considerable risk, covered him from the cold, and then fought his way to a place where he could obtain assistance.

15.—Excused the official rat catcher from jury duty on account of the importance of his office—then, finding him a learned man, swapped classical quotations with him, and said: "As we read in 'Don Quixote,' 'The mountains breed learned men and philosophers are found in the huts of shepherds.'"

16.—When Rev. Charles H. Parkhurst, president of the Society for Prevention of Crime, called on the Mayor with a cargo of advice, the latter gravely discussed a great city problem with him, calling his attention to Lecky's chapter on the oldest profession in the world, St. Augustine's Confessions, and Lilly's works, with which the Mayor assumed Dr. Parkhurst was perfectly familiar.

WILLIAM J. GAYNOR.

17.—Refused a street permit to a missionary who wanted to preach Christianity to the Jews. The Mayor inquired whether Jews have not a good religion of their own, and whether it is not true that Christianity owes much to the Jews.

18.—Out of his private purse gave a dinner worthy of Lucullus to Prince Tsai Tao of China. Gave a particularly jolly dinner to the newspaper boys of the City Hall. The landlord tried to serve the wrong sort of wine, but the Mayor insisted on receiving what he had ordered and paid for.

19.—Vetoed aldermanic permit establishing a Tag Day in Richmond Borough for the benefit of the ladies of a certain hospital. The Mayor said that he believed such official action was illegal and was certain that it was unseemly—especially employment of children to "tag" or beg.

20.—At the dinner of the Newspaper Publishers' Association denounced William Randolph Hearst as a forger and falsifier of public documents. Mr. Hearst sued newspapers that published the Mayor's speech, but failed to sue the Mayor.

21.—Warned magistrates to try each case carefully, and see to it that the humblest citizen obtained justice. Warned them further not to allow anybody, especially clergymen or politicians, to influence their decisions.

22.—Informed newsdealers that they need not pay graft to politicians and aldermen for use of stands and promised to protect them from persecution.

23.—Deprived fifty resorts of the vicious and dissipated of their all-night licenses, while carefully protecting those all night cafés and restaurants that proved they serve legitimate night workers.

24.—Shut up theaters that were giving improper and debasing plays.

The foregoing list gives only a few characteristic instances of the sort of work Mayor Gaynor has been doing since taking office. He has accomplished apparent impossibilities with ease and tranquillity.

In the spring of 1909 the Bureau of Municipal Research, a private organization which avowedly exists for the "Promotion of Civic Betterment," published a little pamphlet entitled "What Should New York's Next Mayor Do?" It made

fifty-eight suggestions for improvement, and the newspapers laughed at its idealism and declared that it was looking for a Superman for Mayor.

But the newspapers laughed too soon, for, as Dr. Allen, the chief of the bureau, told the writer, in February, 1910, the bureau found that Mayor Gaynor had already done or was doing forty-five of the fifty-eight good things.

Since then he has accomplished most of the others, and the researchers' whole program is only one little item in the general and widespread reform work of this administration.

In doing these things Mayor Gaynor had no communication with the researchers, and knew nothing of their program. He simply did the right thing because it was right.

When he first took office grafters rested easy. They had seen other good Mayors who had been helpless because of their ignorance of graft and grafting. They supposed that Mayor Gaynor would for a brief time storm about in a blind sort of way and then subside.

But the contrary happened. He did not storm at all. But he had most uncanny knowledge of all the crookedness that had been going on, and now and then he struck, reminding one of Milton's lines in "Lycidas" concerning Cromwell and Parliament:

"But that two-handed engine at the door
Stands ready to smite once and smite no more."

Whatever flourishing evil the Mayor smote crumpled right down and no longer afflicted sight or troubled the city. No one fought back. When the grafters realized Gaynor they folded their hands and sat down solemnly waiting for him to pass by. To them he is phenomenal and not at all agreeable, like an earthquake, volcano, pestilence or other dispensation of Providence. They recognize the grim archness with which he contemplates them and their doings. But they don't grumble—what's the use?

The Mayor is not a great talker, but his sayings, when he does speak, are unusually pointed and pithy. Here are a few of them extracted from speeches letters and other public papers:

The way to do things is to do them.

Be a good man and you will be a great magistrate.

Let the good man in office take care that he does not set a precedent for a bad one.

Let not the sun go down upon thy wrath.—*The Bible.*

I forgive everybody everything every night.

History teaches beyond a doubt that to govern least is to govern best.

What another saith of thee concerneth more him that saith it than it concerneth thee.—*Epictetus.*

Don't strut in office.

Pay no graft. I will protect you.

We want all bad men off the (police) force.

Don't let's call names. Let's get together.

Find out what you can agree on, don't keep harping on your differences.

Nagging at me does no good. Come and help me.

Let every deputy (tax commissioner) who sets down manifestly a wrong valuation be dismissed at once.

Find some one trying to corrupt a deputy and we will have him indicted.

No meaner man exists than one who shirks taxes at the expense of his neighbors.

Policemen must not make laws, but enforce those that exist.

Policemen should not be like sheep in the presence of politicians nor citizens sheep in the presence of policemen.

Learned men are to be found everywhere.

I never talk of cranks. I call them "alert people." Jesus Christ was by some considered a crank.

The Mayor during the campaign outraged Tammany traditions by quoting the Bible and Epictetus. This afforded the paragraphers opportunities for much humor of the slap-stick variety. But the Mayor spoke simply what he thought. Christ is a very real character to him. One of the first acts by which he attracted wide attention, when a young lawyer, was his writing a history of "The Trial of Christ," viewed from the legal standpoint. As to Epictetus, Mayor Gaynor himself is a Stoic and well worthy to sit down and discuss the high things of philosophy with the wise old Greek slave who has told us how we may all have what we want if we will only want what we have.

Taking all things into consideration this is likely to be an economical administration—but saving is not the main consideration. The main consideration is to give New Yorkers what they are paying for. To the Mayor's mind they are willing and able to pay and ought to pay—and then again they ought to receive what they pay for.

His ideal is not cheap service, but honest, adequate, high-class service. The

city is now engaged in immense improvements to provide for the 10,000,000 people who will soon be included in the population. Instead of trying to skimp these the Mayor stimulates their progress. He does not exercise ingenuity in seeking difficulties, but in seeking ways of overcoming difficulties. Nothing is too good for the great wonder city of the world that New York will be in a few more years.

Ruling the city is easy to his Honor, nor do the numerous and ever-growing social calls embarrass him, but he sometimes feels the need of all the philosophy that Epictetus taught on account of friends who are more attached and enthusiastic than thoughtful and judicious.

In spite of precautions taken to exclude all who come to the Mayor during working hours on other than city business a few escape the guards, gain his Honor's desk, and blithely waste his time. So far he has refrained from drastic action, but the sword of Damocles hangs above their heads, and if they desire to do the city's chief a particular service they will stay away from the City Hall unless called to it by real business.

Another thing that at times annoys his Honor is the expressions of joy and surprise emitted by intelligent magazines and newspapers when he does something good for his fellow citizens. What did they expect him to do?

For thirty years in Brooklyn his life was an open book. Whether as a young reporter, a lawyer or judge his ideals, his principles, his actions were always the same. He was always the champion of citizens' rights and liberties—the upholder of the highest ideal of public service. As such he was elected independent of bosses and without the expenditure of a dollar.

Why should people be surprised at finding a man who is sincere?

BROOKLYN, N. Y.

Doña Frasquita

BY THOMAS WALSH

Me and Grady from Texas—say, stranger,
But our outfit was certainly fine—
Gold buttons and pistols—for danger,
Some *Greaser* might grudge us the mine.

Red Grady's mustachios curling—
His shoulders as broad as an ox—
And the looks like a blast he kept hurling
At the little señors round her box.

There was none like old Miramar's daughter,
When the gold fever caught Vera Cruz;
Such eyes—they said "Yes" till you sought her,
And then—then the way they'd refuse!

Yes, there like a queen sat Frasquita,
Coqueting and fanning away,
As the band played the waltz "Amorita"
And they killed off the bulls of the day.

But leave it to woman! Why, stranger,
She just waved her fan at poor Red
As the last bull bucked in from the manger,
Then threw it for fun at its head.

And Grady—our Red!—there was never
Such lightning a change in a man.
Why, he jumped in that ring without ever
A look where the crazy horns ran.

Picked up the light fan at the minute
The bull struck him down in the dust—
Yes, and gored the durn Irisher in it
Till I just shook and swore in disgust.

But they couldn't kill Red—no, nor reckoned
Who came weeping at twilight outside
In the alley—I guessed in a second
How 'twas Miramar's heiress and pride.

It's an old story now. They say Grady
Quit his chewing and swearing, and since
His appointment abroad, takes the lady
To Paris and lives like a prince.

And some of our boys as went over
With Buffalo Bill in the fall
Say Don Miramar-Grady's in clover,
And came round and shook hands with them all.

BROOKLYN, NEW YORK.

The Souls of White Folk

BY PROF. W. E. BURGHARDT DU BOIS

Author of "The Souls of Black Folk."

HIGH in the tower where I sit beside the loud complaining of the human sea I know many souls that toss and whirl and pass, but none there are that puzzle me more than the Souls of White Folk. Not, mind you, the souls of them that are white, but souls of them that have become painfully conscious of their whiteness; those in whose minds the paleness of their bodily skins is fraught with tremendous and eternal significance.

Forgetting (as I can at times forget) the meaning of this singular obsession to me and my folk, I become the more acutely sensitive to the marvelous part this thought is playing today, and to the way it is developing the Souls of White Folk, and I wonder what the end will be.

The discovery of personal whiteness among the world's peoples is a very modern thing—a nineteenth and twentieth century matter, indeed. The ancient world would have laughed at such a distinction. The middle age regarded it with mild curiosity, and even up into the eighteenth century we were hammering our national manikins into one great Universal Man with fine frenzy which ignored color and race as well as birth. Today we have changed all that, and the world, in sudden emotional conversion, has discovered that it is white, and, by that token, wonderful.

When I seek to explain this to me inexplicable phenomenon, there always creeps first to my mind the analogy of the child and his candy. To every child there comes a time when the toothsomeness of his sweets is strangely enhanced by the thought that his playmate has none. Further than this, however, the analogy fails, for with one accord the mother world seeks to teach this child the third new joy of sharing. Any thought, however, of sharing their color is to white folk not simply unthinkable, but its mention is liable to lead to violent explosions of anger and vituperation. Not only is there this unrebuked and vociferously applauded greediness, but something that sounds like: "I shall keep my candy and you shall not have yours." Or, in other words, it is not the obvious proposition: "I am white and you are black," but the astonishing declaration, "I am white and you are nothing."

This assumption that of all the hues of God, whiteness alone is candy to the world child—is inherently and obviously better than brownness or tan—leads to curious acts; even the sweeter souls of the dominant world, as they discourse with me on weather, weal and woe, are continually playing above their actual words an obligato of turn and tone, saying:

"My poor un-white thing! Weep not nor rage. I know, too well, that the curse of God lies heavy on you. Why? That is not for me to say; but be brave! Do your work in your lowly sphere, praying the good Lord that into heaven above, where all is love, you may, one day, be born—white!"

At such times I have an unholy desire to laugh, and to ask with seeming irrelevance and certain irreverence:

"But what on earth is whiteness, that one should so desire it?" Then always somehow, some way, silently but clearly, I am given to understand that whiteness is the ownership of the earth, forever and ever, Amen!

Now, what is the effect on a man or a nation when it comes passionately to believe such an extraordinary dictum as this? That nations are coming to believe it is manifest daily. Wave on wave, each with increasing virulence, is dashing this new religion of whiteness on the shores of our time. Its first effects are funny; the strut of the Southerner, the arrogance of the Englishman amuck, the whoop of the hoodlum who vicariously leads your mob. Next it appears dampening generous enthusiasm in what we once counted glorious: to free the slave is discovered to be tolerable only in so far as it freed

his master. Do we sense somnolent writhings in black Africa, or angry groans in India, or triumphant "Banzais" in Japan? "To your tents, O Israel!" these nations are not white. Build warships and heft the "Big Stick."

After the more comic manifestations and chilling of generous enthusiasm, come subtler, darker deeds. Everything considered, the title to the universe claimed by White Folk is faulty. It ought at least to look plausible. How easy, then, by emphasis and omission, to make every child believe that every great soul the world ever saw was a white man's soul; that every great thought the world every knew was a white man's thought; that every great deed the world ever did was a white man's deed; that every great dream the world ever sang was a white man's dream. In fine, that if from the world were dropped everything that could not fairly be attributed to White Folk the world would, if anything, be even greater, truer, better than now. And if all this be a lie, is it not a lie in a great cause?

Here it is that the comedy verges to tragedy. The first minor note is struck all unconsciously by those worthy souls in whom consciousness of high descent brings burning desire to spread the gift abroad—the obligation of nobility to the ignoble. Such sense of duty assumes two things: a real possession of the heritage and its frank appreciation by the humble born. So long, then, as humble black folk, voluble with thanks, receive barrels of old clothes from lordly and generous whites, there is much mental peace and moral satisfaction. But when the black man begins to dispute the white man's title to certain alleged bequests of the Father's in wage and position, authority and training; and when his attitude toward charity is sullen anger rather than humble jollity; when he insists on his human right to swagger and swear and waste—then the spell is suddenly broken and the philanthropist is apt to be ready to believe that negroes are impudent, that the South is right, and that Japan wants to fight us.

After this the descent to Hell is easy. On the pale white faces which the great billows whirl upward to my tower I see again and again, often and still more often, a writing of human hatred. A deep and passionate hatred, vast by the very vagueness of its foundations. Down thru the green waters, on the bottom of the world where men move to and fro, I have seen a man—an educated gentleman—grow livid with anger because a little, silent black woman was sitting by herself in a Pullman car. He was a white man. I have seen a great grown man curse a little child who had wandered into the wrong waiting-room searching for its mother: "Here, you damned black——" He was white. In Central Park I have seen the upper lip of a quiet, peaceful man curl back in a tigerish snarl of rage because black folk rode by in a motor car. He was a white man. We have seen, you and I, city after city, drunk and furious with ungovernable lust of blood, mad with murder, destroying, killing and cursing, torturing human victims, because somebody accused of crime happened to be of the same color as the mob's innocent victims, and because that color was not white.

Up thru the foam of green and weltering waters wells this great mass of hatred in wilder, fiercer violence, until I look down and know that today to the millions of my people no misfortune could happen, of death and pestilence, failure and defeat, that would not make the hearts of millions of their fellows beat with fierce, vindictive joy. Do you doubt it? Ask your own soul—what would it say if the next census told it that half Black America was dead and the rest dying?

Unfortunate? Unfortunate. But where is the misfortune? Mine? Am I in my blackness the sole sufferer? I suffer. And yet, somehow, above the suffering, above the shackled anger that beats the bars, above the hurt that crazes, surges in me a vast pity—pity for a people prisoned and enthralled, hampered and made miserable for such a cause, for such a fantasy.

I sit and see the souls of the White Folk daily shriveling and dying in the fierce flame of this new fanaticism. Whither has gone America's proud moral leadership of the world? Where

is the generous thought, the sweet applause, the soul's wide freedom with which we once were wont to greet the up-struggling of human kind? How natural it has become that our ambassador to the world, fresh from the laurels of Brownsville, should greet old Egypt's fight for freedom with a blow between the eyes!

Onward we reel. Peace? Ten thousand dollars for peace and two hundred millions for war. How can there be peace for those who are white and hate "niggers"? Democracy? Absurd! Dream of infants! Let Disfranchisement and Privilege and a Solid South rule this great republic. The rights of woman? Are not American women the best dressed in the world? Do they not bring the highest titles in the market? Does free America want to enfranchise any more dagoes and hybrids?

It is not alone this pitiful striking of colors in the great world crusade for liberty, equality and brotherhood; it is the humiliating thought in our own souls that this outward surrender is the honest counterpart of the inward degeneration—the deliberate crippling and deforming of the Souls of White Folk by the glorification of Color Caste.

To you this is less immediately apparent than to me; for before me the Souls of White Folk stand singularly naked. In my presence they tend to lay aside all their little lies and hypocrisies and bathe in brutal frankness. Why not? Am I a millionaire? Have I a political pull? Have I social prestige? Have I any brains? I bear the shadowed answer on my face. Well, then, be thrifty. Why waste manners, beauty, courtesy or conversation on me? There's nought to gain and much to lose, for the watchful world is sitting near ready to resent social equality. Therefore, he who seems to you a gentleman is but his boorish self to me; she who is to you a vision of womanly loveliness may be but selfish vulgarity to me. Such nastier aspects of modern American life flash repeatedly both on me and mine, so that I realize even more vividly than you how thoroly and persistently we are making these things characteristic of the nation, the measure of its thought and soul, every time you make the measure of a man, whiteness. Why not? There is no logical escape. A true and worthy ideal frees and uplifts a people; a false ideal imprisons and lowers. Say to men, earnestly and repeatedly: "Honesty is best; knowledge is power; do unto others as you would be done by." Say this and act it, and the nation must move toward it if not to it. But say to a people: "The one virtue is to be white," and the people rush to the one inevitable conclusion, "Kill the 'nigger'!"

Is not this the record of present America? Is not this its headlong progress? Are we not coming more and more day by day to making the statement, "I am white," the one fundamental tenet of our practical morality? Only when this basic iron rule is involved is our defense of right nation-wide prompt. Murder may swagger, theft may rule and prostitution flourish, and the nation gives but spasmodic, intermittent and lukewarm attention. But let the murderer be black or the thief brown or the violator of womanhood have but a drop of negro blood, and the righteousness of the indignation sweeps the world. Nor would this fact make the indignation less justifiable did not we all know that it was blackness that was condemned, and not crime.

When black Jack Johnson beat a white man at a white man's game before an audience of a hundred millions, with what mingled motive did those millions, from the United Society of Christian Endeavor to the hoodlums of the nation, join hands to shout "Shame!"

Then it was, too, that a little girl in New York made a sudden discovery. She was a poor little waif of six or seven years, and she learned that she was white, and that the fact denoted unusual desert and virtue. She was stealing a ride on an Eighth avenue furniture van and spied me on a passing street car. She stuck out her tongue and jeered and made every contortion of countenance to show her personal disapproval of my kind and the superiority of hers.

Poor little thralled thing! It was not enough that she should be prisoned by poverty and ignorance; this great nation must needs chain her with race preju-

dice—must tell her that always White is Right.

Beneath all that was laughable in that absurd little figure I seemed to see the woe of the world in the education of the American child today. What tenet of our morality are we teaching today so freely, plainly and persistently! I fear the atrophy of soul which this teaching must bring. Both mentally and morally white folk today are suffering from this attempt to transmute a physical accident into a moral deed—to draw unreal distinctions among human souls.

Mentally the blight has fallen on American science. The race problem is not insoluble if the correct answer is sought. It is insoluble if the wrong answer is insisted upon, as it has been insisted upon for thrice a hundred years. A very moderate brain can show that two and two is four. But no human ingenuity can make that sum three or five. This American science has long attempted to do. It has made itself the handmaid of a miserable prejudice. In its attempt to justify the treatment of black folk it has repeatedly suppressed evidence, misquoted authority, distorted fact and deliberately lied. It is wonderful that in the very lines of social study where America should shine it has done nothing.

Worse than this is our moral and religious plight. We profess a religion of high ethical advancement, a spiritual faith of respect for truth, despising of personal riches, a reverence for humility, and not simply justice to our fellows, but personal sacrifice of our good for theirs. It is a high aim, so high that we ought not utterly to be condemned for not reaching it, so long as we strive bravely toward it. Do we, as a people? On the contrary, we have injected into our creed a gospel of human hatred and prejudice, a despising of our less fortunate fellows, not to speak of our reverence for wealth, which flatly contradicts the Christian ideal. Granting all that American Christianity has done to educate and uplift black men, it must be frankly admitted that there is absolutely no logical method by which the treatment of black folk by white folk in this land can be squared with any reasonable statement or practice of the Christian ideal.

What is the result? It is either the abandonment of the Christian ideal or hypocrisy. Some frankly abandon Christianity when it comes to the race problem and say: Religion does not enter here. They then retire to some more primitive paganism and live there, enlightened by such prejudices as they adopt or inherit. This is retrogression toward barbarism, but it is at least honest. It is infinitely better than its widely accepted alternative, which attempts to reconcile Color Caste and Christianity, and sees or affects to see no incongruity. What ails the religion of a land when its strongholds of orthodoxy are to be found in those regions where race prejudice is most uncompromising, vindictive and cruel? where human brotherhood is a lie?

The one great moral issue of America upon which the Church of Christ comes nearest being dumb is the question as to the application of the golden rule between White and Black Folk.

* * * * * * *

All this I see and hear up in my tower above the thunder of the seven seas. From my narrowed windows I stare into the night that looms beneath the cloud-swept stars. Eastward and westward storms are brewing—great, ugly whirlwinds of hatred and blood and cruelty. I will not believe them inevitable. I will not believe that all that was must be—that all the shameful drama of the past must be done again today before the sunlight sweeps the silver seas.

If I cry amid this roar of elemental forces, must my cry be vain because it is but a cry—a small and human cry amid Promethean gloom?

Back beyond the world and swept by these wild white faces of the awful dead, why will this Soul of the White Folk, this modern Prometheus, hang bound by his own binding, tethered by a fable of the past? I hear his mighty cry reverberating thru the world, "I am white!" Well and good, O Prometheus, divine thief! The world is wide enough for two colors, two little shinings of the sun; why then devour your own vitals when I answer, "I am black"?

Atlanta, Ga.

A Bride's Psalm of Joy

BY MARGUERITE OGDEN BIGELOW

The graybeards had compassion on me in my day of rejoicing,
For they said, "She does not know."
The snowy-crowned old women shook tears from their eyes,
For they said, "She is innocent."
The young men and women who had gone on before me smiled wistfully,
For they said, "She also is young!"
Even the cynics advised me,
For they thought that I was about to go the way of all flesh.
One and all they saw my bud blasted and my sunlight shadowed,
My dream routed, my vision eclipsed,
My soul besmirched, perhaps destroyed.

They warned me of disappointment that I might not be disappointed,
Of sadness, that I might not be too often sad,
Of pain, that I might not suffer too deeply,
Of the carnal, that I might be able, perchance, to save a partial soul alive.
Tears they tried to pour into my cup of rapture,
That a wonted taste might give no shock of bitterness:
They would have girded my waist with fire, in all kindliness,
That I might feel the less the brand of ruthless desire.
For they said, "There is somewhat of the crape 'neath every wedding veil!"

All this because they loved me, and yet I went on my way heedless and confident,
Heedless of compassion and advice,
Confident that the warnings were vain,
Nourishing in my heart the bud of promise, warm with sunlight,
Refusing the tears and the fire-brand;
For I had faith in the hands that held me, in the eyes that met mine,
In the proud pledge of his mind, in the beauty of his spirit.
Thus I went on my way.

In the evening I slept, and in the morning I awoke and knocked at the door of my soul, demanding entrance.
And I asked, "What cheer, O soul of mine?
What of the hour of knowledge?
What of the day of fulfilment?"
Then my soul arose and stood before me naked and fearless,
And answered me proudly.

"Open the windows that the old men and women may look in and see my sunlight!
Open the windows that the young men and women may catch the scent of my perfect blossom!
Open the windows that the music of my joy may go out to confound the cynics!
Tell them that I am not saddened, neither am I disappointed,
No, not for a fraction of time;
Show them that there is no suffering for me, save gladness,
That I am not at war with the flesh, nor is the flesh divided from me, against me.

"Lo, I am whole, sound, sane, glorious, more glorious than of yore,
For my dream is become actuality,
My vision is become fulfilment,
My ideal is become as God. He mounts His throne and reigns.

"For me, there are no tears, there is no brand of fire!"

Burlington, Ia.

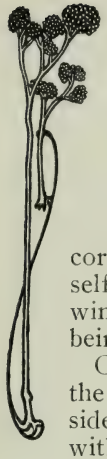
Around Home: An August Idyl

BY E. P. POWELL

Author of "The Country Home," etc.

I SAW a tourist in Florida, who had been from one resort to another, all over the State, and I asked him if he had been paid for his trouble. "I am so tired," he replied, "that I do not know whether I have enjoyed myself or not. I have seen old St. Augustine, full of antiquity, and Palm Beach, with nothing ancient about it, and I have fished at Tampa. Now what I want is a little quiet; a cranny somewhere and a bit of water or weeds that I can look at. I know a glen up North with more comfort in it than your whole State contains." He was a born naturalist, and so not a very good judge of artificial displays. There is too much traveling and touring nowadays and too little home study. Any one who means to enjoy the world must have his eyes and ears open all the time, and he must be able to see what is near at hand as well as that which is to be got at only by travel. There are few places anywhere in the States not full of novelties, as well as nooks and corners that have never been enjoyed.

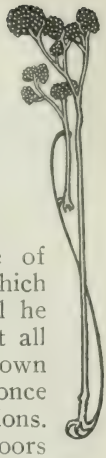
One of the finest methods of vacating work that I have yet found is not to pack trunks and start on a tour to look for something interesting, but to quietly drive along a country road, close by home, or go on foot if you please, carrying your lunch, your spirit lamp and your kodak. It is the common things that one must learn how to enjoy, but it is these common things that we rarely ever seen and less often hear. A hundred birds may sing into ears that never hear, and the most exquisite wild flowers may bloom for eyes that never see. I was fifty years old before I learned the companionableness of the white daisy.



As I grow older I find the universe coming to me; trifles are full of art and philosophy, work is full of all sorts of sciences. There is no better geology than that which is under my feet, and as for ornithology, one may turn his ten acres into an aviary, if he will. Emerson told us well that Heaven is in any man's dooryard. It all depends on his seeing it. Generally we have faith only in the remote.

Boys leave home to start life in fresh soil; they only find out in old age that, after all, they have been working over somebody else's old soil. When the spade handle is cracked they begin to think of the old home and the childhood life. Just then their own boys are preening wings for flight. It is home that we need to make more of, and it is just around home that we need to become tourists and learners. Every one in these days should have a hobby; either entomology, or botany, or ornithology, or geology, or perhaps he can combine them all together into biology. At any rate, it is life that we need to study, and life is in every spadeful of dirt, and the air teems with it. We grumble sometimes at our little rivals in the garden and orchard, but what a superb study they become to one who really finds them out.

You will be amazed to find how much material for scientific study can be picked up along a common highway. New England has, distributed about her roadsides, nearly every plant and tree that will grow in her soil and climate. Most of these are bird sown, and often form most charming groups for shade as well as flowers and fruit. Each year develops its own peculiar forms of fungoid and insect life, and I do not know of one that has been



richer than the present. It might be all set down to loss, if Nature's only purpose was to feed our bodies, for these little creatures of soil and air make away with much of our crops; but Nature has no such limit to her purposing. The farmer who plows for corn is at the same time tilling himself, and the seeds that fly by on wings are not the only seed that is being sown.

Our roadways are highways for the traveling of a great deal besides ourselves. They are crowded with travelers every day and every night. You will find rare bushes and plants send their seeds hundreds of miles in this way, dropping one here and one there, in the ditches, or in the plowed fields, or fence corners, to catch and grow. In the Western States I used to find, not far from my door, cypripediums, fringed gentians, yellow-fringed orchids and cardinal flowers in the highway ditches. The fences were covered with clematis and roses and Virginia creeper, every one of which had traveled thousands of miles to get there! They were now owners of that part of the United States.

It is a good plan to pick up a demure country urchin, if you can find one, even if you are not going far away from your own acres, and let him tell you what it is that he has seen or found out. Do not be sure that it is your sublime obligation to instruct every one of these two-eyed children of Nature. They have often seen what you have not seen, and you will find that lots of pairs of eyes are everywhere around your neighborhood, doing a lot of investigating. I advise you to make a good deal of use of them before they are sent to the public school. After they have been tutored for awhile they will know better than to waste their time in this way; they will be too busy memorizing a lot of books. I have found out a good many fine things about my own neighborhood by being friendly with the lads that go without boots or stockings; things that I never should have found out alone or with books.

I have a splendid friend who on every occasion insists on talking about the excavations of Mycenæ. He knows the whole story from the beginning to the end, and he reads his Homer in Greek. His boy and I had been rambling not far away, and we had brought in a couple of beautiful Luna moths; which greatly excited my friend until he was told that they were not at all uncommon, feeding on his own butternut trees. He lapsed at once into his antiquarian discussions. Really, we have at our own doors some very ancient things, buildings of people that have been on the globe a great deal longer than we have. Why go to Europe to study a few old, broken-down castles of medieval date? I am not quite sure that every one of our gardens is not a part of that garden which the Lord planted eastward in Eden.

When I set my lads at work with tutors, it was not that they might learn about the plants and animals of distant lands, but home botany, home ornithology and even home geography—for there is a lot of geography on every man's farm. What I wished, above all else, was that they should have their senses cultivated to know the world just about them. I did not care so much that they should understand Wagner as that they should be familiar with the notes of thrushes and sparrows. I opened one of their cases the other day, with drawer after drawer of exquisite butterflies and moths, and my visitors were astounded to learn that every one of these was a tenant of my own neighborhood.

The work world is very superficial at best. Even a well-trained eye sees only between four hundred billions and eight hundred billions of light vibrations. The ordinary eye does not see one-millionth of even that which may be seen. The problem is not to chase over the earth, to see more of the surface, but to try to see deeper and more accurately. The ordinary tourist gets less and less able to see or to comprehend. He grows more superficial the

farther he travels; but if he will stay at home, in a single hour he may find out something better worth the while. He picks a bit here and a half truth there, and then makes a shallow book of it. I wish some one would write an exhaustive book of a single acre.

Pastures are no longer the fashion; silos and soiling have taken their place—very wisely; but their going has taken away many fine things. Among the rest has gone that marvelous mullein, with a leaf like the best Axminster; and I confess to a tenderness for the big bull thistles, covered with goldfinches, about now, chattering joy, and fluttering bits of song about, as light as the thistle-down. Twenty of them chuckling over the sweetness of their feast and flashing sunshine in the shadows! I have been about the world somewhat, but never saw a happier picture and one that better touched content than right there in the old pasture under the hill. There was a deep brook at the corner, and I remember that when the cows stood in it, at noon-day, their tails reached the water, and so they sprinkled themselves coolingly.

I have no quarrel with civilization, but it should be conservative. I miss the ginseng and the puttyroot and the sarsaparilla, up by the beech woods; but in the glen I find yet the spearmint and the peppermint, and tucked in between them the blue-eyed forget-me-not. I am sure that a sweeter spot is not in all the world than right here. I will pull off my shoes and stockings and wade in among the minnows and the sidewise scampering crabs. The breeze is laughing over the hill top, and the sun is ripening a lot of butternuts and beechnuts in the tree tops, for the boys—and me. In the gardens I find but one thing as it used to be; civilization has had no effect on the blackberry thorns. They are just as utterly barbarous as ever, altho there is no sense in it. There is no need of these thorns, unless it be just around the edge of a garden to keep the roundabouts out.

Try this experiment: Go to the top of the nearest hill, no matter how often you have been there before; sit down among the elder bushes, or under the shade of a hemlock, and just do nothing but look. You say you have been there a thousand times and know all about it. I venture you do not. Study the orchards and the farmhouses in the valley; study them until their arrangements suggest to you the names of their owners. Learn for the first time the diverse shadings of green among the trees, and try to distinguish among the bird songs; get all your senses open and then lie down listening. When you come down from that perch you will surely be ready to say that you never knew so much about the valley and the neighborhood before.

If there is a sluggish ditch anywhere near by, and I am quite sure you will find one within a half mile, it will be able to show you with a little investigation more things than you had dreamed of in your everyday life. In one of my parishes I had a young friend who would never go straight home from Sunday school. He pried up the loose stones and lifted up broken pieces of sidewalk and dug into the sluiceways, so that when he reached home his pockets were full of beetles and bugs and worms and all sorts of plants. His room was a museum and a laboratory combined. His sister complained to me of his loitering habits, but his mother was wise enough to let him alone. He is now eminent as a scientist. I recommend you to encourage this investigating habit in all sorts of out of the way places on the part of your children, and try a day of it occasionally as a vacation from your work.

Old Humphrey says he knows of a ditch so full of "nettles, with their fine purple bloom"; "large dock leaves with holes in them and turning a little brown"; long grass that quakes in the

wind and trembles at the touch; thistles in blossom, "prickly burdocks, silvery coltsfoot and straggling blackberry brambles," that all together make a charming picture. He thinks that the bees and the wasps and the big blue flies, flitting from one plant to another, add greatly to the picture. He could persuade himself that the butterfly that settles on the flower knows that he admires him, and that the dragonflies are very conscious that he is studying them.

Things do not sound or seem the same at different times of day. I recommend those who have always been adjusted to the conventional hours to get up just before daybreak and discover the morning. Thoreau says that a genius in the country is known by getting up early and going to bed early. A great deal depends upon the slant of the sun rays. I am laughed at because I go to bed at eight o'clock and get up with the break of day. However, I would not lose the first hour or two in the morning for all the rest of the day. They constitute a daily vacation, giving a fragrance and a flavor to the work that follows.

Here it is now, between four o'clock and six o'clock of a hot summer day that we get the good country cream of life. Night has cleaned the air of every particle of dust, and the perfume of the great clover fields and the meadow lilies fills your nostrils with joy and your lungs with ozone. The birds are singing in every tree-top, and the bushes shake their dewdrops on you with a rainbow in every one of them. Life in the country ought to give you three good things, good sleep, good air and good food—the trinity of health. To secure good sleep go to your room as the birds fly to their nests, and in the morning take a stroll before the world's shuttles can be heard; better yet, be at work in your garden. It is the only time in the day that you can feel that you have the world all to yourself.

Midnight has been devoted to the poets and the lovers; and most of our popular apprehension associates the night with the brewing of sentiments that do not take a good hold on broad daylight; "mooning" it is appropriately called. I have, however, a sure conviction that if you will study the world about you under the moonlight you will learn something new.

Tree foliage is something entirely different from what it is in the day. You will never quite understand an orchard full of Northern Spies and Spitzenbergs unless you walk under the trees after the world is asleep—that is, the ordinary world. Shadows are as unique as the objects themselves. Some of the tamest trees in the daytime are the most beautiful at night.

An entirely new population takes possession of earth and air. Tree toads in the branches; frogs chuckling by the brooks; night hawks shuttling the air with open mouths, and occasionally a whip-poor-will calling out of the big spruce. Butterflies are asleep in the hollyhocks, but moths are abroad, and to please them the honeysuckles and madonna lilies give out a fragrance that is nearly lacking in the daytime. These flowers depend on moth service to carry their pollen from bloom to bloom, and for that reason do what they can to attract them. There is a total shift of workers abroad at night, but no let up of labor.

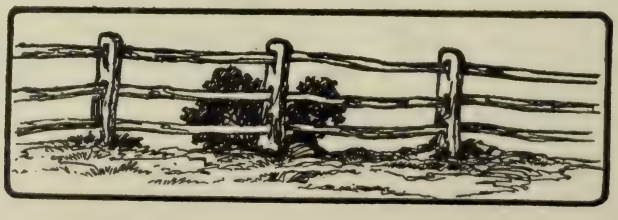
Those who dread night air are of all people most stupid. Unless in marshy land, it is as wholesome as that which is charged with sun rays. I advise you for awhile to sleep in the daytime and try living at midnight. No one ever suffered from lying on sweet timothy haycocks, with the moonbeams dropping directly upon him. At any rate, if you wish to vacate your work world completely, venture a few nights in the orchard, and down the glen, and wherever else you may feel that you are familiar only at noonday. You surely will find a very novel world. Wander-

ing among my familiar hedges at night, I find myself a stranger. Who owns these trees and these shadows?

A city boy, visiting me, filled his pockets every day with lunch, and dined harmoniously in the branches of a huge maple tree that overhangs my glen. He whistled and occasionally broke into song while he nibbled at his doughnuts and drank from his milk flask. The boy had all his life lived in the city, and he was just coming to birth in the country. He kept up his arboreal habit until one day a branch broke with him and he came to the ground. His next experiment was rolling his trousers as high up as possible, to wade the glen brook, until he reached a boulder too big to be covered by the water, where once more he sat and enjoyed his dinner.

It takes one of these entirely fresh hands and unconventionalized brains to find out what is really natural, for we country people are just as conventionalized as the city folk. We live in grooves and work in grooves, and if we play at all we play in grooves. We have our country social limitations and fashion limitations. If you cannot get any further away from home, climb a warm-hearted apple tree and take your lunch with the robins. If I were to take my pick of all trees it would be one of the old-fashioned Sweet-bough trees, with room enough in it for three or four birds' nests and sitting room for a whole family of boys and girls with their books.

All houses are pinched; most of them are prisons; live out of doors as far as you can, especially during the summer months. Have plenty of hammocks and hammock beds and extension chairs, where you can take your afternoon nap, or vacate the house altogether—that is, sleep as well as work in the open air. A right sort of veranda should go at least around three sides of your home and be ten feet deep. Balconies should not be fastened on to the outside of your home, but be a solid outreach of the timbers and roomy enough to make retreats.



The other day I came upon a family that has an out-of-doors dining-room, roofed over, to be sure, and constituting a corner of the house; only it is entirely open on two sides, for roses and clematis that clamber over lattices. The floor of this room is a solid grouting of cement, made with a slight slant to carry off the water of a driving shower. A catalpa tree grows straight up thru the center and branches out over the roof. It has gone on up forty to fifty feet in hight, and in its blossoming season is a marvel of beauty. The dining table is built around the trunk of this tree. Such an outside dining-room saves a deal of summer work, and is deliciously cool during the hot days. We have not got anywhere near the ideal life yet; please put your brains at work inventing and discovering.

A real vacation is vacating the ordinary. Do it. You do not need to spend your earnings to the advantage of other people; at least do not go to a pleasure resort (only once in your life, just once). But home, blessed home, is a wider and deeper word than all fathoming; it holds more than we ever find out, and its boundaries are not limited by the surveyor. It includes all that the best educated senses can discover—and more.

> "One harvest from your field
> Homeward brings your oxen strong;
> Another crop your acres yield,
> Which I gather in a song."

Reap a little wider and dig a little deeper and reach a little farther each year. Be sure never to drag anchor.

CLINTON, N. Y.

Glimpses of the Private Life of a Great Composer

BY CHARLES GOUNOD

With an Introduction by Theodore Stanton.

THE following letters were written by Charles Gounod, the composer of "Faust" and so many other famous musical productions, and were addressed, with three exceptions, to perhaps the dearest friend of his youth and old age, Hector Lefuel, the talented architect of Napoleon III. At the time the correspondence began young Lefuel, like Gounod, held a Prix de Rome, or a state scholarship, which enabled him to pass several years at the fascinating Villa Medicis, situated on one of the seven hills of the Eternal City.

When Charles Gounod left Paris for his sojourn abroad, his brother Urbain, an architect of promise who died young, remained behind with the widowed mother. This separation of mother and son was very painful to both, especially to the former. Her letters to Hector, the favorite companion of "our dear Roman," as she often calls Charles in this correspondence, reveal on almost every page this sorrow, and at the same time occasionally throw considerable light on the musical development of the talented and loving son. Thus, on April 6, 1840, she writes:

"In the midst of certain little compositions which are mere recreations of his musical nature and which may, later, bring in some cash, his mind is occupied with more serious creations, during his walks or when he is alone in his corner. Then you will not find him putting note to paper until all is well arranged in his head. Everybody has his own way of working. I know his by this time, and I am sure that very often his greatest amount of labor is done in moments when one might think he was doing nothing."

The reference to Ingres in two of the letters, showing how much the aged painter was attached to the young composer, tallies with a passage which Gounod once read to me in his then unpublished memoirs, wherein it was stated that he used frequently to sit up until the small hours of the morning playing to him, when Madame Ingres, in her dressing gown, would come downstairs, shut the piano and send both off to bed.

The long letter from Rome, giving an account of the terrible blow which Gounod received on his head, should be read in connection with the letter dated from St. Cloud in October, 1857, written soon after the composer's return from Dr. Blanche's[1] private asylum, where he was forced to go for a brief mental breakdown. It may be asked whether this accident in Rome, sixteen years before, may not have affected Gounod's brain. The fact is his face always bore a strange, faraway, dazed expression, which suggested at least a mystic.

Of the letters given below, the two short ones from St. Rémi and the long one from Vienna were not addressed to Hector Lefuel. The last named was written to Count de Pastoret, the author of the cantata with which Gounod won the Prize of Rome. Both were in Italy together.

The letter of 1856 was written before the election held on June 21 of that year for a seat in the Academy of Fine Arts, rendered vacant by the death, on May 3, of the composer Adolphe Adam. Bérlioz was chosen on this occasion, and Gounod was not successful until ten years later. Hector Lefuel was a member of this Academy for the section of architecture. Theodore Stanton.

Paris, July, 1910.

Gounod's Letters.

Naples, Sunday, July 27, 1840.

I am thoroly tired of this place. The only fine thing here—and that, I admit, is very fine—are the moonlight nights, when the mountains and gulf are indescribably beautiful. In daylight all this is more commonplace and the outlines are less grandiose. But the worst of all

[1]The son of Dr. Esprit Blanche. Both father and son were celebrated French alienists.

is this Neapolitan population. It would be impossible for me to pass my life in the midst of such a people.

I have not yet revisited Pompeii. I am keeping that until I have done the islands and coasts of Naples.

NAPLES, August 13, 1840.

I can't stand Naples any longer. I was not well at all during our excursions, and now that I am back in this cursed city I am ill again. But I have the sea, where I go in swimming once or twice a day, and this is delightful.

ROME, Saturday, February 27, 1841.

Coming home last night from a fancy dress ball at Delannoy's, I struck my forehead against the big door of the Academy, which was only ajar. As it was two o'clock in the morning, and there was no light at the porter's, I didn't notice that the door was only partly open, and so rammed my head against it frightfully hard. In fact, the blow was so strong that the two persons who were with me thought that the bang against my head was the slam of the door, until I gave vent to a sudden cry of pain, which they heard as they went up the stairs. I was last, stopping behind to pay the cab. Then my head was bathed in cold water, I was put to bed, the doctor was sent for, I was kept on my couch a whole day, dieted, was somewhat delirious, and was given a hot foot bath the next morning. But now I feel all right again.

ROME, April 1, 1841.

I am working very hard. But I would like to work well and not simply hard. I am getting near the end of my mass, those at the Academy who have heard it are pleased with it. Now I am writing the credo, which I have kept for my last effort, hoping each day to gain a little more of the strength necessary to handle well the expression of such a subject. The transcription is progressing finely and is not giving me much trouble, which is a source of comfort to me, as you can well imagine. I am sure that your faithful heart will feel a little tremolo the day my mass is given. I will hasten to write you how the affair goes off. Perhaps I can give you earlier news and I am glad to be able to say that by telling you the result of the rehearsals.

We have had quite a scare from Paris, a report reaching here that the King had been assassinated, which—a trivial consequence, however—would have put a stop to the rendition of my mass. I trembled at the thought of what might happen if the King were killed. But it now appears that there was no ground for the rumor.

ROME, April 6, 1841.

This short note is to inform you that M. Ingres has made my portrait, which he is taking to my mother. He will speak to you about it and when he does so, please let him know that I have already written you on the subject, for I want him to see that I am interested in the work. This will give him pleasure.

He leaves the house at 4 this evening, and at 5.30 he takes the mail coach as it passes Pontemalle, to which point we are all going to accompany him. Today the Academy is like a funeral on account of his departure.

ROME, May 22, 1841.

My mother sends me news of M. Ingres. She met him at Paris. He has had the fever since his arrival. But he is better now. He has given her his little portrait of me and she is enchanted with it.

FRASCATI, Friday, October 1, 1841.

I would be much obliged to you if you would send me by the coach driver, say, 10 piastres. We shall not get back to Rome before Tuesday evening, and I have calculated that we will be a little short in money to pay for our stay here. We brought with us enough for only eight or ten days and we will have been here thirteen. Put the money in a little box, well packed and sealed, and add, for still greater security, a written line, on the presentation of which I will pay the driver something.

If by chance you pass Via Gondolfi, No. 23, where is Mme. Pommiers' corset manufactory, tell her, or send her word to that effect, in French, which of course give to Michel, that I will reach Rome Tuesday evening, and Wednesday morning I will call on her in order to choose

another piano as good as the other one I got there, for I cannot suffer any longer from the effect of that disaster to the Banco Rotto.

VIENNA, March 25, 1843.

This morning was given at the Church of St. Charles a vocal mass of my composition, written almost in the style of the Sistine Chapel. The execution was, on the whole, satisfactory. As regards its composition, I say nothing, so conscious am I of the necessity of being much more competent than is my case before having the strength and the right to pass judgment on my own work. God grant that I may now be, as I trust I am, in the right and good road for the production of sacred music.

I know not what will result for me from the musical path on which I have entered; whether I am worthy to be the organ of a kind of music in which I should be so happy to excel and whether my work will meet my most sincere and profound desires; for these desires are very grand and my aim is very high.

Religious art, which has been neglected for so many years in France, appeals only to reformers who are courageous and capable. Many will be capable. I am sure to be courageous, but I must second this courage with every possible aid, with researches and meditations.

In the initiatory efforts of youth, I find that everything gives way before the single sentiment—enthusiasm. Enthusiasm is fine, but it is often misleading when it comes before intelligence or subordinates intelligence to it. When it is made the basis, then there is no danger. Tho this does not necessarily mean that I think I have the first, I would like to have the second. To obtain it I would labor with a force for which a lifetime does not suffice.

This is what my sojourn in Vienna has taught me, and if I should get nothing else from it but this conviction, I would have no cause to regret my having been deprived of six months of the dearest and sweetest existence—that of being near my good mother. May God make it possible for me some day to repay her for all the sacrifices of every kind for us with which her life has been filled.

I know not what will be thought of or written about my work. If anything appears, complimentary or otherwise, I will send it to my mother; for I do not ask that the pill be sugar coated. In these matters it is not as in medicine. In our case we must swallow the thing in its natural state. It is a benefit, however, when the dose is distilled by men of merit, and it is from men of this sort that I await an opinion, with impatience and anxiety.

PARIS, February 12, 1855.

Tomorrow, Wednesday, you will have your piano. Now listen and promise to keep to yourself all that I am going to tell you. This piano will cost you 1,135 francs, if you pay down; 1,170 francs if you pay later. The bill, however, will read 1,300 francs, the price you are *supposed* to pay. That's the price everybody pays and Pleyel will not like it if you say the contrary. So now you understand what is expected of you. It is a fine piano. I will come and try it for you day after tomorrow (Thursday).

PARIS, 1856.

Nobody could be kinder or more ready to anticipate my wishes than you are. Of course, I accept the proposal to stand for the vacant seat, and as you are kind enough to offer to aid, there is ground for me to at least hope that my budding pretensions will be preserved from ridicule by my not receiving too bad a defeat; for it would be expecting too much to succeed the first time.

I do not know exactly who my rivals are to be. I place myself quite in your hands for this maiden academic effort of mine, and however the election may go, I will always be under as much obligation to you as tho I were to succeed, for your support of me has been as devoted as one could expect.

The newspapers have not been of any help to me, for I have not asked them to do anything. If I did not know that you are busy from morning till night, I would have gone and got some hints from you as to what I should do. But it seems to me that my course is very simple. I shall send very soon my letter offering my candidature; and at the same time as this initial formality, I am

going to begin, in accordance with advice which has been given me, a first series of general visits to all members of the Academy of Fine Arts. Then, when the Section of Music shall have presented its list, I will repeat my soliciting importunities and will neglect nothing that will aid, in the eyes of my arbiters, the realization of my ambition.

Saint Cloud, October 7, 1857.

I am very eager and in great haste to shake your hand and return your kind visit paid me while I was in Passy. But how am I going to accomplish this? You are never at home. You tell me I must fasten you in your house by a fixed rendezvous; that I must invite myself to dine with you. Now, my dear friend, as I am ordered to lead an absolutely quiet home life and prohibited from even thinking of dining out, which commands I myself am the first to approve of, and as, at the same time, I am very desirous of seeing you and chatting with you, which, I see, can be brought about only by our dining together—will you condemn yourself to dine some day at your house alone with me? This I can do, but only on condition that you will tell nobody about it, as you will be the sole exception to a rule imposed by Dr. Blanche. There is nothing very recreative about this plan which I propose to you, my dear friend. But I know you would grant me much more than this, if I were to ask it. So this is why, knowing that I could ask *more,* I really ask less. Well, then, will you mention a day when you and your wife will have nobody but me at your table? and you will see me arrive with joy. Two lines only to Montretout, 25 Route Impériale, St. Cloud.

St. Remi-de-Provence, March 25, 1863.

Here I am and settled at last. My piano has just arrived from Nimes. The view from my window is splendid. There is nobody but myself in the house. This is absolute tranquillity. I would be ready to pass my life here if I had with me those whom I love. I can now well understand why Mistral prefers to remain in this paradise of country life, and is not willing to exchange the riches of peace for the poverty and misery of agitation. My window is wide open. The sky is azure. I hear only the cooing of pigeons in the courtyard. The silence of the cloister reigns. Six weeks of this quietude and "Mireille" will be finished. This is a beautiful spot and as pure as Italy. It is the Italy of France and I did well to pitch my tent here.

St. Remi, April 4, 1863.

This region agrees with me in every respect. Here are tranquillity, health, natural beauty, sane ideas. Only good can come of this stay here.

London, Tavistock House, Tavistock Square, November 8, 1872.

I am told that elections for filling the chair of our colleague Carafa[2] are to take place shortly. I cannot participate in them. But I suppose if I were there you might like to have my views on the subject; so I send them by letter.

I am given to understand that you favor Bazin[3] for the vacant seat. You may be sure that I am not going to try and lessen in your eyes the value of the claims on which Bazin bases his candidature. I do not think it generous or just to cast a shadow on the merits of one man in order to bring out in stronger relief those of his neighbor and rival. So if I were where I could speak with you, I would say something of this sort:

Bazin is a man of healthy, correct and sane traditions, and his talents for teaching are united with a grand honorability in the performance of the duties attached to his functions. But I do not think he possesses the poetic elements which constitute a high level in art, and which, tho they may not attain the degree of genius, at least make it possible for him who feels them to reach a conspicuous place in his art. Bazin will not advance the music of his time by one step. This is my conscientious opinion of him.

The man whom I would support if I were present at the election would be Reyer,[4] who, to my mind, is endowed. He has the poet in him and his works

[2]Carafa da Colobamo (1785-1872), the French composer of Italian origin and author of the operas of "Solitaire," "Masariello," etc.

[3]French composer and professor at the Paris Conservatory (1816-78), was chosen Carafa's successor.

[4]Reyer (1823-1904) was not elected until 1876.

are stamped with imagination, and often with inspiration. His entrance into the Academy would be in line with the musical movement of our time and with its lyrical and dramatic tendencies.

Such is my honest view of the situation. You must excuse me for having sent it to you. I shall be glad if it helps my candidate.

ST. CLOUD, October 3, 1878.

You may well guess what must be at this moment the existence of your old son that he hasn't the time to go and shake hands with you. But I am really condemned to hard labor. I haven't a minute free because of this terrible "Polyeucte," which is going to be given on Monday, with its rehearsals, its suppressions, its patchings up, its resolings and its strengthening in general. Then, too, there is my correspondence, which is so tiring and disheartening; unanswered letters by the hundreds. I get no sleep. I am fagged out, and to complete my misery, I have been suffering terribly for the past ten days from an abominable inflammation of the congested salival gland, which makes it impossible for me to see what is going on around me. When these attacks come on, in the parotid, in the eye, in the temple—the pain nearly sets me crazy. In a word, it is horrible.

The Message of Socialism to Collegians

BY UPTON SINCLAIR

[The following article by the author of "Manassas," "The Journal of Arthur Sterling," "The Jungle," etc., was first delivered as an address before the Ruskin Club, of Oakland, Cal. In view of the recent election of a Socialist administration at Milwaukee there will doubtless be a revival of socialistic discussion thruout the country.—EDITOR.]

THERE is a certain sense of the relationship which all of us have to life which comes over us at times. We have not created our own life; it is a thing which has been handed down to us, which has been made what it is by the efforts of countless generations of other people. For instance, the beautiful bodies which we possess, with their wonderful powers; we know that they are the product of age-long struggle on the part of our ancestors, from whom we inherit our faculties—which just at present it seems to me we are squandering. Our civilization is giving way, I think, to disease, to alcohol and drugs, and it seems to me that thru them we are losing possession of our heritage. It seems to me that the basis of true morality is a sense of the sacredness of the powers which have been handed down to us; the obligation which rests upon us to transmit them to future generations, to leave the world stronger and the race better than we found it. This is a feeling which should come to intellectual people, I think even more than to others, because this truth is so much more obvious of intellectual things. We must acknowledge that comparatively few of our ideas are of our own creation; they are the result of the efforts and sacrifices of other people. It is our duty, in the first place, to find out what makes for human welfare; and in the second place, when we have made up our minds to that, to live this truth, to live it at the highest potentiality of which we are capable.

When you go out into the world you will find a commercial civilization; a civilization in which the morality is not the morality of the student—the ideal of devotion to truth for its own sake. The ideal is the ideal of the trader. Men are driven by economic conditions to make money, and they have to make it from each other; and they have to struggle against each other—they have to keep each other in ignorance—they have to deceive each other. The highest success becomes the success which is founded upon deception and concealment and fraud. You all have sometimes talked with people who have things to sell; you know how much respect for truth they

have. A man has a horse to sell; he does not care anything about the scientific facts in the case; about the age and condition of the horse; he is interested only in the price which he can get you to pay for the horse. And if you apply that test to any rank, or grade, or station, or class, in our society, you will find that all its ideals are based upon this morality of the trader.

There is this, however, that you can say about the trader: He is at least a wide-awake man. Competition keeps him on the alert. But as that process goes on, some of the traders become successful and combine, and then you have the theatrical trust, or the steel trust, or the associated press, or an association of professional men of one class or another; and then you exchange the morality of the trader, and get the morality of the vested interest. This is a still less pleasant state of things; for here progress is entirely arrested. All that the man who represents vested interests wants is to be let alone. He is not interested in new spiritual experiences nor in revolutionary movements; vital religions, arts, or politics, or anything else; all he wants is to be let alone —so that he can continue to pay dividends.

It has been my fortune to study the vested interest rather intimately, and everywhere I have found it the chief— I am tempted to say the only—corrupting force in the community. It does not matter whether it is a great corporation, extending over the whole country, or simply a small lumber organization in the back woods; you will find it the corrupting force. These interests are engaged in keeping down labor, in working women and children, in buying up and debauching our political parties, our courts and our legislatures. In every city you will find them in league with the different forms of vice, with the liquor and the gambling interests—a combination for the protection of vested interests; and everywhere you will find that all these vested interests want is to be let alone. They are perfectly content with the world as it is. And of course this is absolutely foreign to the spirit of the truth seeker; for the man who seeks the truth and loves it for its own sake knows that it is a progressive thing. What is truth one day, tomorrow is a commonplace, and the next day it is a subterfuge. Truth is something that must grow, and the truth seeker a man who must work. And he is everywhere in eternal and deadly conflict with vested interests.

As I say, all that I ask of any student is that he seek the truth in his own department, whatever it may be; and that he try to apply it; that he watch out for the enemies of that truth, and when he sees an enemy hit it. I can say that there is scarcely a profession or important occupation in this country in which I have not talked with men who went to their work with that ideal, went to it with no idea of what they were going to find, but simply intending to do right, to watch out for the enemy and hit it; and every time the progress of those men has been thru all kinds of reform organizations into the revolutionary Socialist movement. And this is simply because of the fact that, everywhere and in every form of its activity, the vested interest is eternally and necessarily hostile to the progress of truth and to the search for the real good of humanity. Of course, a man can find perhaps a little corner of the world in which he can fill some obscure situation without getting into trouble. There are all grades of truth, and some truths are more important than others. It is a truth, for instance, that a certain number of lines in Shakespeare's poems have what are called feminine endings; and if a man devotes his time to counting these endings and teaching boys and girls how many there are, it is possible for such a man to live and do his work without getting into conflict with the System. I remember I was once in a class taught by a professor who has always been to me a perfect illustration of this academic ideal. In one of our lessons we came to Byron's oft quoted line, "There let him lay." The professor remarked: "I have an impression that somewhere in Shelley's poetry the same blunder has been made, and I have some time thought that when I had the time I would read his poems over and

try to find the blunder." Imagine a man who can read "The Skylark" and look for "There let him lay"!

Of course, I assume that young men who propose to seek truth and live it are men of vital impulse; men who want real truth, truth that counts; and who when they labor for human welfare want the welfare to be of some real nature. And of course, to a man of that sort, the academic attitude is impossible.

Let us suppose that this man we are talking about is going to be a lawyer, and resolves that he will work for justice in the world. He leaves college and he goes to practise law. I happen to have been favored with the acquaintance of a lawyer in New York, one of the half dozen of the highest paid corporation lawyers in the United States. He has recently become a member of the Supreme Court of one of our Eastern States. I went to ask him some questions, and very much to my surprise I found that he was willing to talk to me freely. I have sat in his library with him many a time, and listened to him unfold to me the career of a lawyer. When he was a young man he had a number of cases in a downtown civil court, and he always lost these cases. One day a greasy individual entered his office and proposed to go into partnership with this young man, saying: "If you will take me into partnership, you will win where you are now losing your cases." He was "in" with the political boss of that district. Then he told me the experience of a relative of his who had recently become counsel for a great railroad. He was sent for by the lawyer, who had a certain damage case in charge, and during the interview this man opened a drawer in his desk and took out a list of the Supreme Court judges of New York State. In front of the names of six or eight of these judges were crosses. "Take this list," he said, "and bring the suit in any one of these courts. These are our judges."

Another case: An intimate friend of his, one of the best known lawyers in New York City, had recently gone down to Trenton, N. J., when the Legislature was considering a bill which affected the Standard Oil Company and its railroads. He had, to my friend's positive knowledge, carried with him $50,000 in greenbacks. My friend said: "Why are you taking all that money?" The lawyer smiled and said: "How do you know but that I may have to pay for my lunch?" A good story, but the point is, see how it opens up the situation of our young lawyer!

But, you say, that is rascality which any honest man would pass by. I grant you that. Assuming that he has nothing to do with such things, what is the great mass of legal cases that will come to him. It will be somebody who is trying to get some money out of somebody else. And will the lawyer now be permitted to consider the truth? Will he dare to suggest to the client that he should consider the truth? It is recognized as legal ethics that a lawyer is to get for his client the best that he can; that is, that the lawyer is to go by the ethics of the trader and not by the ethics of the truth seeker.

Or let us assume that a man becomes a doctor. You will say that surely the medical profession is exempt. Many doctors have told me of the conditions they have found. Some physicians are popular with the rich; they go into society and they cultivate the favor of "influential" people. They put forward ideas which please the rich and they make themselves agreeable. I know of one such doctor who owns a medical journal, and hires a couple of other men to write articles which have made him a reputation all over the country. And in every city there are groups of men of that sort who control medical opinion and are hostile to all advances. All intelligent physicians of the present time know that the practice of giving abundant drugs is wrong and utterly futile; that the thing to do is to tell people that they cannot be well so long as they live the luxurious and idle lives they live. But what kind of a reputation would a doctor make who told his wealthy and self-indulgent patients to go out and do some honest work.

Or let us assume that a man goes into journalism. He will find that the profession of journalism hardly exists. No newspaper can live without the advertisements of department stores, the advertisements of whiskies and tobaccos,

and the public advertisements which are under the control of the political machines. Most of our newspapers are owned by millionaires or controlled by vested interests. I do not know how it is out in the West, but I can say that there is not a newspaper in New York which is not owned by a millionaire, and which is not controlled by that millionaire for the millionaire's own interest. One newspaper has a list of two or three hundred men which is in the drawer of every man who edits copy for that newspaper; and about these two or three hundred men nothing unpleasant is allowed to get into print. On the other hand, many of the things which they print about people who do not happen to be on the list are things which no truth-telling journalist would write.

Now, as I say, this is the condition, and it is called "conservatism." The medical man is conservative; the lawyer is conservative; the editor is conservative; the politician is conservative. What that means is that he is conserving vested interests and invested securities; and that he is opposed to any activity, political, or social, or intellectual, or spiritual, or whatever it may be, which in any way threatens to disturb the contentment of people with the *régime* of the vested interest.

I say, let the young man only go out into life with the ideal of truth, and try to apply it. I have in mind a man who started out as a settlement worker. He was at the head of the city bureau for the distribution of relief in the Chicago stockyards. There was an epidemic of sickness among the people and he started out to find the cause of it. He found that in half a dozen houses the sewers backed up into Halstead street. He went to the Board of Health. They promised to investigate and attend to the matter; but nothing was done. Then he found out that these tenements were owned by the Democratic boss of the district. He then went to other authorities, but still nothing was done. He finally went to the Mayor — Mayor Harrison — who promised to attend to it; but time went by and still nothing was done. In the meantime this young man was studying out for his own life the ideal of truth and human welfare; and at last he went to see Mayor Harrison again and said: "I want to ask you an honest question— I want to know just how far you intend to go in the remedying of these conditions in Tom Carey's tenements on Halstead street?" And the Mayor answered: "I intend to go just exactly so far as the business interests of Chicago will permit." Now, young college men going out into the world, you will find that you can go, in your efforts for truth and human welfare, just exactly so far as the business interests of your employers will permit. These business interests will permit you to deal in all kinds of superficialities and in all kinds of shams and fine speeches; you can get up in church meetings and talk about your living for humanity; but when you come up against the grim economic fact, when you propose to do anything real and vital, anything which runs counter to the stream of profits, there you will find that you are stopped. If you are in a university which is dependent upon private endowments for the salaries of its professors, you will find that it is not good form for you to tell the truth about the political activities of the persons who contribute the endowments. If you are in a State university whose chancellor has to go once a year to the politicians for the voting of funds, you will find that it is considered good form to be conservative as regards the politics of that particular community.

One of the most interesting experiences of my life was a day that I spent with Judge Lindsay in Denver. Judge Lindsay was a man who loved "kids." He liked to take little street urchins and pat them on the head, and make them stop smoking cigarets, and tell him their troubles; and he observed that lots of those kids who came up to the police court in Denver were comparatively harmless boys, who had been cutting up pranks of one sort or another; but when they were sent to the penitentiary they always turned out criminals. So he had organized a juvenile court, and he set to work with no purpose in the world but to help those kids. You would think that to help kids was certainly a harmless kind of occupation; but then he found that these kids were being debauched by wine rooms, so he tried to

stop the wine rooms. He went to the Police Commissioners, but nothing was done. Then he went to the Mayor, but still nothing was done. Then he went to the Mayor's boss. And finally he struck the president of the Telephone Trust, who had furnished the money for the boss. When he got thru with that—being hardly able to believe what it proved—he went back and tried it again. There was a young girl who was arrested for not being in school—a truancy case. She was only twelve or thirteen years old. Lindsay found that she was working in a laundry—working thirteen hours a day; the law permitted her to work eight. Lindsay went over that case. I do not suppose he struck the president of the Telephone Trust—probably the president of the Laundry Trust that time. But at any rate, he found that the law could not be enforced. Then, too, he found that the reason this thirteen-year-old girl had to work in a laundry was that her father had been killed in Guggenheim's smelter works.

"Didn't you get any damages?" he asked the mother.

"The railroad paid us $200," she replied.

"What did the railroad have to do with it? I thought that he was killed in the smelter works."

"He was, but the railroad paid the money."

"How was that?"

"I don't know; he always got his money from the railroad."

And then Lindsay investigated and found that some philanthropists of Colorado had forced the Legislature of Colorado to pass a law prohibiting men from working at certain dangerous trades more than ten hours a day, and among these trades was that of smelters. So Senator Guggenheim had had his smelter transferred to the payroll of the railroads, and they went on working in the smelters overtime! So Judge Lindsay found himself in trouble with all the corporations in the State—with the Smelter Trust, and the railroads, and the mine managers' association, and the public service corporations of Denver. But Judge Lindsay is a fighter, and he went to the newspapers; and the result is that this little man is now fighting the whole system of vested interests in Colorado—simply because he wanted to keep the people from corrupting his kids!

So far as a living is concerned, the college man in our community is generally safe. If he saves himself from the grosser forms of dissipation he can always earn money in one way or another. So this situation does not come home to him with so much poignancy. But the thing that he must ask himself is, Who it is that furnishes the wealth that constitutes the dividends upon the vested securities? It is the vast mass of the producers of the land, the men, women and children who work upon a competitive wage and who get a bare living out of life. They furnish all the profits. These people are in the pit—they have not been given college educations. They have the sense of injustice, but they are unorganized and untaught—they do not know what to do, or how to set about it. That, at any rate, is the way the college man feels about it at first. But in time he comes to the discovery that these people whom he supposed were helpless have had the courage and persistence to go ahead at the task of organizing themselves, of founding their own publishing houses, newspapers and magazines, of developing a propaganda and a moral sentiment—undertaking this tremendous fight to deliver themselves from the chains of wage slavery and the servitude of vested interests. They are doing it, they will continue to do it—all alone if they have to—but they need the help of educated men. The college man who goes out into the world and seeks the truth—who faces the facts and keeps himself in the vital current of affairs—will come sooner or later to a knowledge of this movement and the duty which he owes to it. He will have to sacrifice his dreams of wealth; he will have to sacrifice fame; he will have to give up his idea of being recognized as an eminent citizen and a leader of public opinion. He will not be invited to address large bodies of prominent citizens, and the newspapers will not report his speeches at length. He will find the whole body of conservatism, so called, most bitterly opposed to him. He will find himself maligned. He will find that he has to

face ridicule and loneliness—the path is not quite so lonely now as it was a few years ago, but it is not "the primrose path of dalliance." Whether for a lawyer, or for a doctor, or for a college professor, it is the path of struggle; but it is also the path of duty and the path which brings to a man the sense of power and righteousness which is the best thing that life has to offer to a man.

On the other hand, he may choose the easy way. He may become the legal representative of some large corporation. He may be sent to the legislature; he may become a judge, a great thinker. He will then be often called upon to speak; and the newspapers will report his speeches. But all this time the working class will continue to organize itself; this great ideal of Brotherhood will continue to arise and develop; and the man will find that all the world is sweeping by him and leaving him—with all his money, and his respectability, and his comfortable home, and his prosperous children—leaving him behind in all intellectual and spiritual ways.

If you choose the pathway of the truth you may have to wait a long time for your reward. You may have the satisfaction of knowing that your children will live to enjoy it—and if you take fairly good care of your health you may live to enjoy it yourselves. But in any case, you will have lived for the welfare of humanity, and your life will not be a failure. If you build your hopes upon humanity you are building upon the rock. The rule of the vested interest in this republic cannot last forever, and sooner or later those who toil for justice and human welfare will behold the breaking of the mighty dawn.

EDGE MOOR, DEL.

Her Chinese Husband

BY SUI SIN FAR

"I WOULD like to write," said the White Woman, "some reminiscences of my Chinese husband.

"Do," I urged.

So she wrote:

Now, that Liu Kanghi is no longer with me, I feel that it will ease my heart to record some memories of him, if I can. The task, tho calling to me, is not an easy one. So throng to my mind the invincible proofs of his love for me, the things he has said and done. My memories of him are so vivid and pertinacious, my thoughts of him so tender.

To my Chinese husband I could go with all my little troubles and perplexities; he would smooth them out; to him I could talk as women love to do at times, of the past and the future, the mysteries of religion, or life, of death. He was not above discussing such things with me. With him I was never strange or embarrassed. My Chinese husband was simple in his tastes. He liked to hear a good story, and tho unlearned in a sense, could discriminate between the good and the bad in literature. This came of his Chinese education. He told me one day that he thought the stories in the Bible were more like Chinese than American stories, and added: "If you had not told me what you have about the Bible I should say that it was composed by the Chinese." Music had a soothing tho not a deep influence over him. It could not sway his mind, but he enjoyed it just as he did a beautiful picture. Because I was interested in fancy work, so also was he. I can see his face, looking so grave and concerned, because one day I spilt some ink on a piece of embroidery I was working. If he came home in the evenings and found me tired and out of sorts, he would cook the dinner himself, and go about it in such a way that I felt that he rather enjoyed showing off his skill as a cook. The next evening, if he found everything ready, he would humorously declare himself much disappointed that I was so exceedingly well.

At such times a grey memory of

James Carson would arise. How his cold anger and contempt as exhibited on like occasions had shriveled me up in the long ago. And then I would fall to musing on the difference between the two men as lovers and husbands.

James Carson had been much more of an ardent lover than ever had been Liu Kanghi. Indeed, it was his passion, real or feigned, which had carried me off my feet. When wooing, he had constantly reproached me with being cold, unfeeling, a marble statue, and so forth; and I, poor, ignorant little girl, would wonder how it was I appeared so when I felt so differently. For I had given James Carson my first love. Upon him, my life had been concentrated as it had never been concentrated upon any other. Yet.

There was nothing feigned about my Chinese husband. Simple and sincere as he was before marriage, so was he afterward. As my union with James Carson had meant misery, bitterness and narrowness, so my union with Liu Kanghi meant, on the whole, happiness, health and development. Yet the former, according to American ideas, had been an educated and broadminded man; the other, just an ordinary Chinaman.

But the ordinary Chinaman that I would show to you was the sort of man that children, birds, animals, and some women, love. Every morning he would go to the window and call to his pigeons, and they would flock around him, hearing and responding to his whistling and cooing. The rooms we lived in had been his rooms ever since he had come to America. They were above his store and large and cool. The furniture had been brought from China, but there was nothing of tinsel about it. Dark wood, almost black, carved and antique; some of the pieces set with mother of pearl. On one side, against the wall of the inner room, stood a case of books and an ancestral tablet. I have seen Liu Kanghi touch the tablet with reverence; but the faith of his fathers was not strong enough to cause him to bow before it. The elegant simplicity of these rooms had surprised me much when I was first taken to them. I looked at him then, standing for a moment by the window, a solitary pigeon peeking in at him, perhaps wondering who it was that had come to divert from her friend's attention. So had he lived since he had come to this country—quietly and undisturbed—from twenty years of age to twenty-five. I felt myself an intruder. A feeling of pity for the boy—for such he seemed in his enthusiasm—arose in my breast. Why had I come to confuse his calm? Was it ordained, as he declared.

My little girl loved him better than she loved me. He took great pleasure in playing with her, curling her hair over his fingers, tying her sash, and all the simple tasks from which so many men turn aside.

Once the baby got hold of a set rat trap and was holding it in such a way that the slightest move would have released the spring and plunged the cruel steel into her tender arm. Strange coincidence! both Kanghi's eyes and mine beheld her thus at the same moment. I stood transfixed with horror. Kanghi quietly went up to the child and took from her the trap. Then he asked me to release his hand. I almost fainted when I saw it. "It was the only way," said he. We had to send for the doctor, and even as it was, came very near having a case of blood poisoning.

I have heard people say that he was a keen business man—this Liu Kanghi, and I imagine that he was. I did not, however, discuss his business with him. He never seemed to have any desire to talk over sales and figures with me, and I'm sure I had not. I went down to his store occasionally. All I was interested in were the pretty things, and the women who would come in and jest with him. He could jest, too. Of course, the women did not know that I was his wife. Once a woman in rich clothes gave him her card and asked him to call upon her. He handed me the card after she left. I tore it up. He took these things as a matter of course and was not affected by them. "They are a part of Chinatown life," he explained.

He was a member of the Reform Club, a Chinese social club and the Chinese Board of Trade. He liked to discuss business afairs and Chinese and American politics with his countrymen, and oc-

casionally enjoyed an evening away from me. But I never needed to worry over him.

He had his littlenesses as well as his bignesses—had Liu Kanghi. For instance, he thought he knew better about what was good for my health, and other things, purely personal, than I did myself, and if my ideas opposed or did not tally with his, he would very vigorously denounce what he called "the foolishness of women." If he admired a certain dress, he would have me wear it on every occasion possible, and did not seem to be able to understand that it was not always fit. "Wear the dress with the silver lines," he said, authoritatively, to me one day. I was attired for going out, but not as he wished to see me. I answered that the dress with the silver lines was not suitable for a long and dusty ride on an open car. "Never mind," said he, "whether it is suitable or not. I wish you to wear it." "All right," I said, "I will wear it, but I will stay at home." I stayed at home, and so did he.

At another time he reproved me for certain opinions I had exprest in the presence of two visiting countrymen. "You should not talk like that," he said. "They will think you are a bad woman."

My white blood rose at that, and I answered him in a way which grieves me to remember. For Kanghi had never meant to insult or hurt me. Imperious by nature, he often spoke before he thought—and he was so boyishly anxious for me to appear in the best light possible before his own people.

There were other things, too: a sort of childish jealousy and suspicion which it was difficult to allay. But a woman can forgive much to a man, the sincerity and strength of whose love, makes her own, tho true, seem slight and mean.

Yes, life with Liu Kanghi was not entirely without its trials and tribulations. There was the continual uncertainty during the first year about his own life here in America, the constant irritation caused by the assumption of the white men that a white woman does not love her Chinese husband, and their actions accordingly, also sneers and offensive remarks.

Sometimes Kanghi would talk about returning to China. The thought filled me with horror. I had heard the wives of Chinese talk about secondary wives. One afternoon, the cousin of Liu Kanghi, with whom I had once lived, came to see me, and showed me a letter which she had received from a little Chinese girl who had been born and brought up in America until the age of ten. The last paragraph in the letter read: "Emma and I are very sad and wish we were back in America." Kanghi's cousin explained that the father of the little girls, having no sons, had taken to himself another wife and the new wife lived with the little girls and their mother.

That was before my little boy was born. That evening I told Kanghi that he need never expect me to accompany him to China.

"Very well," said he, soothingly, "We will neither of us go."

"You see," I began, sobbing hysterically, "I look upon you as belonging to me."

He wouldn't let me say more. After a while he said: "In China, it is true a man may and occasionally does take a secondary wife; but that custom is custom, not only because sons are denied to the first wife, but because the first wife is selected by parents and guardians before a man is hardly a man. If a Chinese man marries for love, his life is a filled up cup, and he wants no secondary wife not even for sake of a son. Take, for example, me, your great husband."

I sometimes commented upon his boyish ways and appearance, which was the reason why, when he was in high spirits, he would call himself my "great husband." He was not boyish always. I have seen him, when shouldering the troubles of kin folk, the quarrels of his clan, and other responsibilities, acting and looking like a man of twice his years.

Among his friends was one more distinguished in many respects than most. He came often to the house and I got to know him well. He was in love with a half white, half Chinese girl who was a friend of mine, and they might have been happy. But he had been married on the day he left China. The girl had certainly been great friends with him in her own half Chinese, half American style,

and he was very indignant over his refusal. "It is different with you from what it would be with an American girl," said he. "You are Chinese yourself and would be recognized as my wife in China." This man was reputed a scholar among the Chinese, yet his wife, from whom he had been absent nearly fifteen years, could neither read nor write.

But for all these strange marriage customs of my husband's people, I looked upon them as far more moral in their lives than the majority of Americans. I exprest myself thus to Liu Kanghi, and he replied: "The American people think higher. If only more of them lived up to what they thought, the Chinese would not be so confused in trying to follow their leadership."

If ever a man rejoiced over the birth of his child it was Liu Kanghi. The boy was born with a veil over his face, "A prophet," cried the old mulatto Jewess who nursed me, "A prophet has come into the world." She told this to his father when he came to look upon him, and he replied, as he slipped over my middle finger a ring set with one large pearl, "He is my son; that is all I care about." But he was so glad, and there was feasting and rejoicing with his Chinese friends for over two weeks. He came in one evening and found me weeping over my poor little boy. I shall never forget the expression on his face. "Oh, shame!" said he, softly, drawing my head down to his shoulder, "What is there to weep about? The child is beautiful. The feeling heart, the understanding mind is his. He will be a great writer. More than that; he will be proud that he is of Chinese blood; he will fear none, and after him, the name of half Chinese, will no longer be one of contempt."

Kanghi, in his boyhood, had attended a school in Hong Kong. There he had learned English and made the acquaintance of several half Chinese, half English lads. "They were the brightest of all," he told me, "but they were low in the eyes of the Chinese, because they were ashamed of their Chinese blood and ignored it."

His theory, therefore, was that if his own son was brought up to be proud instead of ashamed of his Chinese strain, he would become a great man.

Perhaps he was right; but he could not see, as I, an American woman, could the conflict before our boy.

After the little Kanghi had passed his first month and we had found a good woman to look after him, his father began to take me out more than I had ever been before, and then began the most enjoyable period of my life. We dined often at a Chinese restaurant kept by a friend of his, and afterward attended theaters, concerts and other places of entertainment. We frequently met Americans with whom he had become acquainted thru business and he would introduce them with great pride in me shining in his eyes. The little jealousies and suspicions of the first year seemed no longer to irritate him, and tho I had still cause to shrink from the gaze of strangers, I knew that my Chinese husband was for several years a very happy man.

Now, I have come to the end. He left home one morning, followed to the gate by the little girl and boy. We had moved to a cottage in the suburbs.

"Bring me a red ball," pleaded the little girl, "And me, too," cried the little boy.

"All right, chickens," he responded, waving his hand to them as he went down the road.

He was brought home at night, shot thru the head. There are some Chinese, just as there are some Americans, who are opposed to all progress, and who hate with a bitter hatred all those who would enlighten or be enlightened.

But that I have not the heart to dwell upon. I can only remember that when they brought my Chinese husband home, there were two red balls in his pocket. Such was Liu Kanghi—a man.

BOSTON, MASS.

Literature

Al Fresco Fiction

We devoutly believe in observing the proprieties of the seasons, even in our reading. Publishers do not furnish us with roast-beef fiction in hot summer weather, but with tinkling fluid romances, any one of which trickles coolly off our minds or soothes us into peaceful enjoyment of our shady porch corner. These eleven stories are hammock fiction, to be read lightly, forgotten easily, or remembered pleasantly.

The Girl from His Town[1] tells of a rich young American who goes to England and appears before the ladies of the land with a generous hand upon his heart and a careless one upon his pocketbook. He is waylaid for a time by a duchess, whom the wide-eyed author describes as "beautiful and unscrupulous," but he eventually falls in love with a Gaiety Theater star, who proves to hail from his town. This girl's tendency to faint without provocation, a certain ethereal limpness about her, combined with much temperamental perversity, gives the story a rainbow halo of sentimentality. This is, on second thoughts, rather less a hammock novel than a romance for the motorist; for characters who seem about to become significant flit past us in a blur of incompleteness that leaves us gasping.

In olden days, when story writers told tales of the high-born prince who loved and wedded the low-born maid, we had the happy thought that virtue and beauty have their own reward. But modern versions of this story have added wealth to the maid; instead of being a goose girl, she is an American heiress, while the erstwhile heroic prince is merely a penurious nobleman, bent upon filling his family coffers. This tale of *The Duke's Price*[2] is, in fine, a polished newspaper story of an international marriage in which the impoverished and titled husband develops a sense of self-respect and refuses to accept money from his wealthy American wife. Had Mrs. Humphry Ward collaborated with these two authors we should have had a sky-blue divorce suit for a finale, but as it is the story lapses into the older, happier strain.

It is a surprise to have such an author as Mr. McCutcheon betray the confidence of his readers. We have learned to expect his monotonous smart set atmosphere, but hitherto he has embellished it with the hairbreadth escapes of his heroes and heroines from dragon adventures. We have an *Et tu Brute* reproach for him when we discover that in this account of *The Butterfly Man*[3] he has stung us with a moral. The story is of a wicked and selfish young man who grows into a fat parasite nibbling at the purses of his friends and the hearts of debutantes. The victims finally turn and rend him. He retires into ungracious mediocrity, where he leads the uneventful life of a clerk. Mr. McCutcheon is catching the muck-raking fever somewhat late.

A book is often at the mercy of its title, but fortunately few suffer from both their titles and their bindings. At any rate, neither should be so self-revelatory as these are. Knowing our author of old we comprehend the significance of *Snow-Fire*[4] at once, and con the words like a Mother Goose alphabet:

> Snow stands for Russia and high court life.
> Fire stands for the ladies and gentlemen who love the wrong people.

But, title apart, the cover design would tell the tale. A stalactite formation of snow dripping down over a dark green background with licking flames leaping up from below foreshadows a story of hysteric love in a wintry land.

Kilmeny of the Orchard[5] on the con-

[5] Kilmeny of the Orchard. *By L. M. Montgomery.* Boston: L. C. Page & Co. $1.25.

trary, is a title connoting a blossom romance—a romance as wholesome as the bread and milk that the hero eats at dusk. This hero is a young school teacher; his Kilmeny a gentle figure out of that sentimental fiction we seem about to lose. To the young man who discovers her, and loves her in the fragrant coolness of the orchard, she is a lady in distress—not any problematic distress of morals or mind, such as civilization imposes, but that kinder distress imposed by Nature. She is dumb. The lover, who is too modern to agree with her relatives in their acceptance of what seems to them an inexorable visitation of the sins of the fathers, calls science to the rescue, and Kilmeny gains her speech. This story is as refreshing—and perhaps rather more stimulating—as a drink from a cool spring set back from the novel reader's dusty road.

The story of Kilmeny, however, in spite of its rural garb, could be set in the sophisticated garden of some fashionable country house and lose none of its atmosphere thereby. But this is not true of this collection of stories by Miss Brown.[6] They do not concern themselves with the inconstant blooms and perfumes of the country, but with those staying features of the soil and its people that have achieved some beauty and harmony greater than that of mere color and romance. They are stories of people who have preserved the notion that the even course of Nature is not monotony, but blessing. They are about people who have not developed the sullen exclusiveness of individualism. They are a community, each member of which keeps a pleasantly inquisitive weather eye upon the crops, the children, the lovers, the joys and the sorrows, of his fellows.

The difference is great between Miss Brown's *Country Neighbors* and the folk one meets in detective fiction. Yet there are differences, even in detective tales. As for Mr. Hill's[7] and Mr. Oppenheim's,[8] in the one bloody mystery flaunts itself with amateurish frankness, while in the other it slips softly upon the surprised reader and then disappears, leaving no evidence, save vague intuitions and unfounded suspicions. *The Monksglade Mystery* is the story of a judge whose life is threatened and ultimately taken by a group of desperadoes, one of whose pals he has sentenced to death. But the mystery of the retaliatory assassination involves situations too extraordinary. Mr. Oppenheim has been more fortunate in his denouements. The victims are, this time, two Americans, bearing incognito to the American Ambassador in London important diplomatic papers. The reader is led to believe the murderer to be a young Japanese Prince, at that time residing in London while he studies British life and institutions. It satisfies the reader's sense of fitness when he learns at the end of the story that he has been carefully deluded and led into by-paths of suspicion.

Mark Twain will ever remain the inimitable interpreter of the Tom Sawyer instincts of small boys, but Mr. Johnson has become the Homer of the American prep. school. True, he speaks in a language as incomprehensible to some as a Chinese dialect, and hence he loses some of the universality of a Homeric appeal. But in his story of the rise of Dennis de Brian de Boru Finnegan (*The Humming Bird*)[9] he attains a wealth of golden slang quite unrivaled—unless, perhaps, precisely in those days of Greeks and Trojans, when there were some hundreds of gods and goddesses to swear by. Have we considered slang a blot upon the chaste scutcheon of our language? After reading *The Humming Bird* we conclude that it is but another vehicle for the enthusiastic emotions of a poetic and Irish soul.

It is rare that a woman is witty without being sharp. Mrs. Lane has the good fortune to have written a witty book curbed by a sense of humor. *According to Maria*[10] is the story of a middle class Englishwoman with social aspirations. After many slips on the

[6] COUNTRY NEIGHBORS. *By Alice Brown.* Boston: Houghton Mifflin Co. $1.20.

[7] MONKSGLADE MYSTERY. *By Headon Hill.* New York: R. F. Fenno & Co. $1.50.

[8] THE ILLUSTRIOUS PRINCE. *By E. Phillips Oppenheim.* Boston: Little, Brown & Co. $1.50.

[10] ACCORDING TO MARIA. *By Mrs. John Lane.* New York: John Lane Co. $1.50.

ladder she turns to find position and prominence entering by her tradesmen's door in the guise of a son in-law who, like the frog in the fairy tales, has been frowned upon and maltreated only in the end to turn into a prince. The one in the fairy tale had a coach. This one has a baronet for a father. The book abounds in accounts of English customs and opinions, which the author imbeds in genial satire.

Last of all, we come to Mr. Chester's *The Early Bird,*[11] for the first shall be last. This shorthand romance "reads" like a novel dictated to an expert telegrapher, and set up, sheet by sheet, as it tumbled over the wire into the publisher's offices. Sam Turner is a young New Yorker, so "born to business" that even on his vacation he cannot fall in love without keeping a finger upon the commercial possibilities of the summer resort. The heroine resents his efforts to serve two gods, but in the course of events she is caught in the maelstrom of his enthusiasm for promoting, organizing or "getting control"; and finally their hearts beat as one to the tune of the ticker. "Business" and romance are one as Balzac, even, never could quite make them.

President Gilman's Life*

FEW men exerted greater or more healthful influence upon American higher education in the nineteenth century than President Gilman, the maker of Johns Hopkins. A graduate of Yale, he repaid amply his debt to his alma mater by efficient service in the reorganization and strengthening of the Sheffield Scientific School. The development of Yale from a small New England college to a national university was the work of no one man, but Gilman, as executive secretary of the Sheffield faculty and for nine years a professor, contributed at least as much as any other man. His continual protests against the inadequate support of the Yale Library during his tenure of the librarian's office were not without influence in the evolution of a new conception of the library's importance in the work of a university. As president of the University of California for a brief period, he was the leader in one of the critical battles which have placed the state universities on a firm footing. The "group system" of electives, which is now in such high favor, took shape at Sheffield under Gilman's leadership, and was favored by him elsewhere. He was one for whom "the disqualifications of old age held long aloof," as Mrs. Gilman touchingly remarked, and not the least useful and permanent portion of his life work was his controlling influence in the organization of the Carnegie Institution. It was Gilman who formulated the plans upon which that highly useful organization is now pursuing its work; the project of a "national university," before he was called into council, having been indefinite, vague, and in other directions than those finally adopted.

But it is as the virtual founder of Johns Hopkins that Gilman will be chiefly remembered. Fortunately he was elected to control at the very inception of the undertaking and the new university developed from the first according to his ideas. It was due to Gilman that a new type of American institution was established, and not merely one more college in a new location. He gave the nation, not only its first real graduate school, but also a new idea of what a graduate school should be. The postgraduate work in all our universities was revolutionized by the example and influence of Johns Hopkins, as Gilman created it. The instruction in every college in America became at once more worthy, and the great advance in American college faculties in the last few decades is due in no small degree to the clearness and wisdom with which President Gilman drew his plans for the Baltimore institution—and to the persistency, ability and force with which he labored to realize them.

The self control by which the great resources of the new university were held for endowments and not diverted to buildings, in the face of much popular opposition, indicated real greatness, and the object lesson of Johns Hopkins, never building-poor, but always rich in

[11] THE EARLY BIRD. *By George Randolph Chester.* Indianapolis: The Bobbs-Merrill Co. $1.50.

*THE LIFE OF DANIEL COIT GILMAN. *By Fabian Franklin.* New York: Dodd, Mead & Co. $3.50.

men of the highest scholarship, has done more than anything else to bear in upon American colleges Newman's teaching that men, not bricks and mortar, make a university.

If one can imagine a spirit unfriendly to so genial a man as Gilman, the critic disposed to be unkind would doubtless seize upon his repeated resignations in the face of difficulty, and before problems which were later worked out successfully. He resigned his post as librarian of Yale because co-operation in library improvements was not forthcoming. Patience would have seen the fulfilment of his utmost hopes. Similarly he relinquished the presidency of California, with intense relief, after a single conflict with a narrow legislature. He had no faith in the permanency of an institution dependent upon popular support and did not at all foresee the magnificent growth of tax-supported universities. Even his last public work, the leadership of the Carnegie Institution, was concluded by resignation when confronted by untoward circumstances. Providence was remarkably kind to him in always presenting a larger and more inviting task, succeeding each endeavor from which he withdrew, but in an estimate of Gilman his willingness to leave an unpromising but necessary work to others, and to start anew in another place, must be borne in mind.

Professor Franklin, a former colleague of President Gilman, has written the life faithfully and in a most interesting manner. A few of the chapters were contributed by others, including an appreciation of President Gilman's personal qualities by Mrs. Gilman.

Proceedings of the Child Conference of Research and Welfare, held at Clark University, 1909. New York: G. E. Stechert & Co. $2.

That this is "the century of the child" is evidenced by the libraries being issued concerning child training and the societies daily organized for the promotion of the well-being of the bairns. This movement is one of the most conclusive evidences of improving civilization. But "it has long been apparent to those who know the work of child welfare organizations that there is little co-ordination between them, that their fields overlap, and that there is often duplication and waste." With the double thought of unifying the efforts being made in the interest of the child and of bringing scientific work and practical effort for children into contact, a conference was organized at Clark University last summer at which a variety of papers was read that have since been issued as a volume. The essays are mostly serious, scientific, progressive, deeply sympathetic without being foolishly sentimental. Few will care to read the volume thru, for it deals with subjects ranging from "Practical Eugenics" to "Anti-Vice Crusades." Like most volumes of "proceedings," it suffers from giving too much space to the long-winded orator and too little attention to the relative value of the papers presented. But specialists in different lines of child work will find useful hints in its pages, tho it does not appear that many people of reputation equal to the ambition of the conference were drawn to its sessions.

Reconstruction in Texas. By Charles William Ramsdell. (Columbia University Studies in History, Economics and Public Law, xxxvi, No. 1.) New York: Columbia University.

We doubt whether any intimate story of the details of local politics would make savory reading, but the facts of Southern politics during the years of reconstruction lead all the rest in grewsomeness. Historians are yet far from an agreement as to what ought to have been the policy of the United States in the years following the Civil War. The problem touched the life of the Union on all its sides—its humanitarian sympathy with the freedmen, its vindictive desire for revenge upon the Southern whites, its lust for office, and its honest concern that the Union be made safe. But whatever the solution, the opinion is growing that the policy adopted was bad. Dr. Ramsdell has here given us the history of his State during the critical time. His volume forms another in the honorable series that Professor Dunning has in-

spired during the past decade, and that has brought the reconstruction of nearly all the Confederate States within our reach. Texas was governed by the army of the United States for six years after the end of the war. Its first so-called Governor was appointed in June, 1865, Gen. A. J. Hamilton, a Southerner who had been a brigadier-general in the union army. Hamilton gave up his office in 1866, when J. W. Throckmorton was elected. Throckmorton was a Texas unionist who had gone with his State and risen to be a Confederate brigadier-general. He was removed from office in 1867 by General Sheridan and succeeded by E. M. Pease, a Northerner who had lived in Texas twenty-five years before the war and had twice been its Governor. Pease had been a unionist during the war and had turned into a radical Republican after its close. He was followed by the radical Republican, E. J. Davis, who, having been elected by the people, was appointed by General Reynolds in 1870. Thru all these changes the Governor had existed only on sufferance; the people of Texas had been ruled by outsiders. At the first elections after readmission in 1871, the State showed its opinion of Republican reconstruction by choosing a solid Democratic ticket. Dr. Ramsdell has traversed the details of this transition soberly and accurately. He has found much manuscript correspondence with which to enlighten his text. Without intruding his own opinions, he allows his evidence to bear out the belief that reconstruction as practised was unwise.

The American People, A Study in National Psychology. By A. Maurice Low. Boston: Houghton, Mifflin Co. $2.25.

Mr. Low has lived long in America, and has earned considerable prominence as a journalist, but he has not become a trained historian. He has discovered, or rather exploited, here the notion that there was a difference between Pilgrims and Puritans, that the Puritan attitude of protest has been significant in American development, that the American has come to have individual traits and distinguishing characteristics. But none of these ideas is original enough to justify a book. It appears from his pages that he contemplates writing a series of volumes restating American history in terms of the national psychology which he has discovered. In this, the first, he gives his space to a philosophic introduction and to a sketchy treatment of the establishment of the colonies down to about 1680. He has followed much the same sources that would be used by a professor in a small college working up a new lecture course. They are the standard secondary works which mark the beginnings of historic erudition, but which leave their reader far from the place where it is safe to philosophize. It is not that Mr. Low has reached conclusions at great variance with those of our leading students. He slips at times, as when he speaks of John Goode in place of John Coode of the Maryland Association, or when he calls Maryland "the only place on the American continent under English rule in which religious sects were unmolested," in the seventeenth century, then proceeds to give an enthusiastic chapter on religious freedom in Rhode Island. In general his views are orthodox enough. His error is that he believes them to be more important than they are. Toward the end of the volume the narrative becomes much like the ordinary accounts of colonial history. In the earlier chapters it is oratorical in the extreme. The reader is halted at the Armada and asked to speculate upon the result "if a grain of sand had fallen into the machinery of fate and brought destiny to a standstill." His main thesis causes one to pause and gasp—"The causes that have produced the American race and American civilization lie buried in no obscurity. No lava of a culture long dead must be cleared away before the truth stands revealed. On the palimpsest of a virgin continent, on verdure-clad mountains, in primeval forests, on the trackless waste of inland oceans, and rivers so vast that they gave to man a new conception of the might of nature, the American people have written in enduring language the record of a race." This is the language of holiday and pageant; it has no place in historic interpretation.

Men Versus the Man. By Robert Rives La Monte and Henry Louis Mencken. 252 pp. New York: Henry Holt & Co. $1.35.

A rare opportunity has been at last offered the reading public to find within the covers of a moderate sized book a presentation of Individualism and Socialism by two authorized exponents of these theories. La Monte is well known as an orthodox Socialist writer and one of the editors of the New York *Call*. Mencken numbers among his many achievements an excellent book of Nietszche and is connected with the editorial staff of the Baltimore *Sun*. Both writers have back of them a valuable literary and historical training, and their friendship causes both to view each other's position with an unusual sympathy. As the various chapters of the book are merely letters the two writers really exchanged, we must overlook a certain structural weakness. The antagonists start by brandishing figures and statistics which convince La Monte that a revolution is unavoidable and prove to Mencken that no revolution is forthcoming. But they soon abandon arithmetic for philosophy. La Monte states the aim of Socialism thru a quotation from Marx and Engel's "Communist Manifesto": "In place of the old bourgeois society with its classes and class antagonisms, we shall have an association in which the free development of each is the condition for the free development of all." He repudiates the charge that Socialism is striving for promiscuous equality. It aims only at equality of opportunity:

> "Many a Giotto today has no chance to develop his individuality because he has not the luck to be discovered by a Cimabue. The Socialist aim is not to provide a Cimabue for every Giotto but to make the conditions of life so equal that no Giotto shall need a Cimabue. We do not hold that every boy and girl has the genius of a Giotto but we do hold that every human being has an individuality worth developing and that every stunted, dwarfed, or atrophied individuality makes the world measurably poorer . . . Solidarity is the condition precedent for the blossoming of individuality."

To this Mencken answers that "Nature herself has divided the human race into two different types, the low caste man and the high caste man:" the one dreams chaotic dreams without working out practicable plans for their realization. The other, having efficiency as well as imagination, makes the thing itself arrive out of the idea of it:

> "The educational uplift of the low caste individual is a mere pipe-dream: The public school can never hope to raise him out of his caste. . . . A year after he has left school he has forgotten nearly all that he had learned there."

In vain does La Monte plead that a different environment would make a new man out of him; in vain does he quote Mendel to the effect that "Characteristics, talents, aptitudes and graces acquired by education and environment cannot be transmitted by heredity." Mencken declares very forcibly that the salvation of the world depends on an energetic minority of high caste individuals keeping the low caste multitudes enslaved or . . . bought:

> "In some of the counties (of Maryland), I am told, fully 90 per cent. (of the voters) accept honorariums from the party disbursing officers. Horrible? Not at all, just suppose that these swine actually recorded their own thoughts in the ballot box. . . . And yet you Socialists, whether you are disposed to admit it or not, propose to wipe out the just and providential disabilities which now differentiate all such vermin from their betters."

The book is on the whole very readable and the witty parries of these two cultured duellists never allow it to lapse into dullness.

Hearts Contending. By Georg Schock. New York: Harper & Brothers. $1.50.

This is the Old Testament story of Job with the scenes laid in German Pennsylvania. Here are wheat fields instead of vineyards; yet are the people of the drama of biblical gravity, not to say patriarchal. Job Heilig is a righteous man who attempts to direct his family according to the laws of righteousness instead of human goodness. For a time the family is biblically submissive, for the wife is the good wife of Proverbs. The three sons accept the lives Job has planned for them, and the daughter moves thru the story a colorless negative. Then, suddenly, while Job is sitting with just pride in the midst of his prosperity, Providence turns a critical eye upon the unctuous correctness of his life, and puts him upon the rack of misfortune. The primitive obstinacy of Adam and Eve who could not remain in

an Eden made for them but not by them, develops in his children. The daughter, with the advent of a lover, becomes insubordinate; and runs away. Jonathan, after refusing to become a minister, quarrels with his brother Antony over a woman, and in the struggle that ensues Jesse, the third brother, is almost fatally injured by Antony. This Antony is the most significant figure in the book, unless we except his father. He is the final scourge that flings Job Heilig upon a figurative ash-heap. When Bertha indicates her preference for Jonathan, it is as if some lava crust in him which had for years contained his volcanic heat, had burst; he pours forth a fiery destruction upon his father's barns and fields and finally compasses his own ruin and death. Meanwhile, Job sits sulking at the Lord because he cannot understand His manifold ways. Finally, however, there comes a painful awakening. This book has its lesson for the unmercifully righteous (if the type endure), and moves thruout with a dignity verily Job-like.

The Buccaneers of America. By John Esquemeling. New York: E. P. Dutton & Co. $4.

This is a reissue of an English translation of Esquemeling's record (first published in Dutch in 1678) of the adventures of the pirates along the Spanish Main. To it is added a part of Ringrose's journal. The work is valuable for those who want original sources; though it is probable that most readers prefer to get their knowledge of the buccaneers from such a work as Masefield's *Spanish Main*. For the present volume is poorly edited. No explanation is given for the anonymity of the introduction or of the translator's preface; contradictory dates and statements are often left unaccounted for; the Ringrose addition is printed as a part of the Esquemeling record, with nothing to differentiate it except a few words in the introduction; while the mention of Wafer's journal might lead the reader to infer that it formed a part of the volume. That necessary work in every old book of travels—the identification of places mentioned in the text with places known to the present generation—is hardly ever attempted, but the records themselves are of great value. Esquemeling was a pirate and a member of Morgan's expedition which sacked Panama in 1671, while Ringrose was in the Hawkins-Sharp expedition which destroyed the Spanish ships in Panama Harbor in 1680. They wrote of deeds in which they were participants or of which they were eye-witnesses—deeds almost unexampled for cruelty and bloodthirstiness—with a naïve unconsciousness of criminality. Even to this orderly age is there something romantic and picturesque in the exploits of these turbulent ruffians.

Bygone Days in Chicago. Recollections of the "Garden City" of the Sixties. By Frederick Francis Cook. [Illustrated.] Chicago: A. C. McClurg & Co. $2.75.

Mr. Cook is a veteran newspaper man, formerly of Chicago, of which city he gives a vivid war-time picture. Chicago was in a ferment in the times with which our writer concerns himself. It was a loyal city for the most part, tho copperheadism was rampant, and recurring rumors of the liberation of the Confederate prisoners created much uneasiness, not to say panic. The German part of the population was solidly Unionist; the Irish was largely so at first, but as the war took on the character of a conflict for emancipation of the negro, disaffection became widespread. Oratory and the singing of patriotic songs kept enthusiasm at high tension. Chicago has never lacked for "spellbinders," and it was the home of George F. Root, whose soldier songs were sung everywhere, and of the popular singers, Frank and Jules Lumbard. There is a good deal of newspaper history woven into the narrative, not the least interesting of which is a defense of the later Wilbur F. Storey, of the Chicago *Times*, from an attack published some time ago. The defense is approved by a number of newspaper men formerly in the employ of Storey, but now of New York. The early amusements, the literary world, the under-world and many other phases of the general life of the city of war times and thereafter are here pictured. A most readable book.

Literary Notes

....Sadakichi Hartmann is the author of a monograph entitled *The Whistler Book,* announced for early issue thru L. C. Page & Co.

....A popular edition is soon to be issued thru Cassell & Co., for the Cobden Club, of a pamphlet studying *The Effect of Protection on the Standard of Life in Germany.*

....In our Education Number of August 4th we stated that the author of "Birds through the Year," published by The American Book Company, was Albert Field Gilman. It should have been Gilmore.

....*The Lands of the Tamed Turk* are not too well known to travelers and stay-at-home readers of travel-literature; and both classes will welcome the announcement of a book on this subject by Frederic B. Jaekel (L. C. Page & Co.).

....The Department of Biblical and Patristic Greek of the University of Chicago has issued through the University Press a very instructive *Outline of New Testament Christology* (56 cents postpaid) written by J. C. Granbery, Ph. D. The subject is considered genetically and all the literature of the period is carefully examined.

....We have the initial number of *The Journal of Race Development,* edited at Clark University, Worcester, Mass., and devoted to the interests of races and nations of arrested development. The articles in this issue are instructive and treat of conditions in India, China, Korea and particularly the Philippines. The magazine will be of value to any interested in the extension of civilization.

....In a somewhat pessimistic review of *The Art of the Year,* the critic of the London *Academy* comforts himself that "at least two new stars have arisen in the artistic firmament." Both of these "stars" are foreigners. Rudolph Kiss is an exceedingly youthful Hungarian, whose "one-man" show in the Brook Street galleries evoked great enthusiasm; Seymour M. Stone is also a young man—an American, "whose talents are no less. He also has strong poetic feeling. His brush work—less volcanic than Kiss's—is far better adapted to portraiture."

....*Breeding and the Mendelian Discovery is* the title of a book by A. D. Darbishire, of the Imperial College of Science and Technology, London, announced for autumn publication by the house of Cassell. During the last ten years there has been more than a little progress in the development of Mendel's investigations —scarcely an English laboratory exists where independent investigation along Mendelian lines is not proceeding. The present writer has made Mendelism a life-study—altho he is, to be sure, still a young man. His book promises to be useful not only to avowed scientists, but to enlightened breeders of every description—whether of poultry, sheep or garden vegetables.

Pebbles

The widower, you may have observed, usually manages to come back.—*Atchison Globe.*

Without wishing to insinuate anything, it may be said that a good many bashful men get married.—*Atchison Globe.*

There once was a singer named Rawlins,
Who went to sing tenor in N'Orleans.
When he opened his mouth,
Those folks in the South
With lemons took aim at his squallin's.
—*Chicago Tribune.*

A young lady who lives in Adair
Tried to sneak out of church during prayer,
But the squeak of her shoes
Annoyed those in their pews,
So she sat in the aisle in despair.
Chicago Tribune.

A man who lived over in Yuba
Played the "Dead March from Saul" on a tuba.
The neighbors agreed
They liked it indeed,
But they'd like it far better in Cuba.
Chicago Tribune.

Ideals vary with age somewhat. We recall the time when, as a boy, we regarded a farm hand who could wiggle his ears and crack his fingers as about the most accomplished gent of our acquaintance.—*Atchison Globe.*

The Couldn't-Come-Back Club: James J. Jeffries. The Pirates. Napoleon. Rudyard Kipling. Halley's comet. The Democratic party. Mavourneen (to Erin). My Bonnie. You British Soldier. John D.'s hair.—*N. Y. Evening Mail.*

Uncle Jerry Peebles was about to start on a week's visit to the country.

"Have you got everything?" asked Aunt Ann Peebles.

He looked hastily through his valise.

"No, by George!" he exclaimed. "I've forgot my sheet of sandpaper."

"What does he want of that?" inquired Nephew Bill, as the old gentleman went to hunt it up.

"He has to sandpaper his heels every other morning," explained Aunt Ann, "to keep from wearing holes through his socks."—*Chicago Tribune.*

POPULAR FICTION.

"Money Cheerfully Refunded if Goods Are Not Satisfactory."

"Yes, We're Distinctly Related to an English Nobleman, But We Seldom Speak of It."

"Strange I Can't Call Your Name; I Know it Just as Well as I Do My Own."

"Don't Mention It, Jones; Glad to Accommodate You."

"No, I Never Use It Except for Medicinal Purposes."

"No, indeed, Mrs. Kicks; You Haven't Kept Us Waiting One Minute; Dinner Is Just Ready."—*Chicago Tribune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mayor Gaynor's Escape

THAT Mayor Gaynor is likely to escape with his life is a just occasion for satisfaction and relief to every citizen. Just such a vindictive bullet has killed three Presidents of the United States in the last forty-five years, and it is by a miracle that Mr. Gaynor lives. It is these valuable, these invaluable lives that the bullet seeks, and when one of them barely escapes we all rejoice.

By a curious political accident Mr. Gaynor was the only one of the Tammany ticket to be elected. The other general officers of the city were on the Fusion ticket; on Mayor the opposition to Tammany could not unite. Knowing the danger of defeat Tammany put at the head of its ticket the best man it could find, such a man as it did not wish to nominate, and such a man as it would now gladly promote to some higher office where he would not meddle with its business. We have seen such a case in the Republican party when Mr. Roosevelt was promoted from the Gubernatorial chair into the Vice-Presidency. Last March at Hot Springs Charles F. Murphy was a principal member of a company at a dinner to which all the Democratic Governors were invited, the purpose of which was to boom Mr. Gaynor for the Presidency. No sooner was he elected Mayor than the public were warned that he would be no tool of Tammany, and such he has not been. A correspondent in the present issue recounts some of the good things the Mayor has done in these seven months, and fails to tell of some other things not so assuredly good. His purpose in running the police department has doubtless been good, but some of his orders have been far from wise. Yet on the whole he has made as good a Mayor as the city has ever had, and the financial and other reforms he and his associates have instituted introduce a new and better era of economical administration. He is an honest, earnest citizen, devoted to the public welfare, altho he has no particular love for clerics, either Protestant or of his inherited Catholic faith. Indeed he has had no occasion to love them, for he would be more than human if he did not remember the abuse he has received for his divorce. It was noticeable that when he was thought to be dying no priest appeared to give the last rites to the sick.

Professor William James has been seeking for a moral equivalent for war. That soldiering has its moral side cannot be denied. It develops courage; it glorifies patriotism; it puts life on the altar, even to blood and death, for the sake of one's country, whether right or wrong. We have a series of laudatory adjectives which trip to the tongue when we speak of a soldier. He is a "brave soldier," "valiant," "intrepid," "gallant"; all this because he risks his life for his land. But the risks of the soldier are nothing to those of emperors, kings, presidents and mayors of great cities. They are the victims of any crank or madman or desperado. The better the official, the more courageously and intelligently he does his duty, the more likely he is to anger some one and to be assassinated. Therefore such rulers must be guarded by detectives; they ride in public only at risk of life; they are the victims of pistols and bombs. The Czar of Russia is a prisoner in his palace; the Prime Minister of Egypt is slain by a

fanatic, altho he was a most worthy servant of his nation; and the King of Spain, riding with his new wife, scarcely escaped being shot. Not anarchists alone, but any small clerk or watchman, like this Gallagher, who imagines he has a grievance can get a pistol for a dollar or two, or make a bomb out of a bit of gas pipe and discharge it at his victim. High public office, well administered, provides the moral equivalent for war all the courage, all the glory that come from battle. Mayor Gaynor will carry a scar as honorable as any that the veteran soldiers can boast. He will recover, we sincerely hope, and the bullet of a passionate, vindictive discharged watchman may help to give Mayor Gaynor the Democratic nomination for President, without the intermediate office of Governor, which introduced Mr. Cleveland and Mr. Roosevelt to the Presidency.

It is a matter for satisfaction that Mr. Mitchel, President of the Board of Aldermen, altho the youngest man that ever has held so high an office in the city, will be Acting Mayor during Mr. Gaynor's disability. He is a man who has done more than any other to discover abuses and frauds, and to secure the removal of incompetent officials. The city will be safe in his hands.

The Pistol Habit: Stop It

THE dastardly attempt upon the life of Mayor Gaynor has given startling emphasis to the sober words uttered by Judge George C. Holt in his address before the State Bar Association at Wisconsin, and published in our issue of last week. "The repeating pistol," said Judge Holt, "is the greatest nuisance in modern life. Every criminal, every madman, every crank, every bad boy carries one. Nineteen-twentieths of all the crimes of violence that are committed are effected by its use." In this country practically all of the murderous assaults upon public men have been made with the pistol. It is improbable that Booth, or Guiteau, or Czolgosz could have accomplished his purpose with any other weapon. The attempt to kill Seward with a knife resulted only in serious wounding. No assassin, however crazy, would have attempted to shoot Lincoln in a theater box with a gun, or Garfield in a railway station, or McKinley in a public hall. Gallagher would not have gotten near his victim on a steamer deck with such a weapon, and an attempt with a knife would probably have failed.

These facts should raise the most serious reflections, and they should provoke prompt and thorough-going measures to put an end to the most indefensible and monstrous habit of this people, a habit which falls little short of an epidemic insanity.

Judge Holt is absolutely right. For purposes of defense the rifle is superior to the pistol. The pistol and the bomb exist practically only for mischief and murder.

The Constitution guarantees the right to bear arms. But bearing arms does not mean carrying pistols.

The Second Amendment says:

"A well regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed."

The amendment explains itself. It is the militia system which it protects, and the militia are not carrying pistols. It is not easy to see how this right to bear arms could stand if the Government should forbid the private manufacture and sale of arms in general as it forbids the private coining of money or the carrying of mails; but in order to suppress the pistol habit it is not necessary for the Government to monopolize the manufacture and sale of arms, or to destroy any right now guaranteed. State laws and municipal ordinances generally forbid the carrying of *concealed* weapons, and this restriction is not held by the courts to invade any constitutional right. The Constitution does not say that the citizen may keep his arms hidden in a pocket. Neither does it guarantee to him a right to keep and bear a weapon of any specific description beyond muskets at a "training." It is difficult to see how the Supreme Court could construe a law forbidding the manufacture, sale or carrying of pistols without a license as unconstitutional. Judge Holt's opinion that it would be justifiable for the Gov-

ernment to prohibit the manufacture or sale of pistols, except in national armories for the use of the military and police, but that such a law is probably impracticable, may be accepted as summing up the constitutional presumption and the popular thinking on this subject. But we believe that his further judgment that it should be possible to enact laws subjecting the manufacturing, selling, purchasing and using of revolvers to restriction by license granted by a responsible board, is entirely sound and that steps should immediately be taken by an organization or committee of sober-minded men to press such measures upon the attention of all our State legislatures.

As matters stand today, the citizens who might rightly make use of arms in the defense of their homes, their villages, or their country, seldom, as a matter of fact, "bear" them, even when they "keep" them. The men and boys that habitually "bear" arms are, with few exceptions, men and boys who should be "doing time" in public institutions. Certain sections of the South, unfortunately, are exceptions, and with what tragic consequences to themselves the world knows only too well.

Must we wait until again some exceptionally able, devoted and useful public servant falls before the assassin's shot, to bestir ourselves to end a national folly which has become a national disgrace?

The Bishops of Trenton and Springfield

We note the characteristic courtesy and urbanity of the following letter received from the Bishop of Trenton:

Trenton, N. J., August 12, 1910.

The Editor of The Independent:

Dear Sir:—Yesterday a gentleman handed me a copy of your periodical. It is evident that you are not mending your ways.

Some time ago I felt obliged to rebuke you for a vicious attack upon myself. You replied that my authorities were Catholics, altho I quoted non-Catholics who maintained my position regarding the infidel universities. The inference intended by you was, of course, that Catholics are liars, and you people truthful. Such conduct for the purpose of deceiving its readers, more particularly in a periodical of the pretensions of The Independent for fairness and intellectual ability, is certainly contemptible.

In this week's number you have an editorial entitled: "Spain and the Vatican," written no doubt by one of your *learned staff*. Permit me to say that it is crude and malicious, as well as very offensive to Catholics. I presume you don't care.

The true condition of affairs between Spain and the Vatican is not mature enough to be correctly understood by those who are not on the ground. However, if you will take time to read the inclosed news-circular of the "Catholic Church Extension Society" you will have the Vatican point of view. I presume it would be too much to publish it in The Independent and thus put your readers in the possession of the truth.

The article on "Unpunished Crime in the United States" is timely and very able. Judge Holt has handled the subject in a masterly manner.

Very faithfully yours.

James A. McFaul,
Bishop of Trenton.

Not having learned to accept Episcopal rebuke with due submission, we failed to yield our reason to Bishop McFaul's dictation, yet we are glad to have the explanation of the Spanish contention put forth by the Catholic press bureau, and we accept this much of it, that the reforms which the Spanish Government decreed, particularly that allowing Jewish and Protestant places of worship to display their purpose in architecture, appear to be an infringement of the Concordat with Rome, according to which not long ago a Protestant church was compelled to remove its cross. But it is no credit to the Vatican that it does not make haste to accept this reform, but stands on the rights of an agreement which ought to be utterly repudiated. Such concordats against freedom of worship are out of date, or any concordats as to an established and privileged religion. It is these concordats that require ambassadors at the Vatican, and burden the Vatican with a Secretary of State. Yet so long as this concordat existed the proper way would have been to seek its amendment, and in case of delay to denounce and abrogate it entirely. The Vatican has no business to meddle with Spanish liberty of worship or with the laws controlling the monastic orders.

We now turn to Springfield.

It occurred several weeks ago, and in a small Massachusetts town, but it deserves wide public attention. The Catholic priest, Father Gallen, in Florence, close by Northampton, preached a ser-

mon on Catholic education in mission fields, and took occasion incidentally to say a good word for Smith College, where there are many Catholic girls, and for President Seelye on his retirement. The sermon was reported. He said it was a matter of congratulation that thousands of Catholic young men are attending Harvard, Yale and other universities, that such intercourse corrects misunderstandings and unites the people for moral effort. He added:

"Especially are our Catholic young women to be congratulated who as students of Smith College have come under the benign influence of its great president, Dr. Seelye . . . whose broad and liberal mind always gave due recognition to the moral and spiritual power of the Catholic Church."

The Bishop of Springfield, Dr. T. D. Beaven, read the report and did not like it. We may fairly presume that his Metropolitan of Boston did not like it, and Bishop Beaven immediately summoned Father Gallen for a reproof, and before the next Sunday removed him from the church which he had served for twenty-one years. The following is the bishop's letter:

"Rev. and Dear Sir: Your public pronouncement last Sunday to your parish and its aggravation by giving it to the public press has deeply occupied our attention, and we are forced to act summarily in this matter by the belief that it will be by superior authority referred to us for an explanation and a statement of the action we have taken to provide against any further promulgation of similar reprehensible propaganda from a Catholic pulpit.

"If your pronouncements were not clothed with the official sanction of your delegation by the diocesan appointing power, and vested with all the sanction of the teaching pulpit of the Church, we might accept the plea that they did not carry with them any authoritative force, and were merely the utterances of the individual, divorced from his official relations to an organized society. But such a status cannot be accepted, and your action must carry with it all the consequences of an abuse of an official position.

"In view of the above facts we now formally demand at your hands the resignation of the parish of the Annunciation, Florence, in this diocese of Springfield.

"Given at our episcopal residence on this 22d day of June with our signature and counter-signature of our chancellor.

THOS. D. BEAVEN.
Bishop of Springfield.
James F. Ahern, Chancellor.

"N. B. We shall expect your resignation within six days from the date of this letter."

Father Gallen read the letter to his people and sent in his resignation. He told them:

"I desired to speak a word for Smith College, whose students have been teachers in our Sunday school for the past twenty years, and for President Seelye, whose attitude toward our Church has been broad-minded and liberal. I shall send in my resignation as the bishop requires, but I am not ashamed of what I have done."

Such a case as this is typical of the narrow, anti-American spirit of so large a part of the hierarchy, that of Boston and Springfield, for example; and also of the usually silent revulsion against it on the part of the laity and not a few priests. The thousands of Catholics in our universities and the hundreds of thousands in our public schools show what their parents think.

The Spider and the Fly

WHAT a change has come over the world since the time when children used to be taught what were considered to be pretty verses of the hateful, horrid spider and the innocent little fly who used to be invited to walk into his parlor, and, tempted by many allurements, be there caught, ruthlessly bound hand and foot and cruelly murdered. What a moral lesson it made for the young to avoid the allurements of the world, for the wages of sin is death, and he who loveth the danger shall perish in it. As the French would say, "But, how we have changed all that!" Now we know that any agency that is destructive of the fly is a precious boon to mankind. We know that the harmless, innocent fly, of whom we used to talk during the winter at least in rather pitiful, sympathetic tones, tho our tune changed sometimes in summer, when he bothered our rest, is one of the most deadly enemies that mankind has. He is probably responsible for more sickness and death, and especially among the children—those to whom he was held up at once as an object lesson for sympathy and an ethical warning in the past—than any other single agent. Wars and accidents, and even earthquakes and floods, cannot be compared with *musca volitans* for sheer destructiveness.

The whole story that is being told so commonly now, and that is such a complete reversal of what we used to think that some of the older folks particularly are prone to conclude that there must be some exaggeration about it, is founded on thoroly scientific grounds. But not only have we changed our opinion of the fly; his enemy the spider has come in for an even more startling change of opinion, also on thoroly scientific grounds. The spider, besides being the cruel destroyer of the harmless fly in the long ago, used also to be considered as a deadly enemy of the human race. There were many stories of the bites of spiders proving fatal. Most spiders, and especially a certain legendary black variety, were supposed to manufacture a wonderfully pervasive poison, which, inoculated into human beings even in the minute quantities that must perforce have been all that could come from so small a creature, proved often far more deadly than the poison of the rattlesnake or the viper. There was a number of reported cases on record in which the sting of the spider caused death.

Now we know that when the spider proved so poisonous it was not because of anything inherent in his nature, or because of any malevolent influence of his apparatus of defense, which he had used quite naturally, and it served only the very proper purpose of inflicting just enough pain to deter enemies. Whatever of poison there was on his mandibles came from his life habit as a scavenger, for he is one of the world's important scavengers. If in the beneficent process of ridding the world of flies, however, he happened just before stinging a human being to have been using his mandibles in killing a fly that had been feeding shortly before on infectious material, on an open sore or a putrefying mass of any kind, after the manner of flies, then he had become contaminated with this and inoculated it beneath the skin of the next recipient of his attention. In our incomplete observation we completely reversed the *rôles* of the two insects; the fly was considered harmless, the spider noxious. It was the fly that was dangerous, because of his feeding propensities, his liking for offal and secretions and excretions of all kinds, while the spider was not only innocent, but he was a very active factor in the prevention of the overmultiplication of an enemy of the human race.

Probably the most interesting work that our Department of Agriculture has been doing in recent years has been in demonstrating that for every insect pest that is likely to do harm to plants or animals there is usually a corresponding enemy provided by Nature, which prevents the multiplication of the pest to such an extent that it may be seriously harmful. The world has been searched for the enemies of the various scales and insect injurers of our crops, and in many cases with marvelous success. Man has often disturbed Nature's equilibrium by transporting a pest without carrying along its enemy. Our scientists of the Department of Agriculture have had to supply for man's ignorance of natural conditions, but there is no doubt that this is the only sure way of keeping certain pests from being seriously harmful, tho, curiously enough, their natural enemies never seem able to destroy them altogether.

Of course we cannot be expected, because of this principle, to bring back the spider nor to cultivate his presence near our dwellings. We can at least learn a precious lesson, however, about not jumping to conclusions with regard to the *rôles* for good or evil, not only of insects, but of other living things, including human beings, around us, from our utterly mistaken notions with regard to the spider and the fly. We can also learn to appreciate how much living things mean in the accomplishment of vital activities around us. We have been prone in the past to think of physical factors as influencing man's life and health very much. Impurities of the air, miasms from swamps, night air, ground water, dampness and changes in the humidity of the atmosphere have been looked upon as the most important causative factors in disease. We have learned that various vital agents around us are much more important. It has taken three centuries for us to learn the lesson, for as long ago as the first part of the seventeenth century Father

Athanasius Kircher declared, during an epidemic of plague, that he was sure that flies carried the disease and that it could be carried from house to house by cats and other animals. Later he added that fleas and mosquitos probably were also active in the diffusion of the disease. It was only during the latter part of the nineteenth century, however, that we came to realize that not only these insects, but lice of all kinds and the various parasites of man, were much more active in the carrying of disease than any more diffusive agent, such as emanations from the patient, or the patient's breath, or the air of the sick room, or even effluvia from clothing that had been in contact with patients.

One of the most important means of sanitary prophylaxis in the modern time, then, is the reduction of the number of parasites of man and of the animals likely to be associated with man. We have found that the fleas that live on rats and mice may very well be carriers of disease, and at the present moment there is no little solicitude lest the fleas that are known to live on the rodents should have transferred their activities to squirrels on the Pacific Coast, and so be putting us in danger of a wide distribution of plague by their means. It is the little things of the world that are often used for the confusion of the strong. How amazing it is to think that the awful epidemics that sometimes took away nearly one-half of mankind in the past were due entirely to the insect life around. This is the lesson that modern medicine is teaching us emphatically, and making us understand how important are the smallest of the living things in the great scheme of Nature.

Pinchot and Hetch-Hetchy

In our editorial of July 28, entitled "Ignorant Vandalism," we discussed the bold attempt of San Francisco to invade the Yosemite National Park for a water supply. The favorable attitude which Mr. Pinchot, then Chief Forester, took toward this indefensible project not only puzzled many of his friends, but put a severe strain upon their loyalty. They felt that his advocacy of this project was a serious breach of the conservation policy for which they had believed him to stand.

The following letters, which have come to light in the published proceedings of the Commonwealth Club of San Francisco, are surprising as coming from him, who was at the time a Government official charged with the guardianship of national resources, and therefore expected to assume a critical and judicial attitude toward applicants for special privileges:

May 28, 1906.

Mr. Marsden Manson,
San Francisco, California.

Dear Mr. Manson:—I was very glad to learn from your letter of May 10 that the earthquake had damaged neither your activity nor your courage. I hope sincerely that in the regeneration of San Francisco its people may be able to make provision for a water supply from the Yosemite National Park, which will probably be equal to any in the world. I will stand ready to render any assistance which lies in my power.

I was glad to note that the Attorney General rendered an opinion which agrees with the views held by you and the Forest Service.

Very sincerely yours.
(Signed) Gifford Pinchot, Forester.

November 15, 1906.

Mr. Marsden Manson,
2010 Gough Street,
San Francisco, California.

My Dear Mr. Manson:—I cannot, of course, attempt to forecast the action of the new Secretary of the Interior on the San Francisco watershed question, but my advice to you is to assume that his attitude will be favorable, and to make the necessary preparations to set the case before him. I had supposed from an item in the paper that the city had definitely given up the Lake Eleanor plan and had purchased one of the other water systems. If the possibility of a supply from the Sierras is still open, you should, I think, by all means go ahead with the idea of getting it.

Very sincerely yours,
(Signed) Gifford Pinchot, Forester.

This is not merely approving, but suggesting and abetting a scheme which the public sentiment of the country has condemned in no uncertain terms. It will be observed that Mr. Pinchot knows of "other water systems" which the city might have purchased. Without having seen the valley which it was proposed to destroy, without giving a thought to the necessary exclusion of the public from a drainage area of 500 square miles, he advises San Francisco to proceed with its selfish project on the assumption that the attitude of the "new Secretary of the

Interior" [Mr. Garfield] "will be favorable." It is not surprising that this "forecast" of an action which Mr. Pinchot already *stood pledged* to further "with any assistance which lies in my power" proved correct. It will be observed that these letters were written in 1906. We would like to know how it was possible for Mr. Pinchot under these circumstances to judge impartially evidence against the project presented for the first time at hearings held in 1907 and 1908.

We recognize the great service which Mr. Pinchot has rendered to the cause of conservation. But in this case he played into the hands of his enemies and put a severe strain upon the confidence of his supporters. To take from the nation one-half of its greatest national park, with water power of incalculable value, and hand it over, without the excuse of a real necessity, to the nearest hungry municipality that asks for it, is nothing less than conservation buried and staked to the ground.

Such guardianship of our national resources would make every national park the back yard annex of a neighboring city. We hope Mr. Pinchot sees by this time that he made a serious mistake. The sooner he repudiates his support of the Hetch-Hetchy water project the better for the cause of conservation which he represents.

The Restless Farmer

One disquieting note comes from the Middle West, where has been such notable prosperity for a decade. Strangely, it is exactly the reverse of what might be expected. While it naturally seems that the result of several years of business advancement, the heaping up of bank accounts and the acquirement of valuable real estate, would be to establish a satisfied and permanent population, it is stated that nothing of the kind has taken place. Instead, Western communities are lamenting the loss of their best families, and some of the older settled commonwealths expect to show an actual decrease in their rural population in the recent census.

The explanation is that the farmers have "moved on." They have sold the homes built up from bare prairie into thrifty, well-improved properties, have taken the handsome profits and gone to new fields. Some 60,000 farmers have been moving to Canada every year for a half decade—and few of them come back. So many go from single commonwealths that they name their settlements "New Indiana" and "New Iowa," in remembrance of their former homes. What seems the more regrettable feature of this restlessness to the Western communities is that it not only takes progressive and energetic citizens—the class that feels the impulse to seek new lands—but prevents fuller development of the lands. Unless population grows the farms will not decrease in size, and there is not the tendency toward scientific tillage that is demanded if the best results in agriculture are to be obtained.

To be sure, the places of those who go are taken in large measure by others who have left homes farther east and see in the Middle West possibilities of profit. This does not, however, make up for the loss of friends. The associations between families that have been neighbors for a score of years go far toward making life worth living. This association has given many Eastern communities a touch of social unity that is to the old families a precious possession. It is not a sentiment that can be built up in a month or a year, but must grow with generations. In a typical Middle West township the other day was taken a count of changes in five years. The six miles square had been settled in homestead times and the families were on the closest terms of friendliness. They had shared each other's joys and sorrows and lived in an atmosphere of good will. Yet in a half decade 80 per cent. of the land has changed hands and nearly half the families have gone to other localities—this, too, when there has been an unexampled period of prosperity for all. In the places of the early settlers have come new dwellers, strangers all, and they have started on the long task of building up another era of neighborliness and friendship.

It is difficult to understand all the impulses that make the Western farmer a wanderer. It is not a full explanation to show that he can make money by moving. Little pleasure attends the uprooting of a home and the transporting of a

family a thousand miles to a new location. It means hardship and lonesomeness. Were there foreclosed mortgages and crop failures it would be easy to explain, but neither of these has been present. Perhaps the monotony of the endless prairie has something to do with the desire to "move on." Perhaps there comes to the family that has toiled on the same level acres for long years a desire to see what else there is in the world, to seek places where other things are happening. The experience of the pioneer has along with the hardships a spirit of romance. Out in the irrigated country, where farms lie close to the mountains, may be greater variety of experience; up in Canada may be presented some new opportunities for the boys and girls; down on the Texas Panhandle, the long time home of the cowboy, who knows what adventure may await? So the farmer joins a homeseekers' excursion, invests, and takes his family to a new home.

This restlessness has been characteristic of the West since its earliest settlement. This in the beginning made possible the development of the plains. It animated the first homesteader and yet remains with his sons and daughters. While there are new lands to conquer, while there are untilled acres awaiting the coming of the farmer, it serves a purpose; but the time is at hand when there is to be no more frontier. Indeed, it is already here, and the men who move on pay prices for lands that would have been considered marvelous a decade ago. Yet the land movement of the past two years has exceeded any that has taken place in a quarter century.

When will this restlessness cease? When will the Western farmer look forward to making his home as perfect as labor and money can produce, having as his ambition the upbuilding of a permanent abiding place, where, surrounded by his children and by neighbors endeared to him thru long years of close association, he may end his days? Perhaps we are too close to the pioneer period to expect that. This generation is apparently too deeply imbued with the nervous eagerness of the homesteader to settle down for adventures in content. None can doubt, however, that the passing of restlessness will be a good thing for the West. It will establish a stronger citizenship because it will knit the experiences of the residents into closer sympathy and fill their lives with community interests rather than with selfish ambitions. On its business side it will make less difference than in its social expression, and it will be a boon when its people grow beyond the desire to "move on."

God Save California

The Japanese Consul-General at San Francisco, Mr. Matsuzo Nagai, has just made public the results of his investigation showing that the Japanese have recently been returning to their own country from the United States in greater numbers than they have been coming here. In 1908 the excess of those returning over those coming was 1,667. In 1909 the excess was 2,625, and so far this year the proportion is the same. This will cause a sigh of relief thruout the land. Altho the population of California at the last census was 1,485,053, there are still actually 40,000 Japanese in their midst. That is to say, to every 37 whites there is one deadly yellow peril. But even should this receding tide of Japanese immigration be but temporary, California need not despair. According to the Federal Constitution if she can't protect herself the other forty-five States, to say nothing of Hawaii and Alaska, are bound to come to her aid.

To Harmonize the Party

President Taft keeps silence, but it is accepted as a fact that in a few weeks the Republican party will harmonize itself by a substantial victory of the Insurgents. The most is made of the fact that Senator Aldrich, of Rhode Island, and Senator Hale, of Maine, have announced their intention to decline re-election. To be sure this is nothing new and has no definite relation to the present scheme; but the most is made of it, and of Senator Aldrich's reaffirmation of his withdrawal, and of his letter explaining apparently satisfactorily his personal relation to the increase in the tariff schedule on a few articles made of india rubber. Then it is persistently asserted that Secretary Ballinger will retire, or be retired, altho

he has as persistently declared that he will not do so unless requested by the President. Certainly his retirement would be a relief to the situation. Then we are made to believe—which is not difficult—that Mr. Cannon is not to be re-elected as Speaker. And, finally, we are told that Mr. Roosevelt will shortly begin a speech-making journey thru the South and extreme West with a view to harmonizing the party Insurgentwise. We are further told that all this scheme is put forth and being prosecuted by Senator Crane, of Massachusetts, and the President's private secretary, but with no aid by President Taft beyond his silent acquiescence. If all this can be accomplished the public need not grieve, much as we have been indebted to the Senators from Rhode Island and Maine, whose retirement is quite independent of the plan. We shall wait and see what President Taft has to say about it all.

The Friars' Lands

So far as the public is concerned it is not a legal question but a question of social policy whether a large section of the Friars' lands purchased by our Government should be sold by our Government to a single corporation for its own exploiting. We may fairly presume that our Government will not violate a law with which they are perfectly familiar in selling these lands, and the legal authority has decided that matter. But there is many a thing legally permissible which it is not for the interest of the public to do. Congress decided that the public lands must not be sold in large blocks, and it is to be presumed that the reason for that restriction would apply to other lands that might come into the possession of the Government. Further, it is beyond all question for the public good that agricultural land should be broken up into small holdings as the homes of families. That is what gives France its stable wealth. That is the policy of this country. That is what is now being done for Ireland and what is likely to be done for England. We have given away our farm lands to settlers, and every new section of Indian land or of irrigated land is reserved for settlers, and not a square mile of it goes for a sugar company to raise beets, or to any other corporation except by fraud. The Sugar Trust has not treated the Government so honestly that it has any claim to special privileges; and even if the Government makes money by selling these lands to the Sugar Trust, it would be better policy to make less money at first by providing a self-respecting body of land owners and home makers.

The Hague Peace Palace

Altho the cornerstone of the Hague Peace Palace was laid during the sessions of the Second Hague Conference in 1907, the building is far from complete yet. It is expected, however, that it will be finished before the Third Hague Conference assembles in 1915. A specially happy feature of the palace is the intention of all the nations to contribute something to its construction or adornment. The United States will give a large marble group representing the purpose of the Palace "Peace thru Justice"; England four stained glass windows; France a picture by Bernard and Gobelins tapestries; Holland a collection of paintings by Ferdinand Bol and seven stained glass windows; Germany the monumental entrance gates to the grounds; Italy marble for the corridor; Austria bronze and crystal candelabra; Russia a jasper vase over eleven feet high for the central hall; Norway granite for the entrance slopes; Denmark porcelain for the fountain in the court yard; Switzerland works for the clocks; Mexico onyx for the staircase; Argentina a replica of the statue of Christ of the Andes; Belgium the bronze doors of the building; and Japan gold-embroidered tapestries. In more senses than the construction this building will be the first truly international edifice in the world.

The Thornless Cactus

Notwithstanding the recent drift of criticism, it is being conceded that Mr. Burbank's thornless cactus is going to be a plant of immense value, both for forage and as a food plant. This new plant will come true from graft, and is being reproduced in that way, as well as by leaves broken off and planted. When the young plant is three years old it stands 6 feet high, as much in circumference, and weighs 500 pounds. There

will be 500,000 plants distributed during the current year, and these will be distributed thru the Gulf States as well as California. Four tons of the fodder is said to be equal to one ton of alfalfa, and one acre of land will produce as much as four acres of alfalfa. But we have to take into account that this cactus will grow where the alfalfa will not, on the most unproductive soil, while it needs no irrigation whatever. Then we have 10 to 20 tons of fruit per acre, and this also has a commercial value. It can be used for making syrup, boiled or canned. The leaves are said to be very similar to egg plant, as a salad, or fried. Mr. Burbank does not claim and never has claimed that this is the only thornless cactus in the world, but he has developed a variety superior to anything before known. An acre of this plant will support five to ten dairy cows. while hogs and sheep do admirably feeding on it. It serves for drink as well as for food, as it contains such a large percentage of water. It looks now as if we should see this plant as popular as the cow pea and the velvet bean in the Southern States, at least in California, Colorado, Florida and around the Gulf. If the cacti can redeem some hundreds of millions of arid acres, while the legumes more than double the productivity of our better soils, the door is opening much wider to an enormously increased and at the same time better fed population.

A Federal System for Great Britain

Can it be that the plan for a new British Constitution which Mr. Asquith and Mr. Balfour are engaged in has in view the settlement of the demands of Ireland for an Irish Parliament by granting parliaments to Scotland, Wales and England itself, after the pattern so successful in the United States? It may be; Mr. Birrell, one of the eight men in conference, favors it, and it is the logical and reasonable solution of a real difficulty. One of the last days of the late session of Parliament, July 18, was given up to Scotch affairs, and all but the Scotch members absented themselves. It was a sort of a brief Scotch Parliament. But one day was quite too short a time to thresh out the questions raised. The Scotch are getting quite dissatisfied with the attention paid to their interests in the British Parliament, and are already asking for a parliament of their own. The people of Wales are equally dissatisfied, and are kept quiet by the fact that Mr. Lloyd-George is Lord of the Exchequer. Even English affairs are too often neglected for those of the Empire. That one such legislative body should be burdened with the rule of forty-two million people is a present absurdity. That Ireland has long demanded self-rule is natural, and her demand is most reasonable. The easiest way to right her wrong is to right the wrongs of Great Britain's three sections as well as those of Ireland. That these eight men about the council table, representing the two great parties, may have the statesmanship to reach such a reformation is not past hope. The alternative is the present ridiculous way of giving Scotland one day in the session, and keeping Ireland in turmoil. But think how impossible it would seem to manage Irish affairs as Scotch affairs are settled by giving the Irish members one day when, by themselves, they should settle their own affairs without interference from anybody.

Colombia's Grievance

It is not to be expected that Colombia will look affectionately on the United States for our Government, anticipating the Panama Canal, was very sympathetic with the secession of Panama from Colombia. From seceded Panama we got our rights to possess the canal zone. Very likely but for our protection Colombia would after a time have recovered possession of Panama. But that is an old story now, like the loss of Alsace to France. What at present the Colombian people are excited over is the late treaty by which Colombia renounced her rights in the Panama railway, with which company she had a claim of $250,000 a year until 1966. On his return to Colombia Don Enrique Cortes, late Colombian Minister to Washington, was met by so angry a crowd of people that he was obliged to flee his country to escape personal violence. We understand that Colombia has asked that her claims against our Government be referred for adjudication to The Hague, and it is said that our Government re-

fuses its consent. The facts do not seem to be very fully given to the public, and there may be good reasons for such refusal, but they need to be very good. We are on good terms with the stronger South American governments, Chile, Argentina and Brazil; it is with the weaker ones that there is danger of friction.

Florence Nightingale is dead at the age of ninety. She did not achieve fame by accident but by persistent work. Daughter of a wealthy family, highly cultivated as a girl and familiar with the Continent and its languages, she became acquainted with Elizabeth Fry, of prison reform fame, and concluded to give her life to hospital reform. So she studied the best European hospitals, accepting service in them, and returned to England to reorganize a poor hospital in London. Such was her success that her offer to take charge of hospital work in the Crimean War was accepted, and the result was a revolution in the care of the sick and wounded. She returned after the war, and has since been in charge of a hospital until a few years ago, and was one of the idolized heroines of the nation. Her name will never die.

A number of negroes met in Atlantic City, August 4-6, to organize a negro party under the name of the National Independent Political League; and they promise their support to any party that will accept the following measures:

"1. The enforcement of the Constitution, to stop disenfranchisement and peonage.

"2. The passage of a national anti-Jim Crow car law.

"3. National aid to education with the same opportunities to all children.

"4. National legislation against lynching and mob law.

"5. The restoration of the discharged Brownsville soldiers."

The measures are good, but the enforcement of them all by national legislation would require amendments to the Constitution. It is stupid to demand that Congress should do what it cannot do.

Ohio is giving concern to the philanthropist. A few weeks ago a man in Southern Ohio was murdered by a mob of saloon men because he had been active in the anti-saloon movement. That was bad enough. But fifteen men have been indicted for his murder, which is well. In the center and capital of the State the mob has held the city in terror and anarchy because of a strike of the street car system. There has been shooting and killing, and numbers of the police have refused to do their duty, and the authorities have shown sad inefficiency. This has continued so long as to be a serious indication of a general lawless spirit.

It is most fortunate that the United States decided not to take part in the Brussels Exposition, for the priceless treasures sent from the European countries have been, in great part, destroyed by fire. There the buildings were close together, and when one caught fire nearly all were burned. That is a lesson for future expositions to follow our plan, which separates the main buildings; and it will make it very unlikely that in future the choice paintings, ancient furniture, pottery, etc., will be allowed to leave the home museums.

We now are to have postal banks, and before long we shall have a decent parcels post. A man sends a two pound box of candy from New York to Boston for some one he wishes to please, and it costs him 50 cents by express or 32 cents by mail. But if a Chinese here in New York would send his candy to Shanghai our kind Government, goaded to it by international influence, will carry it to her for 24 cents. Why not first be fair to our own people?

Last week Mr. and Mrs. Frederick S. Drew, of San Francisco, paid $2,000 for a private car from New York to San Francisco rather than have Mrs. Drew's pet French bulldog ride in the baggage car according to the rules of the railroad.

"What do you think of that, my cat?
What do you think of that, my dog?"

The Supreme Courts of the States are one after another giving decisions on the validity of the union of the Cumberland Presbyterians with the Presbyterian Church. We can now add Illinois and Arkansas to the list, making seven States to affirm and two to deny. Alabama, Colorado, Mississippi and Oklahoma are yet to be heard from.

Insurance

Persuasion and Life Insurance

ABRAHAM LINCOLN once wrote regarding persuasion as follows:

"When the conduct of men is designed to be influenced, *persuasion,* kind, unassuming persuasion, should ever be adopted. It is an old and true maxim that 'a drop of honey catches more flies than a gallon of gall.' So with men. If you would win a man to your cause, first convince him that you are his sincere friend. Therein is a drop of honey that catches his heart, which, say what he will, when once gained, you will find but little trouble in convincing his judgment of the justice of your cause, if indeed that cause really be a just one. On the contrary, assume to dictate to his judgment, or to command his action, or to mark him as one to be shunned and despised, and he will retreat within himself, close all the avenues to his head and his heart; and tho your cause be naked truth itself, and tho you throw it with more than herculean force and precision, you will be no more able to pierce him than to penetrate the hard shell of a tortoise with a rye straw. Such is man, and so must he be understood by those who would lead him, even to his own best interests."

Lincoln's ideals as thus set forth have a particular bearing upon the work done or sought to be done by the life insurance agent. Any agent might well inscribe the word persuasion in letters of gold in his office, and in this way keep it constantly before him as a moving force. No prospect relishes the didactic or dictatorial tone on the part of an agent in presenting his argument. No man enjoys being told what he ought to do, even when he knows it to be the truth. The honey of persuasion catches him as a fly far more readily and far more certainly. Life insurance is a good thing; more and more in our day are men coming to know that it is a good thing, but so long as human nature remains what it is will men enjoy yielding to an agent's persuasion that is well considered rather than to anything else in the way of method.

Burglary Insurance

A GREAT many people have a fixed habit of going away from the city where they usually live on vacation. They often do this during the summer. Even country people follow this custom, and thus obtain a change of scene. This vacation idea affords the burglar many opportunities for his pernicious activity in housebreaking. The return of warm weather also inspires the leaving open of doors and windows, thus making it easier for the sneak thief, porch climber and second-story man to obtain entrance into houses. Aside from the loss resulting from burglaries, it is often true that a large sentimental loss is sustained in the disappearance of heirlooms thru robbery. In many cases houses are left entirely without protection and people wonder that burglaries increase. The time has come when fire insurance is regarded as absolutely essential, but it frequently happens that families go away for two or three months, leaving the contents of their homes very easily assailable by burglars. The records show that there are about four times as many burglaries as fires each year. A very small loss of property from housebreakers would more than pay the premium on a burglary policy for a number of years. The daily papers frequently mention cases where a van has been backed up before an unoccupied house and its entire contents have been removed. Before going away on a vacation this year it would certainly seem to be the part of prudence to protect your property by means of a burglary insurance policy.

THE New Hampshire Fire Insurance Company, of which Frank W. Sargeant is president, was incorporated in 1869. It has accordingly had forty years of progress. The formation of the New Hampshire Fire was due to the late John C. French, and it remains a monument to the zeal and genius of its founder. The New Hampshire Fire is known generally as the company with the pyramid. In its statement as of January 1, it showed total assets of $5,196,017. The company now has a capital stock of $1,100,000, a reserve for reinsurance of $1,889,434, a reserve for losses of $225,178, a reserve for taxes of $65,000, and a net surplus of $1,510,064.

Financial

August Crop Report

THE Government's crop report for August shows that this year's corn crop will not break the record. One month ago there was fair promise that the crop would far exceed any that had preceded it. A yield of 3,114,466,000 bushels was indicated. The greatest crop heretofore has been that of 1906, which was 2,927,416,000. A decline of condition in July from 85.4 to 79.3 has reduced the estimate of this year's yield by 216,000,000 bushels, and a total of 2,897,708,000 is all that can be expected. This, however, exceeds last year's crop by 125,000,000 bushels, and is greater than any preceding harvested crop except that of 1906. A gain in winter wheat is reported, and a wheat crop only 80,000,000 bushels below that of 1909 can be foreseen. Comparisons are shown below:

	Indicated for 1910.	Harvest in 1909.
Corn	2,897,708,000	2,772,376,000
Winter wheat	458,294,000	446,366,000
Spring wheat	199,394,000	290,823,000
Total wheat	657,688,000	737,189,000
Oats	979,830,000	1,007,353,000
Barley	146,786,000	170,284,000
Rye	32,288,000	32,239,000

Weather was unfavorable thruout the country for crop growth in July, the deterioration having been 4.2 per cent., against a ten years' average of only 2.3 per cent.

The Story of a Dredge

AN interesting example of the effect of our protective tariff upon the cost and price of certain products is afforded by the recent purchase of a large steel dredge for use on the Panama Canal. There were three bids. The William Simons Company, of Renfrew, Scotland, offered to deliver the dredge at the western terminus of the canal for $399,340. Another company, whose works are also in Scotland, undertook to furnish a dredge for $449,000. The only offer from manufacturers in the United States was made by the Union Iron Works, of San Francisco, whose price was $874,146, or more than twice as much as the Simons Company's figures. The purchase of articles of domestic manufacture for the use of the canal builders is required by law, "unless the President shall, in any case, deem the bids or tenders therefor to be extortionate or unreasonable." In this instance, Mr. Taft decided that the bid of the William Simons Company must be accepted. If the duty of 45 per cent. be added to that bid, plus 10 per cent. for the greater cost of material on the Pacific Coast, the total is less than $625,000. It is said that the President would have given the order to the San Francisco company if the company had been content with $675,000, but no argument could convince him that tariff protection warranted the payment of $874,146. It appears that he regarded that price as both unreasonable and extortionate.

....The July output of gold at the Transvaal mines was the largest ever reported there for one month.

....A traveler recently made his way from Portland, Me., to St. Louis, covering the entire distance, 86 miles excepted, in trolley cars. His journey consumed twenty-two days, and the cost of transportation was $33.75.

....According to the report of the Interstate Commerce Commission for the year which ended on June 30, 1909, which was issued a few days ago, there were in the United States on that date 236,868 miles of railroad, capitalized at $7,686,278,545 in stock and $9,801,590,390 in bonds, and the number of employees was 1,502,823.

....Our trade with the non-contiguous territories—Porto Rico, Hawaii, the Philippines, Guam, Midway, Tutuila and Alaska—in the last fiscal year amounted to about $190,000,000, of which $82,000,000 represented exports. In 1897 the trade of the United States with its non-contiguous territories was only $35,000,000. There was a gain of 50 per cent. last year, over 1909, in trade with the Philippines.

The Independent

VOL. LXIX NEW YORK, THURSDAY, AUGUST 25, 1910. No. 3221.

Survey of the World

Mr. Roosevelt's Rebuff

On the 16th the New York Republican State Committee met in this city, the call stating that the business would be to set the time and place for the State convention. Meanwhile Mr. Griscom asked Mr. Roosevelt to consent to be named as temporary chairman at the convention, which will be held September 27. But the "old guard," whose leaders, in the State committee, are T. L. Woodruff, J. W. Wadsworth, Jr., W. L. Ward and William Barnes, Jr., resenting the ambition of Mr. Griscom and the asserted attempt at dictation by Mr. Roosevelt, determined to give them a severe lesson. Therefore, they secured the choice of Vice-President Sherman by a vote of 20 to 15. Mr. Roosevelt issued the following statement:

"To the various persons who asked me whether I would accept the position of temporary chairman of the State convention I said that I would do so only if they were sure after knowing my attitude that they desired me, because my speech would be of such a character that it might help if the convention nominated the right kind of man on a clean-cut, progressive platform, but that it would not if neither the right kind of a man were nominated nor the right kind of a platform adopted."

Mr. Woodruff laughs at the idea that Colonel Roosevelt may be elected as a delegate to the convention, and states further that there is no chance that Governor Hughes's direct primary measure will be adopted into the platform. It would appear that it was intended definitely to rebuke Mr. Roosevelt for his aligning himself with Governor Hughes as to this measure. It is declared that now the ex-President has been four times rebuffed since his return; first, when he went to the support of Governor Hughes in regard to the direct primary nomination bill; again in his support of Mr. Garfield in Ohio; finally in his failure to have his nephew, Theodore T. Robinson, nominated for Congress in Vice-President Sherman's district. Mr. Sherman will accept the position as temporary chairman and make the usual speech. He regards his choice as an endorsement of the President's administration. The Democrats are jubilant over this division of the Republican party, and even some Republicans declare that this action of the "old guard" was taken with the expectation of losing the Governor at the next election, but with the hope of saving the Legislature and party control.

Senate Minority Report on Prices

The minority report of the Senate Committee on wages and cost of living has just been issued, and is in the form of a reply to the majority report, Senator Lodge chairman, which was published several months ago. The minority members are the Democrats, Senators Johnston, of Alabama, Clark, of Arkansas, and Smith, of South Carolina. They say:

"In all the United States there were 5 per cent. of the people directly financially interested in maintaining the exorbitant tariff on woollen goods, and perhaps less than one per cent. of this 5 per cent. got 95 per cent. of the spoils beyond a living; and yet every citizen must have woolen garments and blankets."

They declare that the Payne-Aldrich tariff favors the rich as against the poor:

"Champagne was put on the schedules at from 54 to 66 per cent., while wearing apparel was taxed from 80 to 92 per cent."

They say the President was deceived as to the reduction claimed:

"The President argued that inasmuch as 654 items were reduced and 220 increased there was a revision downward. It is an argument based on numbers, not results."

The power of the trusts, they say, depends on the tariff:

"There are few trusts that could survive a revenue tariff. So enormous have been their profits that we find organizations springing up all over the country, like the Elgin Board of Trade, the wholesale grocers, lumber dealers—associations that have contributed largely to the advance in prices and the frauds perpetrated by manufacturers of certain goods in reducing the weight or contents of packages from 20 to 50 per cent. and maintaining the same price."

There must also, the report continues, be some kind of agreement among the cereal food manufacturers. Finally, there is this inconsistency in the claims of the friends of the tariff:

"It is difficult to understand how any one can favor high rates of duty if he does not honestly believe that it will increase the prices to be realized by the manufacturers producing the article affected by diminishing or destroying competition, and thus necessarily increasing the cost to the consumer. Then we were many times mournfully warned that any reduction in rates would flood our country with lower-priced German products and that the smoke of American manufactures would disappear from the heavens. Now we are informed that the tariff has not increased the cost of those articles entering into every household and administering to the health and comfort of every family."

They quote Great Britain's experience as proof that free trade will not reduce wages:

"Great Britain is a free-trade nation, and it is the most prosperous nation in the world except our own. Shoals of emigrants from the tariff-ridden nations of France, Germany, Italy and Russia go to England to work. But Englishmen do not emigrate to those countries because the standard of living is lower. The general testimony is that the rate of wages for all mechanical trades is substantially higher in Great Britain than in those protectionist countries, while the prices of necessities are lower, leaving the Englishman a wider margin to live upon. It is about sixty years since Great Britain adopted free trade, and during that time, according to a table published in Whitaker's Almanac, wages have increased 81.7 per cent. and prices only 3 per cent."

As to popular extravagance as a cause of high prices they say:

"We are free to admit that many of our citizens have been living extravagantly. But it does not lie in the mouth of the majority to reproach them. . . . Ordinary common sense and prudence would warn the private citizen not to increase his family expense when prices were advancing; ordinary common honesty should cause legislators to reduce appropriations to the necessities of government at all times. . . . In ten years the annual burdens of Federal taxation have increased more than $376,000,000—a per capita now of more than $4. This must be felt in the cost of living."

Opposition to Speaker Cannon

As to reports that the President wished his retirement, Speaker Cannon said:

"I don't believe Mr. Taft contemplates any such action. The President is not the kind of man to yield to every passing whim of a minority. The men you have named as being objectionable to Mr. Taft are the very ones who aided to the best of their ability in passing the laws the Chief Executive demanded of the last Congress. We gave him what he wanted and he knows who to trust. . . . The insurgents won't get rid of me as easily as they think."

This has provoked a declaration from Congressman Longworth, of Ohio. Following an interview with President Taft and Vice-President Sherman and Senator Crane, this is regarded as an indication of the President's desire. Mr. Longworth's statement is as follows.

"In view of Mr. Cannon's unequivocal declaration that he intends to be a candidate for Speaker of the next House I think it is incumbent upon those of us who are candidates for membership in the next House who have made up our minds upon our course of action and have positive views upon the subject to state our position publicly. . . .

"I shall oppose Mr. Cannon's election as Speaker and I shall do so in the manner that I consider the proper and effective one for the settlement of controversies in my party, namely, in the Republican caucus. I made up my mind before the adjournment of the last session of Congress that Mr. Cannon could not be re-elected Speaker and my opinion has been strengthened since thru correspondence and talks with my colleagues. I am not referring to those who have openly opposed him in the past but to those who like myself have supported him. . . .

"I have genuine affection for Mr. Cannon as a man and the highest respect for his splendid fighting qualities. I have supported him five times for the Speakership, having voted four times for his election and once against removal, but I cannot do so again. I repeat that I shall oppose the re-election of Mr. Cannon to the Speakership and that I am firmly of the opinion that his re-election is impossible."

In response Mr. Cannon at first replied contemptuously that he would not trust fakes nor fight windmills, but later he issued a milder statement, in which he

referred to the legislation during the eight years that he has been Speaker, and concluded:

"In the event of my re-election as a member of the House I shall attend and abide by the action of the Republican caucus, and from his statement Mr. Longworth will do the same, as will every Republican member of the House. . . .

"If any Republican candidate for Congress feels that his position as a candidate on the Republican ticket would be strengthened by pledging that he will not support me in a Republican caucus I have no objection to his making the pledges. The only test that I would make as to the Republicanism of a candidate for Congressman is, will he if elected attend the Republican caucus and abide by the same in the organization of the House and the enactment of legislation in pursuance of Republican policies?"

The Iowa Congressmen have agreed not to vote for Mr. Cannon for Speaker:

Various Items

Mayor Gaynor's recovery has been normal and rapid, altho the bullet had not been extracted up to Monday. He was then sitting up part of the day, and expected to be able to leave the hospital in ten days.——Three former executive officers of the Illinois Central Railroad have been arrested for frauds of $1,500,000 in construction. They are Frank B. Harriman, formerly general manager, Charles L. Ewing, formerly manager of lines north of the Ohio river, and John M. Taylor, formerly general storekeeper. Many others are said to be involved.——Of the Western forest fires the most serious has been in Montana, where railroad men and soldiers have been fighting with poor success. The town of Wallace has been half destroyed, with a loss of life. Large manufacturing and mining plants were destroyed, and the death list for the State will exceed 100. Thousands of homeless people have been removed by special trains.—Fires are reported from various places doing great damage. The condition is the worst known in the history of the State.——The National Negro Business League, of which Dr. Washington is president, has been holding its annual meeting in this city, with 1,100 delegates from twenty-five States. Mr. Roosevelt made to them his first speech since his return and aroused great enthusiasm. Dr. Washington claimed $600,000,000 wealth for the 10,000,000 negroes. Those in Georgia last year paid taxes on 1,536,760 acres of land, and Virginia negroes on 1,517,500. ——The violence in the street car strike at Columbus, O., has been subdued by the vigorous action of Governor Harmon, and the troops have been withdrawn. The troops were held in reserve for use in case of violence, but the mayor was expected to patrol the streets and protect the cars. In case of necessity the soldiers' orders were to shoot to kill.——The primary elections in Nebraska were against county option in both parties. In the Democratic primaries Dahlman, anti-Bryan and anti-local option, defeated Shallenberger, pro-Bryan and who would sign a local option act, altho not eager for it. For Senator G. M. Hitchcock defeated Mr. Metcalfe, editor of Mr. Bryan's *Commoner,* by three to one. The insurgents fared badly in the Republican primaries, only one insurgent being nominated. Burkett, standpatter, is elected three to one against Whedon, insurgent. For Governor, Aldrich, standpatter, is nominated.——At the November election in Louisiana a constitutional amendment will be offered for vote which if passed, will allow the State to raise $6,500,000 for the proposed Panama Exposition in New Orleans. The Women's Era Club, of New Orleans, asked that women be allowed to vote on this question, but the Senate refused.——The Republican primary elections in California have gone strongly insurgent. Hiram Johnson has nearly 30,000 majority over the Stalwart candidate. Two Stalwart Congressmen, McKinlay and McLachlan, the latter beaten by William E. Kent, for whom Mr. Pinchot stumped the district. Congressman E. E. Hayes is renominated. Engelbrecht and Smith, regulars, may have been renominated, as also were three other Stalwarts who were unopposed. For Senator John D. Works, insurgent, seems to have a small majority. Owing to the split in the Republican party the Democrats hope to elect their candidate, Theodore A. Bell, whose attitude on railroad domination is the same as that of Mr. Johnson.——The New York Democratic State Committee has fixt the date for its convention on September 29, two days after the Republi-

can, and at Rochester. The sentiment in the committee is said to favor Mayor Gaynor for Governor.

South and Central America

Pedro Montt, President of Chile since 1906, a passenger on the steamship Kaiser Wilhelm der Grosse, sailing from New York on the day of the assault upon Mayor Gaynor on that steamer's deck, died at Bremen, August 16, of angina pectoris. His death was the result of overwork, and overwork in the interests of good government and the economic development of Chile. He was planning to remain in Europe for a year, beginning with taking the waters at Bad Nauheim. His term of presidency ran until June, 1911. The late chief executive was sixty-four years of age, and the son of a former President. He began his official career in 1868, when, at the age of twenty-two years, he entered the lower House of the Congress. He became leader of the Liberal party in that house, and then, successively, Senator, Councillor of State, and Minister to the United States. In this last capacity he served Chile for some twenty years, and became thoroly acquainted with our country. His favorite project has been the abandonment of the pernicious paper currency, and the resumption of gold payments, and just before undertaking his last voyage this policy received a check, when the Congress passed over his veto a currency bill failing to make the reform for which he so long stood. The late President was, also, an advocate of retrenchment, in national expenditures; of peace between Chile and the world at large, and of railway extension. Since leaving Chile, he had been criticised by the native press on the ground of extravagance, and a deficit was said to be impending. In New York, replying to these statements, he said:

"My Administration has been under great expense, I admit, but all for the betterment of the country. We have greatly improved our school system, and among other things installed 600 miles of modern railroad."

His death is a great loss to his country, but will probably result in no immediate change in the Chilean governmental policy or financial status. His funeral takes place at Berlin today. Elias Ferdandez, Minister of the Interior, will continue to act as chief executive until a successor to President Montt is chosen, in November.——The government of Ecuador is sending the cruiser "Bolivar" to Chile to assist in the celebration of the centennial of Chilean liberty, and has issued a decree establishing a period of national mourning for the death of the late President of the sister republic. Chile declared her independence September 18, 1810; altho full freedom was not achieved till 1818.——Ten cases of bubonic plague were reported in Ecuador during the first fortnight of August.——A protocol was signed by Brazil and Argentina on August 18, in full satisfaction of recent flag insults at the capitals of both countries. An offensive and defensive treaty between Brazil, Argentina and Chile is likely to be the next step.——Intense hatred of the British prevails at Ceiba, Honduras, and three Jamaicans of British citizenship have recently been killed there, while others have been maltreated or dispossessed of their property. Being unable to secure redress, the British consul sent for a cruiser, which, under command of Captain Thesinger, has now put in an appearance, the commander demanding immediate indemnity.——Granada, the most important Nicaraguan town on the Pacific Coast, was captured by the insurgents on August 19; and the commander, General Mena, marched toward Managua. On August 21 another insurgent victory was won, and the general in command of the Government troops engaged, Hernando Rivas, lost his life. The capture of the capital followed, without bloodshed, tho not without pillage, and Juan J. Estrada was proclaimed President.

In Great Britain and Spain

Chancellor of the Exchequer Lloyd George has had little peace since voting against the so-called "conciliation bill" providing for a partial extension of the suffrage. He himself claims that his opposition squares with earlier utterances, as his Albert Hall speech. The bill for which he refused to vote did not, he says, "come up to the conditions under which I undertook to

vote for woman suffrage in the House of Commons. What were those conditions? The first was that the bill should be a democratic one, and the second was that there should be some evidence that women really asked for it."——On August 20, the "Orion," the eleventh British battleship of the Dreadnought type, was launched at Portsmouth, a fortnight after the launching of the colossal cruiser-battleship "Lion." The new vessel has a displacement of 22,500 tons. Her turbines will be of 27,000 horse power, giving a speed of 21 knots, and her crew will number about a thousand officers and men. The King and Queen of Spain were present at the launching. ——Eighteen of the crew of the British cruiser "Bedford" were killed on August 21, when the warship ran ashore on the island of Quelport, at the entrance of the Yellow Sea. There is little hope of saving the vessel.——The threatening tone of announcements of Carlist and Republican meetings in Catalonia, to be held on August 18, led the Spanish Government to forbid those meetings. The Carlists are now preparing for open air demonstrations on August 28, calling upon the faithful to defend "holy religion and Mother Church" against "the accursed government." The proclamations close with an exhortation to "exterminate the incendiaries of convents and the violators of nuns." The Government has instructed its Secretary of the Vatican Embassy to call to the attention of the Holy See the violent sermons preached by the Spanish clergy. These sermons are, according to the note of instructions, "insulting to the Spanish ministers and inflaming the populace."

France and Belgium

While Major Davidson, of our own Northwestern Military Academy, has been experimenting with rapid-fire guns mounted on automobiles, especially as an agent for the destruction of military balloons, French military experimenters continue to extend their tests of the aeroplane. Great enthusiasm has been created over the 488-mile cross country race, from Paris (Issy-les-Molineaux) thru Troyes, Nancy, Charleville, Douai, Amiens, back again to Paris. Military "airmen" did not, indeed, compete, but followed the route of those contesting for the Paris *Matin's* prize of $20,000. This route was marked by flags flown from church-steeples, and by the smoke of bonfires; and was followed by many automobilists. The prize was won by Alfred Le Blanc, who will fly this autumn in this country. Only one other aviator, of the thirty-five who registered, and the nine who set out, finished all six legs of this trying race. Le Blanc and his runner-up, Aubrun by name, have been the guests of the city of Paris at a formal dinner, and received gold medals at the hands of the municipality. Both used Blériot machines with Gnome engines. This circular race, which began on August 7 and was concluded on the seventeenth, was the first aeroplane contest wherein the schedule was fixed weeks ahead, regardless of weather conditions. The entire distance was covered in 11 hours, 56 minutes. On the final day, thousands of Parisians betook themselves to the maneuvre-field at Issy. One of the incidents of the aerial competition was a race from Douai to Amiens—fifty miles—between Le Blanc, the winner, and a flock of forty-seven homing pigeons. The first pigeon was beaten by six minutes and twenty seconds.——On August 16 an aeroplane race between Paris and London was started, when Hubert Latham and John B. Moissant, an architect of Chicago, of Spanish origin, and formerly an adventurer in South American revolutions, rose from the aviation field at Issy. Latham was soon obliged to stop for repairs, but Moissant, who asserts that this was only his sixth essay in aeronautics, created a world's record in crossing the British Channel carrying a passenger. The flight was made in an effort to win the London *Daily Mail's* prize of $20,000 for a flight from London to Paris or vice versa. Moissant landed on English soil near Deal, about twelve miles from Dover. Thence he proceeded within thirty miles of London, where he fouled his engine and lost the prize.—— The new Turkish loan of six million pounds sterling (under twenty-five million dollars), a 4 per cent. issue, has

been taken up by two or three Paris and provincial banks. The Socialist press vigorously opposed the issue of a Hungarian loan in France, on the ground that French savings should not be devoted to financing the Triple Alliance.——According to the Brussels press, the marriage of the Princess Clémentine of Belgium and Prince Victor Napoleon will take place at Farnborough, the residence of the ex-Empress Eugénie. Meantime the Baroness Vaughan, morganatic wife of the late King Leopold, has married Emmanual Dureux, a retired merchant of Neuilly, near Paris.——Fire started in the Belgian section of the International Exhibition, at Brussels, on August 14, and promptly spread to the English and French sections, thence to many others. The loss will probably not exceed ten million dollars.——The International Union of Penalogists has just held its eleventh session at the Palace of the Academies, Brussels. The chief discussion was of those cases in which the notion of the delinquent's "dangerous state" may be substituted for that of the criminal act committed—this from the standpoint of a reconciliation of social safety and individual liberty. Professor Clarapède, of Geneva, read a valuable paper on the Psychology of Testimony.

Germany and Austria

Sir Ernest Cassel, the English financier, will establish a foundation of one million dollars, whose income is to be used for the benefit of poor Germans seeking employment in England, and poor British subjects seeking work in Germany. The new foundation is to be in memory of the late King Edward, with whom, during many years, the financier was closely associated. King George and Queen Mary, the Queen Mother Alexandra, and the Emperor and Empress of Germany will act as patrons.——Another foreign philanthrophy, for which an American Jew is this time the sponsor, is Nathan Straus's pure milk bureau. This was established at Sondhausen, near Heidelberg, more than two years ago. An immediate reduction in the death rate followed the introduction of this pasteurized milk. A similar charity has now been instituted by Mr. Straus at Karlsruhe. The demonstration of the practical results of pasteurization has been followed by the promise of a wide extension of this work under the auspices of the Imperial Government.——The statue of Heine erected by the Empress Elizabeth of Austria in the Achilleion has had many adventures since its removal thence at the orders of the new master, the Emperor William. For three years it stood in a summer-house; then it was sold to a Herr Campe, a banker of Hamburg. This gentleman offered it to the free town on condition that an appropriate site be provided. The Senate having refused, Herr Campe decided to place it in the *patio* of his banking establishment, where it would be visible from the street. A petition now addressed to the Senate of Hamburg concedes that, "concerning the value of Heine's poetry, opinions may differ," but adds that "the subscribers . . . believe it their duty to declare that thousands of fellow countrymen will consider the erection of such a monument as an outrage to their patriotism."——The testing of a hexaplane, described as the biggest aeroplane in the world, is about to begin at Frankfort. The machine measures seventy feet over all. It has three propellers and seats two pilots and four passengers. ——The Kaiser's fifty-first palace has just had its housewarming. This palace has been erected at Posen, at a cost of one and one-third million dollars, chiefly to impress upon the Polish mind the Prussian supremacy. It will serve as the residence of Prince Eitel Friedrich, second son of the Emperor, and contains more than six hundred rooms. ——The eightieth birthday of Emperor Francis Joseph, who has reigned since 1848, occurred on August 18, and was the occasion of the gathering of seventy-four archdukes and archduchesses of the Austrian imperial house, and the inpouring of countless letters and telegrams of felicitation. The city of Ischl was lavishly decorated. The Emperor requested that there be no costly festivities, and that the money subscribed for the purpose be devoted to charity.

Italy

The Asiatic cholera, which has for some months been epidemic in Russia, and of which the mortality has been 44 per cent., has spread into Italy, in the Province of Bari delle Puglie, on a peninsula in the Adriatic Sea. Gypsies, and a party of Russians on a pilgrimage from Odessa, are variously blamed for the contamination. Danger arises from the fact that inhabitants of the infected regions are fleeing into other provinces.——For some time past the Swiss and Italian military authorities have been strongly fortifying the Simplon route above the tunnel. The Swiss are building forts on heights that command the pass and the road. The Italians on their side have built across it a kind of drawbridge operated by electricity from small forts on each side of the road.——A government commission appointed to inquire into the condition of the campanile known as the Leaning Tower of Pisa claims to have discovered a marked change in its inclination. It is now fifteen feet eleven inches out of perpendicular, nearly a foot more than it was eighty years ago. Orders have been given for the disuse of the two largest bells, as fears are entertained for the safety of the tower.——The *ferrovieri*, or Italian railway employés, threaten to strike this autumn; and one of their grievances is the purchase by the Government of foreign-made locomotives. The German engines are called by their firemen *crematories*: they are such devourers of good coal; the American locomotives are denounced on the ground that at the end of a few weeks they demand repairs, and soon become quite useless.

Oriental Affairs

One of the reforms of the Young Turks is likely to interest the Occidental tourist: It is the elimination of the dogs of Constantinople. These have at length been removed to one of the Prince's Islands, in the Marmorean Sea. ——The treaty recently signed by Russia and Japan has been regarded with misgivings by the chancelleries, as too favorable to Russian interests in the Far East. Meantime, a portion of the Russian press is as vigorous in its opposition as are the British newspapers. The presence of a "joker" clause is suspected by the Liberal party.——The anticipated annexation of Korea by Japan now becomes a reality. Final negotiations for the annexation were opened by the Japanese Resident-General at Seoul on August 16. The step has been frequently predicted since the Treaty of Portsmouth definitely assigned Korea to the Japanese sphere of influence. The annexation will make little difference in the administration of the Hermit Kingdom, and its effects will be chiefly commercial. The imposition of a higher tariff is anticipated. Meanwhile, the censorship in Korea has been more rigidly enforced than ever, and the country is under strong military guard. Several Japanese warships patrol the Korean coast. The United States Government has thus far made no protest, tho we have several treaties with Korea which would be affected by the annexation. One of these is a commercial treaty providing that no duties of more than 10 per cent. *ad valorem* shall be imposed on articles imported from the United States, except luxuries, on which the maximum duty is fixed at 30 per cent.——The uneasiness prevalent in Korea is shared by Southern China, where its occasion is, however, altogether different. A movement against the Manchu dynasty is dreaded, and conditions are complicated by the distress of the lower classes. According to Japanese reports, the new much vaunted Chinese army is a sham, not to be counted upon in the event of disorder.——Tong-Shao-Yi, a graduate of Yale, formerly sent as a commissioner of the Chinese Government to Tibet, to arrange with the British representatives a settlement of the difficulties which had led to the Lhassa expedition of 1904, and later the holder of various high offices of state, has been reinstated in power as president of the Board of Posts and Communications. At about the same time the Chinese Regent, Prince Chun, issued a secret edict notifying viceroys and commanders that foreign loans are necessary to the development of the imperial railways, and instructing them to suppress the anti-foreign movement.

A Better System of Banking and Currency

BY EDWARD B. VREELAND

[The author of the following article is vice-chairman of the Monetary Commission and chairman of the House Committee on Banking and Currency. It is, we believe, the first public declaration from the Monetary Commission on the new plan for a central bank in the reconstruction of our banking and currency system.—EDITOR.]

IS it extravagant to say that the question of establishing in the United States a sound system of banking and currency is of greater importance to manufacturers and business men than almost all other questions combined? Let us see. What do they fear most in the future? Going back over the history of our country for the last forty years they will instantly reply, "Money panics." Business men, manufacturers, laborers are really more vitally interested in this question than the bankers themselves.

During the panic of 1907 it is true that the bankers were frightened within an inch of their lives, but how many banks in the United States suspended dividends during even that year? Very few. The organization of the bank can be quickly restricted. Business at large cannot be, and must bear the brunt when the machinery of credit breaks down.

We have had a panic about every ten years, till many people have come to consider it a kind of visitation of Providence. It accounts to some extent for the high cost of living, in the business man's effort to make hay while the sun shines, preparing for the rainy day, when a panic strikes the country. It means the suspension of credit, the closing of factories, the throwing of hundreds of thousands of men out of employment, and then a weary siege of hard times during recovery.

Now, as a matter of fact, these panics are wholly unnecessary. They are due to a defective system of banking and currency. In all of the other great nations of the earth there has not been a money panic in more than forty years. The banking and currency systems of these nations have been revolutionized in the last half century. Ours stands almost where it did fifty years ago. We cannot avoid depressions. We may have crop failures, we might even have a war, but what follows at present—runs on the banks, the closing of financial institutions, widespread disaster from one end of the country to the other—is totally unnecessary.

In 1907 the country was never more prosperous. Factories were unable to supply their orders. Railroads were unable to deliver their goods. A panic came like a bolt out of a clear sky. It started because some speculating bankers got into one or two institutions. In 1890 the Barings failed in London, for $100,000,000. It was the greatest bank failure ever known, yet it was not followed by any loss of confidence of the people of England in their banks.

In some respects our banking system is better adapted to our needs than that of any European country could be. I believe in what we call our free banking system, where, in any city, town or village the reputable men of the community can associate themselves and their capital and start a bank which exists, primarily, for the benefit of that community. The branch bank system, which prevails in most foreign countries, is not American. It is contrary to the American spirit. All that we need to do is to correct the defects in the system which we already have.

Our present system lacks leadership. It lacks cohesion. It is a splendid system when times are good, but at the first cloud appearing on the horizon it falls apart, because it is made up of about 24,000 individual units, lacking cohesion. When a panic strikes us every one of these units, actuated by the instincts of self-preservation, immediately stops loaning, does its best to call in the loans it has out, grabs every dollar it can get

its hands on, and puts it into its vault—which brings on the very thing they are all trying to avoid. The moment the throngs of people began to line up before the banks in New York City, in 1907, thousands and tens of thousands of institutions between there and the Pacific Coast rushed orders to their New York banks to send them at once their entire balances, in cash. The banks of New York held over $400,000,000 of the money of outside banks. The law allows them to use 75 per cent. of this, and as a matter of necessity, no matter what the cause, when the depositors and corresponding banks draw upon them at the same time, it means the suspension of the great banks of New York followed by suspensions thruout the country. That is because we lack cohesion and leadership.

The story of the panic from the banks' side is interesting, suggestive and worthy of study. In Great Britain they have an institution called the Bank of England, which holds the reserves of all the banks of the Kingdom. It holds the gold upon which every note is issued. Other banks only carry till money. When we were in the throes of the panic the Bank of England had in its vault $167,000,000 in gold, representing the reserves of the deposits of Great Britain. America began to draw away its balances, necessarily in gold. Week after week ten or fifteen millions were withdrawn, till we drew out about $100,000,000. There was no anxiety in England. The Bank of England simply raised its rates and to replace the gold which we took out it called upon twenty-two other nations of the world for its balances. Without any disturbance of business they were able to send us $100,000,000, tho all which they had in their vaults was $167,000,000; but more suggestive and possibly surprising to many is the fact that at that very time, down in the vaults of our Treasury at Washington, there lay nearly $1,000,000,000 in shining gold—more than in any other country on the earth—which, by reason of our defective system, had to lie there, utterly useless, while this great, rich, powerful nation turned to the "tight little isle," drawing off her gold to relieve our pain.

We have nothing in our system to protect the gold supply of the United States. We produce something like $90,000,000 a year, yet we have much less gold, relatively, in proportion to our paper money, than we had ten years ago. This subject becomes more important as the years go by. The great balance of trade which has been ours during the past ten years has brought a supply of gold to our shores without much effort on our part; but that balance is made up in great part of the products of American farms, and it is more than probable that in another ten years America will cease to be an exporter of breadstuffs. We shall consume all that we can raise. We shall have no such balance of trade coming to us in the future, and we must, of necessity, have some system, founded on the experience of other nations, to conserve and keep the supply of gold which is indispensable as the foundation of the banking system for the whole business of the country.

The United States needs elasticity in currency more than any other nation, because our farm products alone amount to more than $8,000,000,000. It requires $200,000,000 to move this great crop, so that we need much more money in circulation during the harvest season than at any other time. Now, where do we get any elasticity in our present system? We have about $1,600,000,000 in gold, which is practically stationary. It has increased but little during the past three years. We have about $700,000,000 in silver, which is stationary. We have $350,000,000 in greenbacks and Treasury notes, which is absolutely stationary. When business is good we require a great deal more money than when it is poor. When we need it there should be a surplus currency. When it is no longer required it should go out of existence.

I do not know of anything more dangerous to the country than a lack of money, except a redundancy of money. When it is not needed by the business of the country it piles up in New York and forms the foundation for the great bull movements in stocks. The banks cannot hold it. They must necessarily loan it out, and the stock market is the great borrower. When the money is

needed again in business we find that it is loaned out on call, and there is more or less of a panic in trying to get it back again where it belongs.

This eccentric bank note system of ours is hitched to Government bonds. And after forty years' experience we find that the supply of bank notes depends upon the price of bonds, not upon the demands of business. From 1881 to '92 we had a period of magnificent business. Things were humming in great shape, yet our currency contracted $300,000,000 during those years. Then followed five years when business was not good, when mills were lucky if they kept running part of the time. Idle money piled up in the banks, yet this eccentric bank note system of ours actually increased more than $100,000,000. One thing at least is evident. We must unhitch our system from bonds. We must have the supply of bank notes depend upon the demands of business and be ready to meet them. It must not depend, as at present, upon the price of bonds to secure the note issue.

Then our present reserve plan is one of the greatest defects of our existing system. We have in our banks about $14,000,000,000 which the American people have deposited. Against this the banks are required by law to hold in their vaults about ten per cent., taking the country as a whole—that is, they must keep about $1,400,000,000 idle. We are the only country in the world requiring banks, by law, to keep a cash reserve; and yet we are the only country which breaks down in time of need and has these money panics. The mere statement of the fact shows that something is wrong with our system, and a simple illustration will make it plain. Suppose that instead of creating a great reservoir to supply water in case of fire, the common council of some city should say to each householder: "We will turn over to every building its share of the city water for fire protection, and in case of fire each man can use his proportion on his own premises." Or suppose that in case of war each State should furnish its quota, recalling, in order to do so, all of its contributions to the regular army, and keeping the entire force on its own border line. Of course it would be a nonsensical, preposterous plan, yet that is precisely the system which prevails in relation to the reserves of the $14,000,000,000 deposited in the 24,000 banks of the United States today. If a panic starts in New York City do the rest of the banks come to her assistance? Not at all. They immediately come to her destruction by trying to draw out all of the money they have deposited there. It is precisely what has taken place in every panic we have had. It is what will take place in every panic of the future until we get down to a correct system of banking and currency.

Remembering that the other great nations have not had a money panic in forty years it is worth while studying their methods. They do not scatter their armies along the frontier of each state. They hold them together. They do not distribute all the water in small lots to each householder. They keep it in one great reservoir, to be used in overwhelming quantities where it is needed. We must follow something the same plan in our financial system. If, in any way, $100,000,000 could have been thrown into New York in October, 1907, it would have put out that panic before it got started. It would never have spread. If the banks and the business world knew that there was this reserve to draw upon whenever and wherever it was required, it would obliterate the item of fear, which is 99 per cent. of every panic.

The banks of the United States have probably not less than $400,000,000 at this moment deposited in the banks of New York City, and if you traced it down you would find that three-fourths of it is in five or six of the largest banks. This vast sum would instantly put out any panic that could start, but the trouble is that the moment a panic starts it becomes worse than unavailable. Last September the reserve banks of the United States held about $550,000,000 as the reserve of other banks. Of this a fraction more than the 25 per cent. required by law was in their vaults. In what shape would they have been to meet a sudden call from the owners of the money? It would have meant suspension. Experience has shown us over and over again that even the largest banks

are not fitted to perform the functions required of the holders of all the reserve funds of the country. They are not fitted to perform the functions easily within the ability of the central banks of all the other great nations of the world. They are in business to pile up large dividends for their stockholders. The more money they make the greater the success of their officers. The banks of America are not able to keep large quantities of idle cash on hand. They are in business to loan it out and keep it earning. The reserve must be segregated somewhere else, under different conditions.

Then, where this vast amount of money is piled up in national banks, it is almost certain to get into speculative hands. It is sent to the reserve banks, because there it draws 2 per cent. interest. The reserve banks cannot afford to let it lie idle in their vaults all summer. The must loan it out on call. The speculative interests can afford to pay more for it than the business interests, and they get it.

These are the most glaring defects of our system. There are many other minor defects. To correct them and produce a satisfactory monetary system is the imperative demand of the day. Two years ago Congress passed what was called the Vreeland-Aldrich bill. A great deal has been said about it which was not complimentary, but, as a matter of fact, it was never intended as a system of currency or to take the place of the existing system. It was merely an endeavor to protect us from another panic until we had time properly to study the subject and adopt a permanent basis of banking and currency. If you lived in a town of frame buildings which were liable to take fire at any moment, you would consider it good judgment to have a fire engine, even tho it stood idle in the engine house. If it ever should be wanted it would be wanted badly and quickly. This emergency bill was only a fire engine in a frame town. Many things can cause an excitement which might easily result in a call from interior banks for their money, forcing suspension of payment and panic. As the result of this bill we now have in the Treasury at Washington $500,000,000 printed and ready to be delivered even as far away as California in three days, in case of necessity. But that is only a fire engine for a frame town. What we want is to do away with the frame buildings altogether. We want to build a fire-proof panic-proof structure; a system which of itself will prevent the recurrence of these panics.

It is a significant fact that all of the great countries across the sea, with their long experience, have fallen into one line of banking and currency. Every other independent country on the earth has adopted practically the same system, with local modifications. They have followed the two principles which I have described as lacking in our system—the mobilization of the reserves, where they will be available at a moment's notice, and the centralization of their bank note issues, disassociating them from bonds as security.

I would not set up in America any one of the banks of Europe, but I would adopt the principles upon which they are founded and adapt them to conditions in the United States. I do not like to call the evident necessity a central bank, because it brings to mind, to so many people, the central bank which existed in the time of Andrew Jackson, which was not at all the modern theory of a central bank. Neither should it be like the central bank of any nation of Europe. It should have a capital of at least $100,000,000. This should be in gold. The stockholders should be confined to the national and State banks of the United States. The governor should be appointed by the President and confirmed by the Senate. The directors should be elected by the banks, with geographical representation. The stock holding should be limited to five per cent. of the capital and surplus of each bank taking stock. The voting power should be limited to five per cent. The stock should be non-transferable. The Secretary of the Treasury, the Comptroller, the Treasurer of the United States should be members *ex-officio*. Dividends should be limited to four or five per cent. It should do business *only* with other banks and the Government, with power to buy foreign exchange and import and export gold. It should hold a reserve of 35 or

40 per cent. against its notes issued. It should hold from $300,000,000 to $400,000,000 of the reserves of the banks.

Whatever system we adopt the transfer must be gradual from one to the other. We must live in the house we have while we build the other over it. Its note issue should be limited until 1930, when the two per cent. bonds are due, upon which our present circulation is based; in fact, for the next twenty years its note issue should be confined to furnishing the elasticity which our present system lacks.

The first objection in the mind of the business men is that we have tried the plan of a central bank before, without finding it efficient. Following the condemnation of it in Andrew Jackson's time, the people voted to put it out of existence, and Andrew Jackson's dead hand still clutches the idea—the old idea; but the objection is founded on a wholly erroneous impression. That central bank which existed in Andrew Jackson's time is no more like the modern theory of what it should be than black is like white. Borrowing the name encourages the criticism, from those who have not studied either, and for that reason some prefer to call the proposed institution the United States Reserve Bank.

The central bank in Andrew Jackson's time was simply a great private monopoly and the people rose against it just as they object now to monopolies. There was no Government control or supervision. There was no limit upon its earnings. It was more a private business institution than the banks of New York today. It was the enemy and competitor of every other bank from the moment it was born. It established branches in every city and competed against the other banks for their business with the prestige that the United States was a stockholder.

By limiting the earnings of this new bank to four and a half per cent., after the example of the great banks abroad, the officers of the institution cannot make the criterion of their success the piling up of large dividends. They must base it upon making the bank the satisfactory servant and protector of the people. It is quite true that the original bank, along the lines of its methods, ought to have been strangled by Andrew Jackson, in the interests of the whole people, and it was. And yet, in spite of its imperfections, there is this to say for it, that during the twenty years of its existence was the only period in our history when the country escaped panics; and in 1840, four years after its charter expired, the President was elected upon a platform which called for the re-establishment of a bank of the United States. From that day to this efforts have been made to produce a model institution which should meet the necessities, avoiding the dangers of the old institution. At last we are coming close to the ideal conception.

Those who have not yet studied the subject say that the bank I propose would be a monopoly, like the other, but it is precisely the contrary. It is an ideal method of fighting monopoly. It could not possibly become itself a monopoly and it would prevent other banks combining in monopolies. With earnings limited to four and one-half per cent. there could not be a monopoly. Suppose the earnings of the Standard Oil Company were limited by law. The monopoly of the Standard Oil Company would disappear over night. There would be no necessity or benefit in reaching out for all the oil business of the world. More than this, the fixing of earnings in the great central institutions abroad has made lower and more uniform rates thruout. It is an unheard-of thing in any country of Europe to get the tremendous rates of interest which sometimes prevail here in the United States.

Others say that eventually the Standard Oil and Morgan interests would get hold of and control such an institution. The suggestions I have made as to the law regulating the foundation of this bank would render such a thing forever impossible. I think that the people of the United States are capable of preparing a law which shall shut out the possibility of its acquisition by any special interests or of its being brought into politics. Five or six banks now hold three-fourths of the $400,000,000 reserve in the City of New York, today. Run down the list and you will see that they are what is commonly called

the Morgan and Standard Oil banks, so that they already control them for their own private interests, and the establishment of the new institution would decidedly curb and limit that power. It would establish more uniform and lower rates of interest thruout the entire country, by the same power which would prevent all possibility of panics. It would obliterate the most dangerous features of monopoly and create universal confidence in our banking and currency system.

The whole banking business is a matter of confidence. You have heard the story of the old lady who came into a bank, during a run and said, "If you have got my money I don't want it, but if you have not got it I want it right off." The whole theory of the banking world rests upon exactly that transaction. Every banker from here to the Pacific Coast feels the same. If we know that we can get our money in New York when we want it, we don't want it. If there is the slightest doubt, 24,000 banks want to get their money home, and in trying to they precipitate the very panic they are afraid of. This also obliterates the objection that the country is too large for the successful operation of such an institution. The principles do not rest on the number of acres in a territory. Confidence or lack of confidence travels by wire. If there is absolute confidence in the capacity of our system to prevent panics there will be no panics.

Another objection is the fear of political control. This is one more prejudice brought down from the old central bank of Andrew Jackson's time. Every bank was in politics, then, from the day it was born. Today no banks anywhere are in politics. A bank came into existence, then, as a matter of politics, pure and simple. No body of men could go to the legislature and get a charter for a bank unless they were in accord, politically, with the governor and a majority of the legislature. Banks were handled like political patronage. That is all changed, now. Does any one care about the politics of men who take stock in a bank, today? Is there any danger now of a bank losing its charter on account of the political complexion of its officers? There are probably very few banks in the country, today, where the officers and shareholders are members of one political family. We have free banking, now, which has taken banks out of politics. Why, today, the Comptroller of the Currency has infinitely more power than it would be possible to put into such an institution as I have described. The mere finger of suspicion pointed by the Comptroller of the Currency at any bank in the United States might easily produce a run upon that bank. Who ever heard of that great power being used for the benefit of any political party? No. Banks are no longer in politics.

It may be years, yet, before we arrive at a satisfactory solution, for this is the greatest and most important business problem before the people of the United States. Congress alone cannot settle it. Neither bankers nor business men alone can settle it. It must be the result of study and discussion among intelligent men of all classes of the nation, and it will require the best efforts that all of us can put forth before we shall have a suitable and satisfactory banking and currency system adapted to the conditions of this country.

It called for all the eloquence, influence and power of Washington, Jefferson, Madison and Hamilton, to induce the people of the country to adopt the Constitution under which we have grown so great and powerful. So it will take all the energy, thought, and earnest efforts of the business men and bankers and Congress to secure for the people and adopt a system of banking and currency commensurate with the greatness, the power, and the resources of our country.

WASHINGTON, D. C.

THE AMMERGAU AND THE VILLAGE OF THE PASSION PLAY.

The Passion Play of Oberammergau

BY NEIL C. BROOKS

Assistant Professor of German in the University of Illinois.

IT has become a well-known story, the old chronicle's account of the plague that broke out in Oberammergau in the year 1633 and the propitiatory vow of the village to perform the "tragedy of the Passion" every ten years. It may be questioned whether the ravages ceased as suddenly thereafter as the chronicle states, but the most skeptical cannot deny that the faithful observance of the vow has brought ultimate blessings to the village in the form of prosperity and renown.

The fame of Oberammergau was long in coming. The first performance under the vow was in 1634; then at ten-year intervals until 1674; in 1680 the play was repeated, and thus the even ten-year time established which, except for two or three unavoidable deviations, has been adhered to ever since. Not until toward the middle of the last century did the play begin to attract wide attention. In 1840 Guido Görres, with his interest in folk-literature, witnessed the play and published an account of it. From the year 1850 a number of full reports have been preserved, the most noteworthy being that of Eduard Devrient, the well-known historian of the theater and the art of acting. As Devrient was himself an actor and an authority in things theatrical, also a North German and a Protestant, his favorable account was of far-reaching influence, and Oberammergau still regards the day of his visit as the starting point of its present world-wide fame.

The various versions of the play that have been used during the three centuries reflect most interestingly the general tastes and tendencies of the outside world and show that Oberammergau has not led an isolated existence. The oldest text that has been preserved is of the year 1662. This text was probably used from the beginning. It has been shown to consist of two earlier plays patched together, one of them going back to the fifteenth century and the other the work of a fairly well-known Augsburg mastersinger, Sebastian Wild, of the sixteenth century. Thus this oldest version shows a cultural connection between the village and its near Imperial city. The play is in homely German *Knittelvers,* somewhat after the manner of Hans Sachs, and in various ways it strikes a more popular tone than the later versions. It has the medieval fondness for devils, and fulfills the popular demand for comedy in the rôle of Judas. A devil dances behind him as he receives his money, after his exit three devils come in and rejoice over his com-

CHRIST BEARING THE CROSS.

pact with the high priests, and the devils of course do not fail to carry him off to hell after he has hanged himself.

The end of the seventeenth and the eighteenth century brought several revisions of the play, all tending toward the type of Jesuit drama characteristic of that time. These revisions reached their climax in that of Rosner, a learned Benedictine of the neighboring monastery of Ettal. Here allegory runs riot; Death, Sin, Greed and Envy, Angels and Genii, all appear; the eye is appealed to by spectacular pomp and the ear by countless arias, recitatives and choruses. The old version of 1662 may be compared to a crude early woodcut, while this elaborate Jesuit drama resembles those eighteenth century baroque church interiors of which a horrible example is still to be seen in the church of Oberammergau itself.

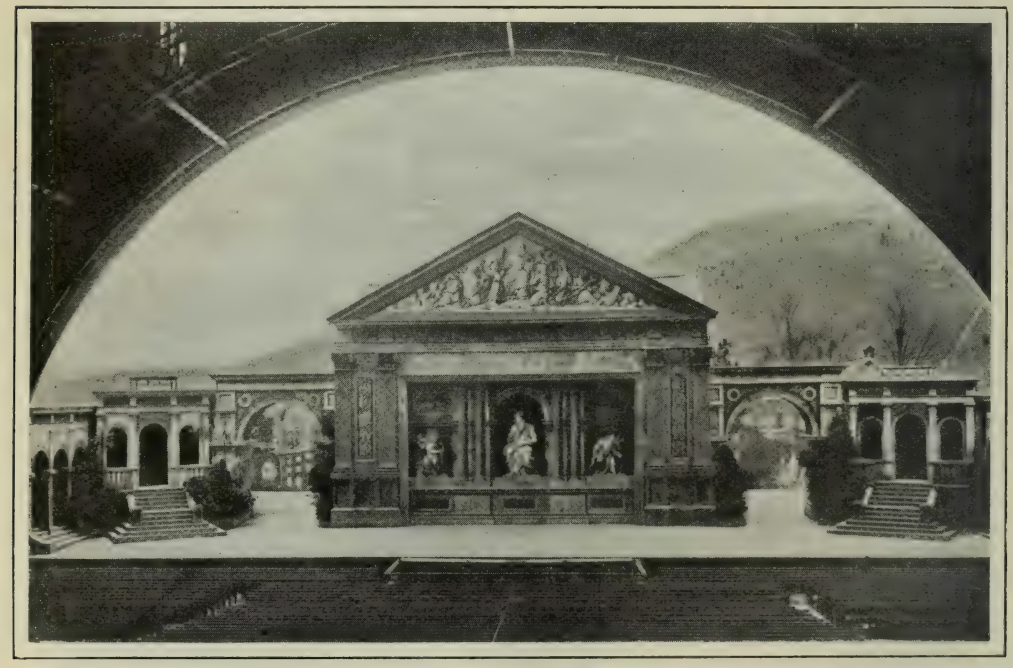
The end of the eighteenth century saw Rosner's version somewhat simplified. The more sober and rational taste of the nineteenth century, however, demanded a more radical change, and this was undertaken in 1810 by Ottmar Weiss, also a Benedictine of the monastery of Ettal. He rewrote the play in prose, removing all the over-ornateness of the eighteenth century, and his text is essentially the one still in use. It was revised, but not very extensively, about the middle of the century by the village pastor Daisenberger. This present text, except for prologues and choruses, is in plain, often rather clumsy prose, and cannot justly lay claim to literary merit.

The history of the text shows us that the words of the play are not now and never have been the work of unlearned villagers; on the other hand the presentation of the play has always been strictly a village affair. The all-important Passion-committee of twenty-four members is chosen about two years before the public performances begin. This committee has all the responsibility for the organization and management of the play. One of its first tasks is to assign the rôles, and a very delicate matter this is in such a small town, with its complicated ties of relationship and friendship, to say nothing of considerations of family tradition and of past performances in the play. This question settled, the rehearsals begin and extend from the simple reading of the parts to the final elaborate dress rehearsals, these in the early spring when the stage is often covered with snow. Any one who has learned by experience how much labor is involved in getting into tolerable shape an amateur play of an hour's duration can appreciate what it means to get into almost perfect shape this eight-hour amateur play with its 800 rôles. During all this time the theater, stage and costumes are being looked over and renovated where necessary, and the families of the village are making a thousand and one preparations for the comfort of the expected guests. It is no easy matter for such a small town to house and feed four or five thousand visitors, and it means for each family a considerable investment that is used only a comparatively few days in ten years. This partly justifies the charge of four dollars and a half a day for the better accommodations, which, after all, are simple.

Finally, early in May, comes the be-

ginning of the public performances. They are given every Sunday and thruout most of the time also on Wednesdays. There are also frequent supplementary performances, so that the total number of performances this summer will doubtless be about fifty. With prices ranging from fifty cents to two dollars and a half (and a few box seats at five dollars), the total income from tickets will doubtless be considerably more than $300,000. In 1900 it was $250,000. Of that amount about a third was divided among the performers in sums ranging from $375 to $12, according to the importance of the rôle. This maximum will probably be increased this year to about $500, but even then it will mean that those who have the most important and most trying rôles will get an average of only about $10 for each eight-hour performance. In 1900, another third, roughly speaking, was used in making small gifts to those who, from the nature of their occupation or from other circumstances, did not take part in the plays; and also in giving an additional sum of $25 to each family in the village. The remainder was used for a variety of public purposes.

The village is early astir on the day of a performance. The church bells are rung vigorously at five and with redoubled vigor at six, when natives and visitors, to the extreme capacity of the village church, gather for early mass. Any who may have felt aggrieved this summer at the early end put to their slumber may get some comfort from knowing that in 1850 drums were beaten up and down the streets at three and there was music in the streets again at four. At eight the play begins and continues, with a two hour intermission, until six. Until toward the end of last century the audience sat for these eight hours in the sun, or probably almost as often in the rain, at times even in the snow, and it was sometimes eight hours without a break, for the midday pause used often to be omitted if the weather threatened to grow worse. Now the amphitheater is a huge vaulted structure of iron, open only at the end toward the stage, and all the spectators are protected except a few in front.



The stage and the method of staging the play are matters of considerable interest, and the Oberammergau stage has been frequently mentioned in the discussion of German stage reform. The stage has nothing of the medieval arrangement. It has been shown to be essentially a survival of the stage of the Italian renaissance opera, introduced into Germany in the late seventeenth and the eighteenth century. One of the pictures here reproduced shows the general arrangement. In front, extending the whole width of the theater, is a proscenium, in front of which there is in the middle a concealed orchestra.

(Copyright by Bruckmann, Munchen)
JUDAS RECEIVES THE THIRTY PIECES OF SILVER.

Back of the proscenium is the middle stage, a real stage enclosed overhead, and with the usual curtain and scenery and stage machinery. On each side, leading back from the proscenium, which itself really represents a street, is a street of Jerusalem; then comes on either side a house, one that of Annas, the other that of Pilate; then colonnades used only for the entrances and exits of the chorus. The proscenium and the two streets are not enclosed overhead and they afford charming views of the Ammergau mountains beyond. On the proscenium the chorus sings, and here and changes of the middle stage are effected without any delay.

As for the performance itself with its prologs and choruses and solos, its tableaux and its dramatic action from the entry into Jerusalem to the Resurrection, all this it is impossible to describe in detail. It must not be thought of as a rustic affair, interesting chiefly as a curiosity and a medieval survival. On the contrary it satisfies the artistic demands of the most cultured. The beautiful richness and harmony of color in costumes and setting is a revelation, and the effect is enhanced by the

THE STAGE, OBERAMMERGAU.

street scenes and the hearings before Annas and Pilate are enacted, the players exposed to sun and rain. They have two or three sets of costumes and can change if they get too wet. Devrient tells how in 1850 the players often raised red umbrellas and, thus protected, went calmly on with their rôles. The advantage of the Oberammergau stage arrangement lies obviously in the number of places of action it affords. By occasional scenes on the proscenium or on the porticos of the houses of Annas or Pilate, and by the aid of the long choruses, all the elaborate stage settings absence of the powder and rouge, the false hair and the artificial light of the professional stage. The green covered mountains in the distance, the sky overhead, the birds not only soaring on high but coming down to the natural shrubs and trees of the streets of Jerusalem, all combine to give a unique charm to the scenes. In such a setting the attempt to imitate the disturbance of nature upon the death of Christ must seem weak and ineffective. Most impressive, on the other hand, is the occasional cooperation of real Nature herself, either with thunder at Christ's death, or, as on

the day I was there, with the first sunshine of the day breaking forth just as the chorus was singing its Resurrection hallelujah.

The tableaux are the object of universal admiration. Given on the slightly darker middle stage, they have all the subdued beauty of color of old paintings. These living pictures, in which hundreds take part, represent those events of the Old Testament which medieval theology and in part the New Testament itself fixed upon as symbolizing or "prefiguring" the different events of the life of Christ, as, for example, the manna from heaven for the Last Supper, or Joseph being sold into Egypt for Judas betraying his Master for silver. These prefigurations are found in some of the German passion plays of the middle ages, but they were first introduced into the Oberammergau play by Rosner in the eighteenth century. Some may have noticed this summer that before the all-important scene of the Resurrection there is no tableau. The regular prefiguration for this is Jonah safely deposited on land after his three days in the whale. This tableau and several others that could but mar the dignity of the play were struck out a few decades ago. It is an interesting fact that there used to be given in Oberammergau at ten year intervals midway between the Passion Play years a play called the *Kreuzschule,* or School of the Cross, in which the events of the Old Testament were given in dramatic form, while the New Testament events which they prefigure were presented in the form of tableaux. It was last given in 1825.

The acted part of the play, the tragedy of the Passion, is given on the whole simply, seriously and effectively. The potter, Anton Lang, as Christ, has the sweetness and beauty of face and the gentleness of bearing which the rôle demand; only in those few moments where force and even divine wrath are required is his presentation inadequate. The dramatic conflicts in the soul of Judas are powerfully given by Johann Zwink, who is this year playing the part for the third time. Ottilie Zwink as Mary, Alfred Bierling as John, and Marie Mayer as the Magdalene win the hearts of all by their charm of personality. In fact the acting of all the characters impresses one as natural and heartfelt. The spirit in which the play is given, the long tradition back of it, the place of its performance away from the world and in the midst of the beautiful Bavarian mountains all combine to prevent the least suggestion of sacrilege.

A report has been circulated, largely by Cook & Co., I believe, that this is to be the last year that the play will be given. Nothing, however, is further from the thoughts of the villagers themselves, and the many in the outside world who have learned to turn their thoughts and if possible their steps toward Oberammergau when "its year" comes hope that the vow of almost three centuries ago may be observed for many a decade more.

OBERAMMERGAU, GERMANY.

Twilight on the Peaks

BY NELLIE EVANS

Now dark and chill the shadows creep
  Across the sunset's bars,
Night weaves her sevenfold veil of blue
  Within the House of Stars.
A peace falls from the twilight sky.
  No word or song could tell
How soft the murmur of the stream,
  How sweet the vesper bell!

ENGLEWOOD, N. J.

What the City Editor Does When a Gaynor Is Shot

BY ALEXANDER McD. STODDART

Assistant City Editor of the New York Press.

THERE was printed on the front page of several New York newspapers the morning after Mayor Gaynor was shot a remarkable photograph showing the Mayor staggering, with blood dropping from his mouth on the lapel of his coat. It showed also a man rushing to his support, a frightful look of horror on his face. The third man in the picture had his back turned looking toward the man who did the shooting.

How do newspapers get such remarkable pictures and how do they get the news so quickly into printed form? is a question that comes up only when big things happen, the shooting of a McKinley, the devastation of a Galveston, the earthquake of a San Francisco, and the calamity of a "General Slocum."

The answer is the city editor. He is the man who never sleeps officially, whose eyes are always turned to what will break loose next and whose ears are always listening to whatever will make a good story today or tomorrow.

"I suppose you wonder why you've had nothing to do all day?" said a city editor on the day the *General Slocum* burned to his newest and lone reporter in the office. "Well, I'm holding you here because if a fire should sweep the city I'd have no one to send."

That illustrates the methods of a city editor, a general of sagacity, alertness and reserve force. When the electric spark of the death of a King Edward, the first naval battle of a Spanish-American war, the fall of a Port Arthur or the election of a President reaches the desk of a city editor, it kindles every fiber of his body while he himself is cool, calm, and collected.

The camera men of the city editor's staff were cool when Gaynor was shot —their work shows it.

McKinley was scheduled to speak at Buffalo, "Mam'selle Champagne" was a first night for the dramatic critics and Gaynor was scheduled to leave Hoboken on the "Kaiser Wilhelm der Grosse" for his vacation. These were routine things, known in advance to the public and to the city editor, and to assign a reporter to cover these things was a routine matter. What happened afterward took all three things out of the routine forever.

Yet so carefully is the city covered by the unpaid staff of every newspaper, that even if no reporters were within miles, the unpaid staff would have done its usual work in its routine way. This unpaid staff consists of the policemen, firemen, doctors, clergyman, department heads of the city, State and Federal government. Matters that come to the police thru the station houses are given out at police headquarters. All news of fires goes to fire headquarters, all news of accidents go to the hospitals in the immediate district. Notifications of death go to the coroner's office. Clergymen must make a note of weddings and doctors of births. So it goes. By the newspapers forming an association, really an unprinted newspaper in itself, these routine things are watched every hour by reporters who write the facts briefly, and manifold copies are made for the subscribers—the local newspapers.

Little escapes, therefore, the vigilant eye of the man who sits in the city editor's chair and passes judgment on what the great network brings in in its hourly haul. The assassination of a McKinley and the shooting of a Gaynor, if no reporter had been previously assigned to go with either, would have come thru the police channels — and quickly, too. The burning of a *General Slocum* would come thru fire headquarters and the hospitals.

And aside from this, scattered thruout the length and breadth of the city and

the country are men and women who know big news the moment it happens and telephone to a favorite newspaper what they have seen. The *Slocum* disaster came in this way to more than one New York newspaper before it came thru the usual channels.

Minutes before the news associations, which collect this routine news, were able to send the "flash" of the shooting of Gaynor three different people called up one newspaper with the same question, almost word for word: "Have you heard rumor that Gaynor was shot?" In the same way came the rumor of the San Francisco earthquake and fire. The verification of these rumors, and the city editor is expected to know in a moment how to and where to verify these things, is all that is needed to start the resources of a great newspaper into instant action.

Periodically comes the rumor that J. Pierpont Morgan is dead, that Colonel Roosevelt has been shot, and yet, unfounded as these rumors always have been, the information is never cast aside but looked into and then thrown on the floor, or in a convenient scrap basket, or a "dead hook," a metal spike on which is stabbed all news not desired for publication.

But should the rumor ever prove true, as both these men know, thousands of pencils, pens and typewriters will go to work immediately to inform the world of what has occurred.

How does a city editor cover all the details of the shooting of a Gaynor? Let us begin at the beginning. There is always some city editor on duty every hour of the day and night in big cities like New York, Philadelphia, Boston, Chicago, St. Louis and San Francisco. For in these cities afternoon newspapers come out at breakfast time. That means that the moment the presses have stopped on the morning newspaper, the afternoon paper men, few of them to be sure, have started to work.

By starting to work means the reading of all the morning papers and culling from them ideas—stories to be followed up because of further interest, making a note of those things that will come up in the immediate future, and rewriting and preparing for this so-called "bulldog" edition, the unusual, peculiar, out of the ordinary stories that can be done over again because of their unique interest.

All this is done between the closing down of the presses for the morning papers and seven o'clock, when all the world goes to work and things begin to hum. When this "bulldog" edition is struck off there it ends, because the real afternoon newspaper must have real news, not a rehash of yesterday's. Yet there is a demand for the "bulldog." It is merely inserted here to show that the chair of the city editor always has an occupant, whether that official is termed the night city editor, the day city editor, the assistant city editor, or the city editor.

The boy who carried the first two-line bulletin from the News Associations was out of breath. He knew the startling information it contained. The office boy opened it immediately. On the outside of the envelope was stamped the word "Bulletin." The office boy knew the value of those two lines, for even in a brief experience, office boys acquire a nose for news that even a young reporter, fresh from college, takes a much longer time to acquire.

When the "flash," or bulletin, as the first information is called, reached the city editor, the afternoon newspapermen were all in the office awaiting assignment. The morning newspapermen were in their beds. What happens in this story is true of both afternoon and morning newspapers, save that the staff of the one is at talking distance in the office whereas the morning staff is still slumbering (9:30 a. m.). The morning newspaper is here dealt with.

The first bulletin read:

"Mayor Gaynor was shot this morning while on the deck of the *Kaiser Wilhelm der Grosse* in Hoboken. It is rumored he is dead."

The city editor read it at a glance. The first thing he did was this: He read the message aloud to those within listening distance. This is always done with big news, so that every one may be alert and ready.

Then he went back to his desk and picked up his telephone. He said to the man at the switchboard. "Mayor Gaynor has been shot. I want you to

pay particular attention to the editorial telephones; watch mine especially. Don't let any inquiries about the Mayor come up here at all. Keep them in the business office."

Then to the several office boys "within call" he said as he took out of a pigeon hole a printed list of the staff with their printed telephone numbers:

"Get me Smith, Jones and Robinson" (reporters).

While awaiting these three numbers to respond, the city editor had a second dispatch from the News Association.

It read: "The Mayor was taken to St. Mary's Hospital, Hoboken."

"Mr. Smith is on the wire," replied one office boy.

"Smith," said the city editor tersely. "Mayor Gaynor was shot fifteen minutes ago while on the deck of the *Kaiser Wilhelm der Grosse* at Hoboken. Get right over there quick."

Smith evidently has asked no questions, for the receiver is hung up. There are no instructions; Smith knows that he is to get there quickly and gather what he may.

"Mr. Jones is on this wire," says another boy.

To Jones the same terse message is given. Jones may be in his pajamas, his telephone being at his bedside, but he is alive to the situation.

"Mr. Robinson is on this wire," cries a third boy at another telephone.

Remarkable as it may seem, at an hour like this morning newspaper men are more apt to be found in one place than possibly at any other hour of the day.

So far three men are on the way to the scene, Smith, Jones and Robinson. Meanwhile the city editor's phone has not been used. That time will come later.

Another flash is hastily delivered. It reads:

"The man who shot the Mayor has been arrested. His name is James J. Gallagher. He lives at No. 440 Third avenue."

The office boys hover near. They have initiative.

"Get me quick, Johnson, Roberts and King," says the city editor.

The boys each have a printed list now. Each one goes to a telephone, for there may be a dozen instruments in the big city room alone.

Perhaps Johnson is heard from first.

Says the city editor:

"Mayor Gaynor was shot this morning while on the deck of the *Kaiser Wilhelm der Grosse*. The man who shot him is James J. Gallagher—James J. Gallagher. He lives at No. 440 Third avenue. Go up there, get everything you can about him. Get a picture. Find out to what political party he belongs, run him down to the ground and phone me later; I may be able to give you something additional."

"Mr. Roberts is on this wire," says the boy.

The city editor walks quickly across the room. He picks up the hand telephone and holds it close to him. His tones are low, even. If he is excited it does not betray itself in his voice. Again he tells the story. "Roberts, Mayor Gaynor was shot this morning and has been taken to St. Mary's Hospital, Hoboken. Get over there quick, see the doctors and let me know early what you get."

Another bulletin is received which reads: "Gallagher was a night watchman in the dock department until July 1, when he was discharged from the city employ."

"Mr. King is on this wire" and in reply to the boy, the story of the shooting is again told in a sentence. Adds the city editor: "Gallagher is to be arraigned in police headquarters, Hoboken. Go over there quick."

On the pad in front of the city editor is a memo, which says:

Smith, Jones, Robinson } Gaynor shot.
Johnson: Local end; Gallagher.
Roberts: St. Mary's Hospital.
King: Hoboken Police Headquarters.

There is a breathing spell for a moment:

And then another order for three men given to the boys: "Get Jackson, McGuire and Horton."

"Mr. Jackson has called up himself. He is waiting to talk with you on the wire," says one boy, while the others dart off to follow the instructions of

their chief; they are the city editor's staff, too.

The news is told briefly to Jackson: "Yes, it is true, Gaynor has been shot," reports the city editor. Jackson lives in Brooklyn, not far from the Gaynor home in Eighth avenue: "Go over to the house," says the city editor. "Gaynor was going on his vacation alone. Perhaps Mrs. Gaynor is at home? If she is at St. James, go to Deepwells and see her."

While the city editor is not familiar with the whereabouts of Mrs. Gaynor, he does know that the Mayor intended to go alone.

"Mr. McGuire is on the telephone," is heard far across the room. Is it an accident that all these men can be got so quickly or is the city editor familiar with the habits of his men or is it the office boy who knows just where to telephone? McGuire is made acquainted with the shooting. "Find John Purroy Mitchel," are his instructions, "and stick close to him."

Horton is found. "Go over to City Hall," are his instructions "and get what there is there. See if Billy Kennel knows the man who did the shooting. He was employed in the dock department, but was recently discharged. His name is James J. Gallagher."

To the list on the city editor's desk is added these names and data:

Jackson: Mrs. Gaynor.
McGuire: John Mitchel.
Horton: City Hall.

The news from the association is beginning to come in rapidly, the bulletins are longer.

The city editor looks over the list of men and at the printed list:

"Tell Hobart, Reed and Judd to come to the office," he says, briefly.

The telephone bells now begin to work all over the office. It matters little now, the usual office routine may go on. Already at work are his men, nine of them, say, with three more to come. A dozen picked men are at work.

He has time to ease up. The afternoon extras are already on the streets, the shrill cry penetrates even to the upper floors of the skyscrapers. Long distance calls break in. It may be an afternoon paper in Philadelphia or Boston or Cleveland. The paper officially does not ask for news, but John Jenkins, of the Boston *Enquirer*, wants Jimmy Bush of the New York *Transcript*. Can Jim Bush give him anything further?

Smith calls up. He tells the city editor what he has learned. "Smith," says the city editor, "I want you to write the main story. Write a plain, straightaway story without any frills. Put Jones on interviews with those who saw the shooting and have Robinson write the story of Gallagher on board the ship." The main story is mapped out.

Johnson calls up on the city editor's wire. He tells what he has learned about Gallagher. "I understand," says the city editor, looking at bulletins before him, "that Gallagher has been a chronic kicker and a prolific letter writer. Go down to the Department of Docks, the Civil Service Commission, the City Hall and get copies of all the correspondence."

Roberts at St. Mary's follows after Johnson: "Gaynor is not so badly hurt as at first thought," he says. "The doctors are not probing for the bullet, however. The Mayor is resting quietly."

In the meantime King, at police headquarters, has not been heard from. The photographers are coming in with their pictures. Standing alongside of Gallagher as he is arraigned is King. That tells its own story.

In the meantime a tipster has brought in an interesting piece of news. Gallagher has retained a lawyer. The information is put in an envelope marked "King."

In the meantime the last three of the city editor's dozen men arrive. They are Hobart, Reed and Judd. Hobart is the political man. "Go out and get me a story," says the city editor, "as to what the charter says in case of the death of the Mayor and the manner in which his successor shall be chosen."

"Reed," says the city editor curtly, "get all the stuff out of 'the morgue' (the place where newspaper clippings are filed away in special envelopes or indexed cards which show where articles may be found in the bound files), "and write an obituary of Gaynor dealing particularly with his first six months as Mayor and his home life."

The telephone bell is ringing. The

city editor says "Hello!" in a voice that never hesitates. "This is Mr. Rockhill, one of your readers. I know this man Gallagher. Seventeen years ago he worked under me," says the man at the other end of the wire. "He did many strange, uncanny things while he was here."

"Will you give the story to one of my men if I send up?" interrupts the city editor.

The city editor jots down the name and address. "Judd," he says, "this man," handing him the memorandum, "knows Gallagher. Go up and see what he has."

Jackson telephones; says that Mrs. Gaynor has heard the news and is on her way to his bedside. "She is on her way in a machine from St. James."

"Follow her," says the city editor and hangs up the receiver.

McGuire has found Mitchel in Hoboken, he telephones.

"Get a line on him. He has opposed Gaynor on some things and been with him on others. Find out about this and tell about Mitchel's hatred of Tammany."

And so it goes.

The schedule of events now looks like this:

Smith: Main story of the Gaynor shooting.
Jones: Interviews on board the *Kaiser Wilhelm der Grosse.*
Robinson: Gallagher on board the *Kaiser Wilhelm der Grosse.*
Johnson: Gallagher the man and his correspondence.
Roberts: Gaynor at St. Mary's Hospital.
King: The arraignment of Gallagher and his plans.
Jackson: Mrs. Gaynor and family.
McGuire: John Purroy Mitchel, the Acting Mayor; his opposition to Tammany.
Horton: City Hall—telegrams and cables.
Hobart: What the charter says, with interviews.
Reed: Obituary of Gaynor.
Judd: The strange, uncanny things Gallagher did.

Now comes the routine news of the day, for the world has not stopped, merely halted. Later there will come the licking of the story into shape. But that is for the copy desk to do. That is not for the city editor. He directs what to do when a Gaynor is shot.

New York City.

The Tyro

BY O. W. SMITH

Illustrations by the Author.

JOHN was my friend. The fact that he was a junior in the High School, and I well round the second turn of life's highway, mattered little; in fact, I doubt if either of us ever realized the disparity in our ages. We were boys together. When I first knew him he had just arrived at the dignity of long trousers, a critical age as parents know; but John passed the Rubicon in safety. Never did a scholar sit before me who weighed my every word as carefully as did he those first days; I felt that I was being weighed in the balance. We were chums. I instructed him in ornithology, and he took to the science as naturally as he had forsaken the mud-pies of kindergarten days. I prided myself upon my knowledge of birds, but soon he outdistanced me in my beloved science; for his eyes were quicker than my old and faded ones, and he discovered nests where I saw only a labyrinthine tangle of brush. He could discover two bird homes to my one, and keep it up all day long, and yet not grow arrogant, for that was his nature. But heigh-ho! How I run on; I must to my story.

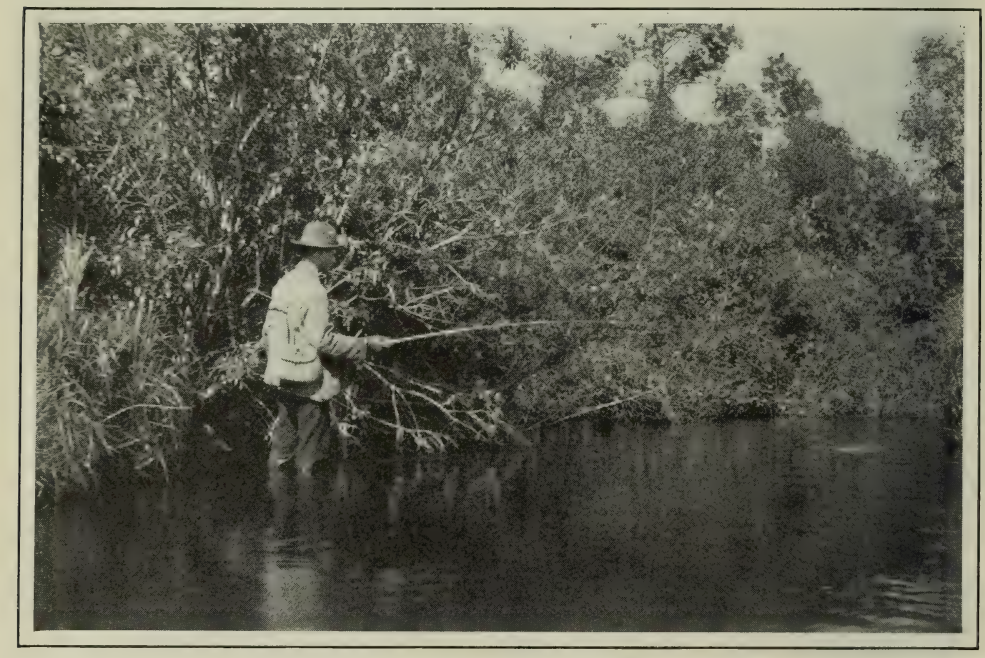
Last spring when the lad's High School closed he wrote that he was going to visit me and "learn how to catch trout." So it fell out that one day when the train paused at our country station, panting as tho impatient because compelled to stop at such an insignificant place, my clean faced lad descended; more grave, more mature it is true, but after all the same fun-loving boy that had grown so dear to me in the days gone by. For two days we

"I HAVE TAKEN THREE FROM BENEATH THAT OLD LOG AND THERE IS ONE MORE TO FOLLOW."

"visited," then we went trout-fishing.

Now every reader of THE INDEPENDENT knows there are just two kinds of trout-fishermen—the one who learns how to catch the wily beauties, and the born fisherman. John was the latter; he just couldn't help catching the fish. But I am getting ahead of my story; a failing of mine, I am told.

It was a perfect June morning when we set out for Daley Brook; flowers were everywhere, and the birds were fairly crazed with joy. Even in June, the month of perfect weather, such days are rare. Again and again I was forced to stop the horse while John climbed out of the buggy to study some rare songster, his face alight with the joy of living. (Oh, that we might always keep the joy and enthusiasm of youth!) The somewhat rare song of the rose breasted grosbeak—that conglomeration of the robin's and Baltimore oriole's roundelay, tho sweeter and more sentimental than either—enthralled him. "Listen!" he cried, his expressive face fairly quivering with delight, "Listen! do you suppose that they have sweeter music in Heaven?" And I answered, "No," for I honestly believe that no angel's song can be so ethereal, and so soul-satisfying. That drive was a trip thru fairyland. I was looking out upon the world thru the wide eyes of the dear lad; that, be it said, is a privilege we old fellows too seldom indulge in, being too hard-headed and matter-of-fact.



Well, we reached the creek, a little, whimsical, meandering brooklet; a stream destitute of falls, rapids and darksome, sulky pools; but, withal, a stream as beautiful as you may find anywhere in God's out-o'-doors. I was sure the creek would capture John, for there is a vein of poesy in the make-up of every normal boy. I was not disappointed. He did not rhapsodize, as a girl from his class might have done; he just stood still and *drank in* the beauty; for the sublimity of June must be felt, it defies description. In June the foliage is at its best; each tree and shrub presents a wealth of leafage, each leaf a work of art, beyond the powers of the human mind to comprehend. The flowers of June are not assertive as are those of summer-time, but modest and retiring; poets' flowers, I call them. To see a violet you must search for it in the grass, as you would for a meadow-lark's nest; but the golden-rod of August will march out to the very road-

side to attract attention. June mothers no such flower. The rose may be plentiful along the creek's banks, but no angler ever accused it of seeking to attract attention. And, of all people, the angler is most appreciative of June.

At last John turned to me with a "Now I am ready to take my first lesson." I showed him how to assemble his rod, for he insisted on doing everything himself; then he stood back while I crept up to the stream and caught a small trout. Again I cast and landed a fair-sized fish. When a third trout took my grasshopper—we were using 'hoppers for bait—I clean forgot the boy until seven ten-inch sparklers lay kicking among the blue violets. When I came back to earth the boy had disappeared down the stream and I followed on. Now as this is not *my* story, I will not tell you of what took place during the next half hour: of the fish I caught and the birds I saw.

When I caught up with John he was upon his knees close to the bank of the stream. "What's the matter," I called, "a snag?" "No," he smiled back, "a yellow throat's nest." And it was even so; there, close to the water's edge, was the nest built of coarse grass and containing four chocolate spotted white eggs. Only three days before I had caught two fish just below the bird's home, had indeed almost stepped upon it, yet I had failed to discover it. When we had talked for some time about the Maryland yellow throat, and its habit of building nests in the damp thickets it so much loves, I bethought me to ask the boy if he had done any fishing.

"Yes," he answered simply, "I have caught five." I gasped in astonishment. When he opened his basket and displayed the fish, each as large as my largest, I clapped the lad upon the back and told him that he'd "do" all right. But I shall always remember that he considered the discovery of the bird's nest more of a victory than the capture of the fish; and that's the stuff that makes the best fishermen, as well as the best companions. When we returned to our fishing, I said to myself, "Old fellow, you will have to look to your laurels."

"THERE JOHN HOOKED HIS BIGGEST FISH."

Knowing that John was well able to care for himself, I applied myself assiduously to the fishing, but fish as I would I could not gain upon him; he was always just two behind. Whenever we passed one another we would ask

the number caught, and answer honestly; something that all fishermen do not do, I am told. Once when I overtook my friend he was standing knee deep in the water, just above a gigantic elm log that helped to form a perfect pool. To my question regarding luck, he answered, "I have taken three from beneath that old log and there is still another to follow." And "follow" it did.

It was inevitable that the boy should snag his line, for that is the inalienable right of every brook fisherman. Now there are two kinds of snags: those in the bottom of the stream, which are not serious unless we have just failed to hook some monster trout; and those in the overhanging brush, in plain sight but just beyond our utmost reach. Those are the ones that rack the fisherman's soul. The sweat rains down our faces, while we reach and tug, always haunted by the specter of a broken rod. Then we get angry and say things. If we have a companion, about that time he saunters around the bend above us wearing a beatific smile peculiarly exasperating, and advises us to "keep our shirt on"—which is rather more than human flesh can bear. We give the line a jerk that we know will break something, we don't much care what, and go on down the stream breathing sulphurous anathemas. All of which is highly amusing—in retrospect. Well, John had some such experience as that, even to the smiling companion. It is a part of a trout-fisher's training. While we were eating our dinner he shamefacedly confessed to having broken three hooks, and his line once; and when I roared with laughter he looked at me in astonishment. "What is the matter with you," he asked petulantly; "isn't it a shame for a fellow to get so mad at inanimate things?" But I only laughed the harder, slapped him on the back once more, and told him that he was a natural born fisherman.

Where Daley Brook disembogues into Little River the creek widens out until it becomes quite a respectable river; there John hooked his biggest fish. The place was almost ideal for a piscatorial battle; deep water, plenty of room, submerged snags and overhanging brush. It was a pretty fight and my fisherman of a day conducted the struggle like a veteran angler. Again and again the trout got under the brush, but John succeeded in leading him out without mishap. Once the fish darted under a submerged log—which does not show in the picture—*but John coolly passed rod and reel under the log,* smiling the while as tho such feats were of everyday occurrence, and continued the battle. The smile and the rod conquered and the vanquished trout was brought to creel. That was the last fish of the day and I shall always remember the boy as he stood there in the knee-deep water, lighted by the rays of the setting sun, while the wild birds he loved so well sang their evening hymns.

The lad's visit came to an end and I drove him to the wayside station. He stood upon the rear platform of the last car and shouted as the iron horse bore him away, "I'll come back next June, when we will fish a whole week, and I will catch more than you!"

* * * * * *

June has come and gone again, and the birds are singing as of old; the violets are as sweet and beautiful as last year, but John comes not. My dear lad, the fishing companion of a day, will never angle for trout with me here again. The snow lay deep above the violets when the message came to me that John had taken the last, long journey, and that his parents wanted me to "say a few words at the funeral." It was a heartbreaking task, and yet I could not say no. I knew that I should be expected to take a text, and I cast about in my mind for an appropriate passage of Scripture; for I have a slight knowledge of the Good Book. Instantly I thought of this passage, and I quoted it as I stood by the side of the casket freighted with flowers: "My beloved has gone down into his garden to gather lilies." "To gather flowers," yes, that is it. John, laddie, you know now whether the angel's songs are more beautiful than the rose breasted grosbeak's; you know of things which we who linger here speculate about; but, laddie, it is wofully lonesome on Daley Brook.

Suring, Wis.

The English Woman Suffrage Bill

BY IDA HUSTED HARPER

Chairman of National Press Committee of the National American Woman's Suffrage Association.

THE situation in Great Britain regarding what is known as the Conciliation Bill is still acute and uncertain. This bill was fully analyzed in a recent number of The Independent. It was brought forward by a special committee composed of representatives of all the political parties in Parliament to replace the one which the suffrage associations have so long advocated without success. The latter demanded the franchise for women on the same terms as exercised by men, which includes all except what might be termed the "floaters," those with no occupation and no abiding place. This was opposed by both the Liberal and Conservative parties, because each feared the other might gain an increase of votes by it; and it was opposed by a large number of other people because they thought it would give a preponderance of women voters over men and, by adding 8,000,000 inexperienced constituents to the electorate, it would greatly complicate political conditions.

This Conciliation Bill proposes to give the Parliamentary vote to those women only who for many years have possessed the municipal franchise, and number about one million. These are what are known as "rate-payers," and everybody who pays rent is considered as paying rates, or taxes. This new measure is known as "a bill to extend the Parliamentary franchise to women occupiers" and an "occupier" is one who resides in a house she owns, or who pays rent to the amount of ten pounds (about $48) a year for business premises, or who pays rent for even a single room, if no more than a shilling a week.

The suffrage associations agreed to this bill because they were assured by their best friends in Parliament that it would have to be this or none for a long time, and it does establish the principle for which they are contending by abolishing the *sex* disqualification. The requirements for voting are so slight that even the Labor party members of Parliament accepted it, as official inquiry established the fact that 82 per cent. of all who would be enfranchised in Great Britain—87 per cent. in London and 90 in some places—would be self-supporting women. The Conciliation Committee of sixty members in charge of it includes some of the strongest men in the four parties.

Public sentiment in favor of woman suffrage had finally become so strong and insistent that the Government, thru the Prime Minister, Mr. Asquith, was compelled to recognize it. In June for the first time he received a deputation, his refusal to do this having been the chief cause of the "militant" demonstrations during the past three years. Mrs. Henry Fawcett, president of the old National Association, reminded him of their forty years of strictly "constitutional" work; of the 9,000 petitions of over 3,000,000 signatures which had been gathered in a few years; of the 257,000 later from the women textile workers; of the 300,000 from the electors in 280 constituencies within three months. She was followed by Miss Rathbone, a member of the Liverpool City Council, and Mrs. Cooper, representing the women textile workers' trade unions, which she said "without votes were exactly like an army without guns." The Women's Liberal Federation, with 670 branches and nearly 100,000 members, the mainstay of the Liberal party, was well represented, and Lady McLaren, its vice-president, closed her plea by saying: "If you refuse our request we shall have to go to the country and say that you, who are arguing against the veto power of the House of Lords, are placing a veto on the House of Commons by refusing to allow a second reading to this bill."

The anti-suffragists argued against the bill, but Premier Asquith answered that as far as he individually was concerned they were preaching to one converted to a belief in woman suffrage. He followed this up, however, by his usual shifty evasions, showing his intention to defeat the bill, and the women saw that every possible effort must be made. He was overwhelmed with petitions and memorials from all parts of the kingdom, from the most eminent members of the clergy, the bar and the universities; from the nobility, both men and women; actresses, artists, writers, trades unions of all kinds and many members of Parliament; while hundreds of mass meetings were held daily thruout the kingdom.

The women did not stop with these efforts, but in Manchester, Liverpool, Edinburgh and other cities great street processions and pageants took place, which in size, beauty and perfection of management never had been equaled. The largest and most impressive of these were in London. How many marched in the first one never will be known, but a newspaper said, "We didn't know there were so many women in the world!" It was led by over 600, robed in white, who had served one or more terms in prison for their cause. There were 800 in caps and gowns, denoting various college degrees, and working women by the thousands, many holding babies in their arms. The second, on July 9, where all the women were dressed in white, was headed by a group bearing aloft white doves, and all carried branches of evergreens and palms, while the long line was ablaze with banners of scarlet, blue and gold. It converged in Trafalgar Square and here at the foot of the towering Nelson monument, one of the most warmly greeted speakers was Dr. Anna Howard Shaw, president of the National Suffrage Association of the United States.

The result of these strenuous efforts of Englishwomen—such efforts as not all the women of the world combined have made for political liberty—was to force the Government to grant the time for a discussion of the suffrage bill in the House of Commons. Two days were allowed—July 11 and 12—and it consumed the entire time of the two sessions. This debate marked a distinct epoch in the woman suffrage movement, not only in Great Britain, but wherever it exists. Heretofore this subject always had been treated by the British Parliament either as a merely academic question or as a joke, but on this occasion it was debated for fifteen hours with the same dignity, seriousness and ability as would have been accorded to any leading political issue of the day. By the action of this greatest legislative body it is now made such an issue in the eyes of other nations and when the English Parliament finally grants woman suffrage its status in all countries will be immeasurably advanced.

A distinguishing feature of the debate was the entire absence of partisanship. The bill was introduced and strongly championed by Mr. Shackleton, one of the Labor party leaders, and seconded by Sir J. Rolleston, a Conservative leader. F. E. Smith, Conservative member from Liverpool, vehemently urged its rejection and was supported by J. Annan Bryce, a Liberal, and Mr. Belloc, a Laborite. Lord Hugh Cecil and Mr. Lyttleton, Unionists; Walter McLaren, Liberal; Keir Hardie and Philip Snowden, Laborites, were among the ablest advocates. The Irish members were divided. In still greater contrast were the eloquent speeches of Mr. Balfour, the ex-Prime Minister of the Unionist or Conservative Government, in favor, and Mr. Asquith, the present Prime Minister of the Liberal Government, in opposition. Altho the chief argument of the "antis" is that woman suffrage would lessen the military prestige of the country, one of the most effective addresses in defense of the bill was made by Mr. Haldane, Secretary for War.

The most unpleasant surprise of the debate was the opposition of Cabinet Ministers Lloyd George, Chancellor of the Exchequer, and Winston Churchill, Home Secretary. Both had been consistent advocates of woman suffrage and assured the women of their support, but for purely political reasons they threw the whole weight of their influence against the bill, giving as a reason its undemocratic nature, the small number

of women who would be enfranchised. Their hypocrisy and treachery are being thoroly exposed and condemned by the suffragists, both men and women. The final vote on the second reading stood as follows:

	For.	Against.
Liberals	162	60
Unionists	87	113
Laborites	30	2
Nationalists	20	14
	299	189

This vote indicates that the bill must depend for its success principally on the Liberal and Labor parties, but that they are not strong enough to carry it without the help of the others. Fourteen of the Cabinet Ministers voted in favor and seventeen in opposition, which fully justifies the position taken by Mrs. Pankhurst's association that it was not the House of Commons, but the Liberal ministers who stood between women and the suffrage and that they should be compelled to suffer for it. Life certainly has been made most unpleasant for them by the "suffragets" since the Liberal party came into power in 1906.

Undoubtedly the vote was a serious disappointment to the Government. Premier Asquith made no effort to conceal his bitter hostility, but his long speech, filled with all the keenness and logic for which he is noted, could not stem the tide in favor of the bill, any more than could the pressure brought to bear by the majority of the Cabinet. They still, however, had the power to defeat it by refusing the third and final reading. Every influence that was humanly possible was exerted upon them. The Conciliation Committee left no persuasion untried. The strong and active Men's Leagues for Woman Suffrage—more than a score of them—used every means at their command. The women organized another procession which surpassed all the others. Half a million people lined the streets as the 20,000 women marched by, and a quarter of a million more awaited them in Hyde Park, where from forty platforms 150 stirring speeches were made. In all this immense throng there was not a jeering remark or unpleasant occurrence—only words of sympathy and cheers of encouragement. The resolution calling upon the Government to enact this bill into law during the present session of Parliament seemed to be adopted by the vast throng without a dissenting voice.

Notwithstanding these demonstrations, such as never before were made on any public question, the session adjourned without action. What will be the result? Mrs. Fawcett has declared that her association will no longer confine its efforts to the former conservative methods. The Women's Liberal Federation has announced that it will carry the case before the voters of the country. Mrs. Despard, president of the Women's Freedom League, intimates that they will stop at nothing to secure favorable action. In a great speech at St. James' Hall Christabel Pankhurst said:

"Unless the members of the House of Commons have secured the necessary facilities to carry this bill to its third reading a vast concourse of women will proceed to Westminster when Parliament reassembles in November to demand that it become a law. The Government will find that any attempt to beat back this advance by arrest and imprisonment will utterly fail, nor will the remonstrance of members of Parliament be more effectual. When we see that peaceful methods have failed we shall know that we must take once more to the hard and dangerous course of militancy; and we realize that when this starts again no man and no woman can foresee the end of it. If the Commons do not win this battle for us we ourselves will take it up. We mean to have the vote and we shall fight anybody who stands between us and this object. We hope it may be possible to march peacefully and quietly to the doors of citizenship, but if it is not, then we will fight our way to them and break them down."

This is the situation in Great Britain—an armed truce for three months with a strengthening of the forces in every direction—then, if the Government still defies what is plainly the will of the people, war to the end! But it is the general belief that the Government will avert this calamity by yielding to the inevitable.

New York City.

Commercialized Medicine

BY ABRAHAM JACOBI, M.D., LL.D.

[The following article is the abstract of an address recently given to a graduating class of the College of Physicians and Surgeons of New York. It was reported for THE INDEPENDENT by Henry I. MacMahon. Dr. Jacobi, the "dean" of the medical profession in New York City, and by his colleagues affectionately referred to as the Nestor of American medicine, has decided views on the spirit of graft and commercialism that has invaded the practice of the healer's art. In communicating these views to THE INDEPENDENT, Dr. Jacobi turned over to our representative, Mr. H. I. MacMahon, the notes of his recent address before the young doctors of the College of Physicians and Surgeons. He has read and corrected the condensed report taken therefrom, and has written out some further suggestions not contained in the original lecture. On May 6 the doctors of New York celebrated Dr. Jacobi's eightieth birthday with a banquet, congratulatory speeches and gifts. He was born in Germany, graduated in medicine at Bonn, and for his part in the Revolution of 1848 was thrown into prison. After his release, like Carl Schurz, Franz Sigel and other distinguished refugees, he came to America. Beginning his practice downtown in New York nearly sixty years ago, he speedily became widely known as a wise family physician and as an expert practitioner and teacher of pediatrics, the science of children's diseases. Dr. Jacobi's son-in-law, George McAneny, was chosen last fall on the reform ticket President of the Borough of Manhattan, New York City. For half a century the doctor has been identified with almost every important movement for the civic betterment. At the age of eighty he is yet in active medical practice, declaring laughingly that he has no time for week-ends in the country, or evening amusements.—EDITOR.]

MORAL principles are best inculcated in the young. I have small hopes of reforming those older offenders who convert medicine or surgery into a sordid trade or confine their efforts to a crude, narrow and ignorant specialism. My wish is to warn the younger generation by means of many flagrant examples of unethical practice that have come to my attention.

Much dishonesty is exhibited, much harm is done thru the too frequent obsequiousness of the family doctor. Some years ago I was sent for, the evening before his summons to court, by a railroad thief who had made many millions by a transaction which enriched him while impoverishing thousands. The magnate lay huddled up in bed; he complained of weakness and lack of appetite; no, he positively could not go to court next morning, and he wished me to certify to that effect. After examining my new patient carefully, I said:

"Mr. Blank, I am happy to tell you that you are not really ill at all. I find nothing the matter with you save nervousness, and (if you will permit me) congratulate you on the non-existence of any ailment that would keep you from business tomorrow!"

That was evening. Now watch the sequel. The morning papers of the following day announced the serious illness of this man and published a certificate given to him a few minutes after I had left him by a doctor practising extensively and lucratively what he called "medicine." Somehow I found no reason to envy or admire the success of my rival practitioner, with his made-to-order diagnosis. When he died a dozen years ago he could not take his dishonestly grabbed fees with him, and I doubt whether the angel wings he is wearing are of any more costly material than yours or mine will be.

Ignorance and subservient cowardice make many a diagnosis—or what they call a diagnosis. In other instances—far too many of them—the physician relies not on his own conscientious efforts, but entrusts the examination of bodily products to one of the pathological "laboratories," whose number has increased immoderately, or turns the whole case over to a specialist when there is no need of doing so. The modern practice of delegating your duty has important results: loss of time, uncertainty of diagnosis, the habit of accepting diagnoses at the hands of men who are no physicians, but sometimes meretricious tradesmen; it imposes unnecessary expense upon the patient, and undermines the respect and confidence of the public. Far worse even than this, however, is

the occasional actual lying about a diagnosis.

Quite recently I cured a patient with a sore, inflamed lip by prescribing simple cleanliness and the application of a local ointment. He had previously visited a specialist, so called, who sent away a section of the diseased lip to a pathologist for examination. On his second visit to the specialist the patient was informed that the examination indicated cancer, and an operation was insisted on. He refused. On looking up the pathologist in person, we discovered that the latter had made no such report, and that the specialist, in plain language, had lied in order to gain a fee for an unnecessary and dangerous operation. It is such men as this who violate the Hippocratic oath and disgrace the honorable practice of medicine.

In Europe they like to specialize more than we do. They set up a specialty by advertising themselves in the newspapers. The pediatrist, the nerve doctor, the woman's doctor, the skin doctor, advertises himself, his alleged specialty and his office hours. Our ethics are more refined, and I believe our results are better. Nevertheless, commercialism has invaded our medicine and surgery to an alarming extent, and the evils of excessive specialism have become notorious. For almost every trifling ill we run to the consultant, or if we have a family physician we ask him immediately for a specialist's address. The doctors have themselves to thank for this situation when the public looks upon general practitioners as a subordinate class of medical employees and considers the word specialist as synonymous with superior physician or consultant.

Some of the nerve doctors, I may add, have gone into partnership with underdone clergymen. The latter publish their neurological associates' names and office hours; they are expected to reciprocate by swelling the attendance upon the churches. They have learned by experience (or ought to have learned it) that quackery or dense ignorance have emptied many of the churches and evolved a Christian Science denomination. And they are already beginning to learn, after a brief sensational notoriety, that no Worcester sauce or preaching of mingled theology and prelatic medicine fills a church for more than a few Sundays.

The adherents of this cult (like the anti-vivisectionists) are recruited from the well-to-do and idle. Fads and imaginations do not root amongst honest workers, tradesmen, mechanics, business men; it is these that make the bulk of our population and are the prop and staff of the present and future republic.

One of the sinister means of obtaining a foothold in crowded communities has turned out to be contract and society practice. In New York City alone there are more than five hundred doctors—perhaps a thousand who either have it or crave it. Competition for such appointments is eager. What it results in is the degradation and demoralization of both the public and the doctors. To earn at the rate of one dollar a year for an individual member of a society, and three dollars a year for a family, they underbid each other, they coax and flatter and treat and otherwise bribe a society president or influential member. They arrive at mutual jealousy and hatred among themselves, and contempt and despicable treatment at the hands of their customers and patrons.

Let me add right here that the "services" rendered by the so-called lodge doctors are just about equivalent to the ridiculous pay. They must go here, there and everywhere, traveling continually from one end of the city to the other; they hurry to patients, they hurry away from patients: careful diagnosis or watching the progress of cases is impossible for want of time. Furthermore, these lodge doctors have no time in which to improve. The constant rush of attending to the wants of several score or several hundred families robs their study hours, and as a consequence they never learn anything. The public knows well it is getting inferior service. Often patients come to me from New York's overcrowded East Side, and when I ask, "Who is your doctor?" they reply: "A little lodge doctor over on the East Side!" If these "little doctors" were "big doctors," charged decent fees and rendered careful, adequate service, their patients would not be obliged to run to Fifth avenue or Madison avenue the

first time something really serious happened. Make up your mind that you will not be "little doctors," that you will do your best and give the best that is in you.

By this new practice of "lodge doctoring," the noblest of vocations is so contaminated as to become the meanest of trades. May the present efforts to efface that stain on the profession be successful!

Worse remains to be said: There are those in the practice of medicine who demand and take commissions. Do you know what that is? An agent receives it when supplying a new customer. Is it difficult to say who pays it? Is it the employer? Is it the customer? The person insured or the purchaser. It is an indirect tax to be paid by the latter, the consumer, who is robbed in order to sustain a high tariff. Commissions are asked and given from and by apothecaries, truss and bandage makers, instrument manufacturers, even by poor nurses. Do not ask for proofs unless you want them, for proofs there are in plenty.

There is also a rumor—call it a rumor for euphemy's sake—that consulting specialists are called because they offer or grant commissions; that practitioners call in specialists on that condition; that a surgeon, for example, is given a particular case because he consents to be robbed of a big percentage of his fee, which is raised correspondingly.

Who is robbed, did I say? The surgeon? Or the patient who is unfortunate enough to fall "amongst thieves which strip him of his raiment?" The words are not mine; they are taken from the gospel of Saint Luke, himself a physician. And furthermore, there is also a rumor—call it so—that many of these fleeced and fleecing consultants, medical and surgical, are quite capable members, adjuncts of faculties and hospitals, and, what is still more perilous, teachers of the future physicians of this republic.

I love my profession; I want it to be respected and to respect itself; I want it to be without the blemish of bribery or mendicancy. And this privilege it no longer has. The time when every family, rich or poor, had its own family physician who knew the illnesses and health of its members and enjoyed the confidence of the upgrowing boys and girls during two or three generations, is gone. What I have just referred to is no longer a mere unauthenticated rumor; it is the contemptuous gossip and common knowledge of all familiar with latterday medical and surgical practice.

In many sections the specialist employs medical practitioners, much as he would employ hired agents to drum up "trade." By custom the commissions to be paid are fixed upon in advance, sometimes amounting to 10 per cent of the fee for the specialist's call and 25 to 33 per cent. of the fee when he operates. I would not be misunderstood as saying that the custom of dichotomy or the division of fees has become universal. On the contrary, there are honorable-minded specialists and physicians of integrity who still regard a proposition to partition professional fees as an insult. But the evil has spread widely notwithstanding, and the very sparrows on the roof gossip of doctors as of bribe takers and bribe givers, as flesh cutters and shavers for the purpose of sordid gain.

The medical papers have been calling attention lately to the increasing inroads of commercialism in the hospitals. In many such institutions it is not the physicians and surgeons of greatest skill and experience who are valued the most, but rather those able to bring the largest cash income into the hospital coffers. Some of them are commercialized to such an extent that the tenure of a visiting physician's appointment depends on his keeping a certain number of the private rooms supplied with pay-patients. As Dr. Bristow, editor of the Journal of the State Medical Society, has pointed out, this means bringing the methods of the auction room and the market place into hospital administration. Furthermore, it forms the entering wedge for the outright sale and purchase of hospital appointments to the highest bidder. The results of mercenary control of these institutions will inevitably be that a large number of mediocre and ofttimes incompetent physicians will be foisted upon the public as experts, while those of possibly greater skill but of less commercial shrewdness or without wealthy

connections will be forced into the background.

Lastly, one conspicuous cause of recent medical demoralization is elementary ignorance of the Pharmacopœia and the methods of prescribing, and increasing reliance upon proprietary remedies. We, the doctors, are responsible for a great deal of the injury that is done to the people by proprietary dosing. We take medical journals that advertise nostrums, that print "reading notices" of proprietary medicines old and new, that sell pages of their issue to the trade, that print eulogies in the shape of "original articles" about factory products, that alternate their medical with advertising pages. Thus it is that even the mind of the medical man is gradually poisoned. What these sheets do not perhaps accomplish, the glib agent will complete. He dumps his wares—his blotters, inkstands, paper knives, pencils, blank books and almanacs—on your table either personally or thru the postoffice.

Well, he can afford it. For the poisonous anilin preparation with sodium bicarbonate which he baptizes with a hybrid name and which is prescribed by thousands of us, yields him a thousand per cent. profit. That is why you find thousands of doctors' offices and hundreds of apothecary shops with stacks of advertising sheets and quackish booklets, but without a United States Pharmacopœia or the American Pharmaceutical Association's formulary. That is why a friend of mine found the expensive prescription of a prominent New York practitioner to read "Remedium Spontaneum Radway," which being interpreted is our old newspaper advertising nostrum of "Radway's Ready Relief." In a large drugstore, one of the gaudy ones to which the prescriptions of our fashionable doctors are sent, I was told that 70 per cent. of the prescriptions sent in by reputable physicians contained either nostrums pure and simple or as a part of a compound.

Perhaps it would lead us too far to examine all the reasons for such demoralization. But one of them should be generally known and appreciated, which is that there are very few medical schools which a graduate will leave, diploma in hand, with the knowledge and practice of writing a prescription. Many of our medical schools neglect their duties by thus omitting to teach the art of medicine in combination with what is extensively and pompously called "science."

The financial crisis now confronting the practice of medicine—the "hard times" and the inability of many practitioners to make a comfortable living—is partly caused by the evils I have narrated, partly symptomatic of them. The cure lies in a return to old-fashioned ideals, in a higher standard of competence and excellence for the general practitioner, and in due subordination of specialism. Though I have long practised and taught pediatrics, I do not desire to be known as a specialist in children's diseases, but as a physician.

Try to remain in or improve your contact with all the branches of medicine. Go in for general practice first, and build a specialty in later years on the strength of your general knowledge and attainments. And above all things bear in mind that medicine, your choice of a walk in life, is the most honorable and most punctilious of professions and not a mean, money-grabbing trade.

New York City.

How to Get the Birds to Stay Close by Us

BY E. P. POWELL

Author of "The Country Home," Etc.

IT is not at all difficult to get acquainted with the birds if we understand that we have to meet them half way. They cannot talk our language, but we can talk a good deal of theirs. There is probably no bird capable of being humanized more than the catbird—that is, no bird of our home aviary. The robin never nests far from human habitation, but the catbird learns to know us very much as a collie dog enters into familiar association. The mockingbird is a cousin of the catbird, and in the Southern States has the same associative and understanding faculties. He will talk with you, and if you will put forth your best efforts to chat with him he will respond. The catbird, however, goes a little farther than his cousin in his intimate apprehension of human folk. Other birds occasionally show a good deal of this affability. The goldfinch will lose all fear of us, and the song sparrow is very easily brought to the door and made one of the family. We have lately been feeding them both about barn and house, and they have shown their content by hopping close to our feet.

The birds most likely to be won into nesting under our protection are the robins, the martins, the bluebirds and purple finch. Give the robin grape vines or bittersweet or Virginia creeper around your porches and he will build within reach of your hand without hesitation. The purple finch likes better a tree with close foliage close by your door. The bluebirds and the martins take most readily to our boxes. These boxes may be of any form whatever, and should be erected in such a way that the bird should have a lighting place before entering the doorway. This is an absolute necessity to secure his occupancy of the house. Inside also it is well to have a perch. When he approaches with his nest material, if he cannot first light near the doorway, he cannot easily enter, and will prefer another place. If a house has been occupied it should be thoroly cleaned out in the fall, especially of the mud used by the robin. Under your porch the robin will frequently come back and use over again an old nest.

To secure bird familiarity and to bring out all their associative faculties two or three things are absolutely necessary. All birds hate cats and all cats eat birds. It is utterly impossible for the two to live in accord, and for the most part the cat has the best of it. A big Tom will manage to destroy at least two-thirds of all the nests around the house and garden, feasting on the young. He will not disturb the nest until the birds are just right for a breakfast, and after he has had sufficient experience he will dine off them in the very early morning. He will note the location of the nest so that he can find it in the dark if he chooses. A good deal of his deviltry is carried on in the night, when the birds cannot see, as he can. If you want birds about you freely and happily, or even birds at all, you must abolish the cat, or you must seclude him so that the birds will understand that they are safe. We are in the habit of shutting up our feline part of the family in a little house, with two rooms and plenty of comfort. Here he or they stay from the first nesting days until September. The birds soon understand it, and will mind him no more than they do a barking dog. In the second place the red squirrel must be absolutely denied a home about your acres. He must be shot mercilessly. This is a pity, for the chatterer is really pretty, and he is interesting. However, if you will tolerate him he will break up every nest as soon as he finds it, beside destroying most of your pears and sweet apples. He will take a small bird, sit on an apple tree limb and devour it like a savage. Birds abhor the squirrel, and some birds, like

the bluebird and the grosbeak and the purple finch, shout their terror as soon as he appears on the lawn. We are glad that this is beginning to be understood, and a choice made between squirrel and bird.

If you will make a bird paradise it is to be accomplished only by very shady lawns and very safe retreats. The catbird likes to build in blackberry bushes and in such dense shrubs as Tartarian honeysuckles. Companionable as he is, you will always find it difficult to get your eye on his nest. If he has learned to trust you, however, he will not say one word to you if you go to a nest and examine it even when the nestlings are about to fly. The robin has the disagreeable habit of plastering his nest on almost anywhere, and he is sure to utter some loud words if you take a look at it; however, he makes no great fuss over the matter, and still builds right over your window or at the door. He also likes a shady place and plenty of trees. It will not be impossible also to attract the indigo birds into your shrubbery or berry garden, while the wood thrush and Wilson's thrush will come to you from the forest edges and build in sight of your window. This is an achievement, when you have made your grounds so safe, so retreatful and so full of food that these thrushes will be familiar. Fifty years ago it was a rare thing when they would approach a human habitation. We have had them all summer whistling about our lawns and calling each other from the break of day until the latest evening. The tanager is another beautiful fellow, who can be won only when your grounds are thorolly safe and shady. He likes the buffalo berry and the wild cherry.

This matter of food must be considered very carefully. One should have it in mind all the time that birds deserve to be fed quite as much as hens and turkeys. They contribute not only to our pleasure, but enormously to our profit. We can afford to welcome their cooperation and encourage it. The easiest food to supply is a plenty of fruit. Wild cherries for late autumn, with a few mountain ash trees, planted either as a windbreak or for ornament, can easily be provided. A hedge of Tartarian honeysuckle serves as windbreak, furnishes a splendid display of flowers, and gives bushels of bird food just in raspberry time. We can also afford to pay toll of cherries and berries out of our gardens —a very liberal toll, not only for the service they render in destroying insects, but for the music they furnish. What would we do to get a bird orchestra if it were not furnished freely?

For winter food one can most cheaply hang a few bones and bit of suet in the trees and by the windows. This will bring a lot of nuthatches and chicadees and woodpeckers, with sometimes robins and half a dozen other birds. During the summer keep a stone basin on your lawns supplied with fresh water where the birds will be free to bathe. There is only one nasty bird liable to approach us; this is the English sparrow, and he makes one more of the impossibles if you would have the song bird at home with you. This fellow is dirty in every way—in his nest and in his person, altho I believe that he bathes occasionally in the water. The very best way to get rid of him is to persuade the other birds to be at home with you. Never allow a gun to be fired about your place except for the destruction of a bird enemy. They will very soon learn that you are killing squirrels and English sparrows, and will lose all fear of the noise. If met as we suggest the sparrow will soon be very shy of you, but we are sorry to say that the fight with the squirrel is likely to be very continuous.

It is impossible by figures and by estimates to show how valuable birds are about our homes. The real point is, however, that a man who wishes to live in this world, and make anything decent of life, wants the beautiful and the sweet about him. By what process of evolution the song bird came about we cannot trace, but we do know that a good deal of the pleasure of country living depends upon a cordial familiarity with these simple hearted friends. They can be brought into the most intimate cooperation, or they can be made shy of our companionship. We think it is worth while to count the birds into the family and provide for them as we do for our domestic pets.

CLINTON, N. Y.

Literature

A Group of Essayists

THE essayist of Addison's day, of Lamb's day, and to a great extent of our day, has always been a man who, having acquired the art of polishing gems, makes it his chief business to search for gems worth polishing. They may be small or large, with few facets or many, of dull colors or of the scintillating sort. It is his business to "shine them up," to make them fascinating in the parlor or the library.

Dr. William Morton Payne[1] has, rightly, in accordance with the modern practice, assumed a broader definition for the essay. It is still a gem to be polished—something "occupying a sort of literary limbo between the creative forms of poem, play, and novel, on the one hand, and the more substantial embodiments of knowledge or of speculative thought on the other." He does, however, keep decidedly within the lines of the old definition when he selects for his themes four such men as Irving, Emerson, Thoreau, and George William Curtis. They were, as he very closely shows, and with much learning, polishers of gems of "the purest rays serene"—Thoreau decidedly less so than the others, tho the author has so strong a liking for him that he is unwilling to remember that the poet-naturalist is, in his shorter themes, a lecturer and sermonizer rather than an essayist. Call him, however, what you will, the lover of original thinking, simplified living, and sane observation of man and nature, combined with the happiest manner of presenting the gems unfinished, will never quarrel with Dr. Payne for putting the Concord genius within the fence of any artistic form of literary work.

Dr. Payne touches chiefly on the biographical side of his themes, and in this form finds a half brother of the quill in Prof. C. T. Winchester, of Wesleyan University, whose subjects belong to the first half of the last century[2]: William Hazlitt, Charles Lamb, Thomas De Quincey, John Wilson, Leigh Hunt, with Jeffrey of the new school of critics close at hand to rub on the oil or the vitriol to the chief of the poets. Precursors, all, of the American school, they were in deep sympathy with the growing desire to get a freer hand in the distribution of literary honors. All were true essayists of the expanded definition, and Professor Winchester deals with them as if he loved them—loved them chiefly for being one step in advance of their ancestors, and at least two steps behind their successors. A reformer who is not a good "whipper-in" of his following has a hard time in scoring successes. In William Hazlitt Professor Winchester finds a whipper-in exactly to his mind, and a proper subject for the whipping in poor, wiid-eyed Leigh Hunt, with his multitudinous tendency to roam in wild daisy fields. Yet he does amusing justice to both men, and is delightful reading, mingling the critical deftly with the biographical.

A true essayist, and of the most charming form—one of the very best sort—is Mr. E. V. Lucas,[3] who has little of the professorial manner and enough of distinct personality to make one resist the temptation to place him in the school of Charles Lamb, as one is constantly on the point of doing. His humor and method of treatment are of the same glancing, personal kind which a frequent reading of Lamb has induced in so many writers. But the humor and the manner are both native in his case. He was born with it, as much as the author of *Alice in Wonderland* was born with his peculiar form of drollery, or Mr. Crothers with his. You may expect any one of them to jump out at any moment from under the parlor table and say "Boo!" to an unexpected guest, and

[1] LEADING AMERICAN ESSAYISTS. *By William Morton Payne, LL.D.* With Four Portraits. New York: Henry Holt & Co. $1.75.

[2] A GROUP OF ENGLISH ESSAYISTS OF THE EARLY NINETEENTH CENTURY. *By C. T. Winchester,* Professor of English Literature in Wesleyan University. New York: The Macmillan Co. $1.50.

[3] ONE DAY AND ANOTHER. *By E. V. Lucas.* New York: The Macmillan Co. $1.25.

no further introduction needed. Because Lamb came first and did best, there is no reason why others born under the same planet should keep their fun bottled up forever. Mr. Lucas's fun is of the sweetest, his egotism most lovable, his polish of the gem perfect in its way. It is always different from the next man's. It is possibly because of that subtile tendency to differ from his neighbors—but not to differ too much—that made him put just twenty-six essays, instead of the more tempting number of twenty-five, into his table of contents.

A most interesting group of essays, depending less on manner than on matter, varied, not relevant to any line of professional or practical work, and yet informing, is the little volume *On Everything,* originally contributed to the London *Morning Post,* by Hilaire Belloc.[4] Here also there is evidence of humor in the odd number of articles included in the volume. No man would have stopped with the thirty-ninth essay unless he had had in mind the department store, where a penny is subtracted from the even tens in order that five cents may be added as a preliminary charge. Mr. Belloc gives full value, however, in whatever he has to offer. He is evidently a shrewd observer of details, and before sitting down to write, has his full quota of small facts to pack with the contents of the box. Everything is there which will be needed for an attractive showing when the box is opened in the playroom where a tired man likes to spend some part of each day. If the author is talking of song, for instance, his arrangement of material includes all that is of use in the world's habit of singing, set in a form that is worthy of the best humorists. A specimen of the grim order can be seen in a little skit bearing very likely on English politics, but borrowed from an historical season in French politics. "Mr. Robespierre" is at his culminating point, riding for a fall, and the "reasonable press" of Paris is helping him along. One paper "admits" that Mr. R. "has handled a very difficult situation with admirable patience and with a tremendous grasp of detail." Another paper declares that altho "1,200 executions in four months is a high record," more seem to be expected by an eager public. It is "the pressure of business in the courts" that prevents, and "unless a larger number of judges are created under his new bill, the popular discontent may grow to an extent he little imagines, and show itself vigorously at the polls." Under the heading of "Official News" comes the announcement: "We are requested by the Home Office to give publicity to the arrangements for tomorrow's executions. These will be found on page 3. There will be no executions on the day after tomorrow." Between these two specimens one can easily see what an assortment of literary *deliciæ* Mr. Belloc has in store in his thirty-nine articles. The curious reader will find enough fun and drollery in the author to be willing to place him near Mr. Lucas, but not in the Charles Lamb corner.

Mr. Charles D. Stewart's half dozen essays, *On the Spot,*[5] are of the informing sort, but the information is dressed for the epicure in style. As the author lies in bed, after an alarming illness, and watches a spider spinning the sticky part of himself over the corner of a window, he becomes a student of natural history, and one follows him with much the same kind of amused joy that is induced by reading John Burroughs. If he is out of bed and has become a cowpuncher, with a story to tell—how his ox "Bully," braced back as a "Sitting Bull," gloriously held up a competitive Bos named "Scott"—into the story goes as much information about the "bos" breed as could well be put into a brief narrative that is pungent with wit and humor. The essay here verges on the domain of the story. Then there is a disquisition "On the Moraine," wherein the geologist comes to the fore, as, hammer in hand, he investigates what there is left of the glacial period in Wisconsin—as much of its ground rock, that is, as is necessary for his purposes. There is good writing here, of the Mark Twain school—if there is any such school—where the humorist "leaks information." In fact, "leaking information" has come to be a characteristic of the modern essay.

[4] On Everything. *By H. Belloc.* New York: E. P. Dutton & Co. $1.25.

[5] Essays on the Spot. *By Charles D. Stewart.* Boston and New York: Houghton Mifflin Co. $1.25.

Professor Ladd's Magnum Opus

THIS book* is the product of Dr. Ladd's mature reflections and of all the hard work that he expended on his earlier volumes. Tho much shorter than many of his previous works, it may be described as his *magnum opus,* and it would be a safe prophecy to say that it is destined to have a much longer life than any of its predecessors.

Much of the constructive work in psychology which Dr. Ladd has contributed, as the result of his laborious research and careful collation of data, is already in course of supersession, and some of his later philosophical writings are difficult reading, and make but a small appeal to the man or woman who is not engaged in the study of psychology or of modern philosophical systems. In *Knowledge, Life and Reality* he deliberately addresses the thoughtful public rather than the special student. With infinite care he has prepared his chapters to meet the need of the man who is not equipped by a study either of Dr. Ladd's own system of psychology or of any other systems which have attained to more or less currency.

From a literary point of view this book possesses few graces of style and no brilliance; but it is clear, deliberate and not difficult to understand, and Dr. Ladd is certainly to be congratulated on his success in rendering his meaning intelligible to the audience to which he appeals. Had such a work as this come to us from the pen of a younger man, the author might well have been criticised for the audacity of the attempt to cover the whole field of human knowledge. Coming as it does as the ripe fruit of a long life spent in laborious research into the nature of the human mind, it will be received with the respect which must always be accorded to genuine original thinking.

Dr. Ladd's object in *Knowledge, Life and Reality* has been to demonstrate the need of philosophy in order to bring all modern science and thought into some kind of unity; to examine critically the theories of knowledge and of metaphysics by which the philosophers have attempted to offer an explanation of the universe, and to give his own theory, and the reasons on which he has based it. Philosophy differs from science, Dr. Ladd tells us, in that it is not capable of being verified by experimental demonstration. This belongs in the realm of science only, and where science ends, there philosophy begins. The aim of philosophy is, in a system, to offer an acceptable arrangement of rational opinions respecting the ultimate problems afforded by the experience of man as a race. Taking man's experience thus as his basis, Dr. Ladd builds up what may be described as an anthropomorphic conception of the universe. The world to man is a man-made world, and God is a man-made God. In fact, he asserts, there can be no other kind of a world, or of God, and such an extreme of anthropomorphism he considers "the achievement of the prolonged and highest development of the reflective thinking of the race." The most striking feature of Dr. Ladd's new volume is this frank adoption of the anthropomorphic conception of the Deity and of the universe, and his careful and well-supported attempt to rescue this conception from the odium and oblivion to which it has long been relegated. There is no irreverence in Dr. Ladd's treatment of religion. As he has already set forth in his *Philosophy of Religion,* man must be considered as an essentially religious being and the religious side of human nature must be accorded just as much validity as the intellectual or esthetic. In the present volume, there is even an advance beyond the *Philosophy of Religion* in the reverence of spirit with which Dr. Ladd pursues his inquiry.

*KNOWLEDGE, LIFE AND REALITY. *An Essay in Systematic Philosophy. By George Trumbull Ladd, LL.D.* New York: Dodd, Mead & Co. $3.50.

Bjornstjerne Björnson, 1832-1910. By William Morton Payne, LL.D. Chicago: A. C. McClurg & Co. Fifty cents net.

The associate editor of the Chicago *Dial* is the author of this tribute to the great Norwegian, which is, in substance —altho it is brought down to date—the essay contributed by him to the *International Quarterly* of March, 1903, written on the occasion of the novelist's seven-

tieth birthday. There are here less than a hundred pages of well-printed text, followed by a list of "works." But the study of Björnson is feeling enough, and intelligent enough, for us to welcome its perpetuation in book form. Dr. Payne is familiar with the language of Björnson as well as with his ideas, and as an introduction to the genius of one who may be described as "the incarnation of a whole people" (as Renan described the novelist Tourguénieff), its value is quite out of proportion to its bulk.

The First Great Canadian. The Story of Pierre Le Moyne Sieur d'Iberville. By Charles B. Reed. Chicago: A. C. McClurg & Co. $2.

The exploits and adventures of the Sieur d'Iberville, as described by Mr. Reed, were certainly such as to deserve a permanent record, and to give to Iberville a prominent place among the early explorers and conquerors of America. In spite, however, of Mr. Reed's evident admiration of his hero and his insistence on the greatness of Iberville's services to France and to Canada, the impression that is left by a reading of his book is of futility, of useless cruelty, and barbarism. If Mr. Reed had set out to write a peace tract or a monograph showing the utter uselessness of militarism, he could hardly have accomplished anything more convincing than his biography of the greatest of French-Canadian warriors. He depicts the English colonists —with no desire to fight—somewhat careless about military preparations and efficiency, and upon these settlers who are slowly winning the wilderness, pounce the French adventurers, gaining brilliant victories, carrying away rich stores of booty, and leaving desolation behind them. Yet the English—with the national characteristics of bull-dog tenacity and of never knowing when they are beaten, return again, and yet again, to the scenes of their defeat; and in the long run it is the English—the men intent on homes, harvests and trade—who make themselves masters of the New World. In contrasting the military power of French Canada with that of the early New England colonies, Mr. Reed himself acknowledges the superiority of the more peaceful settlers. The English, he writes, "to their great advantage, had been left frequently alone." The French colonies, on the other hand, had developed in obedience to authority; and a system had been perfected, the only advantage of which was that it favored military efficiency. "But while this latter condition," adds Mr. Reed, "presents many desirable features as an accessory to government, it is a repeatedly demonstrated failure as the sole and permanent support of the State. The more efficiency the population as a whole acquired in a military sense, the less efficient it became in the true colonial sense. The result was restriction rather than development and involution rather than evolution." Mr. Reed hints that there was no great desire on the part of the French to conquer thoroly the territory pre-empted by the English on Hudson's Bay or in Newfoundland, and to retain possession of it. From this point of view, the exploits of Iberville and his companions are of no nobler character than those of some doughty pirate. Their object was loot—furs or codfish—whatever the English had slowly and painfully collected. Nor were these expeditions carried out on any higher plane of ethics than characterized the predatory operations of Captain Blackbeard and his piratical crews. Telling of the utterly indefensible invasion of Newfoundland by Iberville in the winter of 1696-7, he writes: "To the English villages the incursion of Iberville resembled nothing less than the fell descent of the Angel of Wrath. Some of the inhabitants were killed, but most were swept up like dust and carried to France. They could have been no more surprised, no more powerless, no more utterly extinguished if some great cataclysm of Nature had overwhelmed them." That Iberville had enormous difficulties to encounter in this winter expedition, thru the rigor of the climate and the impenetrability of the wilderness thru which he had to march, is admitted; but what military glory could accrue to any one of higher civilization than an Iroquois Indian from the conquest and annihilation of these peaceful fishermen? Besides the argument afforded by the career of Iberville as to the uselessness of war, the advocates of peace might find great satisfaction in surveying the distance that the world has

traveled in the last 200 years from a point at which such exploits as those of Iberville could be hailed with satisfaction and delight.

Quiet Days in Spain. By C. Bogue Luffmann. New York: E. P. Dutton & Co. $2 net.

Because Spain is less quiet today, this book of *Quiet Days* is likely to have an increased number of readers. They will find in it little about the clerical conflict—but much of more permanent interest than riots have, in any land. They will hear of the little girl who wrote to the traveller, "I hope Poste Restante is a nice place, and that you are very comfortable." They will learn that "the Spanish peasant is always clean shaven—at any rate, he gets a clean shave now and then. Meet a company of country Spaniards pouring into a town, and they look like so many stage brigands. Meet them returning, and they appear as so many pleasant-faced human sheep." Borrow noted a good many decades since that the rustic Spaniard was shaved only weekly. Mr. Luffmann verifies the statement, as above. He does not, however, quote *The Bible in Spain* with frequency. "No British writer has written more entertainingly of Spain," he confesses; but adds: "and no man has created a more erroneous impression." Mr. Luffman is no George Borrow, but he is the author of *A Vagabond in Spain,* as well as of the present volume; has wandered thru forty-two out of the forty-nine Spanish provinces in a single year, and has taken "pot luck with all sorts." His chapters are without much intimate connection, but they all concern the Peninsula, and they are almost all in some degree interesting. There is much less generalization here than in Mr. Ellis's admirable *Soul of Spain;* but we are glad to know poor old Maria, Trinny, and the rest. We learn something, besides, of Hispanic gastronomy. Mr. Luffmann is the unmistakable Briton, and his narrative of travel is not thereby improved. But his opportunities for seeing the real in Spain have been remarkable; and so we readily tolerate him. For one thing, he makes no pretension to style.

Sable and Purple, With Other Poems. By William Watson. New York: John Lane Co. $1.25 net.

The title conferred upon his latest volume of verse by Mr. Watson explains itself when we read the verses written in May, 1910, "Honour the happy dead with sober praise." The dialogue of King Alfred and Asser the Welshman bulks larger, however, in this slim volume; tho to call it impressive would be another matter altogether. Disappointing, in the main, is the poetic journal of a stormy honeymoon, *In the Midst of the Seas.* Here we find this rather commonplace apostrophe to New York:

New York! a city like a chess-board made,
Whereon the multitudinous pawns are swayed
Neither by Knight nor puissant Queen,
And bow not unto Castle or King,
Yet hither and thither are moved as tho they obeyed,
Half loath, some power half seen,
Some huge, voracious, hundred-headed thing,
Armed with a million tentacles, whereby
He hooks and holds his victims till they die.

This is not Mr. Watson at his best. Mr. Watson at his best is not represented in this volume of *Sable and Purple,* which is only a fair example of what Mr. Watson can do in poetic journalism.

The Taming of Red Butte Western. By Francis Lynde. New York: Chas. Scribner's Sons. $1.50.

This is another of Mr. Lynde's stories about a refractory railroad. Here, as more than once before, we have a system that is as a bucking broncho—tho here (as usually), the hero ends by bitting his bronco before admiring eyes. In this story, however, there is some variation in the character of that hero. He believes himself to be a physical coward—in spite of which he is appointed to tame a wild-cat railroad. In breaking the spirit and power of the lawless crew running it, he discovers that he is a brave man. This story would altogether want significance, did it not represent the evolution of the healthy adventure tale—frankly bloody and raw with but one villain and many honorable men—to the yellow chronicle of what happens to one honorable man among many villains who are too wise to be bloody.

Sandra Belloni (originally *Emilia in England*), 2 vols.; *Rhoda Fleming; Evan Harrington;* being Volumes III to VI of the Memorial Edition of the Works of George Meredith. New York: Charles Scribner's Sons. $2 a volume, sold only by subscription.

The four new volumes in the "Memorial Edition" of Meredith, which come to us at once, sustain in all respects the promise of high excellence in book making made by the first two volumes issued at the end of the year. The paper is of exceptionally good quality in these days of cheaply-made books, deckle-edged, and watermarked with the author's initials. The type is reasonably large; the letterpress, delightfully clear and clean; the binding, of dark green silk, simply and neatly lettered in gold. The illustrations of *Sandra Belloni,* which by the way is one of the richest mines of Meredithian wisdom—perhaps in none of the novels are the gifts of his insight more lavishly scattered—and is also the only one of his stories which the author furnished with a sequel, are from photographs made last year by Mr. Frederick H. Evans of wooded scenes near Copsham and Oxshott, which were intimately associated in Meredith's mind when he wrote this novel. *Rhoda Fleming,* one of the simplest of Meredith's stories, written in strong and simple Saxon and remarkably free from "Meredithese," and by many readers regarded as their favorite among the novels, is also illustrated with photographs of scenes near Copsham, where the author lived when writing both *Sandra Belloni* and *Rhoda Fleming. Evan Harrington,* the most entertaining of all Meredith's novels, the one that most nearly makes the appeal of the popular novel, has for illustration five pictures by Charles Keene, selected from those which accompanied the serial publication of the story in *Once a Week* in 1860. The order of arrangement of these volumes is not strictly chronological, for *Evan Harrington* was written and published several years before either *Sandra Belloni* (1864) or *Rhoda Fleming* (1865); but this break in chronological sequence is only a minor defect, scarcely alloying the pleasure of having these masterpieces of English fiction in a form and dress worthy of their rank. Every lover of Meredith's writings will want this handsome edition, which the publishers promise to make "definitive" and inclusive of much new material never published in the author's lifetime; an inducement to many readers strangers to him to make the acquaintance of this master of the English novelists of his time and masterly poet, too, whom Richard Le Gallienne has not inaptly called "an incarnation of the Great God Pan."

Whirlpools. By Henrik Sienkiewicz. Translated by Max A. Drezmal. Boston: Little, Brown & Co. $1.50.

This novel of modern Poland is inspired by the same patriotic motive as the famous trilogy. It, too, was written "for the strengthening of hearts." Nowadays the foes of the Polish people are not the Russians, the Swedes, the Turks and the Germans, but, according to Sienkiewicz, the socialistic and agrarian agitators. The most attractive character in the book, the dainty maiden musician, Marynia, falls a victim to their violence, for she is shot while playing for a charity concert, and dies with the query on her lips: "For what? For what?" Futility is the burden of the book, as it is of Galsworthy's labor drama, *Strife.* Sienkiewicz himself has no solution for the distrest condition of his beloved country, but he scores (as always) the ancient and ineradicable faults of the Polish character: envy, spite, quarrelsomeness, idleness, licentiousness. These vices, which caused the fall of the old kingdom, still keep Poland in subjection. The enervation due to the decline of religious faith he depicted in *Without Dogma,* a character sketch of a Polish Amiel who could accomplish nothing because he believed in nothing—in himself least of all. These modern Poles are certainly less interesting to read about than the bloody heroes of *With Fire and Sword* and its successors, but then these constituted the most remarkable series of historical novels written in recent years. Also, Mr. Drezmal is a poor substitute for the translator of the earlier novels, the late Jeremiah Curtin. Mr. Curtin was no stylist, but Mr. Drezmal does not even command English idiom. Again, Mr. Curtin used to soften the Polish names for us in some degree and give

us a key to pronunciation. In this volume it is discouraging to come upon Jastrzeb in the first line and Kryzcki in the third.

A Cavalier of Virginia. By G. E. Theodore Roberts. Boston: L. C. Page & Co. $1.50.

This is a buccaneer romance in which the hero figures like a game cock, dragging his wings, ever ready to murmur thru clenched beak, "S'death, my Lord," and thereupon draw his redoubtable spurs for mortal combat. It has the invariable features which make the swashbuckling romance dear to the heart of the adventure-loving reader—the hero, the wicked elder brother, the beautiful lady, her invalid father, certain gentlemen, the villain and the pirates. The villain of this story has the piercing eye and the dark hair and character; with an added flourish of a wicked sibilant Spanish name. He entices the heroine away from her home in Virginia to a lonely island where he is the cruel Don. The hero gives chase thru bloodshed, death and pirates, and finally rescues the lady in distress. She herself appears rarely in the narrative. Occasionally Mr. Roberts permits her to figure modestly as a vision or a ministering angel, but never in secular events as a millstone about the neck of her daring lover.

Princess Helene von Racowitza: An Autobiography. *Authorised Translation from the German by Cecil Mar.* New York: Macmillan Co. $3.50 net.

Nothing could be truer than the opening words of this remarkable document:

"The following sketches are not intended for timid souls or conventional thinkers, nor for those who are prudishly inclined or narrow-minded."

A mixture of blood hardly less strange than George Sand's flowed in the veins of this remarkable adventuress—blood of Viking men and Jewish women. Her narrative is distinguished not by its frankness alone, but by the importance of many of those who figure in it—Heyse, Andersen, Bulwer, Meyerbeer, Liszt, Björnson, and Henry George, to say nothing of royalty, or of Serge von Schewitsch, "my present husband." By the extent of this restless woman's wanderings, also, that have girdled the European Continent and our own. To be sure, this is not the first time that the Princess has rushed into print. Some thirty years since she published the account of her relations with Lassalle upon which Meredith relied, for the most part, in composing his *Tragic Comedians.* This novel has lately been issued in the memorial edition of Meredith's works; perhaps the reminiscences of the much-daring Hélène will profit by the synchronism—in their sale, that is. If so, an autobiography of *moeurs suspectes* will be floated upon the reputation of a novel which Meredith himself came to despise, and whose errors the present work helps to correct. Yet the complaint is not to be made that its author is dull. As mistress of men of genius, as a novelist of ambition and an actress of pluck, she finds more than a sufficiency of material glittering or grim—and, on occasion, humorous.

Literary Notes

....Longmans, Green & Co. have in preparation a volume, *King Edward VII, as a Sportsman,* which will be fully illustrated.

....Prince Paul Troubetzkoï, the Russian sculptor, has recently completed, at Iasnaia Poliana, a bust of Tolstoy. This is something of a feat, for the great novelist has always refused to pose for any artist.

....Lord Dufferin's *Letters from High Altitudes* will soon receive the honor of inclusion in two popular series of reprints—the *Everyman's Library* and Henry Frowde's *The World's Classics.*

....The study of the Norwegian novelist, Björnstjerne Björnson, in his country house near Lillehammer, has been turned into a museum of relics. His death-mask, many of his books, with his own annotations, and other souvenirs have already been placed there.

....Prof. John A. Lomax has been collecting the ballads of the cow-puncher for we don't know how many years; and now we are to have the result in *Cowboy Songs,* promised for autumn publication by the Sturgis & Walton Co. Prof. Barrett Wendell, of Harvard University, contributes the introduction.

....A delightful way of studying French literature is to carry about in the pocket a volume of Sainte-Beuve's *Causeries du Lundi* in the edition now being published in Routledge's New Universal Library (Dutton, 50 cents each). The translation is by Trechmann and the articles from October, 1849, to March, 1851, are covered in five volumes.

....Doubleday, Page & Co., are the publishers of another motor story by C. N. and A. M. Williamson, entitled *The Motor Maid*. This latest Williamson book takes the reader thru the beautiful Riviera, spinning a very original love tale almost as fast as the motor speeds.

....Thomas Jefferson was our representative at Versailles in 1781, and, introduced into the salon of Helvetius's widow by Benjamin Franklin, he met there the sculptor Houdon—who had just exhibited his *Voltaire assis*. Four years later he arranged that Houdon should execute a statue of Washington—the masterpiece now shown in the Capitol at Richmond. By a gracious act long deferred, a bronze replica of the statue has at last been presented to the Versailles Museum. Colonel James Mann, chairman of the Virginia Commission, delivered the speech of presentation, and Ambassador Jusserand, in the absence of the French Premier, accepted the statue on behalf of the government. A porcelain copy was long since exposed at the Louvre for the benefit of the American tourist suffering from *mal du pays*.

....Even Chelsea, that distinctively literary quarter of London, has undergone the ravages of time, according to a writer in the Philadelphia *Book News*. This fact is illustrated by the removal of William De Morgan from his picturesque old house, "The Vale," in a quiet suburban road, to a more pretentious dwelling some blocks away. The novelist remains as enthusiastic as ever about pottery and tile-making, however; partly, perhaps, in view of Mrs. De Morgan's proficiency in this art.

....Miss Alice Brown's new novel, *John Winterbourne's Family*, is promised for October publication by the Houghton Mifflin Co. This writer is as deeply regional, as provincial in the rich and noble sense of the word, as the late Sarah Orne Jewett; and the same publishers announce a new seven-volume edition of Miss Jewett, which will include *Tales of New England, The Life of Nancy, The Queen's Twin, Deephaven, A Native of Winby, The Country of the Pointed Firs*, and *The Country Doctor*. The new *Country of the Pointed Firs* will differ from the familiar editions in containing the short story, *William's Wedding*, published in the July *Atlantic*, and therein described as having been found among Miss Jewett's papers.

....Two hundred and one years ago, Samuel Johnson was born; and as a kind of belated bicentenary performance a statue of the *Ursa Major* was unveiled early this month in the enclosure of St. Clement Danes, Strand—the church where he attended divine service. The donor of the statue is Mr. Percy FitzGerald, who delivered, in the porch, a brief address in praise of the Lexicographer. The statue is of bronze, is six feet in length, and stands upon a pedestal of black marble. The head is modelled upon the lines of Reynolds's portrait and the Nolleken bust. On the pedestal, bas-reliefs represent Boswell and Johnson in the Highlands, Johnson and Mrs. Thrale, and Boswell introduced to the club by Johnson.

Pebbles

An Atchison man takes so much care of his children that there is talk of having his picture taken as a He-Madonna.—*Atchison Globe*.

Next to an English saddle, a Western man's idea of the greatest joke is a man who would ride such a saddle.—*Atchison Globe*.

"Who are those two women on the float?"

"They are twins. The married one is five years older than her sister."—*Ladies' Home Journal*.

Housewife.—"Are you willing to chop some wood for your dinner?"

Plodding Pete.—"Sorry, mum; but I am a Pinchot man."—*Boston Transcript*.

"What are you going to call your new magazine?"

"The *Umbrella*."

"Why?"

"Because everybody will take it."—*Judge*.

Mrs. Young.—I want to get a divorce from my husband.

Lawyer.—What are your charges?

Mrs. Young.—My charges? Mercy! I thought I'd have to pay you.—*Boston Transcript*.

"I've a few more points to touch upon," said the professor of horticulture, as he awkwardly climbed over the barbed-wire fence at the foot of the orchard.—*University of Wisconsin Sphinx*.

August Mittlestaedt, of Austin, Ill., has been known as a woman hater for twenty-five years. On Saturday he will marry Mrs. Adeline Gutsehaw. The widow explained today how she won his heart. This is how:

"Add four eggs to a quart of milk, a half cup of sugar, and a little vanilla. Bake half an hour until it sets. Serve custard hot with cream and sugar.

"Take one and a half cups of sugar, one cup of sour milk or cream, two eggs, one tea spoonful of soda, one cup of butter and flour to mix soft. Add vanilla flavoring and bake until cookies are a delicious brown."—*Chicago Tribune*.

Of all the things I dearly love, I most adore the spring,
I think that it is very nice,—a quiet, harmless thing.
I love to bask upon the grass, my head upon the ground,
My feet among the branches of the elm-trees standing round;
To lie and watch the little clouds go rolling through the sky,
At times to smoke my little pipe, and sometimes just to lie;
To feel the little spiders go a-maying in my hair,
While pigeons stand and ruminate or turn and idly stare;
To take my stockings off, to wave and waggle with my toes.
Oh! have you in the springtime ever done such things as those?

—*Harvard Lampoon*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Rumors, Inventions and Lies

It has been a week of political rumors, inventions and lies. The papers have been filled with columns of imaginary inventions, under scare headlines, asserted as positive fact, only to be cast over and denied the next day. The basis of it all has been one undoubted fact, that the State Republican Committee of New York by a vote of 20 to 15 chose Vice President Sherman to be temporary chairman of the October convention, and thereby "turned down" Theodore Roosevelt. Beyond this all was conjecture, invention.

But it was not told as conjecture, but as fact. The reporters gathered like flies about President Taft and Mr. Roosevelt. They noted who visited Beverly and Oyster Bay. Every man was watched and then questioned. But Taft was silent. Roosevelt was dumb, Sherman was voiceless, Private Secretary Norton was mute. But something must be said; then let the reporters speak, and speak they did. Roosevelt had been insulted, humiliated; therefore he is angry, and therefore he will go to the convention and fight from the floor; for is he not a fighting man? That was enough. But this sensation would not last over two days; so on the third we had it—Roosevelt had not spoken—that he was glad he was not chosen, that it relieved him of responsibility for a probable defeat at the polls, that he would keep out of State politics, that his concern was with national politics, and that he would utter himself only on these in his coming visit to the South and West.

There had been a complete break between Mr. Taft and Mr. Roosevelt. Roosevelt had tossed Taft overboard. Of course; for had he not seen Pinchot and Garfield and was he not angry at the wrong to his friends? The break was published all over the country; but not a word to that effect from either the President or the ex-President. The reporters evolved it from their internal consciousness. That lasted a week, and then came the assurance, with equal basis, that Mr. Roosevelt would not attack the President or his policies, at least not for the present, that his great aim was to harmonize the party, which was also the President's aim. Which should we believe?

We were told that President Taft knew beforehand that Roosevelt was to be "turned down" by the State Committee, that he had given his assent and would stand by the "Old Guard," the bosses, Woodruff, Ward, Wadsworth and their crowd, and that in return he was to have the votes of New York for the renomination in 1912. It was a fine startler, but it was too improbable to last more than a day. Those who told it yesterday remembered today that it was utterly unlike President Taft.

So the stories succeeded each other day by day, gossamers of a dream, guesses hardened into fact, only to be pulverized successively. About the only solid, real fact that emerges out of all this welter of invention is that Congressman Longworth, Mr. Roosevelt's son-in-law, will oppose Mr. Cannon's re-election as Speaker, and that Mr. Cannon replies that such is his privilege if he thinks it is to his advantage to tell his constituents so. It really is likely that Mr. Cannon, whose vitriolic speeches of late are not conducive to harmony, will lay down the gavel, to be

taken up by a more peaceable man. That Mr. Roosevelt does not like all the President's acts is quite likely, but that he will desert or oppose him is quite without proof. That the President has either the itch of office or the desire to humiliate or in any way to injure Mr. Roosevelt or that Mr. Roosevelt is planning to supplant the President is very unlikely. That there is quarrel or coolness between them quite lacks proof. The fact that Mr. Longworth has been much with the President and was present when he had his interview with Vice-President Sherman, and left him to make a visit to Mr. Roosevelt, does not look hostile. Were we to follow the tactics of the sensation-mongers so far as to assert positively what we guess, we should emphatically assert that the President and the ex-President are neither of them laying plans, scheming and plotting how each can beat the other for the Presidency in 1912.

Aloofness

THE announcement that Japan is about definitely to annex Korea, while not official, may yet be true. It is time that this was done. Korea has not been independent even in form since her treaty with Japan five years ago gave to Japan the direction of her external affairs and made a Japanese resident-general advisor and director of the administration. The murder of Prince Ito only hastened but hardly assured annexation, for that was inevitable. The control of Korea by a civilized nation has been of the greatest advantage to her, and she has made more progress than in a thousand years of her existence as a Hermit Nation. But this is what was to be expected. Annexation, or virtual annexation, has given peace and prosperity in all other such similar cases. Examples are such as the annexation of Algeria by France, of India and Egypt by Great Britain, of the Philippines and Porto Rico by the United States, and we doubt not in the end of the Kongo State now annexed by Belgium.

But prosperity and political development are one thing, and good will is another. Will Japan gain the good will of the Koreans? Has Great Britain won the good will of the Hindus and the Egyptians, or are we liked by the Porto Ricans and the Filipinos? The answer is not so satisfactory. We have a way of saying that time will bring favor, but England has been a hundred years in India, and the ill will seems to grow greater rather than less, while in Egypt it becomes more manifest. The Porto Rican legislature is much at loggerheads with the American control, and the Philippines are constantly asking for independence. What is the reason?

Let Sir Wilfrid Laurier, Premier of the Canadian Government, suggest it. He is visiting British Columbia, and British Columbia wants Chinese, Japanese and Hindus absolutely excluded, and a deputation has told him so. He tells them plainly that he cannot agree with them. And he laid down this general truth:

> "There is a reason why we should treat them with respect, for men are men; and I believe they will trade with those that treat them best."

He added a bit of American history, saying that when the effort was made in San Francisco to humiliate the Japanese, the President of the United States "had to go on his knees and beg the local authorities not to humiliate them." To get the favor and good will of these yellow and brown people they must be treated as men, with human courtesy and consideration.

If the English are not liked in Egypt it is for the same fault; they stand apart, aloof from the people they govern, officially just but personally indifferent, unsocial, cold. A competent observer, Prof. Richard Gottheil, of Columbia University, thus explains the trouble in the New York *Sun*:

> "It is this aloofness more than anything else that must explain the failure on the part of British effort in Egypt to make its beneficent rule acceptable. About the beneficence there can be little doubt. The Egyptian fellah was probably never as well fed, as well clothed and as contented as he is today. The country has been lifted out of the mire of bankruptcy; its resources have been husbanded and its finances placed upon as firm a footing as is possible in a country that is dependent for its welfare wholly upon agriculture. Merchants, beys and pashas have grown rich beyond all

expectations. Even the monetary crisis of 1907 has caused only a temporary lull in the prosperity of the land. English rule and English supervision have done all this. But the great fault has been that all this has been accomplished while those who are carrying out English policy have in no manner identified themselves with the Egyptian people, even with its élite. The intercourse between English and Egyptian is purely bureaucratic in the business that the ruled must of necessity have with those who rule."

One might expect that in the intellectual circle learned Englishmen and Egyptians would fraternize, but they do not. Professor Gottheil—and he knows Egypt well—says that French, German and Austrian scholars are in the learned societies and museums and libraries of Egypt, but not English. In the new Egyptian Academy there is no Englishman of learning, no Englishman in the board of trustees of the new Egyptian University of Cairo, but an Italian and a Frenchman. Englishmen do good work for a season in excavations, but they hurry back to London as if present day Egypt did not concern them.

It is this same aloofness in Egypt and India of which the people make piteous lament. What says Sir Eldon Gorst:

"The greatest obstacle at the present time is perhaps the general want of confidence in the intentions of the occupying Power which prevails in the unofficial upper and middle classes."

But how can the Egyptian or the Indian be expected to show confidence if he knows the Englishman simply as a ruler and judge?

This same aloofness, or even contempt, explains almost wholly the hostility of the Philippine people toward the American Government. It is the prevailing tone of the army, and no less of the non-official Americans. As a people we are arrogant. We treat other people as inferiors. We call them "niggers," "dagoes," "chinks," and "sheenies." We insult them, curse them, kick them, deny them rights of country and citizenship, and we expect them to like us!

The negro business men have held this past week an important convention in this city. In an address Dr. Washington told of twenty-six negroes lynched during thirty days this summer, and not one in ten for assaults on women. That is the American spirit unrestrained. It is aloofness, lack of brotherly interest and sympathy that causes all racial and colonial trouble and we make it all ourselves. When President Taft was Governor of the Philippines he treated the intelligent Filipinos as social equals, and danced with their women. The people loved and trusted him. *O si sic omnes!*

Mr. T. C. Maller, an Austrian, has lived in Amritsar, in the Punjab, for nearly twenty years, as a manufacturer. Amritsar is a hotbed of sedition against the English rule. He thus expresses his view:

"If you want to make a friend of a native Indian or any Asiatic you must study him and study hard. You must treat him with politeness and consideration under all circumstances. If you do that you can soon wind him around your little finger. That is the gist of the whole subject."

Popular vs. Delegated Government

As a nation we have always wilfully deluded ourselves with a certain hypocritical assumption. Orators have asserted it and audiences have pretended to believe it. Whatever the occasion, an allusion to municipal councils, to State legislatures, or to the national Congress was seemingly based on the belief that each and every member of these law-making bodies is an embodiment of civic virtue, filled to overflowing with patriotic desire to advance the welfare of his constituents and conspicuously lacking in the reprehensible intention of using his public office as a "private snap."

Of course, we knew better. The business man who breathed easier when the legislature had adjourned; the citizen who voted for a candidate on the ground that he was probably no worse than the others; the civic bodies that petitioned in vain for the correction of glaring abuses, had no illusions on the subject. And for our more complete education, the exposures which have been increasingly frequent of late have left us without the shadow of excuse for other than a perverse determination not to see the self-evident. Foreign critics have not been so blind, and almost from the earliest days of the republic have regarded this official corruption as a proof of the im-

possibility of the continuance of a democracy.

The theory of representative government is beautiful. The citizens in their respective localities having selected their worthiest and wisest, delegate to them the power of legislating for the benefit of all, serene in the conviction that such aggregations of moral pulchritude will produce nothing but good works. The fact is that we have turned over our affairs to the control of a number of miscellaneous humans, and have said to them in effect: We hereby give you authority to direct our destinies for a certain term of years; we promise to abide submissively by your decrees, and we voluntarily divest ourselves of any power to amend or annul your acts, regardless of the possibility that they may be to our injury in greater or lesser degree. One need not be a publicist to know to what condition this method of conducting our Government has brought us. A single illustration will serve. When the franchise which "Jake" Sharp of unsavory memory purchased from the Board of Aldermen in 1884 was attacked on the ground that it had been obtained by proved bribery, the courts of New York State held that this fact made no difference, that *the Board had the legal power to grant such a franchise, and the attendant corruption did not vitiate the legality of the grant.*

What must democracy do to be saved? Clearly the weak point in representative government as administered in the United States at present is the absolute lack of control by the people over those to whom they have delegated governmental functions. In order to protect themselves against the unscrupulous use of these powers the people must possess themselves of the final voice in legislation, the right to initiate desired laws and to veto bad ones. They must be able summarily to end the official career of any misrepresentative who betrays the trust reposed in him. In short, the initiative and referendum to control measures, and the power of recall over men, are the clearly logical steps in the evolution of government of the people, by the people, and for the people.

During the recent session of Congress Senator Jonathan Bourne, of Oregon, delivered his maiden speech. The story goes that he intended to deliver it oratorically, but was attacked with stage fright and decided to read it instead. The speech was a remarkable synopsis of the recent political history of Oregon which today possesses the Australian ballot, corrupt practices act, direct primary, initiative and referendum, and the recall. In an article by Senator Bourne our readers have seen in our issue of June 23 the facts and arguments of that speech ably presented. The speech was not received with any noticeable enthusiasm in the Senate of the United States, which august body is not intensely interested in methods of enabling the people to make laws to suit themselves—tariff laws, for example, or in giving them supervision over the "pork barrel." But among the "common people" Senator Bourne's effort has fared somewhat better. Up to date, more than a million copies of the speech have been distributed. Farmers' organizations are planning to have it read and discussed in their lodges. Insurgent Republicans and some Democrats who ought to be insurgents have been instrumental in its dissemination. The American Federation of Labor, non-partisan direct legislation leagues, and thousands of individual citizens have spread this good seed where it will surely fructify. It is our hope and belief that the widespread interest evinced in Senator Bourne's speech indicates that the time is not far distant when the right of the people to exercise direct control over their vital interests will be the paramount issue in the country.

G. Stanley Hall's Method in Missions

In the new *Journal of Race Development* the president of Clark University tells the proper "pedagogical method applicable to missions." He says, approvingly:

"Some are bold enough often to say that the first task of the missionary of the future will be to make men good Buddhists, Confucianists, and even fetish-worshipers or pagans generally, and that only when a veritable renaissance of their inherited beliefs and cults has been achieved will they be ripe for a religion

that may be condensed into the simple phrase, 'Love and serve God and man'. . . . The problem of the missionary of the future will be to first become the scholar and apostle of the people among whom he lives. He should aim at the revival of all that is best in it, if possible raise up a generation of native reformers and propagandists of it, and then only when this has been done, his endeavor should be to make it blossom into what is surely the ultimate religion of all mankind—that of love and service."

Doubtless this method would take time, and those now in the business have gone more directly at their task, and with fair success. But it is worth trying—in some other branches of civilization, that we might see how it would work.

It should be tried in agriculture. The "primitive," to use President Hall's word, scratches the ground with a pointed forked stick. The agricultural missionary in India, say, should teach the native to point it better, to press it a little deeper, to improve the yoke to his buffalo, to winnow his rice more carefully and to help his women turn the hand-mill. By and by he will be able to use a foreign plow. The English Government is quite wrong in hastily crowding tea culture in Assam, the rubber plantations in Ceylon and the new art of forestry. They should wait a century.

So with transportation. The old caravan way, with laden porters or camels, might be greatly improved, and it is the native industry. And yet the missionaries of commerce are pushing railroads thru and across Africa, radically breaking up old customs, destroying old trade routes, in utter disregard of all the rules of pedagogy. In China the same thing is being done without waiting to teach the people that they need not fear the spirits of the hills and valleys.

Another case in which the gradual, scientific way was cast aside is that of the acceptance of Western education and civilization by Japan. The people had not been educated and prepared for it, but a few native missionaries of civilization forced it on the country. They thought the Western ways better, and they took them all at once, schools, universities, Parliament and all, and all the Western foreign commerce and manufactures. It was very unscientific; they ought to have taken at least a hundred years, three generations, to get "a good ready." To be sure their way worked, and saved Japan from being swallowed up by Russia, or from being divided up, like Africa, between the greedy Western nations; but President Hall could have taught them the better way.

The "pedagogical" principle is this, and don't fail to follow it: Never give your best to a belated people; keep it for yourself. Your ancestors had to struggle thru many generations, let the other fellows do the same. Do not give them the advantage of the achievements of the past; let them go the old road. To be sure we are all of us born ignorant as African babies and have to be pushed and crowded by accomplished teachers in youth into the total gains of a hundred generations, but don't give this sudden impulse to the ignorant infants of the hitherto unfavored peoples. They could not stand it. Give them civilization and give them Christianity only by slow approach and in minim doses. So teaches the sapience of pedagogy. Never hurry evolution.

Prison Reform

Mr. Winston Churchill, the Liberal Cabinet Minister, has lately announced some epoch-making reforms in prison administration. A bill will be introduced this fall, securing to persons condemned to pay a fine a short interval for raising the required sum. The editor of the London *Spectator* writes that "of 138 persons condemned to Wandsworth Prison in a single week for nonpayment of fines the Governor believes that forty or fifty could have paid if time had been allowed." In the move now taken toward improving this unhappy state of affairs, another step is taken in that advance toward a more just, as well as more merciful treatment of the unfortunate which was by no means a novelty even when Henry Fielding laid down the evils of the debtors' prisons in "Amelia."

The extension of the time allowed for the payment of fines is not, however, the only reform announced by Mr. Churchill. It is proposed to abolish imprisonment for persons under the age of twenty-one, "except for gross crimes." A "defaulters' drill" will be substituted, it is reported; and this should save five thou-

sand boys each year from learning the brutalizing lessons of prison life.

We agree that prison sentences should be regarded as imposing, not correction alone (even in theory), but also punishment. This is a point in dispute in certain circles: what is incontrovertible is that the punishment involved should not be exacted at the cost of the community itself. Such must even be the case while English law continues to authorize "three permanent punishments" enumerated not long ago, as "(1) hunger, (2) insomnia, (3) disease." Never was a more daring generalization phrased by an historian than Professor McMaster's assertion as to American conditions that

> "We have changed our prisons from stews and brothels and seminaries of crime into reformatories of crime."

Probably the best word that the most fatuous student of this matter could safely speak, in the discussion of prison conditions in Anglo-Saxon lands, would be something like this: the system which we have evolved, not without clumsiness, in an age of increasing enlightenment, temporarily removes from the community, with less of cruelty than was formerly used, those individuals, precisely, whom the community can most readily spare.

A Surgical Opportunity

THE raising of chickens for pleasure and profit has many attractions for those so situated that they can engage in it. Even when conducted on a small scale it contributes to the family maintenance and adds to the larder what cannot always be purchased from the grocer. On a large scale it is sometimes profitable, altho perhaps not to the extent of estimates based upon irrefutable mathematical demonstrations. But chicken raising has disadvantages. The most serious of these, since it cannot be controlled by good fences, is the fact that cocks crow at unseemly hours and make themselves neighborhood nuisances. The watchdog who bays the moon, or every few minutes rushes off in a paroxysm of fury, barking with all the power of his leather lungs, may have nothing to bark at, but in his case the excuse may be pleaded that he is nervous and thinks he discovers occasion for alarm even when none exists. Doubtless he fancies he is doing his duty, and perhaps believes that if he makes his presence known and his vigilance a matter of common report, the danger from evil-disposed persons will be avoided, as they will keep away from his bark and his teeth. But in the case of the cock even the excuse of good intentions cannot be pleaded. He crows because he wants to, and it may be because all other created beings wish he would not. He is an early riser and a light sleeper, and it is his habit to crow not only at sunrise, but at irregular and apparently arbitrary intervals thru what have been euphemistically designated as the "still watches." His propensity in this respect is attested by the experience of centuries, and the profoundest study has failed to discover that any useful purpose is served by it. If, like the statue of Memnon, at Thebes, he saluted the rising sun and was therewith content, we might find in this a survival of customs derived from a primitive ancestry which had erected a sun myth into a religion; but no such connection is traceable, and we are left to the conclusion that the cock crows when and as he does for no other reason than pure egoism, and because he believes that "the pibroch of his race—the song without a tune" is melodious, agreeable and plausible. Whenever he chances to awaken he sends his raucous challenge ricocheting across the landscape, to awaken instant and defiant response from every cock within hearing. In this it resembles a relay message by wireless telegraphy. It starts an endless chain of crows which, if not circumterrestrial, is at least transcontinental. Very likely the initial post-midnight crow of a cock in Lubec, Me., subsides in ultimate silence in the poultry yard nearest the Pacific.

It may be there are human beings who do not hear this sleep-murdering intrusion upon the welcome silence of the night, or hearing it, do not resent it. The owner of a crowing cock may even rejoice in the evidence of virility which his crow betokens, and between naps whisper "More power to him." But for the average citizen it is anathema. Thousands of costly and vexatious law-

suits and tens of thousands of implacable neighborhood feuds have resulted from the protests of angry people justly aggrieved. When served with a peremptory order of nuisance abatement from a local board of health, or a summons of court to show cause why an injunction should not issue, etc., the poultry raiser suffers an affront for which no apology can atone and which can be adjudicated only in accordance with the Roman *lex talionis*. In the conflict between those who desire to raise poultry and those who object to cock-crowing there is enough to shake the foundations of society and disrupt an older republic than ours.

This suggests the inquiry why surgery cannot provide the *modus vivendi* which the partisans in this perennial conflict may not be seeking, but should welcome. Experience, supplemented by the most careful inquiry, has not shown that the vocal organs of the cock perform any useful function. Rostand has made this undisputed fact the basis of the most successful play of the year. No doubt the ability to crow vociferously may gratify the vanity of the cock and impress hens, pullets and cockerels with his importance; but beyond this it is as futile as the defiance of Ajax. So far as is known or as we have any reason to believe, the cock would be just as useful if he could not crow at all; that he would be vastly more agreeable goes without saying. Indeed, if the ego in his cosmos was minified several diameters and he was reduced to the necessity of maintaining his authority by deeds rather than proclamations, there is every reason to believe that he would experience great moral improvement and have a much better tenure of life. The bucolic headsman visits his ungentle ministrations first upon the young cocks who try to crow.

It would seem that very simple surgery would result in keeping wide open the glottis of a cock selected to live, and effectually prevent the stretching of the vocal cords of the larynx, without which articulation, or its equivalent in gallinaceous vocalization, would be impossible. A very slight change in the natural arrangement of the laryngeal diaphrams would silence them, and with a properly designed instrument this might be done with no more discomfort to the bird than would be justified by the result. No doubt the cock who found that he could not crow would step just as high and pretend that he had become a philosopher and practised reticence as a rebuke to the banal commonplaces of the habitually loquacious. The economic value of such an operation would be beyond estimate. Chicken raising would thenceforth become tolerable even in relatively populous centers; the city man who, as Dr. Holmes tells us, longs in summer to

> "—— vole to some umbrageous clump,—
> Depart, be off, excede, evade, erump"

would not be deterred from so doing by the knowledge that his needed sleep would be dissipated by environing cocks. Even laying hens absorbed by maternal duties and solicitudes might welcome peace and quietness and become even more attentive to the business of their lives. It is quite safe to say that years of study and experiment have been devoted to the attainment of objects immeasurably less beneficial to humanity than those outlined. Now and then to prolong a life menaced by some unusual or even normal danger is commendable; but to confer substantial happiness upon millions of the living while they live and are trying to do something useful is even better, and should entitle the benefactor of humanity who does this by showing how to silence cocks to the most conspicuous vacant niche in the pantheon of fame.

Agricultural Schools

The establishment of agricultural schools is going on rapidly in some of the States, and surely in nearly all of them. It seems impossible to wait for a complete readjustment of the common school system to industrial methods and aims. This will probably be achieved, but the farmers of the country are impatient, and demand immediate action in some direction. Arkansas is about to build four agricultural schools on the largest type. The State Legislature appropriated $350,000, and the cities are endowing the same schools with $500,000 more. The schools are to

be built and furnished according to the most improved methods, borrowing a good deal from the Stout schools of Wisconsin. They will be so located as to stand for agricultural conditions that represent the whole State. Arkansas topography and climate permit of a very wide range of horticulture and agriculture. The schools in this State, as in all the Western States, will pay special attention to soil culture, forestry, and the general subject of conservation of resources. The new breed of farmers must know how to stop waste as well as grow large crops. Above all, they must know how to *make* soil, instead of exhausting it. A distinctive feature of the Southwestern schools is the breeding of fine live stock. Only pedigree stock will be purchased for breeding, and the folly will be demonstrated of breeding inferior animals. A recent bulletin from one of our agricultural colleges shows us that twenty-two animals on one farm brought in not quite as many dollars as eight on an adjacent farm, while costing an equal sum. The establishment of these industrial schools does not in the least make it less important to adjust our common schools to the practical and actual needs of the people. They should educate toward work and not from it; toward the country and achievement in production, as a rule.

From City to Country

The State of Missouri is the first to adopt a systematic method of officially aiding in the movement from the city to the country. It has undertaken to establish colonies, and Governor Hadley is at the head of the movement. One of these colonies contains about two thousand acres, divided into homesteads of forty acres each. All buildings and fencing and other improvements will be made at cost. An expert farmer is engaged to take charge of each colony, and direct the work, so as to allow the least possible waste. Uncleared land is priced at ten dollars per acre, and ten years' time will be given to all settlers in which to pay for their farms. The colony is equipped with a saw mill, a planing mill, a corn mill, a store and a post office. The State Immigration Board supervises the selection of the land, and this present colony, the second in time of establishment, is in the rolling region of the Ozarks. It is a well-selected location, with perfect drainage and pure water and clean atmosphere. A railroad connection is secured. Bradford, the farmer in charge, is a Harvard man, and has some ideals of a social sort which he would like to work out. He is a skillful fruit grower, and a strong believer in co-operation. He will run the central farm himself, and has supplied the same with the very best farm implements, including a cannery. The first colony organized was in Stoddard County, and others are to follow. It is hoped to not only discharge a good deal of congestion from the cities, but to bring back those Missourians who were drawn off into Canada by a promise of immense wheat crops. These have learned, by actual experience, that an eight months long winter, with week long blizzards, do not constitute a garden of Eden. Other States are proposing to take up this scheme of officially establishing colonies; and we see no reason why it should not succeed.

Dickens's Centenary

The celebration of Charles Dickens's hundredth birthday will have a new feature if the scheme of a writer in the London *Strand* be adopted. Dickens lived at an epoch when no international copyright treaty had been signed by this land and his own; and no international copyright law in any form proved of much pecuniary advantage to him. Hence, in spite of the vast popularity of his books, his "receipts" proved inadequate for an extravagant man; and of his three surviving children and seventeen grandchildren, several are embarrassed more even than John Dickens, his father—so magnificent and impecunious. The suggestion is that "Dickens stamps" at two cents each be sold to those who own his books, and said owners are expected to paste one stamp in each volume. It is a kind of voluntary tax, a sort of conscience-fund to make up for what the novel-writer lost in copyright returns. The project would be sure of proving vastly remunerative if it once "took hold." The question is, Have most Americans and "colonials" (we suspect

the scheme is aimed at their heads, chiefly) the order of sensibility which would bring them to the purchase of "Dickens stamps"? Perhaps so; tho just why the public should take up a collection for the twenty surviving descendants is a question for the psychologist alone. If there were only one needy daughter—or, say, two or there poor grandsons, orphaned, and in need of a schooling—the world would certainly respond. Twenty of them, however, stand a poor chance. For the question suggests itself: Is there much logic in hastening to the support of a dead novelist's offspring, many years after, when actual poets are left to blow their brains out? The new project savors of a sentimentality like that of certain chapters in the story of Little Nell. Yet perhaps that is the fact which will recommend it to the great soft-hearted public, that has idolized this same Little Nell.

Missionary Work Compared

It is admitted that in missionary lands Catholics have more converts than Protestants; but in reply it is claimed that at present the growth of Protestant missions is more rapid than that of the Catholic. The question is discussed in the *Korrespondenzblatt für den Katholische Klerus Deutschlands,* No. 12, and it is frankly admitted that the Protestant claim is founded on facts. This influential Catholic journal says:

"It has been computed that the 260,000,000 Catholics contribute about 20,000,000 marks ($5,000,000) annually for mission purposes, while the 160,000,000 Protestants contribute 80,000,000 marks ($20,000,000). This is an average of eight pfennigs for each Catholic, but more than six times that much for each Protestant. This greater degree of liberality on the part of the Protestants is to a large extent caused by the superior organization of the latter. Especially do the mission conferences and regular congregational mission festivals in common vogue among the Protestants do much to make the mission cause popular among them, and these auxiliaries could with advantage be adopted by the Catholic churches too. The number of mission workers in the foreign fields of the Protestants is 45,622, on the Catholic side, 34,454. It is true that the Catholic Church reports no fewer than 30,414 mission stations, while the Protestants count only 3,790; but to counterbalance this the latter have 18,921 schools with 867,400 pupils, while the Catholics have 17,834 schools with 790,880 pupils."

A Doctor of Sacred Scripture

The new Biblical Commission, of the Vatican, has among its labors that granting the degree of Doctor of Sacred Scripture. There are very few of them, and the kind of examination which the candidate must pass will be of interest. The Rev. George Hitchcock was the applicant. First Father Gismondi examined him in Syriac, taking the "Tenth Dynasty of Bar Hebræus and the Gospels." Then Father Gennochi took up the Hebrew text of Isaiah, and Father Fonck the Greek of Romans. Then Abbot Janssens examined him on the exegetical works of the fathers and Father Molim on the critical exegesis of the Scriptures. The candidate was then given the subject for a lecture of an hour, with but one hour for preparation, on "The Privilege and Final Conversion of the Jewish People," with particular attention to Paul's treatment of the subject in Romans 9, 10 and 11. On a succeeding day his thesis on "The Higher Criticism of Isaiah" was presented, and Fathers Vigouroux and Gismondi and the Abbot Janssens, who had read it beforehand, presented difficulties for him to answer. We take it that everything was in Latin, and he "passed." It was a fair sort of examination, but, so far as the Oriental part is concerned, not so difficult as has to be passed by candidates for a fellowship at the American School of Archeology in Jerusalem. The conclusion which the candidate must reach on such critical questions as the higher criticism of Isaiah are already fixed for him by the Biblical Commission which has decided what may or may not be believed.

Japanese Hobsons

"When history shall have placed all the great historical events of the nineteenth century in their proper perspective, none will, we believe, bulk larger in the eyes of posterity than the appearance of Admiral Perry's fleet in Japanese waters on July 8, 1853."

It is thus that the leading article of the London *Times's* recent "Japanese number" (July 19) opens; and no American wants to question the judgment. Unfortunately, another American naval officer—the hero of the "Merrimac"—bids fair to efface the earlier

commander's glory. We have never yet heard of a Japanese Perry, but a "Japanese Hobson" emerges in the person of Mr. Takenokoshi Yosaburo, author of "Twenty-five Centuries of Japanese History." He is convinced that a conflict between his nation and ours is ultimately inevitable; for, as he has recently informed the Oriental Economic Society, the idea of our expansion flows, respectively, westward and south-Society, the tide of our expansion of time. This is the view of "Fighting Bob" Evans, who never scruples to talk for publication. Fortunately, however, it is not the view of the keener Japanese publicists, nor even of the better kind of editors. The Japanese Hobsons are treated at home as dangerous characters—who are to be tolerated only because their very existence springs out of our own intemperance in speech and in idea. The *Hochi Shimbun,* a type of Japanese journalism at its best, declares that there is need to check the utterances of the Oriental Hobsons; as we need to curb our own.

It is because we are interested in the very important subject of church union that we have paid some attention to the results of the union of the Cumberland Presbyterians with the Northern Presbyterian Church, and the contest for the property by those who refused to join. The anti-union men have claimed that a majority of the members of the Cumberland Presbyterian Church, variously estimated at from 100,000 to 150,000, have refused to accept the union and remain with the recusants. Now their year book has appeared and it shows how misleading this has been. The anti-unionists now claim but 56,109 resident members, and this number has evidently been considerably padded out. They can find but 17,018 members in Tennessee, their stronghold, where they assured the Supreme Court that they had not less than 35,000.

We are fortunate in being able to print so unusual and important an article this week as that by Congressman Vreeland, who speaks with peculiar information as chairman of the House Committee on Banking and Currency, and vice chairman of the Monetary Commission, which has been visiting the capitals of Europe in search of light how to reform our banking system and prevent the frequent recurrence of panics. Every business man ought to read this article. It gives an idea of what some of the members of that Commission believe to be the true remedy for our financial evils, and perhaps gives a clue to the drift of their coming report. It is full of fact and clear argument, and, on the face of it, conclusive. But it will be thoroly sifted, for against any sort of a central national bank there has been long prejudice.

In an article lately printed in THE INDEPENDENT the writer said:

> "Dun and Bradstreet have computed that 95 per cent. of the business concerns in the United States are sure to fail at some time in their career."

We observe that *Dun's Review* has lately discussed this matter. It has made careful reports of failures since 1866. The number of mercantile concerns in the country in 1866 was about 160,000; it is now about 1,300,000. During the years from 1866 to 1903 the number of business failures has been about one per cent. annually. A few have failed repeatedly, and many have gone out of business without failing, either because the business was not profitable, or because of death. It is clear that 95 per cent. is quite too large a proportion, unless we suppose the normal life of a business concern to be a century.

The report that several hundred Hindu coolies are on their way to this country expecting to get positions as policemen is very curious. The government of India does not encourage emigration, and prohibits that of coolies unless they have permanent employment engaged. But that is just the kind of immigrants which our laws forbid, for it is contract labor, so that they would seem to be doubly excluded. We have no law to exclude Hindus, if they meet the conditions imposed on other immigrants. If these come to San Francisco they will not be warmly welcomed and will be sadly disappointed. There is no danger of any considerable immigration. Australia, New Zealand and South

Africa exclude them, and Canada practically does the same.

The Republicans in Texas have increased their white membership by 40,000 in three years, and have announced that it is a white man's party and only white men shall hold office. They expect that this action will gain them 50,000 votes. Then why should not the negroes vote with the Democrats? They ought to go for the party that will treat them best, as they have been doing in Tennessee. To them their own interests and rights are paramount, and if the Democrats are split up and either faction will accept their votes no one can blame them for considering their own interests, as everybody else does. If the Republican party does such an injustice it deserves to be repudiated.

"We will not ask Jean Jacques Rousseau
If 'apes' confabulate or no;
'Tis clear that they were always able
To hold discourse, at least in fable."

Nor will we doubt Mr. Garner's assertion that they have an inter-simian language of twenty or thirty sounds of which he knows a few. So all birds and beasts have their calls, beyond question, of imitation or alarm. The hen that clucks and the cock that crows clearly mean to express their minds. Mr. Garner's studies are of interest in the broad field of comparative animal psychology which is attracting many students.

The titles of Ph. D. theses are sometimes very puzzling. Here is one from Cornell University, written by Helen Brewster Owens, on "Conjugate Line Congruences of the Third Order Defined in a Family of Quadrics." Now "conjugate" we know, and a "conjugate line" we suppose relates to ancestry on both sides; and "congruences" are essential for happiness in the conjugate relation. But what kind of children are "quadrics," and would a "family" of them be congruous or quarrelsome? We leave the riddle to our readers.

The Alumni of the University of Kansas publish *The Graduate Magazine*, from which we learn that the annual religious census shows that the number of students is 1,855, of whom 1,163 are Church members (10 Jews), and only 274 are without Church preference. That is, over 62 per cent. of the students are members, and over 85 per cent. have a decided Church preference. And yet Harold Bolce included the University of Kansas among the institutions in which the students are taught contempt for religion.

We commend to our moneyed nobility the kind of school established by the Marquis Inouye for the noble youth of Japan, and which is so eagerly patronized that it is hard to get into it. It is conducted on the severest lines. The students, all from the nobility, must practise the most austere life, rising early, studying hard, living coarsely, allowed only a pittance for pin-money, never using a jinriksha, and always riding third class in the cars. That means business, learning, manliness, endurance and democracy.

Fifty thousand enlisted soldiers have deserted from the United States army in the last twelve years, five thousand last year, according to a writer in the current *Cosmopolitan*. Well, what can you expect when their lot is hard menial work, small pay and little glory? The American people do not take their army very seriously. They know that in any real war they will have to fight themselves, and not leave the defense of their country to the professional soldiers.

Times have changed since the cholera invasion which so frightened our grandparents in the thirties. Now we understand the disease and have effective quarantine. In a backward country like Russia they may have 50,000 deaths, and the disease may get a sudden foothold in Italy, but this country is immune, thanks to medical science. So no one need be alarmed.

Of all the suggestions for the proper designation of the men who fly the aeroplanes the best is that of *airmen*. It corresponds to seaman and landsman, and is far better than its next competitor for public favor, birdman. We do not call a sailor a *fishman*.

Insurance

An Industrial Problem

Some time ago one Dillon, a longshoreman, then living in Hoboken, took out industrial insurance in the Metropolitan for $500. Subsequently this man was found hanging by a rope from a tree in Kings Woods, at Weehawken. At least, Mrs. Dillon viewed the body in the morgue and identified it as that of her husband. James Dillon had deserted her and the children more than a year previously, and was in consequence of very little use to her. Still, there was some satisfaction, even tho it was tinged with melancholy, to know what had become of him. It also seemed incumbent upon her to give him a decent burial. She thereupon applied to the insuring company for the $500 insurance the dead man had taken out. She may or may not have intended to spend the entire proceeds of the policy on the funeral, but the Metropolitan having had previous experience in somewhat similar cases, was apparently not certain about the identification. The company therefore declined to pay until the case was made clearer. Mrs. Dillon accordingly took her story to the Legal Aid Society in Jersey City, and its attorney put the wheels of justice in motion in so far as the bringing of a suit might be so described. Mrs. Dillon testified as to the personal appearance of her one time lord and master, even to a mole on his chin, and set forth that she had no doubt whatever that the body was that of her husband. It would appear to most men that a woman ought to know her own husband, yet three men were produced as witnesses to testify to their acquaintance with the said Dillon, and their belief that the supposed suicide was still in existence. The jury, however, found for the widow against the insurance corporation with its millions, much after the fashion of juries in general. Meanwhile, the corporation appealed after the body had gone to the paupers' cemetery, at Snake Hill, the widow not being able to pay funeral expenses. Something like a year passed swiftly by and one Sunday afternoon Mrs. Dillon was surprised to have a call from her husband. The identification of him was made, it seems, something after the insecure fashion of a house built upon the sinking sand. He had, it seems, heard that she had sworn out a warrant against him for desertion. With this as a moving cause, he went first to Brooklyn and then took a little trip to Wisconsin, but thoughts of home led him to return as described. Under the circumstances the Metropolitan will not pay the $500, as it might easily have done, if its course had been along the line of least resistance. Disappearance is sometimes accepted as proof of death, but in such cases the disappearance must run a reasonably long time. The interesting question obtrudes itself: What if the $500 had been promptly paid, or if Mr. Dillon, sometime a longshoreman, had stayed away until the appeal had gone against the company and it had paid the face of its policy?

In honor of its centenary, the North British and Mercantile Insurance Company, the New York manager of which is E. G. Richards, with headquarters at No. 76 William street, is issuing a very attractive memorial booklet, the title page of which includes a reproduction of a heading by Thomas Bewick, which appeared on the original proposal form of the company. The conditions existing in England and Scotland, where the North British Insurance Company's main risks are written, are briefly sketched, and the rise and progress of the company is given a place in its pages. The original office bearers of the company and its affiliations are named, as well as the managers, secretaries and actuaries in Edinburgh and London; tables showing the progress of the company from 1809 to 1909 are given, the new business of the company is tabulated, a list of the branch offices appears, and a general survey and history is given in the booklet in an interesting form.

The Independent

VOL. LXIX NEW YORK, THURSDAY, SEPTEMBER 1, 1910. No. 3222.

Survey of the World

President Taft's Denial

The President has found it necessary to deny publicly in a letter to Mr. Griscom that he had any hand in turning down Mr. Roosevelt at the meeting of the New York Republican Committee. He says:

"The suggestion that I have ever expressed a wish to defeat Mr. Roosevelt for the temporary chairmanship of the convention or have ever taken the slightest step to do so is wholly untrue. I never heard Mr. Sherman's name suggested as temporary chairman of the State convention until I saw in the newspapers of August 16 that he had been selected at the meeting of the committee. When you called at my house Saturday evening, August 13, you told me that Mr. Roosevelt intended to go to the convention as a delegate and you suggested incidentally his being made temporary chairman—a suggestion in which I acquiesced. It did not occur to me that any one would oppose it. This was the first time the subject of the temporary chairmanship was mentioned to me by any one."

He adds that he telegraphed Vice-President Sherman that in his opinion the situation in New York could be saved "by a full conference with Mr. Roosevelt and reasonable concessions as to platform and candidates." On Monday, August 15, he was told by Mr. Sherman that it was proposed to oppose Mr. Roosevelt with Senator Root's name, and no other name was mentioned. The President protested against a contest and again urged conference with Mr. Roosevelt. He refers to the columns of false reports about his action, and concludes by saying:

"With due deference to honest difference of opinion I have expressed the view which I still entertain that the solution of the direct primary issue can be found in provisions similar to those of the Cobb bill as amended in accord with the memorial signed by Mr. Seth Low, Mr. Joseph Choate and other prominent Republicans of New York city."

Mr. Roosevelt was pleased with the letter.

New York Politics

At first Mr. Roosevelt was not inclined to be a delegate to the Republican Convention at Saratoga, but the contemptuous expressions of the "old guard" decided him to go there and fight the bosses. They have accepted the challenge. The first of them to reply was William Barnes, Jr., who sent out a statement. He expresses satisfaction that the ex-President had come out into the open, and reminded him that it is his duty if beaten in the convention "to support the ticket or leave activity in the party." As to the direct primary system which Mr. Roosevelt has approved, he said:

"I am not informed what attack upon the representative form of government he will make, except that he has already committed himself to the destruction of the convention system of making nominations. Upon that question he will be opposed with all the intelligence and power of those who recognize in this populistic departure the beginning of the fall of representative government. There can be no compromise on this subject. . . .

"That Mr. Roosevelt has ceased to send telegrams to those over whom he has no control and intends to fight like any other citizen as a delegate to the convention is a source of congratulation to everybody. That he desires to commit the party to the extreme folly of the direct nominations fad is unfortunate. The weight of his influence, although greatly impaired, may have some effect in this direction, but it is the sincere hope of all those Republicans who believe in the conservative instincts of the party that he will fail to commit it to the path which must of necessity lead to populism."

Mr. Roosevelt replied:

"They will have all the fight they want. I am only going to that convention because I feel that the public interest—the interest of the people of the State of New York—demands that the Republican party be given a chance to stand squarely and uncompromisingly for clean, decent, honest politics.

"I shall go to that convention to make my speech exactly as I had originally planned it, and while I hope there will be enough good sense to prevent any one opposing the prin-

ciples for which I stand, yet if they do oppose them, it is their own affair. As far as I am concerned the issue shall be absolutely clean cut."

Thereupon Mr. Barnes made this further statement:

"All citizens will rejoice at the statement of Mr. Roosevelt that he will go to the Saratoga convention if Nassau county will send him and that there will be no compromise on his part, because the people are entitled to know where the Republican party stands on all public matters.

"Differences between members of a political party should be fought out at political conventions. Then when the majority opinion has been recorded it is the duty of all to support the ticket and the platform or leave activity in the party.

"Two years ago the Republican platform contained a plank calling for a reform of the convention system and practically repudiated direct nominations. The Legislature passed a bill in conformity with that platform and Governor Hughes vetoed it. This year it is apparent now that we will get a clean-cut decision upon this subject, and possibly upon its natural corollaries, direct legislation, the initiative, referendum and other forms of populistic proposal. . . .

"When Mr. Griscom interjected Mr. Roosevelt's name as a candidate for the temporary chairmanship of the Republican State convention without the members of the State committee knowing where Mr. Roosevelt stood on the issues now before the people in this State and after the Vice-President had been placed in nomination before that committee, thereby forcing an issue which it was not the intention of the majority of the committee to create, he simply threw a firebrand in the Republican situation entirely unwarranted, and for what purpose it is not for me to say.

"So unwise was his action that President Taft has been called upon to disclaim the absurd charge that he was responsible for the selection of Mr. Sherman. Of course he was not responsible, nor was he consulted. Why should he be? The selection of Mr. Sherman, a highly proper one, was made by the State committee itself, which was a function belonging to it and to no other body of men or to a single man.

"It is therefore highly sensible on the part of Mr. Roosevelt, if he hopes to control the policies of the Republican party in this State, that he should go to the State convention as a delegate and there thresh out what he thinks ought to be the policy of the party with those who have different opinions from him. It is assumed, of course, that he will abide by the decision of that convention, as will those who will oppose him there if he is unsuccessful."

Mr. Roosevelt has met the challenge of Mr. Woodruff that he make the fight for the direct primary at the New York convention by denying that this is his chief purpose. He said in a statement:

"The Progressives are emphatically in favor of taking a real step forward about direct primaries, substantially on the lines of Governor Hughes's proposition, but this is not the main issue. The main issue is that we stand against bossism, big or little, and in favor of genuine popular rule, not only at the elections but within the party organization, and, above all, that our war is ruthless against every species of corruption, big and little, and against the alliance between corrupt business and corrupt politics, as to which it has been found that too often in the past the boss system has offered a peculiarly efficient and objectionable means of communication. We are against the domination of the party and the public by special interests, whether these special interests are political, business or a compound of the two."

Mr. Roosevelt's Western Trip

Mr. Roosevelt started on his Western trip Tuesday. That day he addressed the farmers of Utica, and made it clear that he was with the progressives and against Vice-President Sherman in the latter's home, but his speech was devoted to agricultural and ethical topics. His trip thru Iowa and Nebraska to Wyoming was not marked by any serious political speeches, but by short addresses to the enthusiastic crowds at the stations at which the train stopped. At one place he was called out of bed and spoke from the cars dressed in a cloak thrown over his pajamas. Thus far Mr. Roosevelt has been careful, while meeting the insurgents, such as Senator Cummins, cordially, to make it understood that he spoke solely of the conditions in New York, which he knew when he spoke strongly in favor of progressive measures. He declared: "We stand against bossism generally, not only at the elections but within the party organization." He has not spoken of the Taft administration. Mr. Bryan, in his *Commoner*, declares that Mr. Roosevelt is out for the nomination in 1912. Mr. Roosevelt received a cowboy demonstration at Cheyenne, Wyo., on Saturday. His speech there had no reference to politics, but was of local interest.——Mr. Bryan declared in an interview last week in Kalamazoo that he would not be a candidate for President in 1912. He said there was plenty of good material in the party for the position, and that the

Democrats would control the next House of Representatives.

Justice Goff's Injunction

Supreme Court Justice Goff, of this city, has made a very important decision affecting the strike of the cloakmakers, which has continued so long. The strike is against an "open shop," and Justice Goff declares that the purpose of the strike is itself illegal because its purpose is to prevent those from working who have the right to work. Accordingly, he says, the acts, such as picketing and patrolling, by which this purpose is to be accomplished are illegal, and he granted injunctions against them. But he refused to grant injunctions against holding meetings, declaring that the strikers' right to meet and express their opinions could not be questioned. He said:

"The primary purpose of the strike being to drive non-union employees out of the trade in the borough, except on condition of joining one of the defendant unions, the purpose was against public policy and illegal."

The strikers are also enjoined against calling on the workers at their homes and attempting to persuade them to strike, or following them in the street. He declared that there is at common law a proof of a civil conspiracy; and he accordingly ruled:

"Violence, disorder and threats on the part of members of the unions directed against members of the plaintiffs' association and their employees should be attributed to the unions in the absence of denials of the disorders shown in the moving papers, which included police court records, and in the absence of any proof that such disorderly members of the union had been disciplined."

Of course, this will be appealed to a higher court. The leaders of the strikers had just agreed to recommend yielding as to the demand for a closed shop, but the workers were insistent and made a great demonstration on Saturday in favor of persisting in the demand. Finally the plan of settlement was rejected by them.

The Forest Fires

After the big forest fires in half a dozen Western States, particularly Montana, Idaho, Oregon, Washington and California, which destroyed millions of property, wiped out several towns and killed over one hundred men, the rain so far quenched the fires that they seemed under control, and the soldiers, who had been sent to help the fire patrol in the parks, and the citizens, were withdrawn. But after the rains the fires broke out anew in Montana at Elk Park, and on the Little Thunder River, and the Governor sent the Adjutant-General with orders to call out all the men needed. The fires in the forests of Oregon and Washington have so filled the air with smoke that navigation is difficult for a space from 100 to 300 miles from the coast. Every part of Puget Sound is thus hampered by the dense smoke.——Mr. Pinchot has issued a statement as to the forest fires, in which he lays much of the blame on Congress for having refused appropriations for the proper equipment of forest rangers. He mentions Senator Heyburn, of Idaho, whose home town, Wallace, suffered severely; Senator Carter, of Montana, and Representative Mondell, of Wyoming. He praises the work of the men of the Forest Service, and says:

"Forest fires are preventable. It is a good thing for us to remember at this time that nearly or quite all of the loss, suffering and death these fires have caused is wholly unnecessary. A fire in the forest is the same kind of thing as a fire in the city. There is only one way to fight either. The fire department of every city is organized with the prime idea of getting to the fire when it is young. So with forest fires. The time to conquer them is before they grow strong. If a forest is equipped with roads, trails, telephone lines and a reasonable number of men for patrol there is no more likelihood that great fires will be able to get started than there is that great conflagrations like the Chicago fire will get started in a city with a modern fire department. Under rare circumstances they may, but the chances are against it.

"The Forest Service has done wonders with its handful of devoted men. It has put out every year many thousands of small fires, any one of which under favorable conditions might have developed into a conflagration which ten thousand men could not stop. This year, because of the great drouth—the worst in much of the West for more than twenty years—there were too many fires and too few rangers."

The Census Reports

It is the belief of the Census officials that the total population of the United States, with its possessions, will be about 100,000,000, of which some 90,000,000 or 91,000,000, will be in the States.

The entire tabulation will be completed by the middle of November. The addition by immigration during the past ten years has been about 6,000,000, of whom 500,000 may have died. This makes allowance for the large number who returned.——The Census Bureau gives out a number of reports of local population. They include Pittsburg (with Allegheny City) 533,905, a gain of 18.2 per cent. in ten years, making it probably the sixth city in the country, but the people are disappointed, hoping it would be the fifth. Syracuse has 137,249, 26.6 per cent. increase. Newark, N. J., has 347,469, an increase of 41.2 per cent. Scranton, Pa., has 129,867, the increase 27.3 per cent.; Schenectady, N. Y., 72,826, increase 129.9 per cent.; Detroit, 468,766, increase of 63 per cent.; Sioux City, Ia., 47,828, increase of 44.4 per cent.; Toledo, Ohio, 168,497, increase of 27.8 per cent.; St. Louis has 687,029, and is likely to remain the fourth city in the Union, Boston being the fifth. The population of Michigan is 2,810,273 against 2,420,982 in 1900, or 18.1 per cent. There are nine cities with a population of 250,000 or over, namely, Detroit, Battle Creek, Bay City, Flint, Grand Rapids, Jackson, Kalamazoo, Lansing and Saginaw Michigan stood eighth among the States in the matter of population in 1900 and will probably maintain her relative rank in this year's census. The census figures will show, it is said, a small absolute decline in the population of Vermont, altho the figures are not yet given out. During the thirty years from 1870 to 1900 the population of Vermont increased but 14,000. That of Maine increased 69,000, and of New Hampshire 93,000. In the two latter States this increase was mostly by immigration, for the increase of native population was 25,000 in Maine and 34,000 in New Hampshire, while in Vermont it was 16,000. But the increase of the native population may have come largely from foreign parentage. The population of Canada by its new census is 7,489,781.

Various Items

Mayor Gaynor has so far recovered from the wound by the pistol of an assassin that he returned on Sunday last from the Hoboken hospital to his home at St. James, Long Island. He somewhat overestimated his strength, for on reaching his home he fell on trying to mount the steps; but the doctors anticipate no evil effects.——The gossip to the effect that Secretary Ballinger would resign in September has given place to another, perhaps no more reliable, that his resignation will not take place until November.—— The primary election in Georgia has gone in favor of Hoke Smith for Governor in place of the present incumbent, Joseph M. Brown, who defeated Governor Smith two years ago on the railroad question, but who has not been able to secure the reversal of the legislation secured by Governor Smith in his previous term as Governor. Congressman Livingston, who supported Speaker Cannon, has been defeated, but Lee and Edwards, who were Cannon Democrats, were successful.——Requests have come from 566 postmasters that their offices be made postal banks, and 1,093 banks have asked to be made postal depositories.

Our Latin American Neighbors

More than $50,000 has been subscribed for the $100,000 peace monument to be erected by Americans in the City of Mexico, as their tribute to the centennial celebration. The monument will probably be placed in the Alameda or on the Paseo de la Reforma. The month-long celebration of the republic's independence commences today, and every municipality has a program of parades and festivity. Former Governor Curtis Guild, of Massachusetts, goes to Mexico as the special envoy of President Taft, and the United States will also be represented by a distinguished commission. September 15, 16 and 19 will be the fête days of special brilliance, and a magnificent pageant has been planned. On September 25 will occur a sham battle, under the direction of the Mexican Secretary of War. In other cities than the capital there will be elaborate celebrations. In Chihuahua a new $1,000,000 palace is to be dedicated, and the town has spent a million and a half on fountains, public baths, bridges, pavements and other public improvements. ——On Sunday, Cuban Liberals broke up a Conservative meeting at Guines. Several were wounded. The disorder

was occasioned by Conservative attacks upon the Gomez government.

South American Peace

General Estrada's first official act as master of Nicaragua was to assure this country, thru a despatch addressed to Secretary Knox, of the "warm regard" entertained for the United States "by the victorious party of the revolution." Continuing, he said:

"I desire to inform your Excellency that Nicaragua is willing and eager to make the proper restitution for the unfortunate killing of your citizens Cannon and Groce and for other atrocities committed by my predecessors."

Prior to the arrival of the Estradists at Managua, Dr. Madriz, who was till August 20 President, dismissed the commandant of the prison, which was left without a guard. Some 700, 600 of them political prisoners, escaped, secured rifles and added to the disorder in the capital. On August 22 mobs ruled the streets, shouting for the new government and hooting North Americans. American marines and blue jackets at Corinto stood ready to march on Managua at a moment's notice, but the step proved unnecessary. A disposition shared by the leaders of the factions to work for the restoration of complete order has been noted. The country has been impoverished by the ten months' war; American interests have suffered, and the mines have been idle for months. It will take at least two years for the country to be restored to its normal condition. Estrada's victory determines the supremacy of a republic of less than 50,000 square miles, with a population, chiefly of Indians and Mestizos, that is about 600,000. The capital has only thirty or thirty-five thousand inhabitants. But the gulf coast of Nicaragua, from Gracias a Dios to Greytown, is of increasing importance to American trade, and is already dotted with plantations of the United Fruit Company. For twenty years this company has been an influence for peace and prosperity in Costa Rica; it is likely to play the same part in Nicaragua. Madriz, the deposed President, has fled to Honduras. It is unlikely that he will make a long stay there. "The arm of Secretary of State Knox is long, and his grip iron," say the Central American diplomats at Washington. A general election will soon be held in Nicaragua, and the choice of the insurgent chief as President is looked for. A new Constitution is also to be promulgated. At the moment, nothing is more suggestive than the oblivion into which Madriz's predecessor, the erstwhile tyrant Zelaya, has fallen. He is as obscure an individual as Castro himself. Owing to public necessities, General Estrada has decreed that for a period of six months dating from September 1 the following goods shall be admitted into the country free: Corn, beans, rice, lard, sugar, flour, kerosene, naphtha or gasolene, candles, ordinary soap, tallow, sulphur oils, salts, acids and disinfectants.——Charles M. Pepper, commercial adviser of our Department of State, explains in the latest pamphlet of the American Association for International Conciliation how peace may be secured in Latin America. Trade, he says, is the great pacifier; and while our own share of South American trade—$300,000,000 annually—is not relatively large, "our commercial policy is conciliatory," he says, "and whatever tends to increase commerce is an additional means of conciliation."——The United States having forbidden the election of Dr. Mendoza to the Vice-Presidency of Panama, on the ground of unconstitutionality, the native population of Panama is in a high state of excitement. The boundary dispute between Costa Rica and Panama has finally been settled by the former approving the protocol drawn in Washington.——Tho American trade in Brazil shows a decided increase, according to a report received at Washington from Consul-General Anderson at Rio, it is evident that it has suffered from a lack of properly trained representatives, banking facilities, and proper passenger service. The efforts of the German exporters during the last ten years have been most profitable. They have systematically trained men for this special branch of commerce; have built up their banking facilities; have subsidized direct steamship lines, and have obtained a sure hold upon Brazilian trade. Germany now has about the same share of Brazilian commerce as the United States.

Russia and Germany

The establishment of an American banking institution in Russia is being seriously considered by a group of American bankers. Inquiries as to the demand for such an institution, as well as its chances for success, have been made by American commercial interests in Russia and Siberia. The cotton trade between American growers and Russian mill owners alone could be increased to $100,000,000 a year, nearly double what it is now, it is said, with the aid of an American owned and managed banking house to finance transactions which now ordinarily go thru Berlin or Paris. The new institution would not be limited to the usual banking transactions. The financing of Government railroads and municipalities and the development of natural resources would be undertaken. ——Despatches variously estimate the number of cholera cases in Russia as 120,000 and 133,000. The deaths have exceeded 58,000. These figures are for the year 1910, and are regarded as too conservative. The disease is more widely distributed now than heretofore, but in some districts the number of cases is diminishing. In Italy new cases are reported daily, but the scourge remains limited to the area originally affected. The disease has now broken out in Vienna, and two cases were, on Monday, reported at Spandau, nine miles from Berlin. The Rumanian army maneuvers have been countermanded in view of the epidemic raging in South Russia, near the Rumanian frontier.——The Russian Ministry of War has placed an order for artillery worth $1,450,000 with the Creusot works in France. Many members of the Duma are displeased that the contract goes to France, as the appropriation was voted on the understanding that it should be expended in Russia.——At the recent Free Trade Congress at Antwerp, Dr. Carl von Tyszka read an elaborate statistical paper attempting to demonstrate that German protective tariffs had made the price of wheat and meat appreciably higher than either food is in the English markets. Prof. Lujo Brentano, of Munich, showed how the import duties, levied ostensibly in the interest of the agriculturist, had in fact laid great burdens upon them as well as upon the industrial classes. The enormous advance in the price of land, with speculative aspects such as have lately been observed in our own Western States, has resulted in large borrowing to purchase lands which cost from fifteen to twenty times as much as competing agricultural land in other countries. Professor Brentano argued that unless steps are soon taken to cut down the duties on food products, there will be a financial and industrial crisis in Germany, besides increasing political unrest.——The Turkish Government has purchased the German battleships "Kurfürst Friedrich Wilhelm" and "Weissenburg." With reference to possible further purchases on the part of the Turkish Government, the Kiel correspondent of the *Cologne Gazette* remarks:

> "As Turkey has in view the purchase of two further battleships, it is in her interest to acquire the "Brandenburg" and the "Wörth." The Porte would then be in possession of a full division of ships all of which would be of similar efficiency. In the interests of the uniformity of ship units the clearance of these two ships is also to be desired on our part."

Rumors of Turkish orders for new ships are published at Berlin, and a Kiel organ even states that the Turkish Government has accepted in principle the offer of "an important European yard," which is ready to build a battleship of 17,200 tons and another of 23,000 tons, at $7,000,000 and $10,000,000 respectively, for early delivery.——Two Englishmen suspected of being army officers have been arrested as spies at Borkum, Germany, after photographing the fortifications. The Berlin press prints details of alleged systematic British espionage. ——A recent election at Zschopau, Saxony, resulted in the seating of the Socialist, Dr. Göhre, formerly a clergyman. He received 14,350 votes in a district which formerly has always returned a Conservative, but which, this year, gave the Conservative candidate but 4,500 votes. The Socialists now have fifty-one seats in the Reichstag—an increase of eight since the general election of 1906. In the preceding Reichstag they held thirty votes above the present total. The speech of Emperor William at a banquet at Königsberg, on August 25, when he threw down the gauntlet to German lib-

eralism in a speech on the Divine Right, is counted on to increase the force of the party. "This means fifty more places in the Reichstag!" exclaimed members of the Socialist party after the Kaiser's first public indiscretion since his *Daily Telegraph* interview of two years since, with its humiliating sequel.

In Scandinavia

An uproar in the session of August 27 of the Socialist Women's Convention at Copenhagen resulted in the adoption of a motion declaring that it would be a matter of great regret if the women of any country accepted a limited suffrage. This followed the declaration of British delegates that they would accept half a loaf.——On August 26 representatives of the International Seaman's Union, meeting at Copenhagen, adopted the motion of Havelock Wilson, leader of the English union, for an international strike of three weeks, to be ordered unless the shipowners of each country appoint as soon as possible a committee to confer with the union's delegates on improving the condition of seamen. On the same date the Convention of Transport Laborers adopted a motion for the affiliation of seamen's unions thruout the world. This will enable seamen belonging to any union to be transferred to any other organization of that kind without the payment of an entrance fee.——Capt. Elmar Mikkelsen, with his expedition, which sailed in June, 1909, on the Danish ship "Alabama," to search for the bodies of members of the Ericksen expedition of 1907, were wrecked last winter on the eastern coast of Greenland. The news of the rescue party's escape recently reached Copenhagen, but with few details.——The Nordenfeld Steamship Company's steamer "King Harold" has returned from the Arctic to Trondhjem, reporting that latitude 80 deg. 10 min. was reached. The ship met the Amundsen expedition, with the "Fram," at Spitzbergen. Amundsen reported discovering a volcano and geysers at Wood Bay Beach, covered with lava. —— The Norwegian-American steamship line was established at Christiania on August 27, with a capital of $2,800,000. The directors were authorized to purchase for $1,330,000 the steamship "Kaiser Friedrich," of Hamburg, which will be renamed the "Leif Erikson."

Spain

On August 16 an issue of 3 per cent. Treasury bonds to the value of about $8,000,000 was made, most of which was subscribed by the hour of closing the same day. The present issue is rather more than half the amount recently authorized by the Cortes.——An arbitration treaty between Russia and Spain was signed at St. Petersburg by a representative of the Russian Government and the Count de la Viñaza, the Spanish Ambassador, on August 16.——Cardinal Merry del Val, when he received the Marquis de Gonzales, who has been in charge of the Spanish Embassy at the Vatican since the recall of the Marquis de Ojeda, is said to have confirmed his position that, if Canalejas maintains his policy, the conflict will be left in *statu quo*.—— By a vote of 17 to 13 the workingmen's associations at Bilbao countermanded the order for a general strike, to begin on August 29 in sympathy with the striking miners.——All leaves of absence of officers and men of the Portuguese army and navy were suspended and warships recalled, in view of the reported intention of the reactionaries to provoke disturbances on the occasion of the elections for the Cortes, occurring on August 28. Rumors that the Clerical leaders planned outbreaks in protest against the Government's liberal policy proved, however, falsely alarming. The polling was conducted in an orderly manner, tho not without excitement. It is said that the Government did not oppose the Republican candidates in certain constituencies, and that the Republicans in other constituencies supported the Government against the Clericals.

Notes

The principality of Montenegro, a little highland country of 230,000 population, whose capital is a village of 4,300 inhabitants, has now been raised to the dignity of a kingdom. On August 28, the Parliament passed a resolution to that effect. Nicholas, the ruler of the country, received for the

first time the salute of one hundred and one guns. During the celebration of this Prince's jubilee his capital of Cettinje was crowded with hundreds of visitors, including royalties. Montenegro is the last of the Balkan states to declare itself a kingdom, Bulgaria having received that promotion in 1908. The *de facto* autonomy of the new kingdom has long existed, but has not always been recognized in treaties. Thus the Russo-Turkish convention of 1791 qualified the Montenegrins—thru a slip—as "Turkish subjects." The error was corrected by Turkey herself in the Treaty of Grahova, in 1838, and again in a protocol of 1842; but was resumed in later negotiations, when the principle was declared that Montenegro was an integral part of the Ottoman Empire. This contention has been opposed by a proud and courageous population, that has had the immense advantage of Russia's moral support.——Latest reports of the Brussels Exhibition fire show that out of 250 acres, only 10 were affected, these belonging to the Belgian and British sections, whose buildings are being reconstructed. The exhibition will remain open till November 1.——The Manchester *Guardian* reports that the royal commission appointed to study trade relations between Canada and the West Indies will find it impossible to recommend any plan for commercial reciprocity that would embrace all the West Indian colonies. They are said to favor the West Indies granting reciprocal preference to Canadian products in consideration of Canada's existing preference of 33⅓ per cent. It is also likely to be recommended that the West Indies grant preferential admission to products from Great Britain. The establishment of better marine and telegraphic communications between the West Indies and Canada is also urged.

Korea

The text of the convention under which Korea is annexed by Japan was communicated to the representatives of the Powers at Tokio, August 24. The document was signed August 22. Baron Hirata, Minister of the Interior, requested the proprietors of all the Japanese newspapers to publish no unauthorized information regarding the situation in Korea. He pointed out that such publication would complicate the task of the Japanese Government in carrying out the annexation. Japanese officials already predominate in certain branches of the service. Sporadic outbreaks in protest against the absorption of Korea by Japan are anticipated, but serious rioting or even widespread objection from the Koreans to the annexation is not expected. The British Ministry very promptly announced that it had no objection on political grounds to the annexation. The Foreign Office has for some time been negotiating, informally, with the view of protecting British interests in Korea under the Anglo-Japanese treaty of alliance, negotiated in 1905. This treaty stipulated that the free hand enjoyed by Japan in Korea should be subject to "the principle of equal opportunities for the commerce and industry of all nations." Business interests insist that this gives to Great Britain the opportunity to negotiate a special commercial treaty affecting Korea, under which the advantages of existing arrangements would not be lost. By the convention of annexation Korea has even lost its name. In being transferred to the Japanese Home Department the Hermit Kingdom has been rechristened Cho-Sen — the Land of Morning Calm. By the terms of the annexation convention the Korean court is maintained with an organization parallel to that of the Japanese Crown Prince; the Emperor of Korea becomes Prince Gi, and will rank after the Japanese Crown Prince. The existing civil list ($740,000) will be continued, but numerous parasitical posts will be abolished. Foreigners are promised the same rights in Korea as in Japan. All treaties existent between Korea and foreign countries were on Monday succeeded by conventions to which Japan is a party. Japan will retain the present tariff for a period of ten years, and will, during the same period, permit foreign vessels to engage in the coasting trade between the Korean open ports, and between those ports and the open ports of Japan.

THE NEWFOUNDLAND FISHERIES ARBITRATION BEFORE THE HAGUE COURT.

The United States counsel are at the table on the left. From left to right they are: Edwin M. Borchardt, James Brown Scott, Charles B. Warren, Samuel J. Elder, Elihu Root. On nearer side of table are: Robert Lansing, George Turner and C. P. Anderson. The British counsel sit at table on the right. The tribunal is composed of the following gentlemen, from left to right: Sir Charles Fitzpatrick, Chief Justice of Canada; Dr. Savorinn Lohman, of The Netherlands; Prof. Heinrich Lammasch, President, of Austria; Judge George Grey, of the United States, and Dr. Louis Drago, of Argentina.

The Passing of Korea

BY MOTOSADA ZUMOTO

[Mr. Zumoto, who has written before for THE INDEPENDENT, was closely associated with the late Prince Ito, having been his private secretary during two of his premierships, and while Prince Ito was Resident-General of Korea having served under him in the capacity of semi-official adviser. He has been decorated by the Emperor of Korea. Later, Mr. Zumoto, with the support of some of the leading financial and mercantile houses and interests of Japan, came to this city and established the Oriental Information Agency, with a view to the promotion of trade between the two countries by the dissemination of correct information. He is part owner of the *Japan Times*, of Tokyo, of which he was also Editor-in-Chief for some years. He returned to this country only last week from a visit to Japan and Korea, and consequently brings the very latest information, as the following article attests.—EDITOR.]

THE news last week that the final amalgamation of Korea with Japan has been accomplished, will cause no surprise to any one who has followed the recent course of events in that part of the world with but ordinary intelligence.

Incapable of self-betterment, hopelessly backward in the race of human progress, and a constant source of danger and complication between her powerful neighbors, it has long been evident that a condition of permanent stability requisite for the welfare and prosperity of the Korean people could only be secured by the Hermit Kingdom coming under the sole control of one of the contending Powers. It has also been evident to all fair-minded students of history that destiny pointed to Japan as Korea's natural guardian.

Apart from the strong ties of race and language, Japan's claim to dominancy in Korea rests upon the supreme right of self-preservation. Korea's geographical position has been aptly described as a dagger pointed against Japan's breast, and should it fall into the hands of a strong hostile power, the result would be fatal to the very existence of Japan as a sovereign nation. In any case, we have made good our claim by the sanguinary wars we had to wage against two of the biggest Powers of the world.

The termination of the last of these struggles found Japan undisputed and legitimatized protector and guardian of Korea. The five years during which Japan has tried the experiment of a protectorate in Korea forms one of the most interesting and critical chapters of its history. The most conspicuous feature of this important period is a fatal unwillingness or incapacity on the part of Korea to seize the most unique opportunity ever offered her for her regeneration and advancement along the line of modern civilization.

In assuming protection over the Korean kingdom toward the close of 1905, Japan started with the avowed idea of exercising only a general supervision and guidance, leaving, as far as possible, the management of the internal affairs of the country in the hands of the Koreans themselves, so that Korea might in course of time develop into a prosperous, self-governing nation, enjoying all the benefits of a stable and enlightened administration under the supreme suzerainty of Japan.

The unique opportunity thus offered Korea for the betterment of her condition was the more valuable because it was her good fortune to have had as the first representative of her new suzerain Power a statesman of unequaled prestige and power, and imbued with a strong and deep-seated sympathy for the Korean people. It was the writer's privilege to accompany Prince Ito to Korea and serve under him in a semi-official capacity thruout his term of office there as the first Resident-General. The writer may consequently claim to speak with some authority when he assures the reader that the Koreans never had and will probably never have a stronger, a better, a more persevering and a more consistent friend than the great statesman so foully murdered by one of the very people for whose benefit he had consecrated the remainder of his noble life.

GENERAL VISCOUNT M. TERAUCHI,
Resident-General of Korea.

GENERAL BARON H. OKUBO,
Commander of the Japanese Army in Korea.

On the very day that he first landed on Korean soil on the 1st of March, 1906, on his way to his new post as Resident-General, Prince Ito sounded the keynote of his policy when, addressing the Japanese residents at Fusan, he told them in his characteristically blunt way that he had come to make the Koreans a happy and prosperous nation and that, therefore, those who wanted to enrich themselves by despoiling the poor Koreans need not look for any tolerance, much less protection from him.

Almost the very first thing he did upon the assumption of his difficult office at Seoul, was to issue stringent regulations for the control of Japanese residents in the country with a view to the protection of the Koreans against the malpractices of the undesirable immigrants who had swarmed in in the wake of the victorious forces during the war. A number of the more incorrigible among these were deported, and for the rest the new regulations were so fearlessly enforced that thruout his term of office Prince Ito was cordially hated by a section of the Japanese population. His sympathy and friendship for the Koreans were indeed so pronounced and strong, that he was never popular even among the fairly respectable and intelligent portion of the Japanese in Korea.

Out of the many remarkable incidents that came to the personal notice of the

YI WANYONG (KOREAN),
Prime Minister.

writer, illustrative of the noble spirit in which Prince Ito carried out his work in Korea, mention may be made of what took place at a memorable dinner at his official mansion in Seoul in the late summer of 1907. Addressing those among his guests who had lately been appointed to posts under the Korean Government, as distinct from the Japanese service in Korea, the Prince reminded them that their duty was to serve the Korean Emporer and the Korean people to the best of their ability without troubling themselves about the furtherance of supposed Japanese interests in the country, which they might safely leave to his own care. Such was the character and policy of

the man whom the Emperor of Japan sent to Korea to inaugurate the régime of protection. Had the Koreans been wise, they would have received Prince Ito with open arms and offered him a hearty and cordial support in the carrying out of the policy of reform and progress mapped out by him. But what was the reception actually accorded him by the Court and officials of Korea? The Emperor even tried to refuse to recognize his official status, and the Korean officials from the highest to the lowest steadily persisted in offering a passive resistance to all schemes of reform and improvement. Seemingly consenting to

CHO CHUNWAN (KOREAN),
Minister of Agriculture, Commerce and Industry.

these schemes, actually they did little to carry them out honestly and effectively.

With incredible patience Prince Ito set about removing this formidable obstacle in his path, and in course of time he succeeded in inspiring some of the leading Koreans with confidence in his honesty of purpose, so that he could now count upon the support of the Koreans under his immediate and personal control. But with regard to the bulk of the great army of Korean office-holders in the provinces, they have never evinced any indication of an intelligent interest in the measures of reform initiated by the new power at Seoul. It is a well known fact that, so far from giving an honest support to these efforts at national regeneration, many of them have even gone out of their way to poison the minds of their local people against the new régime by disseminating all sorts of wild and ridiculous rumors. One of these is that the taxes collected under the new government were being sent over to Japan as a tribute, whereas the fact is that Japan is yearly spending nearly twenty million yen ($10,000,000 gold) of her public funds for the purposes of administration and various public works, besides several million dollars required for the maintenance of the military garrison. There is no doubt that the dissemination of these absurd reports has had a great deal to do with the insurrections which have only lately been suppressed by the ex-

MIN PENGSIK (KOREAN),
Minister of the Household.

penditure of a large amount of money and blood.

On the discovery of an act of serious treachery on the part of the Korean Em porer in the summer of 1907, in the form of a secret mission to the Hague Conference, Japan's grip over Korea had to be tightened, and the result was a new agreement under which, among other things, Japanese subjects were made eligible to official positions under the Korean Government, and that Government was debarred from taking any important step without the consent of the Resident-General. In every Department of State, the post of Vice-Minister has since been filled by a Japanese, while in every provincial government the Korean Governor has been given the benefit of one or two Japanese assistants. It was shortly after the inauguration of this new system that the Prince made the noteworthy declaration at the dinner already referred to.

The new system was undoubtedly an improvement upon the old one, but from the nature of things it could not have been expected to work to the entire satisfaction of those responsible for an honest and efficient management of the national affairs of Korea. Its inadequateness has been abundantly demonstrated by the experience of the past three years.

Much, it is true, has been accomplished during the past five years, especially in connection with justice, education, public works, finance and police. It is, indeed, wonderful that so much has been accomplished in these lines in so short a space of time and in face of so discouraging conditions.

But the very success that has attended our efforts in these respects only proves the absolute necessity of a radical change in the system of government in Korea. For whatever real work of improvement was accomplished in Korea under our protection is where the work has been done by the Japanese officials on their own responsibility and free from the benumbing effects of Korean interference.

Did space permit I would like to work out this feature of the subject more in detail. For the present, however, I must be contented with this brief outline of the course of events that have compelled Japan to assume full and direct responsibility for the government of Korea.

None of the foreign Powers with any interests in Korea need in any way be disturbed by the change that has taken place in the political status of Korea, for the Japanese Government will scrupulously protect all foreign interests. Foreign interests in Korea are at best very insignificant, the bulk of the trade being in the Japanese hands. According to official statistics for 1908, for instance, America's share in the foreign commerce of Korea was only 10 per cent., Great Britain's 12, and China's 13, whereas Japan got 63 per cent. out of the total of 55,000,000 yen ($27,500,000). Small as is the actual amount of trade which the foreign Powers have with Korea, it would be seriously injured if Korea were brought under the sway of the Japanese tariff, which is much higher than that now in force in Korea. But the intention of the Japanese Government, as I am reliably informed, is to keep Korea outside of the Japanese tariff limits and maintain the existing rates applicable to goods imported from all countries, including Japan.

As for the special immunities enjoyed by foreign mining concessions, it goes without saying that they will be maintained intact by the Japanese Government.

The only other important form of foreign interests in Korea is the mission work. On this score no anxiety whatever need be entertained by anybody who is in the least acquainted with the spirit of almost unprecedented liberality and tolerance with which modern Japan has consistently regarded all missionary efforts in Japan during these forty years and also in Korea during the last five years. Prince Ito's large-minded attitude in this respect won the confidence and respect of the foreign missionaries of all denominations in Korea. The same policy was followed by his immediate successor, Viscount Sone, and there is not the slightest reason to believe that any departure will be made in this respect by the eminent statesman now at the head of affairs in Korea.

Viscount Terauchi, upon whose shoul-

ders has devolved the delicate task of inaugurating the new order of things, is one of the rising statesmen of Japan. Liberal-minded, sagacious and straightforward, he enjoys the confidence of his Imperial master to such a degree that acute observers of current events confidently predict that offices still higher than that of either Viceroy of Korea or Minister of War are in store for him.

It so happens that in the course of a long interview granted to the writer in Tokyo shortly before his departure for his new post in Korea in July last, General Terauchi incidentally referred to the missionary question in Korea. He told me that he fully appreciated the peculiar difficulty of the situation of the foreign missionaries in Korea, owing principally to the strong propensity of the Koreans, converts and otherwise, to use the Church for political purposes. He gave me to understand that he had no doubt that the missionaries were honestly endeavoring to steer their ship clear from the fatal rock of political entanglement. He even went so far as to express sincere sympathy for them in their present delicate situation.

I entertain no doubt that my missionary friends in Korea will find in the new ruler of Korea a man always ready to make a frank exchange of views, and, whenever necessary, to extend to them all assistance and protection they may need.

New York City.

To the Seekers of Success

BY W. J. GHENT

Author of "Our Benevolent Feudalism," "Mass and Class," Etc.

YOU hunt and strive for success. You that are religious pray for it, and you that are unreligious woo it and entreat it with a devotion that transcends the fervency of prayer. The teachers instruct you, the editors urge you, even the preachers exhort you, to go forward and win. They tell you not only that you *should* win, but that you *can* win. They tell you that no matter how fierce the strife, no matter what obstacles front you, no matter how many suitors throng the gates, you can, thru courage and persistence and fortitude and abstinence and thrift, attain the goal. Some of them tell you that you can attain it by merely thinking it, provided only that you think hard enough and directly enough and constantly enough; that thoughts are material things, and that the flower-like idea of success, well cultivated, brings of itself the fruit of realization. Many roads lead to the goal. There is room at the top for everybody. Make haste, rest not, sleep not; but like a star in its course speed onward and the victory is yours.

And what is it that the exhorters mean by success? One and all, this is what they mean: the attainment or the state of attainment of high place and rich rewards. No definition less material of aim or less opulent of promise would be thought by the instructors of the multitude to be worth while; nor, indeed, would any other satisfy the common desire or the common understanding. This is an age of material achievements and the meaning of the word necessarily takes on the form and pressure of the age.

Never was the counsel to win success so loud voiced and so insistent as now. Never was there such a multitude of counselors. The pursuit of success has been transformed into a sort of religion, and a horde of priests and oracles interpret its dogmas and disseminate its practical precepts. They tell you what things to do and what not to do. They tell you how to win the smile of the Success-god when he is indulgent; how to gain his attention when he is listless or indifferent; how to propitiate his anger when he frowns. The press pours forth a

stream of volumes—for which the colloquial term "dope books" would be a not unfair designation—revealing to you the hidden lore. They interpret for you the signs, the portents and the mystic meanings of things and they furnish you with the approved litanies and forms of service. No matter who or what you are, salvation is within your reach. The Success-god is merciful. You can, by easily learned rites and practices,

> "Break your birth's invidious bar,
> And breast the blows of circumstance,"

wresting from a reluctant world the crown of triumph.

You may have noted that the priests and oracles of success are not invariably examples of the efficacy of their own precepts. Tho some of them go clothed in splendor, the greater number seem still to be waiting the fulfilment of their prayers and the reward of their devotional practices. You may have further noted that the greater number of the followers seem also to have halted this side the earthly paradise. Effort there has been—aspiration and striving, the keeping of faith, the rigid observance of revealed precepts. Who is there that cannot picture the tragedy of the thousands of men and women, of boys and girls, who have toiled and dreamed and dared, who have renounced leisure and peace and pleasure and honor, in their devotion to the god of Success? They have failed, most of them; they have found circumstances so formidable that neither an ardent wishing them away nor an active battling against them has sensibly cleared the pathway. All the heroic effort of these aspiring beings has been expended on a vain quest. They are today, most of them, where they were when they started. The unsentimental figures of the census on occupations reveal a larger proportion of toilers every decade. The "dope books" have been conned, the directions have been followed, the seekers have wearily trudged and striven along the indicated way. They have found it to be something else than a highway. Toll-places it has, where the toll of blood and tears and hopes and ethical principles is remorselessly taken up; but it has turned out to be not a turnpike, but an elongated treadmill, where every footing returns to its appointed place.

Perhaps the cult of success is yet too new and nebulous to justify us in expecting so much from it; perhaps its creed has yet to be rounded out and made a coherent whole; perhaps some of its precepts need revision, or at least adjustment to time and circumstance; perhaps its mahatmas and yogis are of varying degrees of adeptness and cannot with equal skill point the way and the manner; or perhaps its followers have dwelt too strongly upon the letter of the law rather than upon its spirit, and have thus failed in discipleship. Somewhere there is fault. The word of promise is broken to our ear as well as to our hope. What is it that the oracles of Success specifically tell you? It would take something more than a five-foot shelf to contain all the recent volumes dedicated to the purpose of aiding you in breasting the blows of circumstance and in breaking the invidious bar of your birth. It will be well to pass by the common run of counselors and to proceed straightway to the fountain-head of the success religion—to no less an oracle than that innocent corrupter of youth, Dr. Orison Swett Marden. There is something about that name which suggests the prayerful attitude of the seeker of success. And what the name suggests his volume reveals. Take, for instance, "Peace, Power and Plenty." You are told therein that poverty is unnecessary, that the Creator did not intend it; that "there is no providence which keeps a man in poverty, or in painful or distressing circumstances." You are told that "poverty itself is not so bad as the poverty thought. It is the conviction that we are poor and must remain so that is fatal." You are told that "if we can conquer *inward poverty*, we can soon conquer poverty of outward things, for, when we change the mental attitude, the physical changes to correspond."

The economic framework of society, the necessary divisions of labor, the enormous numerical preponderance (inevitable under the present system) of hard and ill-paid tasks, the mathematical impossibility that any considerable num-

ber of persons should escape therefrom —all this is serenely waved aside. Defects in the situation are admitted—great obstacles to preferment and distinction; but yet nothing that need greatly trouble the strong of soul and the resolved of heart. Listen:

"I do not overlook the heartless, grinding, grasping practises of many of the rich, or the unfair and cruel conditions brought about by unscrupulous political and financial schemers; but I wish to show the poor man that, notwithstanding all these things, multitudes of poor people do rise above their iron environment, and that there is hope for him. The mere fact that so many continue to rise, year after year, out of just such conditions as you may think are fatal to your advancement, ought to convince you that you also can conquer your environment."

So that no matter whether you are a McKeesport mill-worker or a South Carolina factory operative, you can rise. "All our limitations," you are told, "are in our own minds. . . . We starve ourselves in the midst of plenty, because of our strangling thought. The opulent life stands ready to take us into its completeness, but our ignorance cuts us off." Then comes the individual counsel:

"If you want success, abundance, you must think success, you must think abundance. Stoutly deny the power of adversity or poverty to keep you down. Constantly assert your superiority to your environment. Believe that you are to dominate your surroundings, that you are the master and not the slave of circumstances. Resolve with all the vigor you can muster that since there are plenty of good things in the world for everybody, you are going to have your share, without injuring anybody else or keeping others back. It was intended that you should have a competence, an abundance. It is your birthright. You are success organized, and constructed for happiness, and you should resolve to reach your divine destiny."

Many such things the oracles of success tell you. But there are many, equally important, which they neglect to tell you. Of course, they do not all tell you the same things. The virtues enjoined, the vices condemned, the methods approved by one may be slighted by the next, and an emphasis put upon other factors. But, one and all, they neglect to tell you the mathematical and logical chances. Like the agents of a great lottery, they appeal to your gambling instinct; they tell you of the big winning made by Brown or Snigglefritz, and they inspire you to believe that what these men have done you can duplicate. They are not even as fair as the lottery agent; they do not tell you how many grand prizes there are and how many secondary prizes and tertiary prizes, and so on down to the least reward that can possibly be considered a prize. Nor do they tell you the number of blanks. They inflame your imagination till it sees the whole world richly hung with prizes, and you a certain winner. Under even favored conditions of birth and training, with innate energy, native capacity and agreeableness of personality, there may still be enormous chances against you; in certain states and conditions of life not one of you in ten thousand can reasonably hope for a prize. Yet you suffer the Arabian Nights tale of fabulous riches within attainable grasp to possess you and to control your thought and action.

Let us take a single industry—that of the interstate railroads. Of the 1,458,244 employees in the United States (1908), how many can hope ever to be numbered among the 5,767 general officers? You are an employee, we shall say; and in mere numbers you have about one chance in 252 of reaching your goal. No matter how efficient you become, no matter what hours you give to study and plan and fit yourself for "higher" things, it is not likely that the number of general officers will be greatly increased. If all of you become the executive equals of the 5,767 general officers, there would still be places for only 1 in 252 of you. But the proportion of mere numbers is not enough. There are other factors to consider. In many of the branches of railroad service the qualities needed for efficiency are not the qualities needed in "higher" places. You might be an expert tracklayer, a brave and skilful locomotive engineer. Your expertness in these lines fits you rather for continuance in your present work than for translation to other spheres, and you will find your special excellence a bar to advancement. There are casualties also to account for, and thus there is a further qualifying of the numerical chances. Suppose you are a trainman. Every year about 1 in 10 of you is wounded; about 1 in 135 is killed. You have thus a much better

chance of achieving death or wounds than of achieving success. Even if you happen to be employed in some of the safer branches of the industry, there may be numberless chances against you. You may have had to begin work as a boy and therefore to forego an education. Your mother tongue may not be English, and that is a handicap of no mean importance. You may have few friends and be without the rare faculty of making them. Then, too, you may have ethical scruples against taking advantage of men and occasions, and in critical times the observance of these scruples will block your advancement. The oracles cannot help you; the "dope books" cannot give you light. The lure of success may draw you, but you will ultimately find it a vain lure.

Or perhaps you are not a railroad employee, but a factory worker in a mill town. From childhood you have been taught to do one thing only, and to do it over and over again. Perhaps you are fortunate above some of your fellows in that you have a "four-motion" job instead of a monotonous "three-motion" job. A right-hand movement left, a left-hand movement right, both hands up and then both hands down—and this over and over again, five hours in the morning, five hours in the afternoon, six days in the week, four and a fraction weeks in a month, and whatever number of months in the year your master chooses to employ you. Your every faculty has been hardened about this one task, unfitting you for any other. Your meager earnings just suffice to keep you and your dependents alive. You cannot move from your environment. Your life and the life of others depend upon the work place to which you are attached. What other thought can you possibly have than the "poverty thought"? Would it, if it were possible, avail you aught to have any other? What possible message can the oracles have for you? What possible degree of success is conceivably within your grasp?

There is another thing the oracles neglect to tell you. In the vast and complex scheme of things, the "lower" places are just as necessary as the "higher" places. The 1,452,477 railroad men other than general officers are not employed thru philanthropy. They are not employed by reason of the rich man's pleasure in paying wages to the poor man. They are employed because, upon a hard, unsentimental, cash basis, it takes that many men to do the work. It cannot be done by machinery, nor by thought transference. It must be done by muscle and brain. No matter how efficient and masterful you become, these places would still have to be filled. You never heard, did you, that any of these places went begging? No matter how many men, according to the oracles, have scaled the walls of the earthly paradise, the common work has still to be done, and there is ever an eager army pleading for the chance to do it. How shall it be done if all listen to the oracles of success?

No, the pursuit of material success solves nothing in this world worth solving. It is a cult which deceives and demoralizes and ruins, which blinds men to their actual situation in life and which evades or ignores the real solution of poverty. Instead of fostering co-operation, the natural tendency of social man, it foments strife. It dooms the multitude to stumble about in privation and ignorance, led by a false light and a vain hope. By joining hands for a common purpose you might achieve a material success in which all would share—one which would be the enduring basis of a higher success, a success of the social instincts and feelings, a success of moral and intellectual endeavor. By striving for individual material gain, you but wreck your own and others' opportunities.

There is thus another success than that taught by the oracles—a success often characterized by a chain of apparent defeats. It is a success which defies poverty; or which, tho sensible of its blight and pain, accepts it unflinchingly in its quest of higher things. It is the success of a Jesus, a Mazzini, a Marx. It is the success of thousands of lesser men in all times whose deeds are unchronicled, and whose names, long forgotten, can never be resurrected. It is the success which, tho generally uncrowned in the lifetime of the individual,

achieves its crown in the social advancement of the race. Is this too remote or barren a reward for which to strive? But barren or remote as it may seem to the being nursed in the environment of fratricidal strife and of material gain, it bears its immediate guerdon to the individual life. There is a luminous passage in Prof. Karl Hilty's little work on "Happiness" which you might well memorize and make a part of you:

"One of our own contemporaries, Thiers, a man who had in high degree attained success, and who at certain points in his life pursued it with excessive zeal, once made this striking remark: 'Men of principle need not succeed. Success is necessary only to schemers.' In other words, a genuine victory over the world is not to be achieved thru that kind of success which the French call *succès*, and which for many men makes the end of effort. He who plays the game of ambition may as well abandon the hope of peace of mind or of peace with others, and in most cases he must forfeit outright his self-respect."

Success, then, in its ordinary meaning, in the meaning of the oracles, is not victory, either over the world or over yourself; it is too often defeat and impoverishment. It is the sacrifice of what is best in man for a trumpery prize. Whether, as with the overwhelming mass of mankind, by whom the goal can never be attained, or whether, as with the few, by whom it is attained in some measure, the rage of pursuit inevitably means the hardening of the social feelings, the extinguishment of the spirit of brotherhood, the clouding and darkening of the social vision by which a people live and become great. It obliterates all inward peace and sets the heart and faculties at war with creatures of your own kind. In its fiercer promptings it might, rather than physical lust, have been the theme of the great 129th sonnet of Shakespeare. The lust of success

"Is perjured, murderous, bloody, full of blame,
Savage, extreme, rude, cruel, not to trust."

It is as a swallowed bait, which makes the taker mad—

"Mad in pursuit, and in possession so:
Had, having, and in quest to have, extreme;
A bliss in proof, and proved, a very woe;
Before, a joy proposed; behind, a dream."

And even in its more moderate promptings it differs from this not in kind, but only in degree.

We must have conflict, say the individualists, who stand as the philosophical sponsors of the oracles of success. We must have obstacles to war against, in order to bring out and develop the sturdy virtues. But the estimable qualities which the individualists tell us are developed only by conflict can still find nurture and growth even tho the rage of success be calmed and the war of each against all be ended. Says Prof. David G. Ritchie, in his "Darwinism and Politics":

"If we are still reminded that only thru struggle can mankind attain any good thing, let us remember that there is a struggle from which we can never altogether escape—the struggle *against* nature, including the blind forces of human passion. There will always be enough to do in this ceaseless struggle to call forth all the energies of which human nature at its very best is capable."

In the strife for worldly success you waste energies which would enrich the world. You rob yourself and all men. However poor in nature you may be, you can yet contribute to the real success of mankind. There is everything to do. What tho the event men call defeat forever recurs to you? In an ill-adjusted world, where brutality and selfishness triumph, there is no humiliation in the thing called defeat, so only that the goal striven for is the common good. The humiliation is rather in the misuse of our fellows for our own material gain, in the obstructing and halting of the onward march of mankind. Tho the oracles rave, and their followers imagine a vain thing, be it yours to emulate rather than to compete, to help rather than to harm, to struggle for and with rather than against mankind, to forego the lure of what men of the modern jungle call success and to seek the success of one in the success of all.

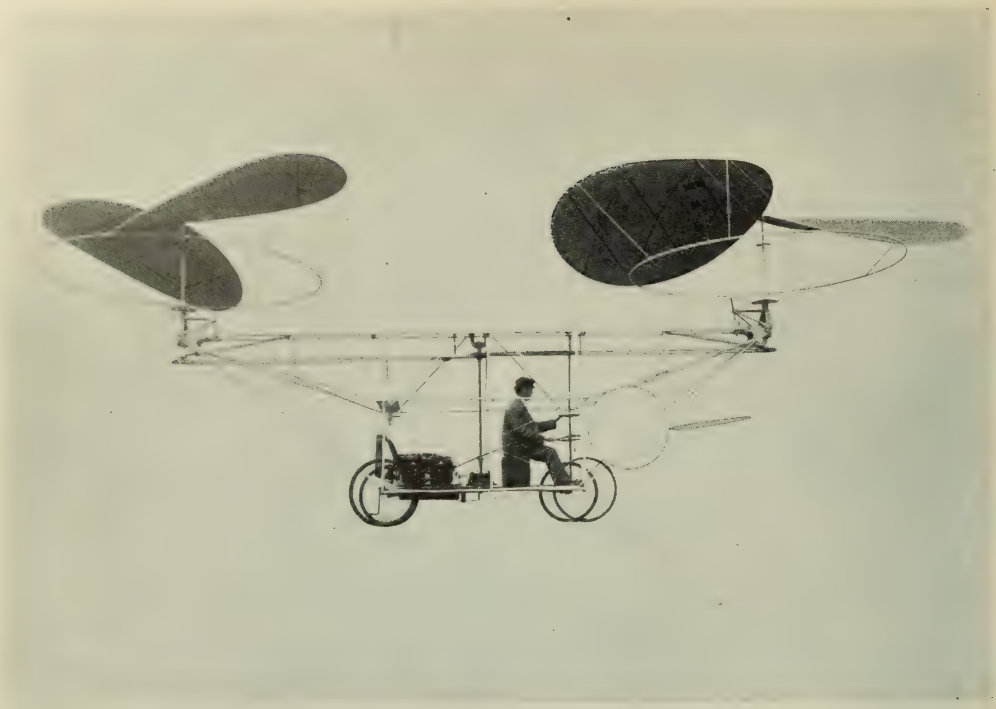
The A. B. C. of Aviation

BY LUKE J. MINAHAN

[The following article, as its title implies, is intended to explain the principles of flight and the working of the aeroplane, so that those who have hitherto neglected the matter (i. e., most of us) can get a clear idea of how and why the airman accomplishes the marvels he does. The author is President of the Pittsfield (Mass.) Aero Club and has already contributed to our columns.—EDITOR.]

THOUSANDS of people attend aviation meets for the special purpose of witnessing the splendid spectacle of a human being soaring and fleeting in the sky like a bird, in defiance of natural laws; hundreds of thousands more people eagerly read the reports of flights in daily papers and periodicals, and comment on the marvelous achievements of aviators; yet, with very few exceptions, both those who witness flights and those who read about them do not understand how it is done. Some try to study the matter, but find that it is not an easy thing to do, the few books on the subject being mostly of a scientific nature, dealing with theories and problems rather than explaining how the aviator flies. Most of the cyclopedias are also of little use in this respect, because practical aviation is a recent thing and is not to be found in books printed before the year 1908. To supply the want of information in that subject the writer proposes the following article.

Aviation is that division of aeronautics which deals with heavier-than-air flying machines; the machines which, in flight, depend for their support upon the dynamic reaction of the atmosphere, the tendency of the air to press upward any horizontally propelled rigid or quasi-rigid thin surface or plane. There are



several subdivisions to this class, the principal being the aeroplane, others the helicopter, the orthopter and the helicoplane. The areoplane stands at the head, being the only mechanically propelled heavier-than-air machine that has developed sufficiently to make human flight possible. The orthopter and the helicopter are both the aeroplane's prototypes. The orthopter was the result of man's early attempts to overcome the difficulties imposed by the laws of gravitation by imitating birds and fly with flapping-winged machines. In the history of human flight, which began as early as the second century, there are several cases recorded where men have attained a certain success with the help of the orthopter; but in each case the aviator started from a high point and flew downward, and, with one very small exception, they never succeeded in rising above the starting hight. These devices, which we now call orthopters or ornithopters, usually consisted of arched, mechanical wings attached to an iron bar. The aviator held the bar and ran down hill until the pressure of the air against the wings was strong enough to hold his weight. Otto Lilienthal, the German aviator, in the latter part of the last century, became quite adept at that kind of flying; he met his death in a flight. The helicopter, which stands between the orthopter and the aeroplane, was an improvement on the former in that a mechanical device was used to start the apparatus from the ground. It was built on the theory that the thrusts of a rapidly revolving screw would cause the machine to rise. Experiments with these were conducted until quite recently, and if it was with little success, it helped to make the aeroplane possible. The aeroplane is, in general description, a rigid or quasi-rigid thin plane surface, which, in being propelled at a given speed thru the air in a slightly upwardly inclined horizontal line, causes the resistance of the air to press it upward. It may consist of one or many planes, be mechanically propelled, and be fitted with devices for balancing, directing the flight, rising and descending.

The aeroplane is the only heavier-

READY TO FLY.

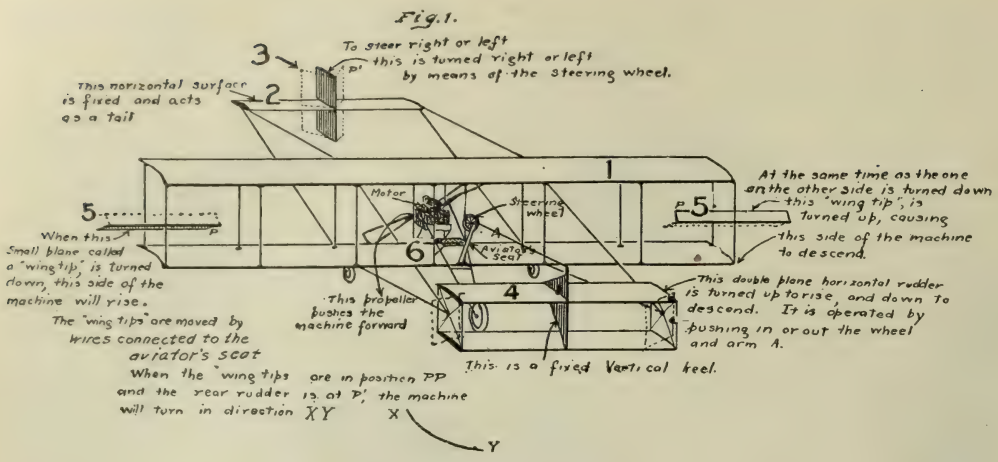
THE LATEST STYLE OF HELICOPTER.

than-air machine that has actually flown, therefore the only one of interest in considering practical aviation. As we see by the general description, the aeroplane is essentially a thin material surface which, in moving thru the air at a certain speed and upwardly inclined, causes the air to press it upward. That material surface, which we will call "plane," is the body. That body will rise in the air *if* propelled and kept upwardly inclined; will travel thru the air in a straight line *if* propelled and kept perfectly horizontal, and will descend of its own weight *if* not in motion or in motion and downwardly inclined. In that respect it is exactly like a kite; but a kite is not efficient for human flight; neither is this plane, unless the three *"ifs"* be removed and a more affirmative word be substituted. We see, then, a necessity for power to propel this plane or body, and some kind of a device to make it turn upward to rise, keep it horizontal to fly straight, and incline it downward to descend. An aeroplane that can arise, travel straight, and descend possesses the essential features, but unless it can also be made to go in different directions and can be kept from capsizing, it is not practical, not safe enough for human service. It must therefore be fitted with some kind of device to guide its course and maintain its equilibrium. Accordingly, the aeroplane, to be practical, must have a body or plane, some kind of device to propel it, and devices to make it rise, descend, turn and maintain its equilibrium. To govern ascent and descent, the course of travel, and maintain the equilibrium, different machines are fitted with different means, but the difference is usually small, and the *modus operandi* almost the same; so that a detailed description and explanation of one will give a good idea of the others. Likewise the fact that the body of different aeroplanes may consist of more than one plane does not need a special explanation, because three superposed planes work practically on the same principle as one; and the devices governing the motion, the rising and descending, the steering and maintaining equilibrium of a monoplane or one-plane body are practically the same as the de-

vices used in the biplane or two-planes body, and triplane or three-planes body for the same purpose. A detailed description of an aeroplane of either class with its flight-controlling devices, and an explanation of the *modus operandi* will, therefore, give a general idea of the aeroplanes of the other classes. For example, we will take the Curtiss biplane, the machine used by Glenn H. Curtiss in the flight from Albany to New York, and, more recently, by Charles K. Hamilton in the flight from New York to Philadelphia.

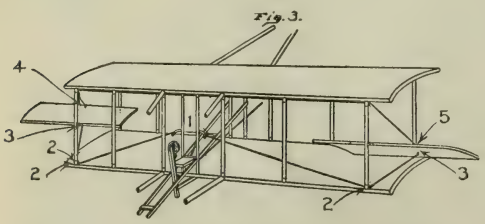


The Curtiss is a biplane, that is, its body (1) is composed of two sustaining planes placed one above the other. The planes are of equal surfaces, 28 feet 9 inches long, and 4 feet 8 inches wide; their frame is of bamboo, the covering of silk dipped in rubber, and they are held one above the other, 4 feet 8 inches apart, by bamboo uprights, further tightened by wires stretched by turnbuckles.

Connected to the body on the rear, two to the top plane and two to the bottom plane, are four bamboo poles which extend 10 feet in the rear and support a horizontal plane called the tail (2), which is crossed by a vertical plane called the steering rudder (3), which controls the direction of flight. To the front, connected to the top and bottom planes and extending out 10 feet, are four more bamboo poles, supporting the elevating rudder (4), which consists of two superposed planes of equal surface, crossing in the center by a fixed vertical keel. This rudder controls the ascent and descent. At each end of the main supporting planes or body, right and left, between the planes, are two auxiliary planes called "wing tips" (5);

SHOWING POWER PLANT AND CONTROLS.

The bamboo rod extending forward from steering wheel actuates the elevating rudder, which steers the machine up or down as the operator pushes or pulls the steering wheel. The rear rudder, which steers the machine to right or left, is operated by turning the steering wheel the same as turning the steering wheel of a boat. The balancing mechanism is operated when the operator swings his body to the high side of the machine, when it tilts to one side or the other. The action is carried to the balancing planes through the back of the seat, which swings on pivots and is connected by cable to the balancing planes.



THE CURTISS BIPLANE.

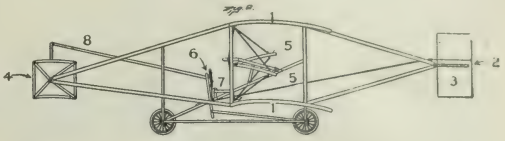
(1) Body or main planes, (2) single plane tail, (3) steering rudder, (4) two planes elevating rudder, (5) balancing planes or "wing tips."

these are 4 feet long and maintain the equilibrium by regulating the tilting of the machine.

In the middle of the lower plane, on the front edge, is the seat for the operator. This seat is placed on two inclined uprights which extend from the near edge of the upper plane downward to the first wheel. Behind the operator's seat is the motor, with a 6-foot long propeller. This is the motive power of the aeroplane.

Directly in front of the aviator's seat is the steering wheel. This wheel is mounted upon a rod which extends forward to the horizontal elevation rudder and controls it; a cable controlling the tail rudder goes from the wheel to the rudder, passing thru the bamboo poles that support the tail and rudder.

HOW LATERAL EQUILIBRIUM IS MAINTAINED BY "WING TIPS."

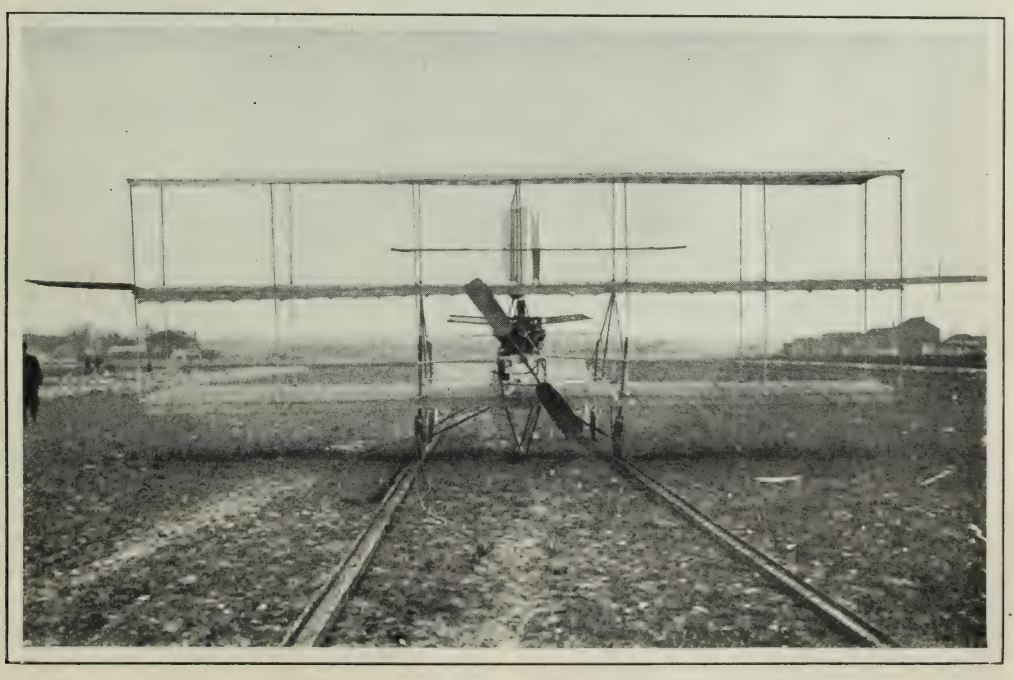


(1) Wires connected to the operator's seat (2) run thru pulleys at the front corners of the lower plane (3) to the under part of "wing tips"; another wire goes from the upper part of one wing tip, thru pulleys, to the other wing tip. The tips are hinged upon the outermost front uprights. When the machine is in balance the tips are perfectly horizontal; when the machine tips down on one side the operator leans toward the opposite side and the seat swaying with the operator's body pulls the wires, causing the tips to tilt, one upward and the other downward. As shown in the figure, the right end tip is tilted down and the left one is tilted up. The air striking the down-tilted tip presses it upward, causing that side of the aeroplane to rise. The left tip, exposing the up surface to the air, is pressed down and that side of the aeroplane is tilted down accordingly.

The whole is mounted upon three rubber-tired wheels. The operator sitting in his seat has control over the different parts as follows: Two levers at his right hand control the engine and a foot pedal makes it possible to stop the engine by causing a short circuit. The steering wheel directly in front of him controls both the elevating rudder in front and the steering rudder in the rear. The elevating rudder is controlled by a backward and forward motion of the wheel and rod (A); the backward motion causes the elevating rudder to turn upward and the machine to ascend; the forward motion turns the rudder downward, causing the machine to descend; when in their normal place the planes of the rudder stay horizontal and the aeroplane travels horizontally.

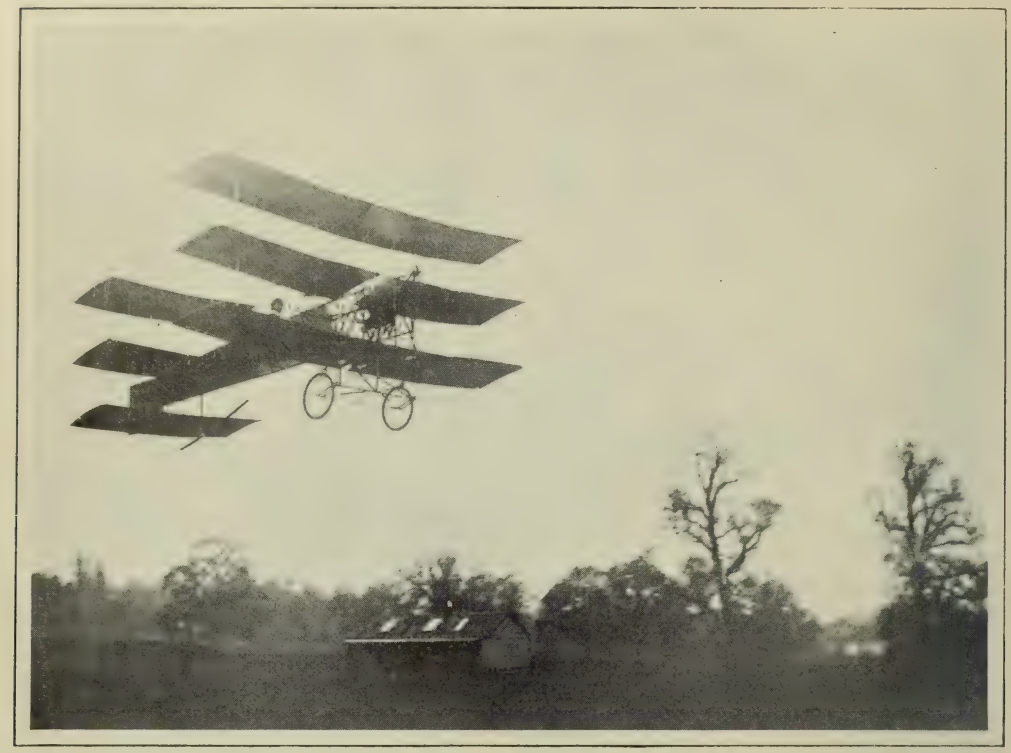
The steering rudder in the rear is operated by the turning of the wheel, like the rudder of a boat; it is turned right or left to steer right or left. The "wing tips" on both sides of the machine, which maintain the equilibrium, are controlled by wires attached to the back of the operator's seat and operated by the movement of the seat, which movements are caused by the swaying of the operator's body. To regain the

equilibrium when the machine tilts on either side the aviator simply sways toward the opposite side and the movement causes the wires attached to the seat to tilt one of the "tips" downward and the other upward. Supposing that the machine tilts down to the right, the operator sways to the left, causing the right tip to tilt downward and the left tip to tilt upward. The air striking the down-turned tip causes a lifting effect on that side of the machine; striking the up-turned tip it causes a down-pressing effect on that side of the machine; thus restoring the balance. As the balance is restored the aviator's seat swings back to its center place.



Now that we know the construction of the aeroplane and the operator's relation to the different parts of the machine, let us follow the aviator on a trip in the air, and let us suppose the course to be a circle. The first thing the aviator does on taking his seat, after starting the engine, is to turn the planes of the elevating rudder gradually upward by moving the steering wheel toward him. The air striking the upward inclined planes presses them upward, causing the aeroplane to rise. Having reached the desired hight the aviator sets the planes or front rudder back to their flat, horizontal position, then turns the steering wheel which controls the rudder, causing the aeroplane to follow a circling course. The rudder of the aeroplane works in the air very much as the rudder of a boat works in the water, causing the aeroplane to swerve

SIDE ELEVATION OF THE CURTISS BIPLANE.



(1) Main planes, (2) single plane tail, (3) vertical steering rudder, (4) two planes elevating rudder, (5) connected to operator's seat with wires, balancing planes or "wing tips"; (6) steering wheel, (7) operator's seat, (8) rod controlling elevating rudder, (9) extends from the rod on which the steering wheel is mounted to the elevating rudder; cable controlling steering rudder (10) extends from the steering wheel to the rudder in the rear.

as the pulling of the tiller cable turns the rudder, making one side of it oppose the current of air. While arising and during the flight, especially during the turning, the machine has a tendency to tilt to one side. The operator regains the balance by swaying his body to the

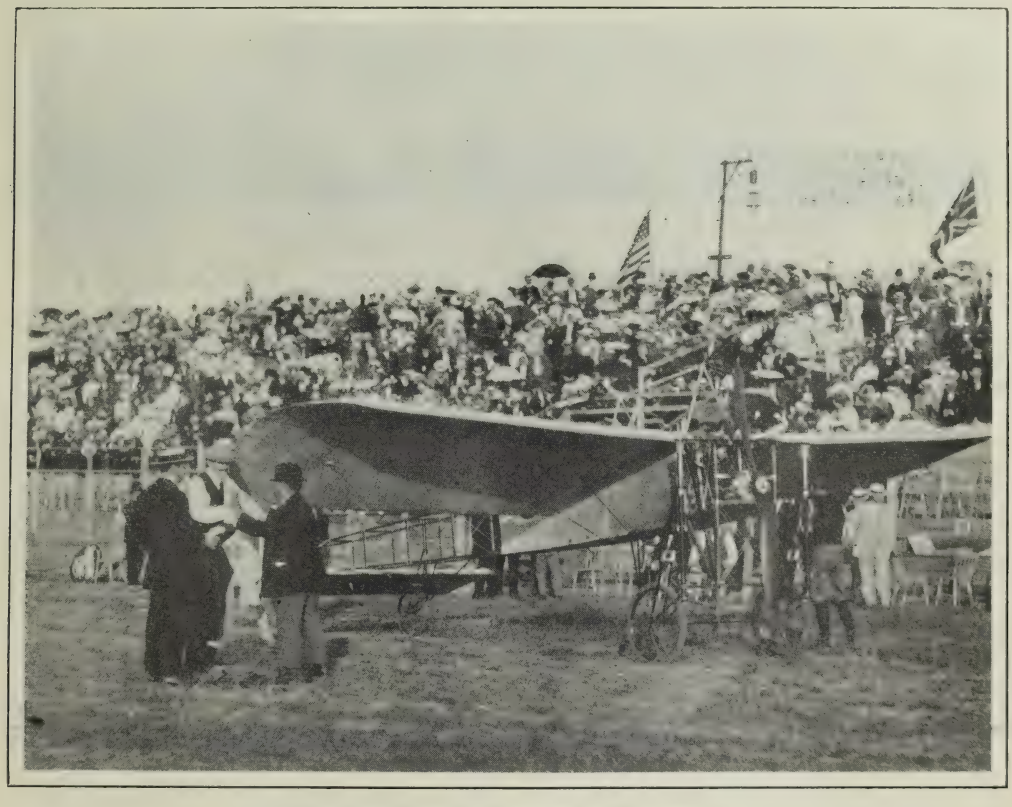
VANINAN TRIPLANE.
(Photograph by Edwin Levick, New York.)

side opposite to the down tilting. This movement, as explained before, causes one of the wing tips, the one on the down side, to rise and the one on the up side to lower. The air current, being gliding run. The best landing is made by tilting the rudder just as the front wheel comes in contact with the ground. If the tilting is too marked the aeroplane will shoot upward again, necessitating

ROE'S TRIPLANE.
(Photograph by Edwin Levick, New York.)

resisted by these exposed surfaces, presses against the lowered one upward and against the raised one downward, causing the ends of the aeroplane to undergo the same movements. As the machine regains an even keel the operator regains his place. The flying is now only a matter of steering and maintaining the equilibrium until the time to descend. Then the aviator picks out a suitable landing spot, usually an open place, shuts off the power, and turns the front rudder slightly downward. That causes the aeroplane to glide down rapidly, and if nothing were done it would come in contact with the ground with a shock, causing damage; but at a distance from the ground the operator tilts the rudder slightly upward and checks the descent, coming to earth lightly in a the depressing of the rudder again, so as to resume the descent.

Different makes of aeroplanes differ somewhat in details. The rise and descent of the Farman and the Voisin are controlled by a single horizontal plane rudder in front instead of a two-planes rudder, as in the Curtiss; to steer they have a two-planes horizontal rudder in the rear, same as the Curtiss has in front. The Wright and the Burgess have a two-planes elevation rudder similar to the Curtiss.



The steering is done in the Wright by a combination of twin rudders and warpings of which I will say more anon. The Burgess has a tail with a vertical rudder similar to that of the Curtiss. The Blériot and the Antoinette monoplanes's devices for ascending and de-

scending, as well as steering, are located in the rear. As a rule monoplanes steer up and down with a tail rudder and biplanes steer up and down with a head rudder.

The devices for maintaining the equilibrium are also different in different machines. Whereas the Curtiss has wing tips controlled by the swaying of the body of the operator, the Wright has what are called "warpings," that is, the rear edges of the extreme ends of the sustaining body planes are made to warp or bend upward on one side and downward on the other by an ingenious system of wires and pulleys. The wires are connected to a lever which when moved right or left causes the "warpings" and turns the tail rudder in a direction corresponding with the warpings. Devices similar to the warpings are also found in the Farman biplane and in the Blériot monoplane, hence the suits brought by the Wright Brothers against Paulhan and the other operators of machines with wing tips, ailerons and warpings, the Wright Brothers claiming absolute rights on devices working on the principle of the "warpings."

The Voisin has neither warpings nor wing tips, but obtains stability by having vertical panels at each end of the planes, closing the space between the planes, and two extra vertical rigid partitions between the planes. That this combination is not as good as the warpings is evident, as the latest Voisin has discarded the vertical partitions for "wing tips."

The Wright aeroplane is propelled by two slow-going propellers instead of one fast one, as is the case of nearly all the other machines. The Wright propellers make about 450 revolutions per minute and give thrust of about 200 pounds. The Curtiss propeller and most of the

LATHAM'S ANTOINETTE MONOPLANE.
(Photograph by Edwin Levick, New York.)

other propellers make from 800 to 1,200 revolutions per minute and give a thrust of from 120 to 200 pounds.

There are several kinds of aeroplane motors; the best known are the Wright, the Curtiss, the Anzani and the Gnome. The Wright and the Curtiss are considered the best. Both Glenn H. Curtiss and the Wright brothers built motors before they built aeroplanes, and their successes as aviators are due to a great extent to their having a good motor. The horse power of aeroplane motors runs from 25 H. P. to 100 H. P. The Curtiss machine used by Charles K. Hamilton in the New York-Philadelphia flight had a 50 H. P. Curtiss motor. The Wright Brothers usually use a 30 H. P. motor in their flights. Blériot's monoplane in the trip across the English Channel used a 25 H. P. Anzani motor; the new two-seater Antoinette monoplane is fitted with a 100 H. P. Antoinette motor. The weight of these motors ranges from 80 to 200 pounds, according to horse power capacity.

The speed capacity of different machines ranges from 40 to 70 miles per hour. The Curtiss and the Wright average 50 miles per hour; Voisin's latest goes one mile per minute, and Latham in the Antoinette monoplane has flown ten kilometers at the rate of 77 miles per hour. The Curtiss and the Wright biplanes weigh about 800 pounds; the Farman and the Voisin over 1,000 pounds; the new Sommer 660 pounds; the Blériot and Antoinette monoplanes weigh about 660 and 1,100 pounds respectively.

There is a difference in the carrying capacity of different aeroplanes. The Curtiss and the Burgess generally carry one person; the Wrights and the Farman two persons; the new racing Blériot carries three persons; and Sommer recently carried three persons besides himself in his machine.

The Curtiss, the Voisin, the Farman biplanes and the Blériot and the Antoinette monoplanes are mounted on wheels, while the Wright and the Burgess biplanes are mounted on skids. It is claimed for the skids that they are

stronger to stand the shock of the machine coming in contact with the rough ground. On the other hand, the wheels afford more facility for starting.

The main supporting planes which form the body of aeroplanes are not flat widthwise, as they seem in pictures, but are more or less curved, the curve differing in different machines. The curve combination causes a greater lifting pressure when speeding with less resistance than the flat plane. Likewise, pictures do not show the wires which run lengthwise and crosswise of the body frame and planes, bracing them and holding them together rigidly, which are kept tightened by turnbuckles.

Besides the above mentioned aeroplanes there are a number of others of both American and European make, including the Santos-Dumont, Cody, Baldwin, Hanriot, Breguet and Miller biplanes, the Humbert, Pfitzner and the Santos-Dumont monoplanes, and the Roe and Wanniman triplanes.

The future of the aeroplane is a closed book, but two improvements will probably be made in the near future. One concerns the maintenance of equilibrium. It seems that a gyroscope is a better device for keeping a level keel than either the "warpings," the "wing tips" or "ailerons." This could be driven by the motor and would maintain the equilibrium mechanically without any exertion on the operator's part.

The other improvement, the practicability of which is at present a mooted point, would be the addition to the present aeroplane of horizontal propellers to make the aeroplane rise from the ground perpendicularly, instead of diagonally. Aeroplanes with such a device are called helicoplanes.

Concluding, it may be well to note the three world's records established at the Atlantic City aviation meet, which closed on July 13. Walter R. Brookins rose to 6,175 feet, the greatest altitude then attained; Glenn H. Curtiss, quickest rise, rose to an altitude of 1,600 feet in 5 minutes 55 seconds; Glenn H. Curtiss again, for 50 miles continuous flight entirely above the ocean, one mile from land, in one hour and fourteen minutes.

PITTSFIELD, MASS.

The Subway

(96th Street to 137th Street)

BY JOYCE KILMER

TIRED clerks, pale girls, street-cleaners, business men,
Boys, priests and harlots, drunkards, students, thieves,
Each one the pleasant outer darkness leaves;
They mingle in this stifling, loud-wheeled pen,
The gates clang to—we stir—we sway—and then
We thunder thru the dark. The long train weaves
Its gloomy way. At last, above the eaves,
We see awhile God's day. Then, night again.

A glance of daylight at Manhattan street,
The rest all gloom. That is our life, it seems.
Thru sunless ways go our reluctant feet,
The glory comes in transitory gleams.
And yet the darkness makes the light more sweet,
The perfect light about us in our dreams.

NEW YORK CITY.

The Latest Dialog of the Russian Socrates

BY COUNT LEO TOLSTOY

THE other day I started out at eight in the morning to take a walk in the country. I was passing a field in which two farmers were plowing, one an old man and the other a boy. I would have liked to talk with the first, but, tho I could hear his voice addressing his horse, he was quite on the other side of the field away from the road. The boy, on the contrary, was near the road, and so I decided to have a talk with him.

This lad was well built and properly clothed, with strong boots on his feet, and his plow was drawn by a big sorrel mare. He politely answered my salutation with a "God be with you." At this same moment something went wrong with his plow, so he stopped his horse and stood still.

"Does this modern plow go better than the old-fashioned one with no wheel in front?"

"Why, of course; much better."

"Have you been using it long?"

"No, not very long, for this one was stolen from us."

"Then you found it again, did you?"

"Yes, we got it back, for the thief was from our own village."

"Is he going to be tried?"

"I suppose so."

"But why should he be, since you have got your plow back again?"

"Why, he is a thief."

"But if the man goes to prison, he will learn to rob better than ever!"

The boy looked at me earnestly, attentively, but answered with neither a Yes nor a No, for the idea I had enunciated was evidently new to him. I then noticed that his clear, healthy face was very expressive. His upper lip and chin were downy. His gray eyes showed intelligence.

He suddenly left his plow standing and appeared to want to take a rest and talk a little.

Thereupon I took hold of the handles, slapped with the reins the big, sweating mare, who began tugging at her collar; and we moved forward a few feet. But I am no longer strong enough to hold a plow properly, so that it got out of my hands and we all came to a sudden standstill.

"You don't know how."

"That's true; I am simply spoiling the looks of your field."

"No matter about that; I'll make it all right again."

With this the boy backed the horse and straightened out my bad furrow. But he didn't go on with his work.

"It is hot in the sun," I began again; "let us sit down over there in the shade," and I pointed to a clump of trees at the other end of the field. So we went over there, the boy sitting down on the ground, while I stood in front of him.

"What is the name of your village?"

"Botuinene."

"Is it far away?"

"That's it, over there on the hill."

"Why do you work so far from home?"

"Oh, this field does not belong to us. I am hired by another farmer to do this work for him."

"Are you engaged for the whole summer?"

"No; only for the plowing and sowing."

"Has he got much land?"

"Yes; quite a good deal."

"Is that your mare? She seems to be a good animal."

"Yes; she's mine. No; she isn't bad," he answered, with evident satisfaction.

In fact, in hight and in width of chest the mare was far better than what is generally found among the Russian peasants.

"Perhaps you do other work. You may be a cast-man."

"No; I am my own master and I live at home."

"What! and yet so young a boy?"

"Yes. When I was seven I lost my father. My brother worked at Moscow in a factory. We were at first helped by our sister, who also worked in a factory. But since I was fourteen I have depended upon myself. I have worked and laid by some money," he continued, proudly.

"Are you married?"

"No."

"Then who is at home with you?"

"My mother."

"Have you a cow?"

"I have two."

"And how old are you?"

"Eighteen," he answered, with a pleasant smile, perceiving that I was interested in one who, tho so young, knew so well how to make his way in the world. This evidently pleased him.

"How young you are; and you have your army to do."

"I suppose so," he answered, with that resigned air with which one speaks of illness, death, and the inevitable.

As is always the case now in Russia when you are talking with the peasantry, we spoke of land, and he told me, among other things, that he didn't have much, not enough to support him unless he did other work besides. And he said all this with a satisfied and proud air. He repeated again that since fourteen he had been his own master and had himself earned all he had.

"And do you drink?"

It was evidently disagreeable for him to admit that he did. But as he plainly did not like to lie, he answered in a low voice, elevating his shoulders:

"Yes."

"Do you know how to read and write?"

"Yes; very well."

"And have you never read anything about the evils of drink?"

"No; nothing."

"It is much better not to drink."

"That is doubtless so, for there is nothing so very good about whisky."

"Then why not give it up entirely?"

The boy made no reply, but it was plain that he understood what I was saying and that he was pondering my words. I continued:

"Could you do so? It would be good for you."

"Of course I could. Why, the day before yesterday I went to Ovino, and when I got to a certain farm the owner called me by name, tho I had not seen him for a good ten years. His name is Koujnie. Do you know him?"

"What! Koujnie Timofeiwitch?"

And then I told the lad that a dozen years ago I had established, with the help of this Koujnie, a temperance society, when Koujnie, who until then had been a hard drinker, stopped completely; that now he was delighted to have done so, that he was getting on well in this world's affairs, that he had a good house, etc., and that he owed all these blessings wholly to this change in the conduct of his daily life.

"That's all quite true," put in the lad.

"Then why don't you, who are such a fine boy, do the same thing? What is the good of indulging in strong drink? You say yourself there is nothing so very good about whisky. If you stop it all will go well with you, too."

The boy looked at me in silence, with wide open eyes, and as I put out my hand to bid him good-bye, I added:

"Well, from this day on, why don't you stop drinking? I am sure it would do you much good if you were to do so."

Thereupon his rough hand tightly squeezed mine and this sturdy grasp seemed to carry a promise with it. Then he suddenly exclaimed, in a happy and resolute tone:

"All right."

"Do you mean it? Do you promise?" I asked, in some astonishment.

"Yes; I promise," he answered, with a strong affirmative movement of the head, as a slight smile spread over his handsome young face. The calmness of his voice, the serious and attentive expression of his physiognomy convinced me that he really meant what he said, and that he intended to keep his word.

Is it due to age or illness, or both at the same time? Anyway, I have become feeble, and now I often shed tears of tenderness and joy. The simple word of this charming, energetic, strong youth, so plainly ready for everything

that is good, touched me so deeply that my throat became swollen with emotion and I, unable to say a word, left him. When I had recovered I was some feet away, but I turned toward him again and said to him, I having earlier in the conversation asked his name:

"Well, don't forget, Alexander, that a promise once made must be kept."

"You may be sure of that."

One is seldom more happy than I was when I left that young boy.

By the way, I forgot to say that, while talking with him, I offered to give him a placard and some tracts against drunkenness. This same placard had been posted up by a man of a neighboring village, but had been torn down and destroyed by the chief of police. But this boy thanked me for it and said he would come and see me at noon. However, when that hour had come and gone and no lad appeared, I admit that I began to ask myself whether all our conversation had not been lost upon him, whether he really cared anything for the printed documents I had left with him, and, in a word, whether I had not thought I saw more in him than there really was.

But when evening came, so did my boy. He arrived in a dripping perspiration, due to his work and walk. He told me he had gone on plowing until sunset. Then he went home to put away his plow and feed his horse; and now, gay and free in mind, he had come to me to ask for books.

When he came up I was seated with friends on a magnificent terrace, where were beautiful flower beds and great ornamental urns; in a word, I was in those luxurious surroundings in which one feels ashamed to receive working people with whom one has friendly relations.

I went forward to meet the boy and forthwith asked him if he had thought over again all we had talked about, and whether he was still decided to keep his word. Again, with his nice smile, the lad said:

"Of course I am. I told my mother about it and she is very much pleased. She thanks you very much."

I saw over his ear a little rolled paper.

"Do you smoke?"

"Yes."

He evidently expected me to ask him to give that up, too. But I did not do so. He said nothing further on that subject. But by an odd association of ideas, due, I suppose, to the friendly feeling which he saw I had for him, he decided to inform me of an important event which was to happen to him in the autumn.

"I didn't tell you that I am engaged," and he smiled as he looked at me interrogatively in the eyes.

"That is excellent; and where does your intended live?"

He told me.

"Has she much money?"

"No; but she is a fine girl."

Then came into my head a question which I always like to ask when I am talking with interesting young men.

"Excuse me for putting this question. But I beg of you to speak truthfully, and if you cannot do so, then please say nothing."

Thereupon the lad looked at me calmly and attentively and asked:

"But why shouldn't I tell you?"

"Have you yet ever had any knowledge of women?"

Without a moment's hesitation the noble boy replied simply:

"No; never."

"That is admirable and I am happy to hear it for your sake."

There was nothing further to say for the moment. And thereupon we said good-bye. But I am going to take him books and may God help him.

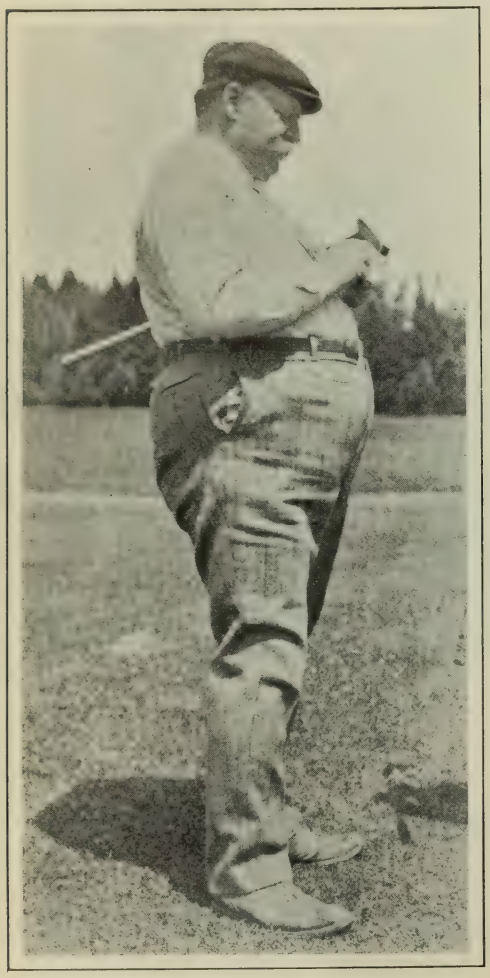
What splendid soil for good seed and what a terrible sin to sow there the seed of falsehood, violence, drunkenness and debauchery!

YASNOYA POLIANA, RUSSIA.

MR. TAFT'S FIRST GAME OF GOLF AS PRESIDENT.
From left to right—Vice-President Sherman, Captain Butt, Gen. Clarence Edwards, the President.

The President's Golf

BY JAMES F. DREY



[The author of the following article is one of the newspaper men assigned to Beverly for the summer. We are inclined to think this makes better "copy" than some of the political "news" under the Beverly date line, recently published thruout the land.—EDITOR.]

THIS is the story of a day's doings by President Taft on his summer golf links. Golf is his chief vacation diversion. It reigns supreme and undisputed in his summer affections. Other pleasures he enjoys. He motors some, reads some, cruises some; he golfs a great deal. He commenced the very day he arrived in Beverly; within an hour or two he was on the links of the Myopia Hunt Club, one of the finest courses in the country. And with the exception of Sundays he plays practically every day. Even an occasional wet day does not deter him. He usually plays eighteen holes.

This is not the record of one of the President's "best" days at Myopia; rather, it is a review of one of his "fair" days; a good reflection, probably, of how his daily rounds might be expected to average. It must be added that a strong

northwest wind was sweeping over the links. But that is not unusual at Myopia; indeed, it is a rare day that does not get some touch of blow. It was a morning when a very good golfer might consider himself as doing well to cover the course under three figures.

As usual, the President was on the ground early; scarcely ten o'clock. John

BOGEY?

Hays Hammond, who loomed large as a Vice-Presidential candidate in the last Republican National Convention, was his opponent. Mr. Hammond is one of the President's summer neighbors. The President did not delay. He squandered neither time nor words. He teed up his ball; a matter of a minute or two, done in full view of a youthful "gallery" from the caddy house. The young critics, not inconsiderate of his weight, registered guesses ranging from 105 to 125 on his score for the eighteen holes. Another second or two and the ball was sailing up the hill on its way to the first green. The President had given it a vigorous smite and for a moment was standing still, watching its course with a cheering smile.

The President was in earnest. He wanted to play his usual steady game. He was out for a victory; perhaps a record. He was determined that the wind would not foil him.

The first hole was made in 4. That was a good beginning. And he continued to go splendidly; and that, despite the off wind. It was not until he reached the teeing ground of the seventh hole that he got the wind with him. His drive from there was a long one; considerably more than 200 yards. Mr. Hammond, as usual when the President made a good stroke, called it a "beaut." The secret service man, too, had something complimentary to say. The President remarked that the wind helped him. He made the long eighth hole—485 yards—in 6. That was very good, almost as good as a real expert could expect to do. He did the short ninth hole in 2.

From the beginning he applied himself to the ball; intently, continually. He didn't stop to think of his score. When he did he had Mr. Hammond several holes down.

The President covered the first nine holes in 47. At Myopia, that is good work for any one his size. He was then 3 up on his opponent. His bright young caddy was ready to bet some trifle with the youngster who carried Mr. Hammond's clubs that the President would play the 18 holes under 100.

But the President didn't do so well later. He didn't travel home as fast as Mr. Hammond. Even the sprightliness of his quick-eyed caddy couldn't make him keep Mr. Hammond's pace the rest of the course. And to the caddy's credit it should be said that the President did not lose a ball or have to wait once during the whole round. But somehow his ball didn't eat up the wind in a manner that permitted him to make any permanent gain, or to even hold his advantage. His score for the second nine

holes was 62. His total was 109. That was better than most of the caddies had guessed. It was a very good performance by the President. He had done very well indeed and should have felt pleased. And, doubtless, he did feel pleased.

Mr. Hammond seemed to depend for his own score upon his work on the putting greens. They were in splendid condition, and whenever he reached the edge of a green he either holed out or ran his ball up dead to the hole. At the end of the round Mr. Hammond finished "even" with the President.

The President plays golfs with a baseball stroke. Like so many other golfers who have played baseball, he brings his old stroke with him to the links. His stroke is not Scotland's bonnie swing. It is not the stroke that comes thru with a grand sweep and finishes with the club high in the air and with the wrists taut. It is the short swing of the baseball bat. The President is a good example of the ball player who, having taken to golf, plays his golf in a baseball way; just because that way comes to him easily and feels natural and because golf can be played that way almost as successfully as in the Scotch way.

The President stands rather erect when about to make his shots. He keeps his head still; consequently he easily keeps his eye on the ball. He does not send his club back far. He goes straight thru the ball. He rarely misses a ball. And when he has given the ball its smite and sent it sailing on its way he is done. He makes no after poses. Neither before his stroke, nor after it, nor at any other time is there any "gallery" play about him.

On the putting green he also stands rather erect. He putts well. He grips the club firmly with his right hand. He does not slice. Occasionally there is a slight pull in his play, but that would hardly be called a bad fault. He covers the Myopia course in something under two hours. That means good going. In short, he is a very good golfer indeed. He may be expected to hold his own on any green anywhere, no matter how expert his companions.

Just how the President covered his distances may be judged from his score. It follows:

Hole.		Yards.	Strokes.
1.	First	240	4
2.	Lookout	455	6
3.	Punch Bowl	250	5
4.	Mile River	360	6
5.	Lone Tree	410	7
6.	Brook	270	5
7.	Myopia	495	6
8.	Prairie	485	6
9.	Bullrushes	140	2
10.	Alps	400	7
11.	Road	320	6
12.	Valley	415	7
13.	Pond	320	8
14.	Ridge	350	5
15.	Long	520	8
16.	Paddock	265	5
17.	West	380	8
18.	Home	350	8
	Totals	6,335	109

BEVERLY, MASS.

To Another Helen

(After Edgar Allan Poe)

BY EDWARD N. POMEROY

THERE have been countless Helens since
Old Troy town's towers in blood went down;
And beauty has brought many a prince
The ties of honor to disown
For gallantry's renown.

And Helens oft and oft have won
The homage of the poet's heart,
And led his aspiration on
And up, where Genius dwells apart,—
A mark for s'ander's dart.

But, Pallas-like, I see thee stand
With serious, introspective gaze,
Athena's bounty in thy hand,
Whose purpose only wisdom sways,
And never blame or praise.

Ah, better such a life, where come
The outward calm, the inward peace,
Unvext by passion's fret and foam,
Than the long "glory that was Greece
The grandeur that was Rome."

WELLESLEY, MASS.

His First Circuit

BY ALEXANDRA WATSON

THE Rev. Gregory Walsh had entered on his first ministerial charge and had considerable satisfaction in finding himself installed in a fashionable seaside town, at once a stronghold of wealth and Methodism. His was, of course, the smallest and poorest church in the circuit, but he often preached in the luxurious pulpits of the fine central churches, from which he dominated a congregation comfortably worshiping in cushioned pews and eminently well dressed and prosperous looking. He felt at home in those pulpits—these, he believed, were the congregations to which he was most fitted to minister, congregations capable of appreciating a discourse in which his poetic and histrionic talents had free play, assisted by his delicate features and fair hair. That hair was always an asset in the production of an effect. His mother had once fondly remarked what an impression of earnestness was produced by the quick movement of his slim fingers thru his forelock, and a gesture which was at first one of nervousness had become one assiduously cultivated.

Not that the Rev. Gregory was obviously vain and self-sufficient; his little vanities and secret conceits were as truly a part of him as his Grecian nose and sentimental blue eyes. They had been bred in him from infancy by two doting parents, of whom he was the only child, nurtured later by teachers and professors, ravished by his plastic docility, and good-humoredly tolerated by his companions, who, after dubbing him "Miss Mary," left him in a comparatively peaceful enjoyment of his good opinion of himself. For he was capable of inspiring affection, warm enough if not very deep; his manners were naturally kind and gentle, and he scrupulously avoided hurting any one's feelings.

Thus he had reached the age of twenty-five with an undisturbed belief in himself; no shocks had shivered his mental calm, no fierce temptation scorched his moral complacency. Rocked in the cradle of Methodism, he had early been set apart for the ministry, and by his unquestioning acceptance of the faith and immaculateness of conduct had given no reason to doubt that he was one of the elect. He had certainly never doubted it himself, and entered on his first charge with an inward conviction that it was the first rung in a ladder of which he was destined to climb to the top. It seemed to him most propitious that he should have been sent first of all to a circuit whose importance in the denomination made it easy for him to keep himself always before the Conference, and one in which the absence of genuine poverty left him ample leisure to elaborate and retouch the graceful periods of his sermons.

For they were assuredly graceful, those sermons, as befitted the stately churches and cultured worshipers; they extolled the virtues which bring people to honored positions and cushioned pews, decried with an evident sincerity all doubt and vacillation in belief, and were always rounded off by some well chosen and eloquently delivered quotation from the poets. They were written for his appearances in the central churches, but rehearsed in advance in his own, when, considering the nature of his congregation, a few anecdotes were added, and an "appeal" took the place of the final quotation. The Rev. Gregory knew himself to be strong in "appeals." Leaning well over the pulpit, with his slim, white hands extended in a supplicating gesture, and his dreamy blue eyes fixed on the least well-dressed part of the congregation, he exhorted them to accept the salvation without which the virtues round which his discourse had poetically played were unattainable, or, if by self-righteousness attained, of no eternal efficacy. He felt thrilled by his own eloquence, and never doubted but that his emotion was fully shared by his hearers.

Evidences of his popularity were indeed not lacking; his easy good nature made him welcome in poorer homes, while among the well to do members of

the central churches he received all the petting and adulation which his experiences in life had led him to expect.

It was perhaps because he found a different atmosphere there from the one to which he had so long been accustomed that in the second part of his three years' ministry he took to frequenting the home of an artisan, Steven Grayam, who, with his sister, formed the most cultured members of his own particular flock. Grayam was a skilled worker in silver and a self-educated man. He lived with his sister Joan, whom he idolized, and for whose education he had made many sacrifices. She had been graduated with honors, and was at the time of the ministration of the Rev. Gregory head mistress of the largest public school in the town. She might have been in the high school, but had deliberately preferred board school work, and, in spite of her youth—she was only twenty-three—had already made her influence felt in the district from which her pupils were drawn.

Reserved in general, but passionate when roused to argument, concentrated in her aims and thoro in her profession, Joan Grayam produced an impression of strength and independence. It was almost in spite of herself that she was attractive, for, altho scrupulously neat in her person, she had the utmost contempt for feminine wiles and weaknesses. Her slim, alert frame, fine dark eyes and abundant black hair crowning a broad, smooth brow gave her, however, a distinction which set her apart from the conventional run of young lady worshipers in the Methodist circles, and gained for her the honor of the Rev. Gregory's especial interest.

Not that the Rev. Gregory admitted at first that he had any special interest in her; he attributed his frequent visits to his care for the soul of Steven, whose theology was marked by disquieting symptoms of breadth. What Miss Joan's thoughts and beliefs were it was very hard for him to fathom, for she had very little to say to him and often went out and left him alone with her brother. This he put down to a natural womanly reserve, and feeling of timidity in the presence of one of a superior station to her own—an attitude which subtly flattered him. She never gave an opinion unless asked for it, and not always then, but when she could be brought to voice her ideas she did so with knowledge and conviction, impressing the Rev. Gregory with the extent of her intellectual acquirements. He secretly longed to discuss his sermons with her, to hear her praise them; but tho he angled for some expression of approval nothing came, and he was fain to believe that with her keen sense of the fitness of things she considered any such comment on her part as an indiscretion, if not an impertinence.

It was this reserve, this inscrutableness, joined to her accomplishments and exterior attraction, which, as time went on, more and more piqued the Rev. Gregory's interest. He found himself constantly thinking of her, composing his sermons for her and delivering them with an eye to her approbation, while the number of pretexts which he found for calling on her brother did credit to his imagination. As his three years' term wore on it began to be a question with him how he could accommodate himself to a new sphere in which this secret but absorbing interest would have no part—this sharp savor be absent from life and work. The question in time suggested an answer, a means by which the new sphere and the old attraction could be combined. He toyed with the suggestion as one toys with dreams which can never be realized, for was there not the status of his family to be considered, and his position in the ministry? The suggestion, however, grew to the size of an obsession, and to reconcile it with the foregoing considerations he dwelt upon Miss Grayam's university degree and the advantage to a minister of a clever and cultured wife. Steven was a superior fellow, too; he would not disgrace his brother-in-law. The Rev. Gregory was not mercenary; his father was in a prosperous position and made him an allowance which, with his stipend, assured him a very comfortable income; it was not necessary, therefore, for him to choose a wife with money. Indeed, in his scheme of life it pleased him better that his wife should owe everything to him than that he should owe anything to her; it was with his own

wings that he wished to soar. Then—as no motives are quite unmixed—he reflected how much to his advantage it would be to go to his next circuit as a married man: it would insure him a furnished house and a more important charge.

All these thoughts and reflections simmered slowly in his mind until one day they reached boiling point, and he set off to the Grayams' house with the intention of asking Miss Joan to be his wife. His decision arrived at, he felt no further qualms; nothing but a pleasurable anticipation, a comfortable enjoyment of the feeling of his disinterestedness and a quickening of the blood at a delicious vision of shy, surprised joy in Miss Joan's fine eyes—her dark head pressed against his shoulder. He had chosen a moment when he knew that Steven would be at home and Miss Joan expected shortly. He would act with the same correctness that would be required in suing for the hand of a lady in his own station, and for form's sake ask permission first of the lady's nearest relative.

Steven received him with his usual cordiality. He was a finely set up man of about thirty, with a quiet dignity, a thoughtful brow and a mild light in his brown eyes which contrasted sharply with the hardly veiled vivacity which gleamed in those of his sister.

The Rev. Gregory came quickly to the point.

"Miss Grayam is not yet at home?"

"No, but I expect her every minute."

"It is for her that my visit is primarily intended, but I should wish first for you to know and approve its object. I have decided to ask her to be my wife."

The amazement in Steven's mild eyes did not cheat the Rev. Gregory of the effect that he had expected to produce.

"Your wife, Mr. Walsh!" he exclaimed. "You amaze me. I am sure she has never dreamt of such a thing."

"No, I expect not!" returned the Rev. Gregory, smiling with a but half-concealed complacency. "But I have given the matter my most careful consideration, and am convinced that under guidance she will make an admirable minister's wife."

"Joan—a minister's wife!" went on Steven, still looking completely taken aback. "Oh, I think not, Mr. Walsh; I really think not."

"Allow me to differ from you," smilingly returned the Rev. Gregory. "Her gifts under God's grace can be admirably utilized in His service."

"But Joan!" exclaimed Steven, a fugitive gleam in his eyes. "Have you had any opportunity of gauging her feelings on the subject?"

"It is that opportunity that I seek today," replied the Rev. Gregory amicably, in a tone which suggested that the interview, tho necessary, was only an agreeable formality. "You can understand that it would have been quite contrary to my character and Christian profession to make any advances until I was quite decided as to my ultimate intentions."

Joan's key was heard in the latch. Steven looked agitated. The Rev. Gregory said hurriedly: "I know I can count on your approval, and now will you leave me alone to meet her." He pushed Steven gently toward the door, and the latter, seeming suddenly to have made up his mind as to his course of action, rapidly crossed the narrow passage and disappeared upstairs. A moment later Joan had entered the little sitting room.

Her rather pale face was flushed by a quick walk; her lithe young body seemed to the Rev. Gregory more intensely alive than ever; her fine dark eyes shone lustrously.

She looked surprised to see him there alone.

"Good afternoon, Mr. Walsh," she said, shaking hands in her usual reserved fashion. "Isn't Steven here?"

"Yes—that is, he is upstairs," he replied, assailed suddenly by a feeling of nervousness.

"Upstairs?" said Miss Joan with a perplexed air. "Doesn't he know you are here? I will call him."

"No, no," cried the Rev. Gregory hastily. "He knows I am here. I asked him to go—that is—I came to see *you.*" He made a great effort to regain his full composure; his ministerial dignity, if nothing else, required him to cut a worthy figure on such an auspicious occasion.

"You came to see *me?*" repeated Miss

Joan, slowly drawing off her gloves with the same air of surprise. "Is it about the singing practice?"

"No, Miss Joan," said the Rev. Gregory impressively. "It is about a much more important matter. I have come to ask you to share my life—my ministry."

Her lips parted; her eyes took on a fixed expression of amazement. She moved a few steps further from him, then answered with a studied air of calm.

"You must know that such a thing is quite impossible, Mr. Walsh."

"Oh, no! I do not believe it impossible. You underrate yourself. I can understand that such an idea seems new and strange to you, but I have thought much before coming to this decision, and believe that under God's guidance and with my help you will make a worthy minister's wife. Besides I need you—I want you—I love you."

He spoke with genuine fire and sincerity, only dimly feeling in his fervor that he was acquitting himself remarkably well.

Joan's dark eyes were flashing strangely; it was evident that she retained her calm only by an effort as she replied in a tense voice.

"How can you love me?—you don't know me. It is not love that you offer me. True love, like true goodness, is known by its humility, and you come to me like a conqueror."

A painful flush dyed the Rev. Gregory's fair skin.

"You don't understand me," he faltered, quite taken aback in his turn. "I make no account of myself, but only deem it a privilege for any one to be called to take part in God's ministry."

"God's ministry! *Your* ministry, you mean. Well, I *despise* your ministry." Her cheeks were carmine, her eyes a flame; every line of her straight, alert figure defied him.

"Miss Joan," he stammered, "you can't mean that! You have never given me any reason to believe——" He stopped, daunted by the fire in her eyes.

"No, I have never given you any reason to believe anything—least of all that I would ever dream of marrying you. If you had been more intelligent, less wrapped up in yourself, you would have felt that I disliked you—noticed that I avoided you."

"I never dreamt of such a thing!" he exclaimed with such a naïve sincerity that Joan laughed out scornfully:

"No, you are capable of having believed me crushed by a sense of your superiority; of having thought your visits here a condescension, your friendship, perhaps, an honor to Steven—Steven, a man so immeasurably your superior, intellectually and spiritually, that if you had had an ounce of comprehension of the true values of things you would have sat at his feet during these last three years and begged to be taught of him. It is to him that you owe it that you have never heard before my thoughts about you. He knows how passionate I am when roused; he besought me to restrain myself in your presence, to avoid touching on burning topics. He wished to spare you; he has a kind of pitying affection for you, believes you, in his gentle optimism, capable of better things, your soul stifled only by an unfavorable environment. But now that you have goaded me to speak, I will tell you the truth about yourself as it appears to me; it is perhaps the first time that you have heard the naked truth, and it may be the last." She paused, struggling for some measure of calm, passion in her eyes and voice, and quivering thru her taut frame.

"Go on," said the Rev. Gregory in a low voice, his lips trembling, all his composure and self-confidence fled.

"You are of those who bring Christ's gospel to shame in the eyes of the world. Your ministry, as you call it, is in direct opposition to His spirit. You patronize the poor, you truckle to the rich—you are a time server, and the more deadly dangerous to the cause of Christianity that you are unconscious of it—too blind, too complacent in your egoism to be ever conscious of it. Oh, I have heard you in the central churches, with what tact, what delicacy of feeling you preach to the prejudices, the banking accounts of your congregation—never to their naked souls, steeped in a lethargic self-righteousness. Tell me—was Christ ever tactful, ever afraid of hurting people's feelings? Religion is a sword, or it is a sham. Ah! don't call yourself a

minister of Christ! The only thing that you minister to is your own vanity." She stopped again, setting her teeth, as if afraid of the lengths to which her scorn would carry her.

The Rev. Gregory stood as one paralyzed, his hands clenched, his eyes cast down. As she paused he looked up to see if she had finished—if he might escape.

Some chord of remorse seemed to thrill thru the girl's anger. "I won't call you a hypocrite," she went on, a trifle more gently. "You are not consciously that, nor are you wholly insignificant as a preacher; you pose to yourself as much as to the world; you have a fatal fluency which is your undoing, but perhaps—perhaps, if the true significance, the awful responsibility of your calling, could by some marvelous means of grace be borne in upon your soul and you would go down into the depths, learn all the awful degradation, the hopelessness of the world's destitute, and then come back, your lips touched as with a live coal from off the altar, and bring a message to the rich which would tear the scales from their eyes, make them understand the tremendous obligations to which their religion binds them if it is worth anything at all—perhaps then—then you could be a great preacher—become a minister of Christ, a chosen vessel. Steven believes it possible; I wish, I wish *I* could."

Then as he answered nothing, only stood very still, very pale now, his eyes as if fascinated, fixed on her, she finished off brusquely.

"There—now I have done. I don't know what you think of me, and it doesn't matter. I had to say it. As you are going away so soon it will be easy and more agreeable for us both not to meet again."

She turned away, trembling with the reaction of her vehemence. He took up his hat, stood an instant irresolute, and then nervously, timidly, held out his hand.

Wonderingly, she extended hers; he wrung it strenuously, and saying in a low voice "Good-by, Miss Joan," hastily left the room and the house.

Joan remained motionless for a few moments; then when a step was heard in the passage and Steven entered the room she ran up to him, half-sobbing, and wound her arms round his neck.

"Steve," she cried, her dark head nestling on his shoulder, "did *you* think I would make a good minister's wife—*his* wife?"

He held her to him, patting her hair.

"Steve, you were right to warn me against letting myself go. I was terrible; I lost all control of myself. I said all the things I have been thinking during the last three years—you know what they were. I was very hard, unjust perhaps, but he came to me with such smug assurance. I should not have minded so much for myself, but *some* doubt, *some* hesitation, was due from him to *your* sister, from him who is as far below *you* in moral attainment as I, in my uncharitableness, am below St. Paul."

"Hush, hush, dear," said Steven, holding her more closely to him. "You are overwrought, and your love for me blinds your judgment. He has many excellent qualities, poor lad, but perhaps he needed just this. I might have warned him how it would be, but he is going so soon; it was a last chance of perhaps opening his eyes to the truth."

Meanwhile the Rev. Gregory Walsh was making his way home thru the twilight—humiliated, tumultuous, tortured—an awakened soul.

It was a surprise to many, and a keen disappointment to his parents, when, at his own request, the autumn conference appointed him two months later to a mission in a city slum.

MONTREUX, SWITZERLAND.

Literature

Tales of Travelers

Mr. Max Vernon's "new introduction to a well known city," as it is called in the subtitle, is a recommendable guide to the beauties and treasures of the city on the Arno.[1] Discussing not pictures and churches alone, nor literary relics and historical associations, but also such essential matters (to the leisurely tourist) as marketing and domestic service, its text is penetrated by a quick sympathy for the men and manners of Florence, as its pages are illustrated, also, with numerous photographs and pleasing drawings. Mr. Vernon's telling of the often retold tale is no less pleasant; tho we prefer the excursions to the chapters devoted to that city which he himself denominates, "Poor overwritten Florence!" Indeed, Mr. Vernon devotes a whole chapter to "Books about Florence"; and still further increases his book's usefulness in adding an index.

From Florence it is something of a jaunt to Pompeii—painted, this time, by Alberto Pisa, and described by W. M. Mackenzie.[2] In England, this series is announced as *Black's Beautiful Books*. We must avow ourselves to be rather bored by these monotonously vivid picture books in color, but the present example is an excellent one of its kind; it is capable of giving much pleasure as birthday gift or Christmas present. In the preface we are warned that here "is neither a guide book nor an archeological treatise." The fact is, these books whose subject is painted by Blank, and described by Double Blank, are a rather baffling form of literature—like the dramatic production which is neither comedy, tragedy, nor farce, but is despairingly baptized as "a piece in three acts." We have many such "pieces" nowadays, and many such volumes as the *Pompeii*. This particular volume is not a little heavy.

Another of these imported travel books is C. E. Hughes's *Book of the Black Forest*.[3] Here the many illustrations and the two sketch-maps (of small practical use) are by the author himself. The record of a somewhat bookish traveller's impressions, gathered in the course of more than one holiday visit, the book includes descriptions of the Kinzig and the Morg Valleys, Baden-Baden, Wildbad and Pforzheim, the Hornisgrinde, the Kniebis, the environs of Achern, Allerheiligen, and a great many other places with cacophonic names. It is likely to be a most useful book for the American tourist who plans a walking tour (or even some other kind of journey) to the scenes enthusiastically described. Even the Black Forest is coming to be a hackneyed place; yet it is possible for Mr. Hughes to impart to his travels a note just personal enough to relieve us from the suspicion that here is a compilation. The drawings are quite undistinguished; yet on the whole they justify themselves.

Finally, in another picture-book (the colored pictures are this time a Mr. Quinton's work), A. G. Bradley writes pleasingly of the Avon Country.[4] This amiable cicerone hopes to persuade the American who is bound to visit Stratford to extend his pilgrimage "a little farther, and make time to descend the valley of the Avon with as much leisure as may be to its mouth at Tewkesbury, and gain thereby as felicitious a glimpse of genuine, unspoiled rural England as could anywhere, perhaps, be found." We recommend both the little journey and the rather substantial book—which is discreetly historical, and highly informing, without being in the least awe-inspiring. Would that there were more Mr. Bradleys among the frenzied makers of sublimated guidebooks!

Researches in Egypt*

Professor Müller is one of the American Orientalists whom we owe to Germany. He is one of our four or five Egyptologists, but has devoted his studies particularly to the relation of Egypt to Europe and Asia. With this in view he has made very careful and minute study of both the inscriptions and the pictured representations of the Egyptian monuments. This special geographical and ethnological study he has pursued since his first important volume *Asien und Europa* published in Germany before he came to this country. His communications to German Oriental journals appear constantly. The present volume is not the first from his personal studies in Egypt for which we are indebted to the Carnegie Institution, that on the treaty with the Hittite king being of special interest.

With some minor fragments the chief interest of the present volume is with the decorations in two tombs of the time of Thothmes III, of the Eighteenth Dynasty, 1500 B. C., and Palestinian and Syrian victories of Ramses II and Ramses III. The latter are of value by way of comparison with the better known figures of Ramses III in his capture of Kadesh, and they bring new light in the investigation of the Hittite problem, and, just now, of the nature and strength of the Mitannians, who were rivals of both the Hittites and the Assyrians in the second chiliad B. C. and whom we are now beginning to think of as Aryans. Professor Müller's study concerns their appearance, their weapons, their dress and their art generally. But the decorations in the two tombs are perhaps of most value, as they consist of objects brought as tribute, choice vases, weapons, precious stones, garments, and even a bear from the forests of Lebanon. Our author's task is, with the aid of the epigraphs, to assign each to the region from which it is brought, whether from Cyprus, or even Greece, or from Palestine, Arabia, Syria, Cilicia or the Hittite or Mitannian region further to the east. All this requires very careful, long study and experience, so as to readily identify local styles of ornament whether on objects of art or in dress, with constant care not to be deceived by the errors of Egyptian artists who copied conventional forms and blundered carelessly as to the provenience of objects of foreign manufacture. No one has made such study more carefully than our author, and he is not hasty in reaching his conclusions, leaving many points in doubt where a less competent scholar would have jumped to a conclusion. Such a study is of great value, and the students of ancient art are quite too few. One must constantly check his conclusions or verify them by comparison with the excavated treasures of the earliest Greek, Cretan, Cypriote, Canaanite and Hittite regions. It is fortunate that the Carnegie Institution has not neglected these fields of archeology. We observe that Professor Winckler, the German Assyriologist, is just now resting conclusions as to the origin of Babylonian culture on Pumpelly's volume on Turkestan not long ago issued by the Carnegie Institution; and both Professor Sayce and our present author hasten to make use of Dr. Ward's "Seal Cylinders of Western Asia," issued only a few months ago. One would be somewhat bold to question Professor Müller's conclusions, but on a few unimportant points we raise a doubt. On page 5 and elsewhere he speaks of the Phenicians where we would call them Canaanites, as the Phenician state was not developed until some centuries later. Professor Müller is right, page 10, in presuming the tree of life is Asiatic in origin, and that we have no certain example of it before the Eighteenth Dynasty, but he has missed the earliest dated examples, its appearance on the garments of the Babylonian king Marduk-iddinakhi, in the twelfth century B. C. Undated cases are probably much earlier. We should judge, page 46, that the figure carries *two* weapons, a club and an ax, and not a single composite weapon. Hittite figures of gods carrying two or more weapons in the same hand are not infrequent. These various Asiatic weapons are of great interest, such as the weapon which is very doubtfully a throwing

*Egyptological Researches. Vol. II. Results of a Journey in 1906. *By W. Max Müller.* 4to. Pp. 188 and 47 Plates. Washington: The Carnegie Institution.

stick, and the battleax. Our author sees the ax in cases in Babylonian cylinders where we should see the serpent weapon of the gods, with the neck distended, and the head worn off. The history of the ornaments on pottery and silver vases, the scroll, scale, cross, etc., is of very great importance for the origins of art, and we have here good material, carefully given and hitherto inaccessible. But many questions are yet unanswered.

Promenades of an Impressionist. By James Huneker. New York: Charles Scribner's Sons. $1.50.

Mr. Huneker, who evidently aspires to write of all the seven arts, has now followed his scintillating books on music, literature, the drama, with one on certain practisers of paintings and sculpture that is almost as brilliant — almost, but not quite. The many short papers making up the volume appeared first in the New York *Sun*, and they seem to be reprinted pretty much without revision. In a "Coda" to his book Mr. Huneker says: "If these opinions read like a medley of hastily crystallized judgments jotted down after the manner of a traveler pressed for time, they are none the less sincere." Their sincerity need not have been impaired, but the form of their expression certainly could have been improved and, one is fain to believe, the force of their appeal increased, by the judicious use of the file, and even of a screw-driver to tighten up the joints. The writer's strongly individualistic style, often jerky and sometimes disconcerting, is here vitiated by the frequent employment of the split-infinitive (surprising banality for a disciple of Flaubert!) and other careless and clumsy locutions. But the book is both interesting and instructive. Central in his garden, "a straggling weedy plot," which the author traverses with delight, is "the image of the supreme illusionist of art, Velasquez." There are memoranda also of Botticelli, "El Greco," Goya, Rembrandt, Hals, Watteau and Chardin, among the older masters; and, among modern men, of Rodin, Monticelli, Carrière, Degas, Cézanne, Monet, Renoir, Manet, and Toulouse-Lautrec; of the Spaniards, Fortuny, Sorolla and Zuloaga; and of a group of workers in black and white, from Piranesi and John Martin the mezzotinter to Brangwyn and Zorn. About some of these men this is the first book to give biographical details in English. Concerning all of them Mr. Huneker has opinions of his own, tho he quotes freely from other critics. Frankly, yea proudly, an impressionist, he is also a "comprehensive"—as Lombroso called those with the sixth or synthetic sense. He refuses to play the game according to the rules of Lessing and his *Laocoön;* but indulges in erratic symbolism and confuses terminologies, confessedly to "strike sparks." And in the slang phrase of the day, "he gets away with it." Thus, of Rodin:

JAMES HUNEKER.

"Let us drop this old æsthetic rule of thumb and confess that during the last century a new race of artists sprang up from some strange element and, like flying-fish, revealed to a wondering world their composite

structures. Thus we find Berlioz painting with his instrumentation; Franz Liszt, Tchaikoffsky, and Richard Strauss filling their symphonic poems with drama and poetry, and Richard Wagner inventing an art which he believed to embrace the seven arts. And there is Ibsen, who used the dramatic form as a vehicle for his anarchistic ideas; and Nietzsche, who was such a poet that he was able to sing a mad philosophy into life; and Rossetti, who painted poems and made poetry that is pictorial. Sculpture was the only art that had resisted this universal disintegration, this imbroglio of the arts. No sculptor before Rodin had dared to break the line, dared to shiver the syntax of stone. For sculpture is a static, not a dynamic art—is it not? Let us observe the rules, tho we preserve the chill spirit of the cemetery. What Mallarmé attempted to do with French poetry Rodin accomplished in clay. His marbles do not represent but present emotion, are the evocation of emotion itself; as in music, form and substance coalesce. If he does not, as did Mallarmé, arouse 'the silent thunder afloat in the leaves,' he can summon from the vasty deep the spirits of love, hate, pain, despair, sin, beauty, ecstasy; above all, ecstasy. . . . Love and life and bitterness and death rule the themes of his marbles. Like Beethoven and Wagner, he breaks the academic laws of his art, but then he is Rodin, and where he achieves magnificently lesser men would miserably perish. His large, tumultuous music is for his chisel alone to ring out and sing."

Rest and Unrest. By Edward Thomas. New York: E. P. Dutton & Co. $1 net.

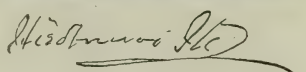
If good Americans will overlook some curious grammatical constructions to be found in the early pages of Mr. Thomas's little volume, and so get into the heart of the nine sketches and studies that have to do with Wales and the west of England they will find the volume exceedingly worth reading. One stumbles a little over the opening sentences. This, for instance: "Alice Lacking had reached an age when already one man had confided *in* her his admiration for one of her friends. . . ." And this, in the next sentence: "In comment she allowed herself one of those faintly twitching smiles which *seems* to most people exquisitely tender. . . ." And this, on page 7: "Her flesh, her brain, her nature *was* sopped in spring like bread in wine." The key to the spirit of the studies of character and scenery is to be found in the last sketch of life in Wales: "The Queen of the Waste Lands." The atmosphere in all is somber, suited to a land of wide moors or of mountain recesses, where the mornings are late, the evenings early—lands from which the active life of England is excluded, the gloom shut in; a land where the poet may be happy, even while he is miserable, but the man without imagination can find refuge from insanity only by resorting to the vestry or the conventicle. In describing this sort of waste land, the author is a poet in his choice of words a painter in his sense of color, an analyst in his power of segregating the elements which make up an unsatisfactory life, and an artist in recombining them in a manner so common nowadays among a group of writers both abroad and here in America. Too many of them are engaged in exploiting for the purposes of philanthropic resettlement the waste lands of the world. Mr. Thomas's work sometimes suggests such a purpose; but, on the whole, the reader will perhaps conclude that he has fallen into that manner because he finds that it is the fashion in England just now to do so. He is, at any rate, a poet and has glimpses occasionally of the poetry which may exist still among the "submerged tenth."

Legends of Mexico. By Thomas A. Janvier. New York: Harper & Bros. $1.30

Weird tales these, and some of them of a decidedly "creepy" quality. They are true examples of folklore—tales that have been built up by the common people thru many generations until somewhere they reached a relatively stable form. Antiquarians have learnedly discussed them, and novelists and poets have used them. But it is in their oral form that Mr. Janvier prefers them; and he has been fortunate in having them told him (or, in most cases, his wife) by believers. "In their written form," he writes, "they have acquired an artificiality that directly is at odds with their natural simplicity; while the sleeking of their essential roughnesses and the abatement of their equally essential inconsistencies and contradictions has weakened precisely the qualities which give to them their especial character and their peculiar charm." They are told in an inimitable manner—that of the credulous Mexican—corrected, if you will, by that of the somewhat incredulous Mr. Janvier.

EL CALLEJÓN DEL PADRE LECVONA

Copyright, 1910, by Harper & Brothers



Drawn by Walter Appleton Clark

Illustration from *Legends of the City of Mexico*, by Thomas A. Janvier

Prince Ito: The Man and Statesman. By Kaju Nakamura. New York: Japanese-American Commercial Weekly. $1.

The mighty man who carried out the original ideas of Kido, Okubo and others, added more of his own, and, with brilliant ability and untiring energy, put these ideas into living forms, incarnating in himself the New Japan, deserves and will yet have a detailed and comprehensive biography. Meanwhile, we are thankful for this popular manual of 114 pages. It pictures Ito as decidedly human. Part first tells of his early days and aspirations, his sailing voyage to Europe and his meteoric return to Choshiu, to dissuade his feudal lord from the insanity of war with Europeans in 1864. Part second pictures the Meiji era (1868-1909), and his official life, as administrator, father of the constitution, and guide and dictator in politics. Ito's private life, in certain phases, here frankly outlined, was not attractive, nor is it an inspiring story. Yet this is an illuminating and pleasing little book.

The Theory of the Theater. By Clayton Hamilton. Henry Holt & Co. $1.50 net.

The Theory of the Theater is a live book, tho not a permanent one. To be sure, its journalistic quality—its closeness to the actual season, and the season before, cannot obscure the vigor of Mr. Hamilton's attitude; but the absence of perspective is sometimes rather disconcerting; all the more so because the critic himself is so cocksure. Even in accepting, up to a certain point Mr. Hamilton's views, we are inclined to agree with Mr. Eaton, who, in *The American Stage of Today* discussed Mr. Hamilton's chapters as they first appeared in *The Forum*, and described their writer as one "who takes his own brains to the theater, but thinks nobody else does."

Travels in History. By Mark Twain. New York: Harper & Bros. 50 cents.

Mark Twain's Speeches. With a Preface by Mark Twain and an Introduction by W. D. Howells. New York: Harper & Bros. $2 net.

When Charles Lamb discussed *abiblia*, probably he was anticipating the publication of these so-called *Travels in History*, culled from the work of a great humorist, by a school superintendent, and by him "arranged for home and supplementary reading in the sixth, seventh and eighth grades." In Mr. Kendall's introduction he speaks a word for "vitality and reality" in books for children, as also for the genius of nationality; and, quotha, "In Mark Twain we have the national spirit as seen with our own eyes." When Mr. Howells wrote this somewhat difficult sentence, he was not, necessarily, thinking of *The Prince and the Pauper*, *The Yankee in King Arthur's Court* and *Joan of Arc*, which are the books upon which Mr. Kendall draws. The *Yankee* he praises as "a study of the opposed ideals of democracy and feudalism." This would have amused "one of the greatest American authors"; and how he would have delighted in all the obituary essays in the recent issues of the magazines! As for the *Speeches*, well adapted as some of these were to their occasions, one is tempted to prefer the frontispiece to all the other contents of the volume. This is a not very familiar portrait of the author whom we shall always remember —tho neither for his *Travels in History* nor yet for his oratory. These speeches are for that matter altogether brief; as specimens of spoken humor ever should be. It is a question whether he who delivered them would have favored their publication; or, publishing, would have acted wisely. Anent the first of them, good reading is furnished in Mr. Howell's contribution to the September *Harper's Magazine*.

Daniel Boone and the Wilderness Road. By H. Addington Bruce. New York: The Macmillan Co. $1.50.

To thousands of readers the story of Boone's career is one of never-failing interest. The name of Boone has been a noted one all over the world for nearly a century; and his personality has exercised upon many men, as it did on Lord Byron, a peculiar fascination. Mr. Bruce has retold the frontiersman's life carefully as to detail and in an attractive manner. He does not overrate his hero; he places Boone among the men of the time in a light and setting that will be approved by most students of history. He has also vividly and faithfully pictured the common life of frontier days. Incidentally, he has unearthed some evident records of the later life of John Finley, the frontiersman who induced Boone to make his first trip to Kentucky, and who accompanied him there, but of whose subsequent career historians have heretofore been silent. A map showing the old Warrior's Path and the Wilderness Road is given, but this is rather too small to be of value. The frontispiece is a picture of Boone, from the portrait painted by Chester Harding, in the hero's eighty-fifth year.

The Poetic New World. Compiled by Lucy H. Humphrey. New York: Henry Holt & Co. $1.50 net.

Uniform with the *Poetic Old World* is issued this new anthology of American place poems, with Walt Whitman's

"I hear America singing, the varied carols I hear,"

set upon the title-page as a motto. One is reminded, rather, of Mr. Bryce's query, "Where is your American poetry?" (which we quote from memory), in turning the pages of this really beautiful little book that contains, by the way, more than five hundred pages, and poems on American themes by such foreigners as Tom Moore, Lord Byron, Wordsworth, Thackeray and Stevenson. New England bulks conspicuous here; both in regard to places and poets. Thus Pennsylvania is accorded only passages from Whittier's *Pennsylvania Pilgrim* and Longfellow's *Evangeline*. Delaware has only a portion of Bayard Taylor's *Peach Blossoms* —but, then, Delaware is such a little State. On the other hand, some of the New England sites are celebrated by non-Yankee Americans; and there is nothing in its *genre* more delightful, in

Copyrighted by T. Gilbert White, 1909.

BOONE'S FIRST GLIMPSE OF KENTUCKY.

all this volume, than Bret Harte's dainty *Newport Romance*—

"Her lover was fickle and fine and French."

Where tradition has touched this young land, then, poets of almost all the States have done their best by their subject. It is the absence of tradition even conceivably romantic that has handicapped our regionalists. Thanks to Joaquin Miller, Bret Harte, and others, the Far West makes a better showing than any part of the land except New England; tho here too it is only a relatively richer tradition that makes the verses possible. As for the New England pages, most of them are banal enough, when all is said and done; it is in quantity that they chiefly excel. In a newly published volume of Hawthorne letters, the romancer writes:

"Whittier's book is poor stuff; I like the man, but have no high opinion either of his poetry or prose."

This in the early fifties. The statement might be extended, in its application, to other excellent New Englanders. Thin, indeed, is their product—even when garnered by a loving hand. As for New York's share, we are chiefly impressed by the desperate effort that has been made in these last few years to catch the elusive romance of the modern maelstrom, so far as it really exists. The present anthologist unblushingly passes over Nat Willis's one really beautiful little poem,

"The shadows lay along Broadway,"

and has found space to include, besides Walt Whitman's always admirable *Mannahatta,* a portion of Richard Hovey's too little known *Winter Thought of Dartmouth in Manhattan,* Mr. Le Gallienne's *Brooklyn Bridge,* E. C. Stedman's *Pan in Wall Street,* such verses as Mr. Firkins's *On a Subway Express,* and Mr. Roberts's *On the Elevated Railroad at 110th Street.* We sing the cacophony of our transportation systems in the wilderness of novelty, which we name New York; and perhaps in time these things will, indeed, savor of romance. It is almost too soon to know. This is, in any case, an entertaining little book for library or for railway journey; disappointing in most respects except its mere form as a book, but opening up wide vistas of reflection and examination.

Literary Notes

....The third volume of Thoreau's writings to be edited and illustrated by Clifton Johnson is *Walden* and is to be published by Thos. Y. Crowell & Co.

....On the Henry Holt & Co. book-list for October appears a translation of Henri Bergson's theory of life and intellect under the title, *Creative Evolution.* The rendering is by Arthur Mitchell.

....The Abbey Theater Company of Dublin seriously contemplates visiting the United States during the coming season with a repertory of plays by Lady Gregory, W. B. Yeats, and the late John Synge.

....The French Academy has now reached the letter "E" in its revised dictionary of the French language. Twenty years having been spent over the letters A, B, C, and D, the completed portion of the work is already out of date.

....Montrose J. Moses is the writer of *The Literature of the South,* a study of the subject beginning with Captain John Smith and coming down to our own Foxes and Pages. The book is promised for fall publication by Thos. Y. Crowell & Co.

....Henry Frowde announces for autumn publication *The Oxford Book of Italian Verse, XIIIth Century—XIXth Century,* edited by St. John Lucas, who also selected the poems included in the *Oxford Book of French Verse.* Upward of a hundred Italian authors are to be represented.

....The London booksellers, the Leightons, offer for sale the rare and complete *Book of the Apocalypse,* issued by Broch about 1430. This perfect example of a block-book they offer for $18,000—and add to the bargain the famous Latin Bible, from the same establishment (1475), formerly owned by William Morris.

....The prize play written for production at Stratford-on-Avon in the Memorial Theater by Mrs. Lionel Marks (Josephine Preston Peabody), of Cambridge, Massachusetts, was performed some time since in the presence of an enthusiastic audience. The London critics consider the piece imaginative and, in a literary sense, pleasing; but deficient in dramatic power. Meantime, the Stratford summer performances in the Town Hall began with the presentation of the freedom of the town to Mr. Benson—Mrs. Marks's producer and interpreter. The last honorary freeman of the borough was Edmund Garrick.

....Duffield & Co. are the publishers of the new uniform edition of Fiona Macleod (William Sharp), the price of which is $1.50 per volume. We have before us two volumes—*The Sin Eater* and *The Washer of the Ford,* in one single volume, *The Dominion of Dreams* and *Under the Dark Stars,* in another. The first of these contains five tales not included in the original editions. A brief note by Mrs. Sharp is added to each volume. These contributions to Celtic literature are too well

known to demand criticism at the present moment; it is enough to add that they are presented in a form altogether worthy.

....With the growing interest in recreation and out-of-door play for children, such a volume as the *Proceedings of the Third Annual Playground Congress* and *Year Book of 1909*, issued by the Playground Association of America, is of considerable value to the intelligent play director, the recreation center principal, the settlement worker and the various persons who superintend and manage systematic recreation. The volume includes a tentative report of a committee on a normal course in play, discussions in folk dancing, athletics for boys, story telling and festivals, and other information and suggestive helps along these lines

....Before Colonel Roosevelt entered Africa, he was interviewed by a correspondent of the Paris *Journal*, at Naples. An entertaining interview was, at any rate, published in that newspaper; tho it was subsequently denied by the traveler. Now, coincidentally with the issue, thru Charles Scribner's Sons, of the "superb volume, *African Game Trails*," comes the publication of a book by that Naples interviewer, M. Jean de Bonnefon. We quote from page 203 of his work entitled, *Les Cours, l'église, et la Ville:* "M. Roosevelt vend ses articles, vend ses voyages, vend ses coups de fusil. Il met un taximetre au nom qu'il a rendu illustre." From fear of *lese majesté* we do not translate these daring sentences. We ask ourselves the question, however, does Colonel Roosevelt really use the taximeter spoken of? For *African Game Trails* is a beautiful volume in large octavo, and has five hundred and twenty-nine pages; to say nothing of fifty pictures of deceased fauna.

....In the flood of literature called forth by the current lectures and works of Dr. Arthur Drews, of Carlsruhe, denying the historical existence of Jesus, probably the most noteworthy reply is that of the nonogenarian Professor Dr. Chwolson, of St. Petersburg, entitled *Ueber die Frage, ob Jesus gelebt hat.* The author, who is the Nestor among scientific Talmudists, investigates the literature contemporaneous with the New Testament, especially the Rabbinical, and shows that the reports here found concerning Jesus and His work are exactly what in accordance with the canons of correct historiography could be expected. This *multum in parvo* is published as a good sized pamphlet by H. Haessel, of Leipzig. The same burning question has called forth an excellent work by Professor Johannes Weiss, of Heidelberg, entitled *Jesus von Nazareth, Mythuss oder Geschichte?* In a series of lectures the author handles with keen logic the objections to the historical existence of Jesus as voiced especially by Drs. Kallhoff, Drews and Jensen. The same author, in conjunction with his Heidelberg colleague, Dr. Grützmacher, has issued another more popular discussion of the same subject, entitled *Die Geschichtlichkeit Jesu.* Both of these brochures are published by J. C. B. Mohr, of Tübingen.

Pebbles

It has been observed that a certain Atchison man, who was married only a few months ago, sits around and mopes a good deal, and when any one tells how two can live as cheaply as one, providing the wife is economical, and really loves her husband, he says: "Yes, in a pig's left wrist!" Which has caused the men to imagine that he has come back.—*Atchison Globe.*

Joseph C. Thompson, Republican candidate for Governor of Alabama, was asked whether Roosevelt would be President again. His answer was this story:

An old darky servant, devoted to General Jackson, waited on him in the General's last hours. Right after the General's death a preacher asked Rastus if he thought Jackson would go to heaven.

"I doan know, boss, ef 'e'll go foah sure, but he can ef he wants to," replied the darky.

A Yorkshireman was standing next to a representative of the Red Rose on the second day of the Blackpool flying meeting, when he remarked: "I understand that justice is meted out very quickly in these parts."

"Quickly!" exclaimed the Lancastrian. 'I should think it is. Why, mate, only yesterday an airman fell out of his aeroplane, and he was tried and sentenced to six months in jail before he hit the ground."

"You don't say so! What was the charge?"

"Vagrancy; he had no visible means of support."—*Dundee Advertiser.*

THE PRESENT STYLE.

Mary had a little skirt
Tied tightly in a bow,
And everywhere that Mary went
She simply couldn't go.

—*Harper's Bazar.*

THE GOUSSLER.

(The goussle is a Russian musical instrument *and only six people know how to play it.*)

When father plays the goussle,
From distant parts and near
The neighbors come in swarms and some
Can scarce restrain the tear.
But others like the music;
They say it's simply grand
When father strikes up "Kelly,"
Or, "Let's Go Down the Strand."

When father plays the goussle
It hurts him, poor old dad.
His trill or shake makes father ache,
But on he goes, by gad.
It isn't everybody
Could stick it out like him.
But father's lungs are leather;
He's sound in wind and limb.

When father played the goussle
Last week before the Czar
His majesty screamed with joy and beamed,
And gave him a cigar.
He cried out, "Good! Encoreski!"
Would hear of no refusal.
Bombs fill the air. He doesn't care,
When father plays the goussle.

—*London Globe.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Biters Bit

THE rats that gnawed a file did not hurt the file, but their own teeth got ground down. Conspirators have seldom been more thoroly exposed than have those been who attempted to create a quarrel between President Taft and ex-President Roosevelt.

We do not suppose that Mr. Taft cared who should be chosen as temporary chairman of the New York Republican Convention, whether Vice-President Sherman or ex-President Roosevelt. Either would have been a natural choice, so far as distinction goes. Nor do we suppose that Mr. Roosevelt was greedy for the honor; it would add little to his sheaf of glory.

Yet to the bosses of the party, to the men who had so bitterly opposed Governor Hughes, who had been beaten by him again and again, but who had given him the kick of a mule just as he was to leave the service of his State to undertake the most exalted service he could do for the country, it did make a serious difference which of the two men should open the convention, make the keynote address and appoint the committees, particularly the committee on platform. Mr. Sherman they could control, but not Mr. Roosevelt. They knew that there were those in their committee, probably a majority of them, who wished Mr. Roosevelt chosen. So the "old guard" gave out that at their meeting no selection would be made, and that only the time and place would be settled. Thus they put others off their guard and sprang the unexpected motion to make Mr. Sherman temporary chairman and elected him over Mr. Roosevelt. They were glad to humiliate Mr. Roosevelt and at the same time to humiliate also Governor Hughes, whose reforms both President Taft and Mr. Roosevelt had endorsed.

But in order to secure votes in the committee for the Vice-President against Mr. Roosevelt, they represented that the President approved Mr. Sherman's election. They purposely misrepresented the President's position and action, and concealed from their associates the advice which he had given. His only object was to prevent a quarrel and secure harmony. For this reason he had exprest the positive desire that no action should be taken without consulting Mr. Roosevelt. They did not consult him; they kept the President's request a secret; they represented that he desired Mr. Sherman's choice, when Mr. Sherman's name had never been mentioned to him, and Mr. Sherman himself in the interview just before the meeting of the committee had not informed the President that he was to be a candidate.

The purpose of this miserable plot was a double one. In the first place it was to maintain their control over the party in their opposition to the direct primary system which they had been able to defeat in the extra session called by Governor Hughes; for they knew that the very effect of direct primary nomination was to eliminate boss control and give the power of choice to the people. Their other purpose was to make a break between the President and their enemy, Mr. Roosevelt. It looked likely to succeed in this respect. The press of the country believed that Mr. Roosevelt must break, had broken, with the President. The bosses were jubilant and truculent.

But at that moment President Taft

spoke out. He broke thru all their nets of lies. He told the people that he had never been informed of the proposition to select Mr. Sherman; that Mr. Sherman's name had never been mentioned to him; and that he had definitely asked them to consult with Mr. Roosevelt; and then he added that he still favored the progressive policy of Governor Hughes. He gave the documents. The conspirators were exposed, and were silenced.

So it was that the pack that went out on a hunt found that their game had turned sharply upon them. They tried to set the President and the ex-President against each other; but the result was that both President and ex-President were joined against them. They are already beaten, and all the revenge they can take is to knife their party on election day. But we think that their following will dwindle away. The party will be stronger in New York State for their defeat, and the expectation, even their own expectation, that the State would go Democratic, is much reduced by this sensational outcome. Mr. Roosevelt is now in the field to fight for progressive measures, and he has the President with him, and the people will be with him.

The Sibley Scandal

In Pennsylvania, there are only two known ways of enlivening a dull political campaign. One of these is to call a new party into existence, then fail to secure fusion with the other opposition parties, and finally to develop internal friction. This is the story of the Berry-Gibboney Keystone organization. The second recipe is to develop a few more scandals within the Republican ranks. The State Hospital fizzle at Rittersville seemed at first to have the makings of a scandal of this kind. Here is a property that has deteriorated even before it has been completed. But this variation upon the State Capitol robbery fails to awaken Pennsylvania from her lethargy. The figures of the "graft" were all too small.

It is dubious, even, whether the case of the Standard Oil statesman, Joseph C. Sibley, formerly Democrat, Populist, Prohibitionist, now "regular" Republican, will appeal to the constituents of the Hon. Boies Penrose as particularly interesting. For all that he has done is to secure renomination to Congress as a Cannon Republican on a platform of high tariff and a policy of electoral debauchery. The case is well summed up by the only Democratic newspaper published in Philadelphia:

> "After investing $42,500 in a Congressional nomination, Joseph C. Sibley startled the country by announcing that his heart would not allow him to incur the excitement of collecting the political goods for which he had paid, and he would therefore withdraw from the field. Astonishment over this announcement was shortlived, for it became known soon after that he had been arrested for debauching voters. Among other means he is alleged to have employed to convince the Republican voters that he ought to be the party candidate were cigars wrapped in two-dollar bills and then in tin-foil."

It would appear that Mr. Sibley's chief blunder has been the fact that his bribery was done upon a scale too obviously retail. Trained tho he was in the school of Quay, he is thus out of touch with the generous spirit of contemporary Keystone politics.

There is a bribery law in Pennsylvania which is intended to prevent bribery by limiting the purposes for which money may be spent at elections. But this case seems to show that it cannot be made effective. There ought to be a limit set not only to the nature of the expense, but also to the amount. That a candidate for Congress can spend over $40,000 for an office whose legitimate emolument in two years is only $15,000 is absurd and most suspicious. A case like this ought to remind every State legislature of its duty in this matter. Indeed, Congress may well consider it, for the election of Congressmen is a national affair; and before now Congress has controlled Congressional elections.

The New England That Was

"The passing of New England" is a phrase that always needs interpretation. New England is still on the map. Each succeeding census shows a continuing growth of New England's population. More vigouous is the growth of her industries. Her civilization, in the higher sense of the word, has probably not de-

teriorated, altho her political influence is not relatively so great as it was, and she no longer puts forth a literary product of international repute. The New England civilization is flourishing, too, thruout a broad belt of States stretching westward from the Hudson River to the Mississippi and beyond, where dwell millions of descendants of the Pilgrim and the Puritan stock.

Nevertheless, there is a sense in which it is true to say that the old New England is gone. If you seek New England people of English ancestry you must look for them today in the Western States, in the great cities of both the East and the West, and in the larger population centers of New England itself. The people of that older English blood are no longer to be found in considerable numbers on the New England farms. If you are spending vacation days at one of the old homesteads, well back from any railway or industrial town, you may hear, as you sit on the porch after dusk, the voices of men driving cattle or bringing in the loads of hay, and discover that they are talking in a foreign tongue. Some of them may be Swedes, or Hungarians, or French-Canadians, but most of them are Italians. Thruout Connecticut, for example, the Italians in large numbers have taken possession of the farms once owned and worked by men who knew the meaning of the town meeting, and whose chief interest, other than their economic life, centered in the Congregational Church, whose white spire, stark in the moonlight, is now a ghostlike monument to the memory of things that were.

These newcomers of the alien tongue are not "undesirable citizens." They are industrious, thrifty and well-behaved. They are demonstrating that the New England farms can still yield abundantly in return for hard work and careful management. Their new owners obtain from them ample crops, including quantities of garden products which the farmers of an earlier time never thought of raising for the markets. And, as you reflect upon the certainty that within fifty years practically the whole rural population of New England will consist of people descended from Continental Europe, with ideas, tastes and traditions unlike those of your ancestors, you can picture to yourself the time when a New England people will think and speak of the old gravestones and of the genealogical records in probate courts and town clerks' offices as you have been wont to think and speak of the flint arrow heads and the stone hatchets of a yet earlier and now vanished race. But you will have forgotten the public schools and intermarriage.

If you are curious to find reasons for the passing of the Anglo-Saxon New England farmer, you can take your choice among a dozen plausible ones that have been offered by the statisticians and economists. But probably it will be your observation of the habits of these latest New Englanders from the peasant farms of Italy that will suggest an explanation nearest to the truth. It may be an unpatriotic thing to say, but the fact is, that New Englanders of the Puritan strain were not, as a rule, good farmers. They did not work their land economically, they were not always enterprising, they did not entirely love the farmer's life. It is a popular error which assumes that the men who came with Bradford and Lothrop, with Endicott and Winthrop, were for the most part tillers of the soil. The shipping lists and other records will surprise you if you are not familiar with them, by the frequency with which they describe the first immigrants as "tanner," "cordwainer," "clothier," "miller," "carpenter" or "smith." Comparatively few of them came from the land, or even from strictly rural places. They came in relatively large numbers from London, and towns of some importance, like Dorchester, St. Albans, Sandwich, Ipswich, Lincoln and Newcastle-on-Tyne. Here in their new home there was comparatively little call for their skill as artisans. They became farmers of necessity, and rarely with enthusiasm. Their interest in the land was mainly speculative, and one has only to turn to such a work as Edward Johnson's "Wonder Working Providence of Sion's Saviour in New England" to discover that they had as keen an instinct for the "unearned increment" as any real estate operator in Oklahoma or Seattle.

If this bit of history does indeed tell us why the early New Englanders were

not, in truth, good farmers, and why their descendants have been so eager to leave the farm, it suggests also a more cheering thought. Civilization has never, to any great extent, been developed or conserved "on the farm." The rural stock itself has survived, and its influence has spread, thru the commingling of the sons of the soil with other blood in the towns. It is in the town that the New England blood and ideas survive today, and it is there that they are assimilating and Americanizing the newer Americans, who are buying up our ancestral homes.

The Boy Scouts

When General Sir Baden-Powell organized his Boy Scouts in 1908, we suspected it was an insidious attempt to instil militarism into the British youth. True, the fascinating principles of Indian life were incorporated into the movement, as well as social features, such as savings banks, fire drills and outdoor games. But the organization was predominately military, and there was much saluting of the flag, rifle practice and preparation for national defense.

The movement has now crossed the ocean and Ernest Thompson-Seton (né Seton-Thompson) has amalgamated it with his decade-old brotherhood of "Woodcraft Indians" that mustered 100,000 youths. Mr. Thompson-Seton seems to have drawn most of the military fangs from his American adaptation, for it is now almost wholly a movement for keeping American boys out of doors and busy at something interesting and useful. It seems to deserve, therefore, the hearty encouragement of all good people.

The first handbook of "The Boy Scouts of America" has just appeared, published by Doubleday, Page & Co., of this city. As a manual of woodcraft, scouting and life-craft it should be in the hands of every lad in the land from twelve to eighteen years of age, whether a prospective scout or not. It gives a complete account of how to organize a patrol of scouts and how to learn the Morse and wig-wag code, the semaphore, Indian signs and blazes, boxing the compass, finding latitude by the stars, and measuring distances and altitudes. It gives full instruction in camping, hunting, fishing, cooking, first aid to the injured, archery, building log cabins and teepees, making knots, trailing, riding, mountain climbing, long distance running, water sports, nature study, geology, photography and all manner of games that develop alertness, observation, skill, courage, fortitude and character.

The scouts, of course, have their secret signs and signals—mysteries ever dear to youth, as the college secret societies attest. They have also an admirable system of discipline based on the military idea to teach them obedience, and many honors and prizes to be striven for to develop their ambition. The movement, in fine, seems to be founded on an absolutely sound boy psychology. Were it not for the fact that the American people take their sports in "crazes" promptly abandoning them after the novelty wears off, we should say that the Boy Scout movement is destined to bring health, happiness and all round education to millions of American lads for generations to come.

The old-fashioned country boy of a century ago, as Mr. Thompson-Seton says, could

> "ride, shoot, skate, run, swim; he was handy with tools; he knew the woods; he was physically strong, self-reliant, resourceful, well-developed in body and mind. In addition to which he had a good moral training at home. He was respectful to his superiors, obedient to his parents, and altogether the best material of which a nation could be made."

Today all this is changed. We live in an age of great cities and specialization in industry. Cities are made for men, not boys. A city home offers no rational outlet for a boy's activities. The streets are worse, and there are not enough playgrounds to accommodate one-fiftieth of the boys who need them. Even the old-time all-round country farm is in many cases being divided up and worked intensively and along special lines. The American home is not the school of life it once was. The personal interest in outdoor life and competitive games is being superseded by school and college athletics, where a few over-worked, under-brained champions strive in an arena, while a vast crowd of betting, cigaret-smoking, Rah-Rah boys squat on the

bleachers raucously "rooting" for the home team. Is it any wonder that many thoughtful people are turning against the inherently noble games of baseball, football and their like?

So we welcome the Boy Scouts. Let Chief Scout Thompson-Seton, his scout masters and all others in authority cut out the play-acting and make-believe that still remains in the movement. Let them likewise eliminate the pseudo-military spirit. What remains seems wholly good, for it takes the boy at his most impressionable age and teaches him obedience, self-sacrifice, continence, skill, courage and the love of home, country and his fellow men.

Treason to Truth

We gave last week an account of the examination which a candidate must undergo from the new Biblical Institute at Rome before he can receive the degree of Doctor of Sacred Scriptures; but we did not then give the oath which he must subscribe to before it is conferred, for we had not then seen it, and we think it has not hitherto been translated from the Latin. The *Ecclesiastical Review,* which gives it in the original, wisely refrains from making the usual English abstract of it.

In a *motu proprio* the Pope says that, in order to make sure that those thus taught and honored "may faithfully deliver over the instruction they had received to their scholars without any suspicion of a variant sense (*devii sensus*)," they must therefore repeat the following oath :

"I, N. N., submit myself, with all possible reverence, and with a sincere mind I adhere, to all the decisions, declarations and prescriptions of the Apostolic See or the Roman Pontiffs concerning the Sacred Scriptures and concerning the right manner of explaining them, and especially the Encyclical Letter of Leo XIII *Providentissimus Deus,* and the *Motu Proprio* of Pius X *Praestantia Scripturæ Sacræ,* and his Apostolic Letter *Vineæ Electæ,* in which it is commanded that 'all must subject themselves in conscience to accept the decisions of the Pontifical Council on Biblical Matters pertaining to doctrine, whether already given out or to be hereafter published, equally with the decrees of the Sacred Congregation approved by the Pontiff; nor can any mark of obedience refused, or of rash utterance, be free from very serious fault, whenever by word or writing they attack these decisions.' Wherefore, I pledge myself that I will faithfully, entirely and sincerely keep and inviolably guard 'the decisions and decrees published or to be published by the Apostolic See and the Pontifical Biblical Commission' as 'the supreme norm and rule of my studies,' nor will I ever, whether in teaching or in any words or writings whatever, attack them. Thus I pledge myself, thus I swear, so God help me and these holy Gospels of God."

The document concludes with the command that it remain "established and firm" (*ratum firmumque*) "no matter who may oppose" (*contrariis quibuscumque minime obstantibus*). It is dated June 29.

This is a day in which we hold that university teaching must be free. It is amazing to learn that in a Christian Church candidates for a high degree must solemnly swear that they will always teach just what a selected board of scholars have agreed to, or *shall hereafter* agree to proclaim. To scholarship it is suicidal; to truth it is treason.

With such a principle enforced at the Vatican we cannot be surprised that bishops in this country do their best to divert their youth from the public schools and urge them to go only to Catholic colleges. Two weeks ago we gave the account of the removal of a priest from his church because he had said a kind word for Smith College and President Seelye. The *America,* edited by Jesuits and the ablest of Catholic weeklies, defends the bishop against our criticism by simply declaring that he and another bishop were only obeying the law laid down for them:

"The Catholic bishops of Springfield and Trenton are held up as types of 'a narrow, anti-American spirit' in The Independent's August 18 issue, when what is charged against them is a simple, unaffected doing of their duty as bishops of the Catholic Church."

It is fortunate that some other bishops do not see their duty so uncharitably.

The Revolt Against Laurier

Premier Laurier had the time of his life on his recent tour of the Provinces of the Dominion which lie between Lake Superior and the Pacific Ocean. But it was not the triumphal progress he had been promised when, at the instigation of the official Liberals from the West,

he undertook a speechmaking tour from Ottawa to British Columbia. Fourteen years as Premier have made a woful change in Laurier. From the time he went in Parliament in 1874 until he became Premier of a Liberal Government in 1896 Laurier posed as a democrat. Between 1874 and 1896, according to his own showing, there was not a more whole-souled democrat on the North American continent than Wilfrid Laurier. He was of the people. He ostentatiously paraded that fact, and everywhere announced his sympathy with the common people and his desire to lighten the burdens under which they had labored from 1879 as the result of the national policy that Macdonald and the Tories had imposed on the Dominion. In the old days the English language failed Laurier when he denounced the Macdonald policy as robbery and slavery, and reiterated his pledges that when the Liberal party came into power there should be an end of these burdensome conditions.

Laurier used to exhaust the dictionary when he denounced the Tory national policy, and thereby earned the gold medal of the Cobden Club, of London. But just as soon as he came into power he took over bag and baggage the national policy he had so long denounced; and at the same time he adopted the Tory policies as regards the Senate and the railways. The upshot is that all distinctions between the Liberal and Conservative parties on the issues which formerly divided them have completely disappeared at Ottawa. The official Liberals for fourteen years have been pursuing the ends that from 1878 to 1896 were the mission of the Tories. The Tories today are consequently quite without a mission and without policies; and nowadays the only dividing line at Ottawa lies in the fact that the Tories are the friends of the Canadian Pacific Railway, while the Liberals are the friends and generous patrons of the Grand Trunk and the Canada Northern.

The many interests that for revenue only, from 1878 to 1896, were allied with the Tories when they were in power are today quite as closely allied with official Liberalism. The alliance is to the same end—for revenue only; and since 1896 the alliance has been much more advantageous to the privileged interests than was the old alliance with the Tories so long and so notoriously associated with Macdonald and the Red Parlor at Toronto, where Macdonald openly received contributions to campaign funds that the interests considered it to their ultimate gain to disgorge. The advantage of the alliance of the interests with the Liberals has been greater than that of the alliance with the Tories because Canada has been prosperous and growing since 1896. Prices have been much higher, and as nearly all the duties in the Dominion tariff are on an *ad valorem* basis, there never was a period in the economic history of Canada when the tariff was of greater value to the protected manufacturers than in the fourteen years that lie between the incoming of the Liberal Government in 1896 and Laurier's tour of the prairie provinces in the summer of 1910.

Bounties were begun as part of the national policy in 1883. But up to 1896 the total payments had not exceeded a quarter of a million dollars. Between 1896 and 1910, under Laurier's Government, the Treasury at Ottawa has carried $17,000,000 to the privileged interests. Railway subsidies since 1896 have been as lavish and under as easy conditions as they were from 1878 to 1896. The sole difference has been that since 1896 most of the subsidies have gone to the Grand Trunk and the Canada Northern instead of to the Canadian Pacific, as was the case under Macdonald and the Tories.

But what has given significance to Laurier's tour of the prairie provinces —what promises to make Canadian politics unusually interesting for two years to come, and what has made the tour the most disagreeable and disturbing of Laurier's political experiences since 1896 —is the fact that at nearly every stopping place between the Great Lakes and the foothills of the Rocky Mountains Laurier was told that the people of the West had awakened to a knowledge of the New Feudalism of privileged interests, and were determined to get from under. He was made to understand that the farmers and grain growers of

the prairie provinces abundantly realize his part in fastening the New Feudalism on the people of Canada. He was bluntly told also that if he could not give unequivocal assurance of help in getting from under it, the West without delay would do its best to make an end of the Liberalism that has been in control at Ottawa since 1896. Laurier's democratic utterances of his opposition days, and in particular his speeches denouncing the tariff as robbery and slavery, were unearthed and brought to his attention. So were the pledges embodied in the Liberal program of 1893—the program that Laurier used to climb into power and then abandoned as readily as a man abandons a worn-out pair of shoes. There was no mincing of language on the part of the Western farmers. Democracy survives between Lake Superior and the Rocky Mountains, and neither the Premier's baronetcy nor his official position, scared the spokesmen of the delegations of farmers and grain growers that were waiting for the Premier's special train at nearly every water tank between Kenora and Calgary. Their utterances surprised the newspaper men who were of the Premier's party. They more than surprised Laurier. They obviously disconcerted him, for Laurier has long suffered from taking too seriously the laudation of his heaven-bestowed statesmanship that has been served out to him without stint for the last fourteen years on the editorial pages of the organs of the Liberal party in St. John, Halifax, Montreal, Ottawa, Hamilton and Toronto, controlled by the interests in alliance, for revenue only, with the Liberal party. Laurier was told again and again what the West wants. It demands lower duties all thru the tariff; reciprocity with the United States; relief from the exactions of the railway companies that control the transport of grain to tidewater at Montreal; and relief also from the interested maneuvering and exactions of the companies that control the elevators at the lake terminals. It is what we call insurgency, north of the Canadian line. The West is aroused as no part of Canada has been aroused since Papineau and Mackenzie headed the rebellions in Quebec and Ontario in 1837. It means business, and something will have to be doing at Ottawa in the coming winter, or Laurier and Fielding will have good cause to dread the next general election to the Dominion House of Commons.

The Spanish Contention

THERE are two matters in dispute in the present Spanish difficulty. One is restriction of the monastic orders, and the other the permission of dissenters from the State Church to conduct their worship openly. The first is ecclesiastical in so far as it may involve infraction of the Concordat with Rome; the second is political, as it affects the interpretation of the Spanish Constitution. It is of the latter that we now speak.

The eleventh article of the Spanish Constitution of 1876 says:

"The Catholic Apostolic Roman religion is that of the state. The nation obliges itself to maintain its worship and its ministers.

"No one shall be molested in Spanish territory for his religious opinions, nor for the exercise of his personal worship, always provided due respect is paid to Christian morals.

"Nevertheless other public ceremonies or manifestations than those of the religion of the state will not be permitted."

Remember that this is no agreement with Rome; it is the act of Spain, and Spain can freely interpret or change it. This is what Spain has done.

In the year of the adoption of the Constitution this eleventh article was defined by a Royal Order as follows:

1. "From this date all public manifestations of the worship of sects dissenting from the Catholic religion are prohibited outside their temple or cemetery.

2. "For the purposes of the foregoing rule a 'public manifestation' will mean any act performed on the public street, or on the outer walls of the temple or cemetery so as to show the ceremonies, rites, uses or customs of a dissenting worship, whether by means of processions, inscriptions, banners, emblems, advertisements or placards."

The five remaining sections are merely administrational and need not concern us.

These rules have been enforced with considerable strictness. The doors of dissenting churches have been kept closed during worship, and when one church put a cross on its building it had to be removed. It was not until June 10 of this year that by a Royal Order signed by Premier Canalejas these restrictions

were relieved. In this Order it was declared that the definition of "public manifestations" was too strict, and did not allow all that the eleventh article of the Spanish Constitution permitted.

The point is this. It was "ceremonies and public manifestations" of dissenting religions that were forbidden in the Constitution. But what are "manifestations"? According to the definition of the learned Spanish Academy in its dictionary, a manifestation is "a public meeting (*reunión*), generally held in the open air, and in which the people meet to make known their desires or opinions." But the definition and the prohibition hitherto in legal force adds to this a prohibition of any act, expression or sign which might serve to indicate the ceremonies, rites, uses or customs of any worship other than that of the State. Following this definition it is quite evident that the law forbade what was not forbidden in the Constitution. A placard is not a meeting in the open air.

Accordingly, in order to allow to the text of the Constitution all that it would authorize, the Royal Circular Order proceeds:

"His Majesty the King (whom God protect!) has seen fit to decree that the Royal Order of October 23, 1876, be rescinded, and that hereafter, in accordance with Article II of the constitution, and without prejudice to the legislation on the control of public meetings, the following do not constitute public manifestations, and will therefore be authorized: inscriptions, banners, emblems, advertisements, placards, and other exterior marks which serve to indicate the buildings, ceremonies, uses and customs of worships other than those of the religion of the state."

This Royal Order is signed by the Prime Minister Canalejas and addressed to the various civil governors.

The Prime Minister seems to be within his rights when he declares that this is not a religious matter with which the Vatican under the Concordat has anything to do. It is a purely Spanish civil matter, affecting only the Spanish Constitution and its interpretation and application. Accordingly he will take no dictation from any outside authority. In this he is right. The other question of difference has to do with the restraint of the religious orders; but that is another matter which we do not now discuss.

For the Benefit of Children

To prevent cruelty to animals is a worthy aim; to prevent cruelty to children is vastly more worthy. The society for the Prevention of Cruelty to Children had its origin in 1876, over the case of a little girl. Since that time this society has received 252,062 complaints, involving the custody of 740,245 children; 122,623 cases were prosecuted, resulting in 105,943 convictions, and 160,977 children have been received and cared for.

Today there are 350 similar societies on the North American continent, as the result of its example or inspiration, and in Europe, South America, Asia, Australia, and even in Africa, its sister societies are now doing active and efficient work in the interest of neglected and abused children. That great British organization, with its powerful and influential branches in every part of the United Kingdom, gladly concedes that the New York society was the pioneer in the great work that has brought such extraordinary results in the cause of defenseless children. The original society, which started in one room in New York City, now occupies a spacious eight-story building entirely devoted to the purpose of child rescue.

Thru its activities many evils which formerly prevailed in New York City have been suppresst. The sending out of little girls to sell flowers in the street in the night was stopped some years ago. The practice of sending unhappy children upon the streets to beg, but in reality to steal from the passerby, has been almost entirely suppresst. Helpless children are no longer permitted to be exhibited in acrobatic feats for the profit of the parents. The padrone system, by which little street musicians were imported from Europe and held in practical slavery, has also been broken up. There is no more of the kind of baby farming whereby in former days infants were slaughtered wholesale in order to support their self-constituted guardians.

The newest department of work of the New York society is a psychiatrical department, which helps to reform delinquent children by medical treatment. Dr. Schlapp, of Cornell University

Medical School, is in charge of the new department, examining the children and seeing whether medical attention or a simple surgical operation might counteract evil tendencies. In the case of most children these are occasioned only by neglect from birth, and the removal of such affections as adenoids makes for improvement of mentality and moral character. The examinations from this standpoint are decidedly interesting, and it involves an exhaustive inquiry into all sorts of conditions, prenatal and subsequent.

Prof. William James

That Prof. William James, who died last week, was the greatest of American philosophers we do not claim, but he was the one best known in this country and in Europe. Indeed, he had attained a world-wide reputation. Others might have enunciated his conclusions and remained obscure, but he had the advantage of a pellucid and fascinating literary style, which gave weight and currency to his teachings. He was born in 1842, the son of a Swedenborgian minister, and two years before his brother Henry, the novelist. He had the old-fashioned advantage of a general culture. In 1872 he began teaching anatomy and physiology in Harvard, and passed from that department to philosophy and psychology. We may dismiss his eagerness to study the evidences for spiritual manifestations, his modified confidence in the communications of Mrs. Piper and Palladino, and his willingness to believe that Mr. Hodgson's spirit had tried to keep the promise to communicate with him. It was no discredit that he had the open mind to believe that possible which Swedenborg believed he had experienced. Professor James's serious fame rests in his writings on pragmatism and his book on "The Varieties of Religious Experience." That they will have permanent philosophical or religious value we do not assert, but they have wonderfully stirred our thinking. He was inclined to put more value than many of us are able to on "the wish to believe" and on the weight which the wish to believe should have as to the truth believed. Perhaps he paid more attention to the extreme and abnormal in religious experience than they deserve, but the result has been to show the real value of religious experience. In personality, Professor James was just what his reader might expect and hope. To students he showed himself to be but another student; farther progressed, perhaps, but rather more modest. The simplicity of his literary style was matched by the simplicity and gentleness of his bearing and usual conversation. For those who knew him at Cambridge in the relation of master and pupil there is another than the pragmatic philosopher to remember: there is also the always courteous comrade, the reserved but real friend. The first occasion upon which the writer of this paragraph met the great teacher was when he was sent by the student-newspaper to secure an interview. That interview was cheerfully accorded; then the question was put, "Which way are you walking?" The stammering student gladly followed the other's route, and answered his questions as best he could. "You are taking Philosophy Ia," mused Professor James. "That means that you will use my 'Psychology.' But now you are studying logic with Professor Royce. Can't you tell me just the impression of his lectures that you sophomores have?" And the pragmatist was all appreciation when the sophomore confessed that from 2.30 to 3.30 was just the sleepiest hour of all the twenty-four—and fatal to the study of philosophy. We hope to publish in another issue a fuller recognition of his work.

President Taft's Campaign Letter

President Taft addresses the country in his letter for the Republican campaign book, and appeals to voters to support the Republicans as against the Democratic party. That is right, for he belongs to the Republican party, and was elected under its platform; and by its voters was he commissioned to rule the country. There is in it no discourtesy to the patriotic citizens who do not approve the principles which the Republican party approves; and they have no reason to object. Perhaps the most evident note in the President's enumeration of the achievements in legislation of the last Congress is his modesty. He gives all

credit to Congress for what it accomplished, and does not hint that but for his own persistent demand that the platform's promises be kept very little would have been done. Mr. Taft's self-effacement is one of his notable characteristics. It was not till the very end of the last session that the people found out how quietly but effectively he had been pressing the performance of the party's promises, and his success was accordingly a surprise to every one. If he does not now congratulate himself he does congratulate Congress, the party and the country in the remarkable series of important laws enacted, which, he says, gives us a new ideal of faithfulness to party promises.

The Record of Legislation

One who reads the campaign letter thru cannot but be imprest again with the amount of important and even epochal legislation achieved. The tariff is an old story and always with us; but it is an epoch that Congress gave us, however unwillingly, postal banks. That alone was enough to distinguish any Congress, and yet at the time it appeared of only secondary importance. Similarly the admission of Arizona and New Mexico by a Republican Congress, with the likelihood that they will send Democrats to the Senate, was of great importance. And the reduction of appropriations by $20,000,000, as compared with those of the previous year, with extraordinary retrenchment in the expenses of the Post Office Department, and measures for further reductions, give us unexpected occasion for gratulation. But the President puts first the Payne tariff law, and we observe that it is approved not in definite terms as the best tariff law we have ever had, but as, tho imperfect, substantially a fulfilment of the platform's promise. He shows how in signing the bill he called attention to its unsatisfactory provisions, and he points out the way to their correction. Here he presents a thoroly statesmanlike proposal which he will recommend in his Annual Message. With great forethought he persuaded Congress to appoint a tariff commission, whose business it is to study the cost of production abroad, and which can show what schedules are too highly protected so as to prevent absolutely competition from abroad. He recognizes that the next Congress cannot enter into a general revision of the tariff, such as a Democratic Congress would be pledged to, without great financial disturbance, such as we have had the past year or two. He would therefore have the commission take up one questionable schedule at a time—say, steel or wool—and present it to Congress for change. Then he would have Congress make a rule refusing any amendment affecting any other schedule; and in this case no financial trouble could be expected, and the tariff could be amended gradually as needed. The advantage of this method he hints at, but wisely does not amplify; but we can see what he means to suggest, that a majority of the members, not having personal interests, could decide impartially, and would not be tempted to make combinations to defeat proper legislation. The President's letter is not rhetorical, but it is solidly strong and will appeal to thoughtful readers. The spellbinders must be depended on to provide the fireworks.

A Settlement and a Strike

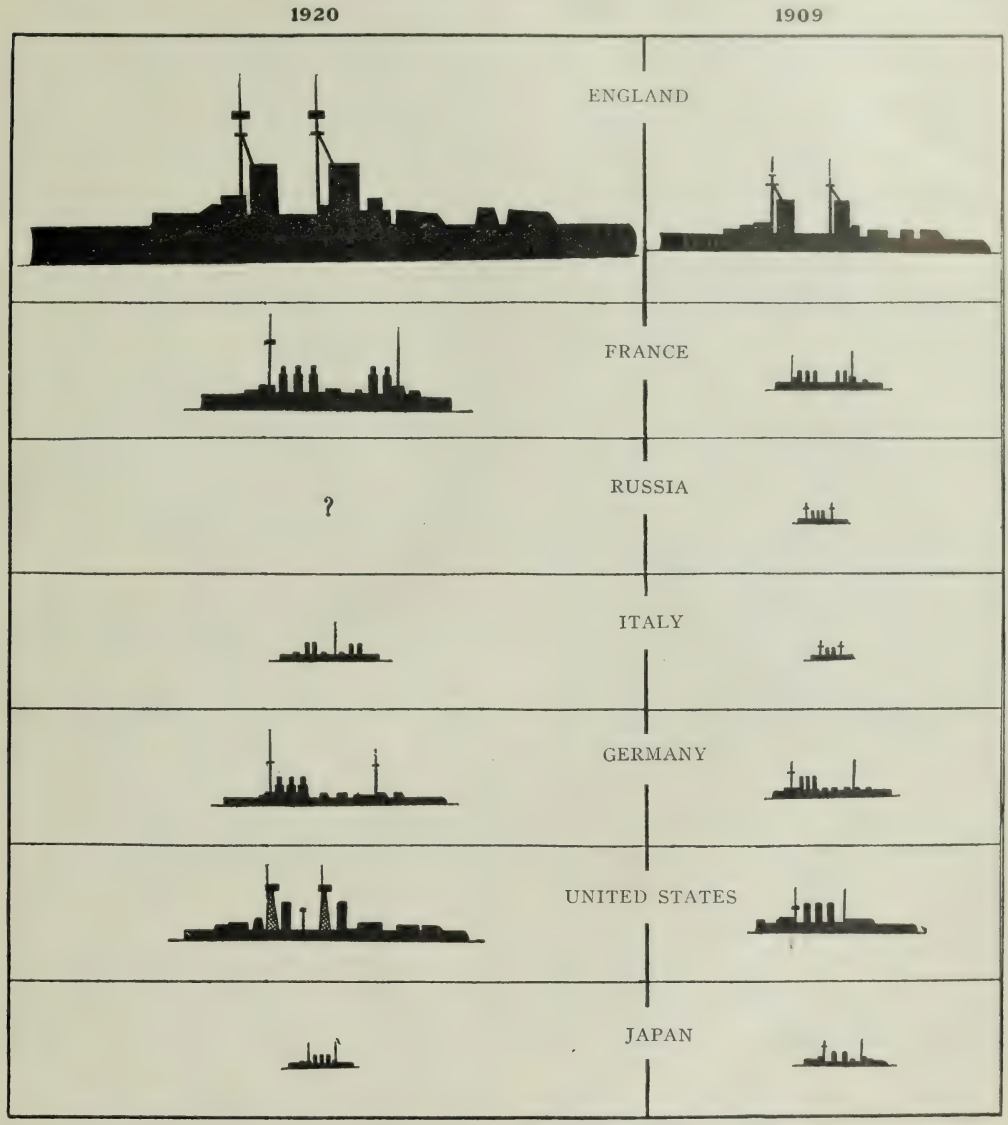
The *Survey*, the organ of the New York Charity Organization Society, tells an excellent story of "How a Settlement Settled a Strike." In 1907, it seems, Florence Ledyard Cross, a graduate of the New York School of Philanthropy, started a small housekeeping center in the Italian quarter of Rochester, in the hope of bringing together Americans and Italians and adapting the latter to our social, industrial and educational conditions. In this she succeeded, and her work waxed great. On the declaration of a strike, after five months' notice, on the part of underpaid Italian street laborers, the strikers received, at first, scant public sympathy, and far less than fair treatment by the police. We quote what followed from the report of Richard Kitchelt, a settlement worker who played a part in the final adjustment:

"Some of the strikers' executive board turned to the bureau for help. Miss Cross called together a committee of prominent citizens interested in civic and social welfare and laid before them, thru the testimony of the workmen themselves, the importance of a

speedy and just termination of the strike. It was shown that the wages of the laborers averaged $6.50 a week, an amount inadequate to maintain a family in health and strength; that the city was being injured by a continually lowering standard of living; that the injection into the community of irresponsible strike-breakers was a menace to the public peace and welfare.

"The newspapers were induced to print the truth about the strikers. Public sentiment gradually changed in favor of the workmen. Petitions from residents and shopkeepers along torn-up streets were laid before the mayor. At last, after the strike had continued four weeks, the contractors consented to a conference which resulted in an immediate increase of one cent an hour and an agreement to arbitrate the wage scale before the next season's contracts were entered into."

Not an important strike, in the number of laborers involved, nor the amount of wages demanded. Yet we venture to consider it as not unimportant, for it demonstrated the power of co-operation which sometimes exists between the modern social worker and the workingman.



Educated Farmers

In the present transition to industrial education, it is important to know how much force there remains in the charge that the pupils of our Agricultural Colleges do not become farmers, but go into some other line of business. Cornell has just sent out a tabulation, showing that out of 899 graduates 122 have become associated with Experiment Station work, or with Agricultural Colleges. This is very desirable, because in no other way could we secure teachers fitted for this sort of work. Beside these, 332 are reported as farmers, farm managers, and nurserymen, while 163 are engaged in some way with cheese factories, creameries, and other dairy establishments. Seven have become editors, and nine landscape artists, or architects, as the Bulletin calls them. The full tabulation makes 71 per cent. engaged in some sort of farm work, 20 in agricultural education work, leaving only 46 out of the 899 who have entirely deserted the land. Of the 206 graduates from the Illinois College of Agriculture 95 per cent. are engaged in agricultural work. This is about as we had supposed, altho the charge is still made that these colleges fail to make land tillers. The registration at Cornell has risen from about 100 in 1900 to over 1,000 in 1910. The greater part of the work of all these colleges is, however, not the teaching of pupils at a central institution, but is done about the counties of the States, in the way of reading courses, lectures, experiments, and assisting in special farm trains and in the formation of rural science clubs. Recently a great deal has been done in the Western States in the way of soil surveys, and in the Eastern States in the way of controlling insect pests. Several of the States are now laying a good deal of emphasis on social organization of rural communities.

Naval Increase

We present herewith a graphic diagram of the present relative naval strength of England, France, Russia, Italy, Germany, Japan and the United States, and also of their relative strength ten years hence. We would especially commend to the study of the Navy League, "Fighting Bob" Evans, Captain Hobson *et omne genus,* the Japanese and United States navy of 1920. If the diagram is correct, those who have been using the Japanese overpowering navy bugaboo to gain larger appropriations for more United States Dreadnoughts are either bigger fools or baser knaves than we had supposed. These tables have been prepared by Captain Tetsutaro Sato of the Japanese navy, presumably with the sanction of the Japanese Government. Captain Sato says his calculations of the naval strength of each country are based upon the aggregate of the fighting efficiencies of the battleships and first class cruisers, the fighting efficiencies being calculated by the displacement tonnage. The efficiency of a battleship is reckoned as beginning to diminish after five years and reduced 50 per cent. after twenty years. A reduction of 20 per cent. has been made on the tonnage of first class unarmored cruisers. Great Britain has not made public any definite consecutive construction plan, but, inferring from the fact that she launched sixty-four warships from 1900 to 1909, it is estimated that she will launch forty battleships and thirty armored cruisers in the next ten years. France's naval strength is calculated on the assumption

that she will carry out her naval plan to construct 45 armored ships by 1925. Russia's naval strength in 1920 is not shown, as her naval program is not clearly known. Italy has not published any definite naval plans, but, calculating from the building rate of the last ten years, her naval strength may be assumed to be six battleships and five cruisers in the coming ten years. Germany's naval strength is calculated on the assumption that she will carry out her naval expansion program as provided by law. The United States is supposed to construct two battleships yearly and not less than one armored cruiser. Japan, after the completion of the present three battleships and three armored cruisers, it is assumed, will not attempt any expansion.

THE WORLD'S GREAT NAVIES.

Many things may happen before 1920, however. The third Hague Conference of 1915 may have something to say in the matter.

More Peace Commissions

The International Peace Congress which concluded its session at Christiania last month applauded every reference to

the American Peace Commission. Its 600 delegates, representing all the civilized nations of the earth, passed a resolution by acclamation urging all the nations to follow the lead of the United States. This week the Interparliamentary Union holds its annual conference at Brussels. Three members from the Senate and fourteen from the House constitute the United States delegation. On their behalf Mr. Bartholdt will introduce the following resolution:

"*Resolved,* That in order to devise definite plans for submission to the third Hague Conference looking to the further perfection of a system of world federation by providing in addition to an international judiciary an international legislature as well as international executive powers for the enforcement of judicial decrees this conference further requests each of the Governments and Parliaments here represented forthwith to proceed with the appointment and creation of a national commission analogous to the commission recently authorized to be appointed by the Congress of the United States, such commissions to report to their respective Parliaments within two years, to the end that by the time the third international conference will convene at The Hague, namely, in 1915, each Government may be ready with a well-defined plan of its own for the accomplishment of the purposes above set forth, and be it further

"*Resolved,* That the delegates of the sixteenth Interparliamentary Conference now assembled are requested to bring these resolutions officially to the attention of their respective Governments and Parliaments and to exert their personal influence toward securing early and favorable action upon them."

Now we learn on adequate authority that Mr. Lloyd-George, the Chancellor of the Exchequer, is in favor of appointing an English Peace Commission for promoting peace and reducing armaments. Thus all the nations are likely to follow the lead of the United States and the advice of the First and Second Hague Conferences seriously to "resume" the study of the greatest question now before the world.

Korean Missions

American interests in Korea are mainly missionary, for the Presbyterian and Methodist missions have had most extraordinary success, the converts being added by the tens of thousands, and at their last general meeting the missionaries resolved to try to secure 1,000,000 converts this year. The scenes in the revivals have been more unusual, including some extreme manifestations, in the casting out of devils, etc., than have been seen in this country, with remarkable confessions of secret sins. But there have been charges that some of the missionaries, or ex-missionaries, have taken part with Koreans against the Japanese, and that Koreans have joined the Young Men's Christian Association as a cover to conceal their political plots. Prince Ito declared that the action of the missionaries was blameless, and that he supported them; and it would seem that most of the missionaries believe that it is best for Korea that it come under control of Japan. At the same time we hear of some companies of Koreans who have very lately left the Christian Church, disappointed at the failure to oust the Japanese. It will now be a critical time, and we can hardly expect this year any such phenomenal accessions as have occurred the past two or three years, and there may even be a setback; but the advices from the missionaries received by mail continue very encouraging.

Emperor William's Latest Blunder

Emperor William is playing with dynamite when, in a public speech which he allows to be published, he declares that his grandfather received his crown "by God's grace alone, not by parliaments, national assemblies or the popular voice," and that he looks upon himself as "the instrument of the Lord, and regardless of the views and opinions of the hour I shall go my way." Has he forgotten 1848, when his grandfather had to flee to England; or his own humiliation not two years ago, when his indiscretion compelled him to promise to control his tongue? Does he mean to challenge all democracy and all liberalism with this declaration of the divine right of kings? He can be sure that such an utterance absolutely endangers his throne. The Socialists say it will net them fifty additional seats in the Reichstag in the next election. This is a question of a constitutional government, and it is too late in the day to declare against it and claim one man's hereditary right to rule independently of the will of the people. He will have to apologize again, as he did at the demand

of the people and of von Bülow in 1908, and as his grandfather did when he came back in 1848 from England and declared himself in favor of a constitution such as he did not love.

The International Institute of Agriculture sends us Number Seven of its monthly Bulletins of Agricultural Statistics. It is to be issued on the twentieth of each month, and in the French language, altho the Institute is located at Rome, Italy. The object of the bulletins will be to bear directly upon agriculture, by giving absolutely accurate information concerning the planting and the growth conditions of the different world crops. The Institute will endeavor, shortly before harvest time, to publish an estimate of the probable total production of all the leading countries, and after the harvest is finished it will publish as near as possible a statement of the total yield. It will aim also to give those facts most essential for the guidance of producers along the line of any one or more of the crops named. It proposes to prevent unfair speculation, based on partial or false report of the yields or the harvest. It remains to be seen whether these bulletins will be any more reliable or helpful than our own governmental reports thru our Department of Agriculture. At all events there is good cheer in finding world organization on the peace basis making such a stride as is indicated by the cooperation of half a hundred nations in these bulletins.

The New Yorker just back from a vacation trip to England exclaimed at the commonplace character of the Whitechapel district, in London: "Horrors? No, indeed: merely rather sordid. After New York, scarcely that." Our own slums are not only more picturesque, they are more crowded. In a single metropolitan block there are herded together, according to the last State census, more than 6,000 souls. Thirteen blocks contain over 3,000 people each. "A small portion of Manhattan Island, south of Fourteenth street," writes a contributor to the *World's Work*, "houses a population of more than half a million." This exceeds that of any one of fourteen of our American States, and is denser than the densest parts of Calcutta or Bombay. The most interesting war waging at the present day is the war against overcrowding in disease and vice-breeding tenements, here in New York, on the part of modern-day crusaders.

That Japan should take over Korea as its own, not after the way Great Britain has taken Egypt, but rather the way France has taken Algeria, was to be expected. It is the logical result. As between Japan and Korea it has been high-handed—and politically inevitable. Korea did not deserve to live independent, and her feeble independence a hundred miles away, with Russia covetous, was a serious menace not to be overlooked. Of course, Korea has objected, and has resisted as well as it could, which was only provoking, not effective. There have been rough measures, many killed—call them patriots or robbers—much Japanese violence, such as always comes in war or insurrection, but one cannot have an omelet or peace without breaking eggs and breaking heads. As between Japan and other countries it would seem that Japan has dealt fairly, and the provisions of treaties with Korea will remain in force.

We have penny postage (two cents) with Great Britain and Germany. Great Britain has penny postage with all its colonies. That is, Great Britain has penny postage with half the world, and the English people are discussing the question of penny postage with France first, and then with all other countries. At present the Post Office brings to the exchequer an income of $22,500,000; and it is computed that a penny rate with France would entail an initial but diminishing loss of $475,000; or, if extended to other countries, an initial loss of $2,000,000. The penny rate to the United States is a loss of $775,000, which the Postmaster-General says is "well worth paying." The total $2,000,000 would be well worth paying to unify the world in this matter. We could afford to make the rate to Russia the

same as it is to the Hawaiian Islands and the Philippines.

Very praiseworthy is the plan to place in Princeton, N. J., a worthy monument to the memory of Grover Cleveland, who was a native of New Jersey, a trustee of Princeton University, and who lived, died and is buried in Princeton. The monument proposed is a tower 150 feet high and 40 feet square, to be the conspicuous feature in the quadrangle of the newly endowed Graduate School. It will cost $100,000, of which $25,000 remains to be raised by private subscription made to John F. Dryden, of Newark, president of this Cleveland Monument Association, or to Daniel A. Voorhees, of Morristown, its treasurer. The design shows an impressive tower, which will command such a view that it can be seen by all who pass on the Pennsylvania Railroad.

Here is a curious fact reported, that 475 Baptist Churches in Southern Illinois are so incensed at the liberal tendencies of their brethren in the north of the State that when the Illinois Association refused to withdraw fellowship from churches that harbor men who hold these liberal views, they sought to transfer their connection to the Southern Baptists. The oddity of it is, that the Southern Baptists separated from the Northern before the war on the ground that the General Convention had no right to impose a doctrinal test, namely the guilt of slavery; while now the Illinois churches join it because their Northern Illinois brethren refuse to impose a test. But when did the fear of inconsistency hamper action when the blood is up.

Will Dreadnoughts become obsolete before they are built? It is reported that Great Britain will build battleships which will be driven by internal combustion engines that will require no vulnerable smokestacks. Possibly the development of the engine has not gone so far, but there is no end to the development of instruments of destruction and of the burdens on the poor people. We may come to it that instead of vast battleships we shall construct a mosquito fleet of small, swift vessels that will carry but one huge gun and which can surround a battleship as the Lilliputians surrounded Gulliver.

Most forcefully does *The Churchman* cry again and again for Church unity, and grieve over a divided Christendom. It is divided, Roman, Greek, Protestant; but happily in this country this division has mainly been healed, among Protestants, by the union of the large majority of the communicants in the Federal Council. We wish we knew just what is the attitude of *The Churchman* to the Federal Council. Unfortunately the Protestant Episcopal Church, in its national Convention, has failed to indicate its relation.

President Taft, speaking as a trustee of Hampton Institute, declared that if he were a multimillionaire it would not have to beg for $100,000 a year to carry on its work. The same issue that reported his wish reported in another column the bequest to Hampton of perhaps $700,000 by the death of the widow of A. T. Dotger, of South Orange, N. J.

That coeducation is the rule even among our more conservative religious bodies is evident from the report of the Presbyterian College Board just issued. It embraces fifty-six institutions called colleges or universities, and ten which indicate a lower grade. Of these sixty-six only sixteen are for men or women only, and fifty are coeducational.

Before the United States Minister to Turkey, Mr. Oscar S. Straus, could go to St. Petersburg, he had to get a special public permit to enter the Empire, because he is a Jew. That may be Russian law, but it is an insult to the United States, and we should insist that no such rule should apply to our diplomatic servants.

Those who read in this issue the poem "To Another Helen," will think of Helen Gould.

Insurance

The New Workmen's Compensation Acts

THE Workmen's Compensation acts which become effective today practically climinate the defense, sometime effective but now no longer so, that workmen assume the risk of their occupations. The acts transfer to the employer the burden of proof that the injured employee was negligent. Under their operation the employer is also liable for accidents caused by superintendents, "bosses" and other executives. The effect of these transfers of responsibility to the employer is already manifest in the hazardous trades. Watchfulness against accidents has been stimulated. Preventative measures have been and are now being taken. In some cases a systematic training of men has been begun looking toward their safeguarding, and there is a stronger market for better safety appliances. The liability insurance companies have been incidentally benefited, since their risks are diminished. The Workmen's Compensation acts will reduce the expense of litigation. Trials under them will be expedited and many abuses that have sprung up thru the development of the so-called "ambulance chasing" and because of protracted litigation will be swept away because of the provision that attorney's bills in employees' personal injury cases must be submitted for the approval of a Supreme Court Judge. This feature of the acts alone will put an end to the scandal found by the investigations of the Wainwright Commission, when it was shown that for every $100 paid out by employers in premiums for liability insurance, over 60 per cent. of the sum went to pay the charges of attorneys and claim agents. Anything that tends to decrease litigation is beneficial, and the acts must make for the reduction of legal fees. The law provides for agreements for damages between workmen and their employers, with certain exceptions in eight trades, on a basis of damages that shall not exceed $3,000. The uncertainty of jury verdicts is thus rendered less uncertain. The damages sustained are graded according to the seriousness of the sustained injury, and if the employee has a dependent family that fact is recognized in its provisions. Out of the former chaos order arises, and settlements will now be reached with a facility that will be refreshing when compared with former conditions. Some of the insurance companies have raised or will raise rates in anticipation of the acts, but we incline to the belief that lower rates will ultimately result.

THE late Charles F. Clark, sometime president of the Bradstreet Company, shortly before his death, wrote to a friend as follows:

"It is practically beyond a doubt that corporation insurance strengthens the credit of firms adopting it. The increased confidence which it establishes is recognized in the mercantile community and thus reflected thru our reports."

Partnership insurance plays a very important role in modern business circles. The resort to this sort of insurance is growing in popularity and the field for this form of insurance is practically without limit. Progressive business houses now recognize the value of this application of the insurance principle and consider partnership insurance in the same light as fire, liability, credit or fidelity insurance, all of which are carried for the benefit and protection of the interested concern. Insurance will not restore a lost life, but it will preserve a credit that but for it might easily be lost.

FREDERICK L. HOFFMAN, actuary for the Prudential, has just tabulated the suicide statistics for 1909. According to Mr. Hoffman the number of suicides in the United States total 12,500 in round numbers. More suicides originate in large cities than in the rural districts, which is, of course, one argument for country life. In forty-two of the sixty-five cities tabulated, an increase in the number of suicides during 1909 over those in 1908 is shown. Over one-half the suicides were by poison or firearms.

Financial

Gold Accumulation

THE New York *Journal of Commerce* last week published a very interesting article on how the nations are accumulating gold.

The following table shows the amount now held in the world's national banks and the gains that have been made during the past decade:

Bank of	1910.		Gain since 1900.
England	$199,609,815	+	$32,832,820
France	678,426,000	+	228,798,560
Germany	195,059,750	+	50,709,750
Russia	704,040,000	+	309,550,000
Austria-Hungary	276,890,000	+	88,395,000
Spain	81,565,000	+	13,120,000
Italy	193,855,000	+	116,525,000
Netherlands	46,615,000	+	22,270,000
Nat'l. Belgium	26,330,000	+	12,155,000
Sweden	22,240,000	+	22,240,000
Switzerland	30,815,000	+	30,815,000
Norway	9,870,000	+	9,870,000
	$2,465,315,565	+	$937,281,130
N. Y. Clearing House banks	371,528,000	+	127,391,500
United States Treasury	1,078,629,033	+	655,449,775
	$3,915,472,598	+	$1,720,122,405

These figures indicate that our own Treasury leads both in the amount held and the increase during the decade. More than one-fifth of all the gold produced has gone to the Treasury and the New York banks, the gross increase having been $782,841,275, or almost exactly the amount mined in the United States during the same period.

The following table shows the world's production of gold since 1900, the figures for the first half of 1910 being estimated:

	Fine ounces.	Value.
1901	12,625,527	$260,992,900
1902	14,354,680	296,737,600
1903	15,852,620	327,702,700
1904	16,804,372	347,377,200
1905	18,396,451	380,288,700
1906	19,445,452	401,973,200
1907	19,860,620	410,555,300
1908	21,378,480	441,932,200
1909	21,775,000	449,500,000
1910	11,000,000	250,000,000
Total	171,493,302	$3,567,059,800

As the increased production of gold is generally considered a chief cause of the recent rise of prices, these figures will doubtless serve as the basis of many economic and financial disquisitions. It is the facts, however, that we present here today, thanks to the *Journal of Commerce*, and not the deductions from them.

....The loss suffered by French crops by reason of continued cold and wet weather this year is estimated at $400,000,000.

....Nearly one-half of the manufactured products of the United States ($275,000,000 out of a total of $671,000,000) go to British territory.

....The Treasury Department recently finished the moving of $225,000,000 in gold coin more than 1,000 miles, from the Mint in San Francisco to the new vaults of the Mint in Denver, without accident or the loss of a dollar.

....According to a report published by the Department of Agriculture, the wheat crop of the world in 1909 was 3,616,109,000 bushels, against 3,179,285,000 in 1908. The crop in Canada was 166,744,000 bushels, showing an increase of nearly 50 per cent.

....Last year there were in the United States 38,812 miles of electric street, elevated and interurban railway. Ohio had 4,450 miles, New York and Pennsylvania 3,950 each, Massachusetts 2,949, Illinois 2,821, California 2,432 and Indiana 2,281. No other State had more than 1,700.

....Moses Haas, a New York cotton broker, and Frederick A. Peckham, of Cincinnati, indicted five years ago for conspiring to obtain from the Statistician of the Department of Agriculture advance information concerning the cotton crop report (which information they are said to have used profitably in speculation), recently pleaded guilty in Washington. Haas was fined $6,000 and Peckham $5,000, the Department of Justice having recommended that they be not sent to prison.

The Independent

VOL. LXIX NEW YORK, THURSDAY, SEPTEMBER 8, 1910. No. 3223.

Survey of the World

Mr. Roosevelt at Osawatomie

Mr. Roosevelt's principal political speech of his present tour was made, August 31, at the dedication of the John Brown Park, at Osawatomie, Kan. In it he devoted himself to the platform of the "New Nationalism." He was received with the greatest enthusiasm, and endeavored to show that the country is approaching a crisis comparable to that when slavery was destroyed by war. He said:

"The essence of any struggle for healthy liberty has always been and must always be to take from some one man or class of men the right to enjoy power, or wealth, or position, or immunity, which has not been earned by service to his or their fellows."

It is equality of opportunity which he urges:

"This means that our governments, national and State, must be freed from the sinister influence or control of special interests. Exactly as the special interests of cotton and slavery threatened our political integrity before the Civil War so now the great special business interests too often control and corrupt the men and methods of government for their own profit. We must drive the special interests out of politics. . . . The true conservative, is he who insists that property shall be the servant and not the master of the commonwealth."

The following are the planks of his platform for this purpose: 1. Complete and effective publicity of corporate affairs. 2. Prohibition of the use of corporate funds for political purposes. 3. Government supervision of the capitalization of all corporations doing an interstate business:

"I do not wish to see the nation forced into ownership of the railways if it can possibly be avoided, and the only alternative is thorogoing and effective regulation, which shall be based on a full knowledge of all the facts, including a physical valuation of the property. This physical valuation is not needed or at least is very rarely needed for fixing rates, but it is needed as the basis of honest capitalization."

4. Franchises given only for a limited time and with compensation to the public. 5. The same supervision over combinations that control the necessaries of life, such as meat, oil and coal, as over public service corporations. 6. Directors of corporations to be held personally responsible if corporations break the law. 7. Combinations in industry are necessary, but they should be controlled in the interest of public welfare:

"For that purpose the Federal Bureau of Corporations is an agency of the first importance. Its power and therefore its efficiency, as well as that of the Interstate Commerce Commission, should be largely increased. . . . The Hepburn act and the amendment to that act in the shape in which it finally passed Congress at the last session represent a long step in advance and we must go yet further."

8. An expert tariff commission:

"Such a commission can find out the real difference between cost of production, which is mainly the difference of labor cost, here and abroad. As fast as its recommendations are made I believe in revising one schedule at a time. A general revision of the tariff almost inevitably leads to log-rolling and the subordination of the general public interest to local and special interests."

9. A graduated income tax on big fortunes, with a graduated inheritance tax:

"We grudge no man a fortune which represents his own power and sagacity when exercised with entire regard to the welfare of his fellows. But the fortune must be honorably obtained and well used. It is not even enough that it should have been gained without doing damage to the community. . . . This, I know, implies a policy of a far more active governmental interference with social and economic conditions in this country than we have yet had, but I think we have got to face the fact that such an increase in Government control is now necessary."

10. A scientific revision of our financial

system, so as to prevent those recurring panics from which other countries are free. 11. A sufficient army and navy to ensure international respect. 12. Conservation of natural resources, of which he will speak later. 13. Extension of the work of the Department of Agriculture and agricultural colleges to cover not merely the production of crops, but all the interests of agricultural life. 14. The regulation of the terms and conditions of labor as well as of the use of wealth in the public interest:

"No man can be a good citizen unless he has a wage more than sufficient to cover the bare cost of living and hours of labor short enough so that after his day's work is done he will have time and energy to bear his share in the management of the community. . . . We need comprehensive workmen's compensation acts, both State and national laws to regulate child labor and the work of women, and especially we need in our common schools not merely education in book learning but also practical training for daily life and work."

15. Suppression of mob violence:

"In the interest of the workingman himself we need to set our faces like flint against mob violence, just as against corporate greed."

16. National and State efficiency:

"The State must be made efficient for the work which concerns only the people of the State, and the nation for that which concerns all the people. There must remain no neutral ground to serve as a refuge for lawbreakers, and especially for lawbreakers of great wealth, who can hire the vulpine legal cunning which will teach them how to avoid both jurisdictions.

"The new nationalism puts the national need before sectional or personal advantage. It is impatient of the utter confusion that results from local legislatures attempting to treat national issues as local issues. It is still more impatient of the impotence which springs from the overdivision of Government powers, the impotence which makes it possible for local selfishness or for legal cunning, hired by wealthy special interests, to bring national activities to a deadlock. This new nationalism regards the executive power as the steward of the public welfare. It demands of the judiciary that it shall be interested primarily in human welfare rather than in property."

17. The direct primary, associated with a corrupt practices act, with the recall. Mr. Roosevelt concludes:

"We must have—I believe we have already—a genuine and permanent moral awakening, without which no wisdom of legislation or administration really means anything; and, on the other hand, we must try to secure the social and economic legislation without which any improvement due to purely moral agitation is necessarily evanescent."

"Neutral Ground"

At Denver, introduced at the Auditorium by Governor Shafroth and Mayor Speer, with Senator Guggenheim, Mr. Garfield, and Mr. Pinchot on the platform, and most enthusiastically received by the people, Mr. Roosevelt spoke vigorously for conservation, but the sensational part of his address had reference to the "no man's land" between States' rights and Federal rights, as created by unwise decisions of the Supreme Court. As to the coal lands of Alaska he said:

"The coal mines should be leased, not sold, and those who mine the coal should pay back a part of the profit to the people. It is the right and duty of the people to demand the most vigilant trusteeship on that part of that branch of the Federal Government in charge of the fuel resources of the United States."

On the water rights he said:

"During the last session of Congress bills were introduced to transfer the water power sites in the national forests and the public domain to the control of the States. I cannot state too strongly my belief that these measures are unwise and that it would be disastrous to enact them into law. In substance their effect would be to free these great special interests from all effective control. The passage of such a bill would be a victory of the special interests over the general welfare and a long backward step down the hill of progress we have of late been climbing."

Before the legislature he spoke on the "neutral ground between State and Nation."

"I am anxious that the nation and the State shall each exercise its legitimate powers to the fullest degree. When necessary they should work together, but, above all, they should not leave a neutral ground in which neither State nor nation can exercise authority.

"Let us illustrate what I mean by a reference to two concrete cases. The first is the Knight Sugar Trust case. In that the Supreme Court of the United States under cover of what a man whose interest is chiefly in sane constructive stewardship can only call a highly technical legal subtlety, handed down a decision which rendered it exceedingly difficult for the nation effectively to control the use of masses of corporate capital in interstate business, as the nation obviously was the sole power that could exercise this control (for it was quite beyond the power of any one State). This was really a decision rendering it exceedingly difficult for the people to devise any method of controlling and regulating the business use of great capital in interstate commerce. It was a decision nominally against national rights but really against popular rights.

"The second case is the so-called New York

bakeshop case. In New York City, as in most large cities, the baking business is likely to be carried on under unhygienic conditions, conditions which tell on the welfare of the workers and therefore against the welfare of the general public. The New York Legislature passed and the New York Governor signed a bill remedying these improper conditions. . . .

"The Governor and the Legislature alone had the affirmative power to remedy the abuse. But the Supreme Court of the United States possessed and unfortunately exercised the negative power of not permitting the abuse to be remedied. By a five to four vote they declared the action in the State of New York unconstitutional, because, forsooth, that men must not be deprived of their 'liberty' to work under unhygienic conditions. They were, of course, themselves powerless to make the remotest attempt to provide a remedy for the wrong which undoubtedly existed, and their refusal to permit action by the State did not confer any power upon the nation to act; in effect, reduced to impotence the only body which did have power, so that in this case the decision, although nominally against State rights, was really against popular rights, against the democratic principle of government by the people under the forms of law. . . .

"I am a most earnest and convinced believer in exercising the power of the nation where that power alone can be really effective, yet I am no less a convinced believer in seeing that the power of the States be made effective where it affords the best means of affirming popular rights. Above all there should be no neutral ground where, owing to a conflicting series of decisions, it shall appear that neither the State nor the nation has power, and where, in consequence, able and unscrupulous individuals are left free to riot at will."

Other Addresses

At Pueblo, Cal., Mr. Roosevelt laid the cornerstone of the new Y. M. C. A. building and spoke of the power to amend constitutions:

"I wish that I could go down to New Mexico and Arizona. But this is the nearest place to them that I will reach on this trip. There is one point upon which I would like to advise them, and that is to make their constitutions easy of amendment at any time when the people feel they should be amended. Experience has shown that not only doctrinaires, but also designing corporation attorneys, often get put into constitutions matters which are not thoroly understood by the people at the time, and my plea is that the people of the new States should be free, so that if at any time they find something has been put into their constitutions which they did not know was there, or if they find out that something is working badly which they believed would work well, they shall have the opportunity to easily make any change that is necessary."

——In a brief address at Sioux Falls, S. D., Mr. Roosevelt for the first time mentioned President Taft. He said:

"I was particularly pleased with what the President said in his last letter on the subject of a tariff commission. A number of Senators and Congressmen have for some years advocated this as the proper method of dealing with the tariff, and I am glad that the country seems now to have definitely awakened to the idea that a tariff commission offers the only solution of the problem which is both rational and insures the absence of jobbery. The President from the beginning advocated this commission. . . .

"It was only by a bitter fight that the friends of the commission idea in the Senate and the House got through the provision. It is not yet in satisfactory shape. The commission itself should be enlarged and its powers greatly enlarged and defined, and any necessary changes made that will make it work more effectively from the standpoint both of the Executive and Congress, but the establishment of it makes an excellent beginning in the right direction. Moreover, the value of the commission as provided has been made real by the action of the Administration in construing in broad fashion the law that provided for it.

"There is another feature of the tariff law which is admirable and points our course in the right direction, the maximum and minimum provision, and here again I wish to point out that the value of the provision has depended largely upon the excellent work done by the Administration in the negotiations with the Dominion of Canada, which were the most difficult of all and yet in my eyes the most important, because I esteem it of vital consequence that we should always be on relations of the highest friendship and good will with our great and growing neighbor in the north. In addition it was of very real importance to provide, as the present tariff does provide, for proper treatment of the Philippines."

Mr. Roosevelt further criticized the Payne tariff. —— After Kansas Mr. Roosevelt was received with no less enthusiasm in Kansas City, Mo., and he made several speeches of less importance. Of his address on fortifying the Panama Canal and of President Taft's address on conservation at St. Paul we give account on the editorial pages.

Political Events

President Taft announces that hereafter all assistant postmasters and all permanent clerks in post offices of the money order class will be put under the protection of the civil service law.——As anticipated, the President has named President Hadley, of Yale, as chairman of the new Railroad Stock and Bond Commission to investigate proper legislation. The other members

are F. N. Judson, of St. Louis; Frederick Straus, of New York; Walter L. Fisher, of Chicago, and Prof. B. H. Meyer, of the University of Wisconsin, all known to be very competent students of the subject.——The President has named Dr. G. A. Holmes, chief of the technological branch of the Geological Survey, to be head of the new Bureau of Mines. The appointment of this friend of ex-Secretary Garfield and Mr. Pinchot was opposed by Secretary Ballinger. ——The Kansas Republican Council met last Wednesday. It was controlled entirely by the insurgents, led by Senator Bristow and Governor Stubbs. The platform endorses President Taft and the acts of the last Congress, but excepts the Payne law.——The success of ex-Governor Hoke Smith in the primaries of Georgia against Governor Brown has been followed by the Democratic convention, whose platform endorses all Hoke Smith's measures while Governor, and asks the railroad commission to secure cheaper rates from Savannah to the interior. The vote for Smith in the convention was 233 against 135 for Brown. The Brown delegates left the hall after the roll call. The Brown delegates left in an ugly mood and threatened a bolt. ——In Maryland, for the first time in the State's history, the Republican and Democratic candidates for Congress were chosen by the direct primary system.—— The first Idaho primary nominations give the majority to Gov. James H. Brady, Republican, and James H. Hawley, Democrat, for Governor. Burton L. French, insurgent, has defeated Congressman Thomas R. Hamer, for Congress, by 5,000 votes; and Arthur M. Bowen is the Democratic candidate for Congress.——President Woodrow Wilson, of Princeton University, has received the support of an organization of Princeton graduates for Governor of New Jersey. In a letter to a labor journal he has corrected its statement that he is a foe to organized labor. On the contrary, he believes that there is more danger from combinations of capital than from combinations of labor.

Strikes

Rioting broke out again in the car strike at Columbus, Ohio, on the night of August 29. An unsuccessful attempt to dynamite a car brought together an ugly crowd and the cars were stoned. The police and soldiers arrested forty men and one man was killed and twenty wounded. The soldiers both used riot clubs and fired a number of shots. On Tuesday night dynamite on the tracks injured three cars and a number of their passengers.—— The great cloakmakers' strike in New York, which embraced 70,000 workers, has been settled by compromise, which was hastened by the decision of Judge Goff forbidding picketing, and the necessities of the strikers. The basis is a "preferential shop," in which union wages and standards will prevail, and union workmen will have the preference if they can be had. A scale of wages is agreed on, and both sides claim the victory.

Census Reports

The most important announcement yet made by the Director of the Census is that the population of the city of Greater New York is 4,776,883, against 3,437,202 in 1900, and 2,507,416 in 1890. The increase then in ten years is 38.7 per cent. The population of the borough of Manhattan is 2,331,542, 26 per cent. increase; that of Brooklyn, 1,634,351, or 40.1 per cent.; of the Bronx, 430,980, or 114.9 per cent.; of Queens, 284,041, or 85.6 per cent.; and that of Richmond, 85,969, or 28.3 per cent. The increase in ten years of the population of Brooklyn of 467,769 is equal to the total population of Buffalo or Pittsburg, with Hartford or Syracuse added, in 1900. New York is the second city in size in the world, being surpassed only by London, which had 6,581,372 population in 1901, and now nearly a million more. Paris in 1900 had 2,763,393; St. Petersburg in 1909 had 2,740,300; Berlin in 1905 had 2,040,148; and Rome in 1901 had 1,196,909.——The population of Philadelphia is announced as 1,549,008, an increase of 19.7 per cent. That of Troy, N. Y., is 76,813, an increase of 26 per cent.

The Philippines

Secretary of War Dickinson has approved a scheme for the consolidation of the Philippine scouts and the constabulary under one head. This will effect a saving of $1,000,000 a year. A

board of army officers, under Major-General Duvall, will prepare the scheme for the unification of these two bodies for submission to Congress. On August 30, in a speech at a banquet given in his honor by the merchants of Manila, Secretary Dickinson deplored the baneful influence of native politics. He also declared that the Payne-Aldrich tariff bill and the prosperity which had resulted from its enactment were a redemption of President Taft's campaign promises. On September 1 came news that former Governor Mandac, of the Province of Ilocos Norte, who is a murderer and a fugitive from justice, had started an uprising. He was soon obliged to release prisoners and to abandon loot, and, on September 3, was seized by the people whom he was trying to incite to rebellion, and delivered over to the American constabulary.

The Pan-American Congress

The Fourth Pan-American Congress, which was held at Buenos Aires, closed on August 30. Four conventions and twenty resolutions were passed. The four conventions relate to provision for payment of pecuniary claims, and for the regulation of trademarks, copyrights and patents. They accord with instructions given to the American delegation by Secretary Knox before its departure. Our former Ambassador to France, Mr. Henry White, reports that the conference worked harmoniously, and that its members showed marked good feeling. On August 31 Mr. Knox cabled congratulations to Don Epifiano Portela, secretary of the conference, and several telegrams of felicitation in regard to the congress have reached Washington. The Argentine Minister for Foreign Affairs, presiding, closed the conference with these words:

"In this year our republics complete a century of independent life. We can say today, 'America for humanity,' because we are sovereign nations and because the position which we hold in the world we owe to the strength of our own arms and to our blood heroically shed.

"But let my last word be a message of recognition to the great nation which invited these continental conferences; which preceded us in the struggles for independence; which gave us the example of a people fruitfully organized as a republican nation; which on a memorable day in its history said, 'America for the Americans' and covered, as with a shield, the independence we had won."

Such language indicates that Mr. White and his fellow-delegates have in some measure corrected the unfortunate impression created by the present Secretary of State's diplomacy. Among the matters considered by our recent Congress were arrangements for the international celebration of the opening of the Panama Canal, in 1915, and ways to establish better water communication between the Americas. Mr. White acted as chairman of this Congress; Mr. Knox was elected honorary chairman, Among the celebrities in attendance were Enrico Ferri, of the Italian Chamber of Deputies, and M. Clemenceau, till recently French Premier.——James Bryce, British Ambassador to the United States, and Mrs. Bryce, have sailed for Colon. They will cross the Isthmus and proceed down the west coast of South America to Peru and Chile, thence to Buenos Aires. The Ambassador wishes to study South American flora and also the progress made upon the Panama Canal, which he regards as the most extraordinary improvement on nature that has ever been made on this planet.

Canada and Free Trade

Mr. J. Wallace Carter, secretary of the Free Trade Union, has returned to London from a visit to Canada. He describes leading Canadians as complaining because they have been represented by tariff reformers as giving tariff preference to British goods in order to secure a preference for Canadian goods in the mother country. The preference, they say, was "adopted to suit our own ends, and nothing more. There was no idea of expecting anything in return." Mr. Carter holds that the popular demonstrations which lately greeted Sir Wilfrid Laurier in the Western Provinces were a magnificent tribute both to the Premier's popularity and to his general policy, and "one long series of enthusiastic censures upon him for failing to carry out the pledge of the Liberal party to establish free trade. . . . In time, Western Canada will dominate the Dominion, and then, if not before, free trade becomes inevitable." Meanwhile,

"the Canadian Government will be forced to reduce the tariff, and the easiest way to do so is to give a further preference to Great Britain." He adds that the whole agricultural population favors a reduction of duties; the average Canadian wants this reduction to be carried out immediately, and the majority of the population wishes a tariff for revenue only. At Nelson, B. C., Sir Wilfrid Laurier has stated:

"It will be our aim to evolve a tariff suitable to all and calculated to benefit the whole country. . . . The cardinal feature and standing principle of the tariff is the British preference, and so long as we stay in office it will remain.

"This policy has met with opposition. Our opponents have said we should not grant a preference unless we received a preference in return. Not so. . . . It is not the policy of the Canadian Government to ask Great Britain to change her fiscal policy one iota. We make our own fiscal arrangements to suit our own interests. So with Great Britain. Yes, and more.

"I have heard it said that unless Great Britain gave Canada some mutual tariff arrangement there was danger of estrangement of our Dominion. That is an insult to the Canadian people. Let the world know that the loyalty of Canada to the British Empire, of which she is proud to be a part, is not dependent on any tariff agreement. Canada is united to the motherland . . . independently of all tariff arrangements.

"But there is another country, a country of ninety odd millions, with which perhaps we should have better tariff arrangements, where value and profitable trade might be developed. That the Canadian returns are not what they should be is not the fault of Canada, but of the United States. Our policy was to have a treaty of reciprocity, but the United States did not meet our pilgrimages to Washington with encouragement, and we took the ground that the next initiative must come from Washington."

The Canadian Premier ridiculed the thought that a reciprocity treaty with this country could jeopardize trade relations with Great Britain.——Major-Gen. Robert S. Baden-Powell, "hero of Mafeking," opened the thirty-second National Exhibition at Toronto, in the presence of more than 50,000 persons. One feature of the day was a review of 2,500 boy scouts.—Cardinal Vincenzo Vannutelli, Papal Delegate to the Eucharistic Congress at Montreal, has been welcomed at that city, together with his companions, Cardinal Logue, of Dublin, and Father Vaughan, of London. The Congress formally opened yesterday. The Premier is expected to attend.

Aviation in France

The *Journal*, of Paris, announces for next year an international contest in aviation, the route passing thru the capitals Berlin, Brussels and London. The prize will be 200,000 francs (rather less than $40,000). In the announcement of this project, the *Journal* praises the aeroplane as an "engine of pacification and concord":

"Let Germans, English, Belgians, Italians, Americans, Spaniards, Russians—let all men—come here with our own. The air belongs to all; we wish it to be free. We wish to conquer it for peace, not war. We want to see men flying there from land to land, not to travel over hostile towns to drop bombs and to massacre defenseless women and children, but to invite humanity to celebrate the definitive acquisition of this new ocean, still virginal, in a pacific tournament of science and of human progress."

The Cologne *Gazette*, in commenting upon the recent contest in which Le Blanc triumphed, says:

"It is with just pride that the French inscribe in the golden book of their national glory the recent exploits of their aviators. By these circuits, French aviation has proved its superiority in a brilliant manner. . . . Foreign nations may feel, in the face of France's superiority here, a legitimate jealousy. But this cannot be a matter of base envy, for in the face of such successes, marking one more step in the triumphal progress of man over the elements, envy is dumb to give the floor to the sentiment of human solidarity: all humanity will soon profit by this discovery, by the same token as it has profited by those of steam, electricity, and the motor-car."

The Strassburger *Post* having recommended that German riflemen "bring down" the French airmen of the Eastern Circuit in case they crossed the frontier thru inadvertence, this handsome tribute of the *Gazette* is gratefully reprinted by the Paris press.——Four dirigible balloons and eleven aeroplanes, piloted by trained officers, among them Louis Paulhan, who is an officer of the reserve, will take part in the grand army maneuvers on the plains of Picardy this month.——At Lille, a M. Brequet, in a biplane of his own invention, recently carried a weight of 922 pounds—five passengers besides himself. On the same day (August 29) M. Morane, at Havre, ascended 6,698 feet, using a Blériot machine; but on September 3 he broke his own record, attaining 8,472 feet, as registered by his barograph.

Portugal, Spain, and Morocco

The Government will have 90 seats, the reactionaries 40, and the Republicans 14, in the new Portuguese Chamber of Deputies. The Republicans have tripled their former representation, and their leader, Señor Costa, contends that the smallness of the Government majority over the combined opposition precludes its long life. He adds that Portugal will soon become a republic. The Republican party in Portugal is described as having a monopoly of brains, its membership including the professors of the universities, and such naval leaders as Admirals de los Reis and Campos. The elections were stormy, and were marked by fraud and bloodshed. The Prime Minister is said to have ordered a strict investigation of all the religious orders in the country, directing that particular attention be paid to the foreign orders illegally established. The members of these orders, it is stated, will be expelled from the country. The Government has protested to the Vatican against the criticism of members of the Administration by Mgr. Dr. J. Tonti, the Papal Nuncio, who stated that they were following in the footsteps of Premier Canalejas, of Spain. This was considered an improper interference in internal politics. No reply to the protest has as yet been made.——The workingmen's associations at Bilbao countermanded the order for a general strike, to begin August 29, as we stated on September 1, but large numbers of strikers overran the docks on the appointed day, compelled many to quit work, and stoned a tobacco factory. The disorder continued for several days, involving frequent clashes between rioters and the troops, and the paralyzing of business. On August 31 the Federation of Labor reversed itself and favored a general strike. The declaration of martial law followed, and the restoration of order. The situation at Bilbao has been blamed upon the Government, which has sought to please both sides. The employers have given a striking example of patience and made great sacrifices in order to avoid a spread of the strike. The workmen believe themselves backed by the Government, but it seems probable that the workmen's associations are mainly influenced by professional agitators. At Saragossa a strike of the building trades, which started on September 1, threatened to become general, but was soon abandoned. —— At the recent sessions of the International Congress of Free Thought, at Brussels, a "Ferrerist" demonstration occurred in the streets, when a procession of radical and Socialist deputies, and numerous foreign delegates, marched to the Grand' Place. There the Francisco Ferrer Committee offered to the municipality a commemorative plaque that has been placed at the foot of the steps of the Broodhuis ("King's House"). This plaque bears an inscription, a translation of which is as follows:

"To the memory of the Counts Egmont and Horn, beheaded on this spot by order of Philip II, in 1568, for having defended liberty of conscience. This marble was dedicated to them by the international committee founded to commemorate the heroic death of Francisco Ferrer, shot at Montjuich for the same cause in 1909."

Professor Simarro, of the University of Madrid, and Señora Soledad Villefranca, the friend of Ferrer, were present at the ceremony of dedication.——The London press publishes correspondence from Tangier asserting that Morocco is in a hopeless state, and calling the attention of France, Germany, Spain and Great Britain to the situation, with a view to rearrangements, looking to the eventual partition of Morocco among these Powers. The Algeciras convention, so far as the progress of the country is concerned, is practically inoperative, it is asserted. Everything is chaotic beyond the seaports, and the Sultan is unable to leave Fez or to collect revenue, which is absorbed by tribal chieftains. Raisuli, the former bandit, is supreme at Alkassar and Kaid Anfloo in the south. Statistics of Spanish losses in the Moroccan campaign confirm earlier reports of the reckless courage of the Spanish officers. Thus, of 252 killed, 44 were officers, the list including two generals and eleven superior officers. In the French campaign in the Shawia the number killed was 173, but of these only 16 were officers, scarcely more than half the Spanish ratio.

The Downward Revision Hoax

BY JONATHAN P. DOLLIVER, LL.D.

United States Senator from Iowa.

THE past year has witnessed two events of unusual interest—the discovery of the North Pole by Dr. Cook, and the revision of the tariff downward, by the leaders of the United States Senate—each in its way a unique hoax, and both promptly presented to the favorable notice of the public by the highest official congratulations.

The greatest philosopher who ever gave his attention to our form of government laid down the doctrine that we not only must have in our republican institutions the spirit of equality but the substance of equality, if the institutions are to endure. Men come to me and say, "Are we not abreast of modern economic progress?" I am not so sure about that. Years ago they made me read Aristotle's "Politics," and there is one thing that I remember because it has been suggested by the signs of our own times, and every time a man says to me, "This is a modern development of business," I always say, "I am not sure of that," because old Aristotle says —and I cannot tell to this day whether it is in a vein of humor or not—that there was a man in Sicily who went to Syracuse with a large sum of money, much of it trust funds, and bought up all the iron from the mines. When men came to buy iron he alone had it for sale and made a substantial profit; the which, when the tyrant heard, he ordered the man into his presence. The man was scared. It was the custom of tyrants to remove people's heads after confiscating their goods. So the man fell upon his face and began to beg for his life. Then old Dionysius said: "Do not get excited; I am not going to take your life." The man said, "You can have all my property." The tyrant replied: "I am not looking for your property. I just want to know how you are doing this." The man explained it, the tyrant thanked him and said: "While I do not want your life or your property, you will oblige me if you will leave this country. I want to do the thing myself."

There would not have been any protest to make if the capture of our market place had been effected as that man effected a similar achievement, by the use of his own money, with some trust funds which he had acquired. It is not that of which the thoughtful millions are now complaining. The thing they complain about is that, in the very presence of our courts, before the eyes of our lawmakers, in the shadow of the Government itself, our market place is being drawn into the control of a few impudent financial interests, with only the scantiest investment of real money, often without the use of real money at all. They literally capitalize the schedules of our tariffs, and powerful syndicates bring into their control whole fields of production, leaving this market place a beggar for their favors. Oftentimes their agents come into places of authority in the Government and to positions of control in political organizations, till it is sometimes difficult for men of good purpose, but limited resources, who rise in opposition, to defend themselves against an effort to read them out of the political party which they are trying to serve.

I am aware that it is sought to constrain independent expression of opinion in these days by an appeal to the principle of majority government; the principle in accordance with which it is thought proper for individuals to surrender their own views and accept the views of the majority. There never was a more faithful friend of the doctrine of majorities than I am. It is our form of government. I accept it everywhere. I have always supposed it to be the duty of a citizen, where the city in which he lives is boss-ridden, to enter the arena and fight for the overthrow of a bad party leadership instead of acquiescing in it and afterward advising the defeat of the party of which it was only the tangible expression. I believe in the doctrine of majority applied to all popular assemblies and to legislative assemblies within limits. But a legislative assembly holds delegated power, and un-

less it acts within the limits of that power its act is wanting in binding authority. If it violates the pledge and the promise by which it holds its credentials it is in vain to appeal to the doctrine of majorities to give it any moral prestige. It is a parody on our form of government to say that a body like Congress shall be governed not by a majority of its members, but by a majority of the majority party of its membership. But there are many who carry the doctrine even further. They say that the majority of the majority party ought to be dominated by the majority of a committee. They propose literally to release the intellectual capital of the Congress by establishing a system of party majorities, until at length one man is delegated to say what Congress shall do, and those who fail to fall in with that theory of government are not only to be put out of the fold of the party, but they are accused of treason against the fundamental principles of popular institutions.

Is the man who holds Congress up by a threat and wins on a bluff a patriot because he represents his own interests? And is a man to be derided and despised because he interposes in behalf of the public, when he has no interest in it at all, and says, "This ought not to be done and by my vote it shall not be done!" By what grotesque standard, by what alchemy of diseased morality do the few become the nucleus around which the solidarity of a great political party is to be organized for the future, while men who stood for public rights and fought for them, and voted as they fought, are declared unworthy of its fellowship?

What a farce it is to talk about the rule of majorities, when before the eyes of all men, and with no dispute of the truth of it possible, the tariff, the most important business of the American people, has come down to the bargain counter, in Congress; and men are authorized to say, "This is the citadel of protection; if any of you have constituents that want anything, come here; we are the dispensing power; support what we want, and take anything you think you need." And another sad result of the surrender of legislative power in the United States has been the creation of professional experts, not to advise Congress, but to mislead it, to deceive it and to confuse its counsels. Behind every professional expert who has fluttered around Congress in recent years there has been a professional manager of some enterprise to be "fixed." No expert in the New York Custom House ever conceived of the job in the cotton schedule of our new tariff without the knowledge and consent of people standing behind the scenes.

Does any one suppose that if, last summer, we had known that the total cost of smelting a ton of lead ore was only $8, we would have put a duty of $42.50 a ton on pig lead, on the theory that labor was to be protected and a reasonable reward offered to capital? Does any one suppose that if we had known that the cost of smelting copper in the United States was not materially greater than in other countries we would have allowed a protective duty of $42.50 a ton on pig copper in all its forms? Does any one suppose that if we had known that the rubber industry needs little or no protection, that at 30 per cent. *ad valorem* every department of it was prosperous, that we were making rubber wearing apparel cheaper than it was made anywhere else in the world, that we were making rubber tires for automobiles with such profit that in Akron, Ohio, in ten years, the Diamond Rubber Company had declared stock dividends which had increased its capital from $50,000 to $10,000,000 under the old rate—if we had known that, does any one suppose the Senate would have listened with patience to the argument for increased protection? How long do we propose that these great interests, affecting every man, woman and child in the nation, shall be managed with brutal tyranny, without debate and without knowledge and without explanation, by the very people who are engaged in monopolizing the great industries of the world, who propose to impose intolerable burdens upon the market place of our country, who do not hesitate, before our very eyes, to use the lawmaking power of the United States to multiply their own profits and to fill the market places with witnesses of their avarice and of their greed?

These conditions lead to the demand for a *general* revision every time that the tariff is touched. We cannot revise

the woolen schedule, for instance; for Congress does not seem able to do one thing and let the other things alone. The idea is that Congress must not do anything because it cannot help doing everything; that the only path of safety is to do nothing, except about once in ten years. We are the only country in the world which takes that position and we are the only market place in the world which can be disturbed by a readjustment of tariff schedules. In other countries the people do not know it is going on; the business men of those countries have confidence in their governments, while our business men have no confidence in their Congress. So when tariff revision is in progress the Capitol is crowded with scared manufacturers eager to seize a moment of time of Senators and Representatives, not one of them knowing what is to be done to him, not one of them knowing how far he is to be put to the bad by the managing powers. The result is anxiety and agitation and panic and disaster to every business; and I venture to say that no honest manufacturer in America came out of the experiences in Washington last summer without a prayer to God that it might be the last experience of the sort to which legitimate American industry should be subjected. I earnestly uphold the President of the United States in his demand, in public speeches and thru his messages to Congress, to prepare the way for a scientific investigation of these subjects, in order that in the future American business may not look to Congress with suspicion and alarm, and that it may no longer be the lot of Senators to trade in a program in the interests of their constituents and to sometimes be disappointed, as more than one man was disappointed last summer who had traded in everything he had, and got sold out in the final adjustment of affairs.

It is most appropriate now to look at that extraordinary session of Congress and observe the methods by which the tariff revision, undertaken in pursuance of party promises of the most definite meaning, was lifted out of the hands of Congress and made a mere vehicle for the interchange of mutual benefits, in which the public got no share.

It is true, as the President said on Lincoln's Birthday, at New York, that we did not promise to revise the tariff downward. The newspapers said that a quiet, derisive laughter went over the audience when that was said; but the President spoke the literal truth. We had made no promise for a downward revision of the tariff. It we had made a promise like that it would have been comparatively easy to have executed it. A few reductions, judiciously made, on articles covered by patent or made by patented machinery, a few reductions so small as to be commercially insignificant, a few reductions made on articles of common necessity now known to be controlled by international trusts, a few reductions scattered here and there thruout the schedules, would have literally fulfilled the promise, and we could all of us have repeated, as was done at Winona, that anonymous scrap of statistical sophistry about the effect of the tariff reductions; a curious table made up for the guidance of Congress by a paymaster in the army and attributed to the midnight researches of one of the great promoters of the new tariff.

We had no promise outstanding to reduce the schedules here and there. Our promise I presented in person to thousands of my countrymen from California to New York. It was to revise the tariff with reference to a set standard of justice and fairness by which our laws should give the advantage to our people of that difference in the cost of production which is known to exist between this market place and the market place of other countries. That was our promise. How did we fulfill it? It was laughed at as ridiculous.

When the work was finished the public eagerly inquired, "What do we get out of it?" and as the answer this table was prepared. It was handed to the President, for use in the speeches which he made. It says, "You get decreases on 654 items, involving a consumption value of five billion dollars." But study the statistics, imperfect and misleading as they are, and even they indicate that these reductions were in most cases so small as to have no value to the public, that a full third of the number were on yarns and threads of cotton jute, and linen ready for weaving into cloth, and that nearly *all* of the five billions of dol-

lars' consumption is made up either of food products which we export or of raw materials like coal, iron ore, petroleum and hides of cattle, or partly manufactured materials like pig iron, scrap iron, tonnage steel and sawed lumber ready for the planing mill. The public has asked and asked in vain for some one to point out a single reduction on any article ready to enter into consumption which has a commercial significance of any sort. Even in the iron and steel schedule, where reductions are most numerous, we are exporters of the articles affected, while the duty was surreptitiously *raised* on structural frames, in order that the trust may be able to penalize building contractors who have sometimes shown a restless spirit by turning to foreign markets rather than submit to unreasonable delay in the delivery of their orders.

It is little wonder that the public receives this batch of freak statistics with derisive laughter when they think of the length of time it will take them to eat themselves into possession of the five cents reduction on the hundred pounds of refined sugar, and then reflect that of the whole five billions of consumption on which reductions are claimed, nearly one-tenth of the amount is charged up to the sugar schedule. When they know that contracts are outstanding between our planing mills and the sawmills of Canada, by which one-half of the reduction on lumber goes to the sawmill, and the other half to the finisher on this side, is it any wonder that they make merry? When they hear it stated by the highest official dignity that the total consumption of cotton goods upon which the duties are increased is only $41,000,000, can any man expect them to keep their faces straight? A mere glance at the tables will show that this carefully calculated $41,000,000 consumption does not refer to cotton cloths at all; that the only thing it refers to is cotton stockings, valued at from $1 to $2 per dozen pairs—from 10 to 20 cents a yair—annually consumed in the United States to the amount of $41,000,000. And yet those whose duty to the President and to the Republican party was to give him the facts to lay before the public, allowed him to go to New York and state to a great audience, mainly of merchants, that the increases in the cotton schedule were applicable to $41,000,000 of high-priced cottons in the nature of luxuries. When people examine the schedule called 'sundries," and find out that of the $1,719,000 of consumption value there on which duties have been reduced, nearly the whole of it represents a commercially negligible reduction on bituminous coal, and a concession to the leather trusts, who were perfectly willing to give up duties which they did not need for the sake of getting rid of the small duty on cattle hides which they had to pay, they begin to see where the joke comes in.

It is probable that those who engineered the tariff bill thru the two Houses indulged the expectation that the exact nature of the transaction, while it was going on, could be hidden by the intricate movements of the machinery. But it may well be doubted whether the most buoyant lobbyist about the Capitol expected that the work of Congress, when known and read of all men, could be surrounded by such an array of bogus statistics and high official sanctions, disseminated in speeches, in private letters, and by personal telegraphic messages thruout the country as to very long conceal its actual operation from the American public.

Of what possible interest is it to the public to be informed that reductions were made upon a large number of articles unless they are given the names of the articles and told what the reductions are. Why should the people be told that in the chemical schedule there were reductions on $433,000,000, and be left to find out for themselves that three-fourths of these reductions were on petroleum and its products, which we export, and that not a single reduction has been made on any article of which we are not the exporters, large enough to find an appreciable expression in the business of the people? Cottonseed oil, with a consumption value of $31,000,000, was put on the free list, at the request of the Senator from Georgia, because the duty was of no importance to those interested in its production. Linseed oil, with a consumption value of $27,000,000, was reduced 5 cents, but

since we never import it the public cannot derive even an imaginary advantage from the decrease.

In the table of information we are told that in the earthenware and glassware schedule duties were decreased upon articles the consumption value of which is $128,358,344 and that no increases were made. Yet the fact is that duties were substantially increased upon certain small sizes of glass consumed to the amount of many millions, while the decreases, for the most part negligible in amount, were upon the larger sizes of plate and silvered glass, on crude gypsum, for the benefit of seaboard manufacturers, on tombstones and other manufactures of marble, making up a consumption value of over $99,000,000 out of the 128; all rather remotely interesting the public.

In the metals and manufactures of metals schedule we are told the rates of duty were decreased on articles consumed to the value of over $1,000,000,000, and increased on articles consumed only to the value of $37,000,000. But the table is inaccurate, as the increased rate on several articles was left out. The whole product of structural steel ready for the builder's use, by an underground transfer from the paragraph where it always stood to the basket clause in this schedule, was nearly doubled; while the slight reduction on tacks, nails, files, screws, saws, has no commercial significance, since we produce the articles more cheaply than anywhere else in the world and sell them in every nation of the earth and every island of the sea; and on wire nails and steel rails the reductions amount to nothing, because international trusts divide the markets and fix the prices.

No reduction of any possible value to the public was made in the sugar and molasses schedule. In order to get a dollar out of the transaction the citizen must eat a ton of sugar, and even then the trust may not allow him the discount; but since we consume $300,965,953 worth of sugar, that vast sum is added to the total consumption which has enjoyed the experience of a reduction in duties.

In agricultural products the table indicates that rates were reduced on foodstuffs consumed to the extent of $483,430,637 and increased only on buckwheat flour. But rates were really increased on certain crackers, biscuits and wafers, for the benefit of the National Biscuit Trust, and on fruits in bulk and when canned, and on fruit trees, shrubs and vines; while the items making up the nearly $500,000,000 consumption upon which rates were decreased are smoked herring, reduced ¼ of a cent a pound; meats, ½ cent a pound; salt, 1 cent the 100 pounds; starch, ½ cent per pound; all of which we export very largely, any way, and which trivial reductions could not possibly benefit the consumer.

The internal revenue duties upon certain forms of tobacco were slightly increased, and in the process of adjusting the size of packages, in the conference committee, there resulted one of the grossest wrongs which the American Tobacco Trust has ever induced Congress to perpetrate—the ruin of scores of independent manufacturers of fine-cut tobacco who had heretofore packed their goods in buckets and sold them to the country merchants. They have waked up to the fact that a benign Government has made such a package of tobacco a criminal offense against the United States.

The table is curiously inaccurate as to the schedule of flax and hemp and jute and their manufactures. Reductions are claimed on articles having a value of $22,127,145, while the value of articles on which the rate has been increased is only $804,445. Oilcloths and linoleums, amounting to $10,335,705, belong in this list among articles upon which the duties were raised. The rates were nominally *reduced,* but the classification was so changed as to result in higher duties. The rates were also really increased on edgings, insertions and other machine-made trimmings for women's wear, but these increases were conveniently overlooked by those who prepared the table.

Let us see, now, how the consumer benefits by the claimed decreases in the "sundries" schedule, on articles with consumption value of $1,719,428,069, against $101,656,598 increased: First, the paymaster's table overlooks the increased rates on rubber goods, the consumption of which amounts to $60,000,-

000 a year; in the item of bituminous coal amounts to $932,344,733, of which we export seven times more than we import, and on which the reduction of 22 cents a ton was made for the benefit of Atlantic seaboard manufacturers. The next item, hides and leathers, amounts to $265,000,000. The duties were removed for the benefit of the manufacturers, and notwithstanding the decrease on boots and shoes, on a consumption value of $305,484,974, we export some sixty times more than we import, and manufacture more cheaply than any other country. The next is a reduction of 5 per cent. on agricultural implements of a consumption value of $84,452,164, which we produce mostly under patents more cheaply than any other nation, and supply the world. The production is largely in the hands of trusts and the reduction was for statistical purposes only. The next is a concession to the consumer of 2 cents per gross on matches in boxes and ¼ cent a thousand in bulk, with a reduction of 2 cents per pound on gunpowder. The consumption of these two items is $31,000,000. They pad the reduction list.

Such an analysis, item by item, should convince any one that so far as the public is concerned the tariff revision in fact carries rates as high or higher than the Dingley tariff law on most articles of general use in their finished condition, and show how skilfully the revision was arranged in order to deceive the public and look like real revision downward. The only new items on the free list are hides, a few semi-finished coal tar products, radium, works of art over twenty years old, miners' appliances, and Brazil and cream nuts.
